Woodland Race Meeting

—AND—

Stock Exhibit

AUGUST 24 TO AUGUST 27, 1910

To Close July 15, 1910.

PROGRAMME.

WEDNESDAY.

1.—2:20 Trot . . . \$600
2.—2:15 Pace . . . 300
3.—Matinee.

FRIDAY.

7.—2-Year-Old Trot . . . \$400
8.—2:08 Pace . . . 600
9.—Matinee.

THURSDAY.

4.—2-Year-Old Pace . . . 400
5.—2:24 Trot . . . 300
6.—Matinee.

SATURDAY.

10.—2:20 Pace . . . 500
11.—3-Year-Old Trot . . . 400
12.—Matinee.

CONDITIONS.

FIVE TO ENTER AND THREE TO START.

All races three in five, except 2 year old will be two in three, and any race not completed at the end of the fifth heat will be declared ended and the money divided according to the position of the horses in the summary.

Entries to close Friday, July 15th, when horses are to be named and eligible to the classes to which they are entered.

Entrance fee five per cent and five per cent of the amount of the stake will be deducted from each money won.

Purses will be divided into four moneys: 50, 25, 15 and 10 per cent.

The Association reserves the right to change the hour and day of any race, except when it becomes necessary to antedate a race, in which instance the nominators will receive three days' notice by mail to address of entry.

The right reserved to reject any or all entries and declare off or postpone any or all races on account of weather or other sufficient cause.

Entries not declared out by 5 o'clock p. m. on the day preceding the race shall be required to start and declarations must be in writing and made at the office of the Secretary of the track.

Racing colors must be named by 5 o'clock p. m. on the day preceding the race and must be worn upon the track in all races. Colors will be registered in the order in which they are received and when not named or when said colors conflict, drivers will be required to wear colors designated by the Association.

Hobblers barred in trotting races, but will be permitted in pacing races.

Member of National Trotting Association.

Address all communications to the Secretary.

A SUBSCRIBER to the "Breeder and Sportsman"
who resides in British Guiana, South America,
writes:

"It may be of interest to you to know that I im-
ported a while back a fashionably bred young trot-
ting stallion (standard of course) and the horse
turned out to be such an utter slug in harness that
the donkey carts could hang on the tail of my buggy.
Got rid of him for \$110—he cost landed about \$900
or a trifle less. So now he runs loose on the
savannah with a lot of common pony mares, a dis-
grace to his breed and also the V. S. who purchased
him for me. A good many trotters would have been
put on order for here if he had been even half as
good as he should have been at the price; but now
one can't mention their name, and the people here
are trying and failing to breed strong harness horses
from light thoroughbred stallions and weedy native
mares in whose veins are a lot of thoroughbred
blood."

In the above short note there is much food for
thought. The fact that this standard bred trotter
was an "utter slug" may have been the fault of the
person who handled him after he reached his new
home, or, as intimated, the "vet." who passed on him
may have "put one over" on the purchaser. It is
not every trotting bred horse that can trot, but at the
same time many driving horses are ruined by the
persons who train and drive them. In the purchase
of breeding males of any breed of animals there are
doubtless more disappointments than anything else,
and our South American correspondent should not
be discouraged because his first attempt was a fail-
ure. As the cost of transportation of this horse
from the United States to British Guiana was about
equal to the price paid for him here, the stallion was
probably a very ordinary animal, as really high
class young stallions that are standard bred cost at
least \$600 here. There are many standard bred
young stallions in California that can be bought for
a reasonable sum, that will be sold on a guarantee
that if they arrive safely in British Guiana no donkey
cart can "hang on the tail of the buggy" they are
hitched to, and we would like to see a few of them

exported to that country as they would doubtless
lead to further importations from here by the breed-
ers of British Guiana.

THE PARENT ASSOCIATIONS have a strict rule
to the effect that parties making entries to races
shall give the color, sex and breeding of their horses.
This is a good rule and should be strictly enforced.
Another clause should be added to it, however, com-
pelling associations to print the color, sex and pedi-
gree of every horse on its official program that is
sold or distributed at the track during the meeting.
Many associations get our programs with little or no
information except the names of the horses and
that of the party making the entry. What is sauce
for the goose should be sauce for the gander in this
instance.

THE PREMIUM LIST of the 57th annual Califor-
nia State Fair has been issued, and every person who
expects or desires to exhibit livestock or anything
else of the thousands of things for which premiums
are offered should secure a copy of this book. It
contains a list of the prizes that will be awarded
in every department and much valuable information
in regard to the manner of making entries and pre-
paring and placing exhibits. By dropping a postal
card containing your name and address to Secretary
J. A. Filcher, Sacramento, a copy of this premium
list will be sent you.

GUISSEPPI ROSSI, of Bossano, Vineto, Italy, was
killed at the track at Trieste, Austria, last month.
His death was the result of a collision while racing
and was almost instantaneous, as he suffered a
broken shoulder, fractured skull and other injuries.
Rossi has for years been a patron of the sport and
one of the first of his countrymen to secure Ameri-
can trotters. Among the many of international rep-
utations now at his farm are Onward Silver 2:05¼,
Contralto (4) 2:10, the one time champion of Eu-
rope, and Virginia Jay 2:14¼.

ANSWERS TO CORRESPONDENTS.

William Rehmke, Woodland—Lady Mowry 2:09¼
is by McKinney 2:11¼, dam Electress Wilkes 2:28½
by Nutwood Wilkes 2:16½, second dam Electress
2:27¼ by Elector 2:170, son of Electioneer 125, third
dam Sugar Plum (thoroughbred) dam of Miss Lottie
2:23½, by Lodi, fourth dam Sweetwater by Volsican,
fifth dam Lady Letty by Argyle, sixth dam by Duke
of Bedford, etc.

Ed. A. Smith, the well known live stock auctioneer
of Ocean Park, Los Angeles county, has just returned
from Utah where he has been for the past three
months helping Mr. Ed. Stuart to dispose of about 22
head of trotters, pacers and thoroughbreds. Among
the horses sold were Boton de Oro 2:11¼ by Zolock-
Belle Pointer by Sky Pointer, Eagletta 2:11½ by
Ketchum-Lady Mc. by McKinney, Bessie Direct by
Rey Direct-Eagletta 2:11½. Birdie Vela by Alta Vela-
Zorilla, Lady Orange Blossom by Petigru-Belle of Ar-
cadia 2:16, and Bessie Orange Blossom by Zombro-
Belle of Arcadia. Among the thoroughbreds were
Timothy Wen, Ila, Lizzella, and five two-year-olds
from Lucky Baldwin's ranch. This makes the fifth
car load of registered thoroughbred and standard
bred trotters that Mr. Stuart has disposed of in the
State of Utah within the last year. As Utah is well
supplied with a lot of good standard bred stallions,
also many good young registered thoroughbred stallions,
there should be considerable high class fast
young stock raised there in the future.

Geo. E. Erlin, of the Dexter Prince Stables, has
lost the good mare Princess Christina, she having
died last week from something like apoplexy. Prin-
cess Christina was by Dexter Prince and was bred
at Aptos Stock Farm. After being sold at one of
the farm's auctions in this city some years ago she
did duty in a business buggy for some time and
finally fell into the hands of Mose Hart of this city
who trained her awhile and then matineed her. She
won several races and then set the trotting record
at the stadium in Golden Gate Park at 2:13, where
it remained for several months until it was equalled
by Charley T. 2:10½, June 11th this year, and re-
duced a quarter of a second by Reina Directum the
same day. Princess Christina fell on the track one
day a few weeks ago while being worked out, and
Friday of last week, while in her stall fell again and
expired. The veterinarian states that while no au-
topsy was held on the mare she evidently suffered
from something akin to apoplexy.

It is said that a match race between A. Laundry
2:18 and some to be named later horse, has been
arranged to take place July 4th at Readville. The
race is the outcome of a wager of \$1000 to \$500 by
Ed Bither that his horse could beat any trotter now
in training at Readville. Henry Titer took up the
defi and it is thought his candidate will be Bronson
2:13¼.

COST OF RUNNING AN AUTOMOBILE.

Here is some automobile experience based on
absolute figures. This information comes from one
of the district managers of the Pacific Gas and
Electric Company. It gives a very good idea of what
it really costs to have a machine.

This is an exact record of where the money went
in keeping up a twenty-horse-power machine for a
period of exactly one year following its purchase new,
Number of miles traveled—12,543.

Tire expense.....	\$300.12
Gasoline.....	135.75
Oil.....	35.05
Repairs and sundry expenses.....	326.66

Total cost for year.....\$797.58

Average expense a mile—6.35 cents.

Monthly average—1045 miles for \$66.47.

Daily average—34 1-3 miles for \$2.20.

These figures merely cover operation costs. They
do not include loss on the money invested in the
machine or the proportion of that cost to be charged
as depreciation in its value, the lifetime of an au-
tomobile being anywhere from one to a dozen years,
according to the care with which it is handled and
kept in condition. Nor do these figures include
the wages of a chauffeur at anywhere from \$75 to
\$125 a month, the assumption being that a man runs
his own machine.

Now as to lifetime and depreciation. A conserva-
tive general estimate is this: A machine lasts an
average of five years. During those five years it
depreciates the first year say 10 per cent, of its
cost, the second year 10 per cent, the third year 20
per cent, the fourth year 20 per cent, and the fifth
year 40 per cent. Among big business concerns it
is the practice to charge automobile depreciation
off at the rate of 30 per cent a year, allowing the
average lifetime of usefulness and up-to-dateness
as a little more than three years.

Taking the average cost of a twenty-horse-power
automobile at \$1800, then the interest charged the
first year, at 6 per cent, would be \$108, and the de-
preciation at 10 per cent, \$180, or a loss of \$288 the
first year. The second the loss charge would be the
same—\$288; the third year it would be \$468; the
fourth year the same, or \$468; and the fifth and last
year, \$828.

Without a chauffeur, and assuming the same average
mileage as this machine made in its first year as a
new machine, the real total costs would be some-
thing like this: first year about \$90 a month; second
year about \$90 a month; third year about \$105 a
month; and fifth and last year about \$135 a month.
Then the machine would be used up. But during the
later years the repair cost would probably increase
proportionately, and add an indeterminate amount,
ranging possibly from \$5 to \$25 a month. These fig-
ures suppose the automobile good for a total of a
little more than 60,000 miles, which is going some,
or about 1000 miles a month at an average of about
\$100.50 a month or about 10 cents a mile. Much
depends on the roads, on the man, and on the care
the machine gets.—Pacific Gas and Electric Mag-
azine.

THE VANDERBILT FOUR WON.

One of the most important events in connection
with the International Horse Show in London, the
Marathon race, took place June 11, and the gray
team driven by Alfred G. Vanderbilt was declared
winner in a field of 11 starters.

The prize for the event was the Gold Challenge
Cup offered last year by Joseph Widener of Philadel-
phia, to be won twice by the same exhibitor before
becoming his property, and as Mr. Vanderbilt won
it last year he was officially presented with the hand-
some trophy, which now becomes his permanent
property. The winners were the same gray team
which he drove in the race last year.

The race was from Hampton Court to the Olympia,
a distance of 10½ miles, which the winning team
covered in 41 minutes. The teams were started at
an interval of two minutes, Mr. Vanderbilt being first
to start and finish. Judge William H. Moore drove
one of his two entries and was the second starter,
but he finished third in 51 minutes, while E. H.
Brown, an English entrant, was third to start and
second to arrive.

Each contending coach had to carry a minimum of
seven passengers, and among those on the winning
coach were James T. Hyde, acting secretary of the
American National Horse Show; Webb Ware and F.
Vivian Gooch, who for years was the saddle horse
judge at the New York show.

Among the two Americans on Judge Moore's coach
were E. T. Stotesbury of Philadelphia and Joseph
E. G. Ryan, the press agent of the National Horse
Show of New York, and the Live Stock Show of
Chicago.

Although a time limit was put as a condition for
the race, yet the award was made at the rate of 40
per cent for horses, 30 per cent for condition on ar-
rival, and 30 per cent for appointments.

Mr. Vanderbilt's team of grays are strictly trot-
ting-bred horses that a leading New York firm of
horse dealers picked up for him in the West. After
winning the same race in London last year they were
brought over and won the Marathon race at the
National Horse Show from Arrowhead Inn to the
Madison Square Garden.

Drink Jackson's Napa Soda.

OUR LOS ANGELES LETTER.

Los Angeles, June 28, 1910.

Most of the trainers at Arcadia gave their horses a let up last week and contented themselves with comparatively slow miles, with hrushes of halves and quarters. The track continues in good shape but the horsemen are anxiously looking forward to the time when they can return to their old stamping ground at Agricultural Park. Several of them, like Walter Mahen and W. G. Durfee, have their horses in training out at Arcadia and some colts and other things at their barns in the neighborhood of Agricultural Park and that necessitates an eighteen-mile trip each morning to Santa Anita and back again at noon, which is pretty tiresome after working out five or six horses, then have to put in the rest of the day with the balance of their charges. Others have to make the round trip each day, for only a few have taken up quarters in the vicinity of the new track.

Joseph H. Williams found it tiresome and last week moved his horses back to his own barn in West Forty-first street. This he was enabled to do as he is not going to campaign anything this season. Before leaving Arcadia he worked his Limonero stallion Arme a mile in 2:14½, last quarter in 32 seconds; the three-year-old pacing filly by Billy Dunlap stepped a mile in 2:25, last half in 1:07½; the handsome bay colt "Jimmie Gatoomb" is coming to his speed fast and looks as if he would do credit to his sire, he worked a half in 1:13, last quarter in 35 seconds. Geo. Prince's bay mare by Strathway, dam by Zombro, went a mile in 2:31 and repeated in 2:30½.

Wm. G. Durfee has decided to sell a number of his horses, including colts, brood mares, race prospects and horses in training. He has so many that he can not do them all justice and he wishes to devote what time he has to his Carlockin and Copa de Oro youngsters and to the few he may campaign this year. The quarters he has heretofore been occupying are no longer available and he does not care to turn out so valuable a hunch on some distant ranch where they would not be constantly under his eye, so twenty or more are on the market, some of which are advertised in this number of the "Breeder and Sportsman."

Though the surveys for the new track are all made and the track builder, Mr. Allen, has been communicated with, the work will not be finished in time to give a race meeting here this season. The California Breeders' association has therefore made arrangements with the management of the State Agricultural Association to race their stakes off at the State Fair at Sacramento, to be held September 3d to 10th. Of course a meeting could have been given at San Bernardino or Arcadia, and the Association would have made some money, but it was realized that it would put the horsemen to a great deal of trouble and expense to ship a colt or two way down here for all of the stables will be north at that time, for the sake of two or three days' racing and the Association knowing they are dependent upon the horsemen of the state for entries in the future when our racing plant will be the finest in the state if not in the whole country, and hence always anxious to accommodate and cater to the interests of the nominators in their stakes in every way possible, thought they would rather forego the gate receipts than work a hardship on their patrons.

The stakes to be decided at the State Fair are the California Breeders' Stake for foals of 1907, with \$400 added; trotters to receive 60 per cent and pacers 40 per cent. The starting payment of \$50 will be due August 4, 1910.

The Canfield stake for foals of 1908 with \$400 added; trotters to receive 60 per cent and pacers 40 per cent. The starting payment of \$25 will be due on August 4, 1910.

The Canfield-Clark Stake No. 1, for foals of 1908; purse \$1000, for trotters only. The starting payment of \$25 will be due on August 25, 1910, ten days before the meeting opens.

In case a two-year-old trotter is entered in both the Canfield Stake and the Canfield-Clark Stake No. 1, the secretary of the Breeders' Association has requested Mr. Filcher, the secretary of the State Fair, to program one of the two-year-old stakes on the first day, September 3d, and the other on the last day, September 10th, so that they may fill both engagements without injury to them.

There are from fourteen to eighteen entries still due in each of these stakes, so good fields are pretty well assured in each race and all the best youngsters on the coast are among the number. May the best one win.

That Will Durfee thinks pretty well of Copa de Oro is evidenced by his getting a \$60 suit of clothes with Robert A. Smith of Sweet Marie fame, that Mrs. Bonfilio's hay stallion would get a lower record this year than the little bay whirlwind Minor Heir. To win the bet Durfee will have to ride close to 1:59 if not better, that is, judging from the way the son of Heir-at-Law acted at Phoenix and here last year. To complete his winter wardrobe Durfee is also willing to gamble an overcoat (if Jack Curry were alive and took the bet it would have to be a white hox coat) that Carlockin will take a faster record than any other trotting stallion this season. Though he has made no plans for the season as yet, it looks from the above as if he contemplated going after the money somewhere and with a kit of edged tools at that, for he has a number of green "tricks" that look good enough to pay express on to any point.

Carlockin and Copa de Oro are both at Arcadia and

have begun their work after their season in the stud. The former was given a mile in 2:44 and the pacer one in 2:48 and both seemed to enjoy the exercise immensely.

Del Oeste, the two-year-old pacer by Del Coronado, dam Little Agnes, the dam of Jupiter B. 2:12, got his postponed workout the other day and came home from the half in 1:05¼. He goes without the straps and like a piece of machinery. He is one of the good things Durfee has for sale, because he is not sired by Copa de Oro.

Durfee worked Orange Girl, a two-year-old pacer by Del Coronado, a half in 1:07½.

A two-year-old filly by Zolock, out of a full sister to Zulu Belle, has just been taken up and looks as if she had the makings of a good trotter.

McPatchen, a stallion in Durfee's barn, is coming to his speed very fast and stepped a half in 1:05½ the other day with ease. His toes were shortened a little a week or two ago and the improvement was marked.

Clarence Berry came out to see his colts and Durfee, as usual, put him to work immediately, not that Durfee is lazy but only that he likes to see others as energetic as himself. Berry drove his three-year-old pacer Aviator a mile in 2:17 to a cart. I did not catch him through the stretch, but he was going some.

The only ones in Durfee's string that got fast miles last week were Water Cress, one in 2:12¼, and Leonora McKinney, his green pacer that negotiated the mile in 2:10, last half in 1:01, and the last quarter in 28¾. She looks as if she would be a fair candidate for the Chamber of Commerce at Detroit next year, if she is not marked this season.

JAMES.

OCCIDENT STAKE ELIGIBLES.

The Occident Stake for foals of 107, to be trotted this year at the California State Fair, has a big list of eligibles. Payments were made January 1st this year on 21 of the three-year-olds in this stake as follows:

Nukina by Nushagak, J. Elmo Montgomery.
Jean Val Jean and Voyager by Bon Voyage, W. A. Clark, Jr.
Bon Guy by Bon Voyage, W. E. Detels.
Pal by Palite, E. D. Dudley.
Prince Alto by Iran Alto, J. N. Harlan.
Clear Voyage by Bon Voyage, Chas. Whitehead.
Silver Lock by Zolock, J. H. Kelley.
Eileen by Walter Barker, W. S. Mahen.
Le Voyage by Bon Voyage, A. L. Scott.
Merry Widow by Albert Mac, W. C. Parsons.
Babe Verne by Jules Verne, Henry Peters.
Miss Price by Zombro, C. C. Price.
Yu Tu by R. Amhush, N. M. Strong.
Sweet Bow by Bon Voyage and Oilnitz by Zombro, L. H. Todhunter.
Pegasus by Zombro, M. S. Severance.
Strathboule by Stamhoulette, Geo. L. Warlow.
Donasham by Athadon, C. A. Canfield.
Ateka by Athasham, D. L. Bachant.
Expedio by Lijero, E. J. Weldon.

The final payment of \$50 each is due on each of these foals thirty days before the race, which will be the opening event of the State Fair and is down on the program for Monday, September 5th.

OROVILLE MATINEE RACES.

Races were held at the Oroville Speedway half mile track Saturday and Sunday last, during the Water Carnival held at that town. The racing was not very good and there was a poor attendance. Results:

Saturday's Races.

First race, trotting:
Dandy (Fred Cornehl) 1 1
Adam G. (M. Sealey) 4 2
Bahe H. (F. Hefner) 2 4
Maud J. (S. B. Onyett) 3 3

Time—3:09½, 3:02.

Second race, mixed.
Seymour M., pacer (Thos. Stiles) 1 1
Katalina, trotter (W. J. Miller) 2 2

Time—2:22, 2:21.

Third race, pacing:
Chiquita (W. J. Miller) 2 1
Rockaway (J. B. Hall) 1 2

Time—2:17, 2:17.

Fourth race, huggy horses, half-mile dash:
Ramhler (A. King) 1 1
Coon (O. K. Poulkey) 2 2

Time—1:30¾.

Running race, half-mile dash, for purse:
Hope Morgan, Johnson, Marysville 1 1
Tramho, O. A. Martin, Oroville 2 2
Red Steel, Sam Woolever, Oroville 3 3

First race, trotting:
Molly 1 1
Earthquake 2 2
Emaline 3 3
Monte Jr. 4 4

Time—2:35, 2:30.

Second race, trotting, dash:
Bahe H. 1 1
Prince 2 2

Time—2:30.

Third race, trotting:
Coon 1 1
Adam G. 2 2

Time—3:02, 3:07.

CALIFORNIA HORSES IN NEBRASKA.

Several Start at Columbus Meeting But None Get First Money.

The second meeting on the Nebraska circuit opened at Columbus June 21st and lasted three days. The weather was very windy and dust flew in clouds during the entire meeting and the half-mile track was several seconds slow. On the opening day San Juan, the son of Nutwood Wilkes, owned by Mr. Leadbetter of Napa, and driven by Charles De Ryder, won the first heat of the 2:30 class trot and earned second money, the race going to Tommy Horn. De Ryder also started Baldy, Col. J. C. Kirkpatrick's hopped pacer, in the 2:18 class pace, but was outside the money.

On the second day there was a California horse in nearly every race. De Ryder started E. A. Gammon's mare Cleo Dillon, winner of a race the week before at Beatrice, in the 2:14 trot. She won the first heat and got third money. In the next race John Hogan's handsome stallion Diamond Mac by Kinney Lou, got two heats and second money, fourth money going to the Los Angeles horse Rancho del Paso by Bay Bird, driven by Hewitt, the man that trained and marked Inferlotta 2:04¾. In the 2:14 pace the pacer Diahull started but got no money.

The third day two California horses, Zolita by Zolock and Baron Bowles by Baron Wilkes, Jr., started in the 2:24 pace, but neither got any part of the purse. The track was said to be six or seven seconds slow owing to the wind and dust. Results:

June 21.—Trotting, 2:30 class; \$400:
Tommy Horn, h.g. by Athol Wilkes (Perry) 2 1 1 1
San Juan, h. g. by Nutwood Wilkes (De Ryder) 1 5 5 5
Dandy Wood 6 2 3 2
Miss Wyman 8 3 2 7
Wat Lahurn 7 6 6 3
Checkheart 3 7 4 4
Judge Fulthingham 4 4 6 4

Time—2:23½, 2:21½, 2:21½, 2:22¼.
Pacing, 2:18 class; \$400:
Young Adella, h. m. by Seven Plumes (Friend) 5 1 1 1
Fox S. b. g. by Medium Wood 1 6 7 5
Easter Lily 3 2 2 5
Asa Danforth 2 3 4 4
Neosha Maid 4 8 3 2
Obid 5 4 6 7
Baldy 7 7 5 6
Sarah Horn ds

Time—2:17¼, 2:17¼, 2:19½, 2:21¼.
June 22.—Trotting, 2:12 class; purse, \$400:
Check Hook, s. s., by Contract (Pyle) 2 2 4 2 1
Fearless, h. m., by Norval Chief (Brown) 3 1 6 3 2
Cleo Dillon, b. m., by Sidney Dillon (De Ryder) 1 3 2 4 5
Bedelia, br. m., by The Envoy (Cooper) 7 4 3 1 3
Dewey, s. g., by Superior (Lyons) 5 6 1 7 4
King Lorin, hr. h., by Norval King (Thomas) 6 5 5 6 6
Lulu Williams, hr. m., by Jack Law (Owen) 4 7 7 5 dr

Time—2:19¾, 2:20, 2:20¼, 2:20, 2:20.
Trotting, 2:20 class; purse \$400:
Annie Russell, h. m., by Alteros (Brown) 1 1 2 3 3
Diamond Mac, h. s., by Kinney Lou (De Ryder) 3 4 3 1 1
The Judge, hr. g., by unknown (Monney) 2 2 1 2 3
Rancho Del Paso, h. g., by Bay Bird (Hewitt) 4 3 4 3 4
Nathelle, blk. m., by Louis Wilkes (Carlick) dr

Time—2:21¾, 2:20, 2:24, 2:21¼, 2:21¼.
Pacing, 2:14 class; purse \$400:
Harry Gray, g. s., by Gray Harry (Friend) 1 1 1 1
Amerike, m. m., unknown 2 2 3
Harriska, h. h., by Carl K. 6 2 3
Captain Dawson, h. h. (Vroman) 3 6 4
Nettie Ohso 4 4 ds
Diahull 5 5 ds

Time—2:19¾, 2:20½, 2:20.
Pacing, 2:24 class; purse \$400:
Loucy One, h. m., by Allercyone (Brown) 1 1 1
Betsy Hal, h. m. (Arle Frost) 2 2 4
Peter Hal, h. h., by Blue Hal (Hand) 3 3 3
Moretta, hr. m., by The Envoy (Cooper) 4 5 6
Zolita, blk. m., by Zolock (Hewitt) 5 4 2
Togo, h. g., unknown (Friend) 6 6 7
Baron Bowles, h. s., by Baron Wilkes Jr., (H. Smith) 7 7 5
Bessie Gentry, b. m., by John R. Gentry (Gannon) ds

Time—2:18¾, 2:18, 2:20.
Trotting, 2:18 class; purse \$400:
L. S. Crum, ch. g., by Sprague (Brown) 1 1 1
Mentolatun, blk. m., by Synboleer (Hartman) 3 2 2
Tom Smith, br. g., by Conrad (Smith) 2 3 4
Belle Tolus, h. m., by Pactolus (Thomas) 4 4 3
Homer F., blk. s., by Falmont (Noe) ds
Time—2:21, 2:20, 2:22.
Pacing, 2:09 class; purse \$400:
Major Ganz, h. g., unknown (Vroman) 1 4 1
Robert Baron, h. g., by Duplex (Cooper) 4 2 1 4
Don, ch. g., by Aldewood (Brown) 2 3 3 2
Billy Barleycorn, ch. g., by Airloom (Owen) 3 4 2 3

Time—2:15, 2:15, 2:16, 2:19.
Timekeeper, a three-year-old wiggler, by Ozono, stepped a quarter in 30¾ seconds at Dover last week for Walter Cox.

FRESNO COLTS ARE TROTTING FAST.

The leading topic for discussion among California horsemen at the present time is the Pacific Breeders' Futurity for three-year-old trotters which will be decided at the meeting to be held at San Jose, August 10th to 13th inclusive. Among the likely starters in this event are a couple of colts foaled in Fresno county that are liable to be close to the winner. Fresno has done very well in the past contests for this valuable stake. Athasham 2:09½ by Athadon, now owned by M. D. L. Bachant, won fourth money in the Breeders' Futurity when a two-year-old, and the next year earned second money in the three-year-old division when it was won by North Star in 2:13½, 2:13½ and 2:16, the fastest Pacific Breeders' Futurity ever trotted. Athasham was bred and was owned at that time by Mr. Geo. L. Warlow, a leading attorney of Fresno, whose principal recreation in a very busy life, is breeding trotting stock and taking a week or two off in the summer to see his colts race in the stakes. In 1906 Mr. Warlow sent a good colt to the races in Nogi, a grandson of Athadon. Nogi got second money in the trotting division of the stake for two-year-olds that year, and the following season Nogi won the Breeders' Futurity, the Occident and the Stanford stakes, each one in straight heats, the fastest of which was in 2:17½. Nogi's winnings amounted to about \$6000 that year. The year Nogi was a three-year-old Fresno county turned out another stake winner in the two-year-old filly Katalina by Tom Smith 2:13½. This filly was bred and was owned at the time by Mr. J. W. Zibbell of Fresno. As a three-year-old Katalina only won fourth money in the Breeders' Futurity, but Katalina won the Stanford stake and was second to Cleo Dillon 2:13½ in the Occident Stake.

Fresno county is expected to show well again this year, and Mr. Warlow predicts the winner of the Pacific Breeders' Futurity at San Jose will lower the stake record of 2:13½. Mr. Warlow says there are several three-year-olds out this year that can beat this time from reports he has heard. Donasham, bred by Mr. Warlow, but now owned by C. A. Canfield of Los Angeles, trotted the Fresno track in 2:15 two weeks ago, and on June 24th Schuyler Walton worked Mr. Warlow's colt Strathboule a mile in 2:14½, and Walton reported the colt had speed enough to have stepped the mile in 2:13 or better. Donasham is a full brother to Athasham 2:09½, Strathboule is by Stamboulette 2:10¼ out of Strathalie that is by Strathway 2:19 out of Athalie, the dam of Athadon.

WILL BE DECIDED AT SACRAMENTO.

The California Breeders' Stake for foals of 1907, the Canfield Stake for foals of 1908, and the Canfield-Clark Stake for foals of 1908, all of which are under the auspices of the California Breeders Association of Los Angeles, will be decided at Sacramento this year during the State Fair. The tearing up of the track and fair grounds at Los Angeles preparatory to the construction of a new track and modern exhibition grounds, necessitated these stakes being held at some other track, and a letter received this week from Secretary W. L. James of the Los Angeles Association conveys the information that it has decided to accept the offer of the California State Board of Agriculture to hold the races at Sacramento during the State Fair in September.

The California Breeders' Stake is for foals of 1907, now three years old, and has two divisions, a trotting and a pacing event.

The Canfield Stake is for two-year-olds, foals of 1908, and is also in two divisions, one for trotters, the other for pacers.

The Clark-Canfield Stake is for two-year-old trotters alone.

This will make a total of five colt races to be added to the Sacramento program this year and will make it the greatest program of colt stakes ever held at one meeting in California, as the Occident and Stanford stakes are also to be decided that week.

FAST WORK AT WOODLAND.

Last week Dorothy Ansel, Det Bigelow's two-year-old filly by Prince Ansel 2:20, dam Lucy B. 2:17½ by Alex Button, worked a mile to cart in 2:22, last three-quarters in 1:43¼, and a mile to sulky in 2:30, with the last half in 1:05. This is stepping some for a two-year-old.

H. Hogoboom worked Queen Alto a mile in 2:16¼, with the last half in 1:05¼, and a two-year-old by Palo King a mile in 2:24½.

Chas. Spencer worked the trotter Prince Lot in 2:14½, half in 1:04½; Anjella in 2:19¼, half in 1:06¼, Laura Rodgers (2) in 2:27, half in 1:07; Frances C. (3) in 2:24, half in 1:07½; Ima Dudley (3) in 2:31, half in 1:11½ with just two months' training; Josie Ansel (4) in 2:31, half in 1:13 also with but two months' training; and Ansell a quarter in 34¾ seconds. These are all by Prince Ansel. He also worked the trotting mare Nada by Nushagak a mile in 2:15¼, half in 1:05.

Mil'ard Sanders likes Baron Todd, the three-year-old colt owned by Wm. G. Snell of New Bedford, and last week worked him in 2:16½ to cart, all quarters being about in the same notch. They have had considerable wet weather at Indianapolis, so that the performance of the colt is very good considering that he was wintered north.

HORSE AND MOTOR TRANSPORTATION.

A fair idea of the comparative merits of horses and motor wagons in city work has been gained as a result of an extended investigation, systematically conducted in Boston, New York and other cities by the Boston Work Horse Parade Association. Many dealers in commercial cars and automobiles were interviewed and particular attention was devoted to finding out the real feeling of those who were using such cars, or who had already tried them. The truth was sought without regard to the results. The conclusion reached is that the motor cannot compete with the horse in the short-haul delivery work and trucking of the city, but in the long-distance service of suburban and outlying delivery the machines are more efficient and economical than horses can ever be.

An endless amount of trouble has been continuously experienced with motor machinery. It is complicated and is subjected to tremendous strain in starting and stopping and even in continuous running over rough pavements. Because of these things many authorities think that machinery has about reached the limit of efficiency in this direction. Progress is sure to follow and no one wants to go on record as setting the limits or the extent of the use of motors for commercial purposes, but the obstacles in the way of a general motorization of traffic seem insurmountable, and economy is leading many firms to discard their auto-trucks for horses and wagons.

Even the men who are putting out the cars are not agreed as to how far they can displace horses. Out of the many that were talked with, only a few assert that they can completely eliminate the horse in commercial delivery. Even if their hope is ever realized, it is evident that years must elapse before such a tremendous readjustment of business may be made as to bring the motor truck into use on a large scale. "Tell people to raise horses," said one dealer. "They will always be needed."

It was found that a good machine for doing the ordinary delivery work of an average horse costs \$1000 and upward. Some of these wear well but many go to pieces very rapidly. The heavy trucks may cost \$3000 and more; and a man of experience who has watched them carefully puts their average business life at about three years. The high first cost and heavy loss in depreciation must restrict the wide use of these machines. Still it is true that a well-built and well-handled motor wagon is able to do as much in long-distance work as several horse outfits. But in work with frequent stops, even where the load is light, a man with a horse can accomplish much more than a man with a motor outfit. A good horse helps his driver in many ways and starts and stops at the word even when the driver is not within reach.

In reliability the horse has the advantage. Motors are not affected by heat as many horses are, but they are unreliable in deep snow and such service ages them rapidly. One firm declares that it will store its gasoline cars another winter if the snow is so bad as it was last season. Electrics are even less dependable than gasoline cars in soft going of any description. It was found that the average horse is far more dependable than the average car and that drivers are easier to get than chauffeurs and command less pay. It is ordinarily easy to replace a disabled horse, but repairs for machines are often long-delayed and a defective casting, for instance, may tie up a car for weeks.

Risk of accidents is much greater with machines than with horses. One New York taxicab company has damage suits pending against it in the state supreme court for over a million dollars, besides suits in the lower courts. A horse usually does all it can to prevent an accident, but a machine is apt to run-a-muck of its own account. While good drivers of horses are none too plentiful, an indifferent driver has far less opportunities of doing serious damage than a careless chauffeur. No cars are fool-proof and emergencies with any of them call for special mechanical skill. The insurance against damage done by horses is about one-tenth of the premium which must be paid in the case of a motor car.—Breeders' Gazette.

WILL RACE MONDAY AT KENTFIELD.

The half-mile track at the stadium at Kentfield, Marin county, will be the scene of some good racing on Monday next, July 4th. Many of the fastest roadsters in Marin county will start. The program:

First race, half-mile—C. W. Rice enters Billy B.; Dr. J. A. Ryberg, Bird Catcher; A. California, Black Wilkes; Frank Pieriera, Queen Direct.

Second race, half mile—George McDermott enters Lou Dillon; C. M. Jones, Rosedale; Henry Martens, Rafael Wilkes; Frank Pieriera, Little Sid.

Third race, half mile—John E. Rice enters Skidoo; Oscar Emerald, Don.

Fourth race, half mile—B. W. Thompson enters Betty; F. P. Grady, Lady.

Chicken class, half mile—J. V. B. Cheda enters Big Dick; C. M. Jones, Dan B.; C. W. Rice, Mary Ouch; George McDermott, Black Dick; Frank Pieriera, Soup Bone.

Gallopers, half mile dash, free-for-all—Elmer Murray enters Larkspur Kid; Frank Pieriera, Sadie; W. J. Nolan, Little Ross.

Walking race for saddle horses—Henry Lucas enters Sand; Charles Olsen, Bob.

HOW HEDGEWOOD BOY HAS BEEN MADE INTO A GOOD GAITED PACER.

Minneapolis, Minn., June 18.—Hedgewood Boy 2:02¼, going good-gaited, will be as hard to beat as any horse now in training. This statement is acknowledged to be true by all those who have had anything to do with or have watched the performances of the greatest son of Chitwood.

It was proven a year ago last fall when all of the fastest pacers found Hedgewood Boy a most difficult proposition. At that time the great stallion was going smoothly and experts were predicting great things for him as a race horse, and they contended that he would soon join the two-minute brigade. These predicaments did not come true in 1909, as at no time did Hedgewood Boy show the class of the year before, and he seemed to be retrograding, so that by the end of the season the other fast pacers were able to defeat him easily. He went roughly, cross-fired, and seemed to have lost his ability to pace with anything like the stride that is necessary for two-minute miles.

M. W. Savage was aware of these facts when he took possession of Hedgewood Boy this spring. That did not bother him, because he—like many others of the best horsemen in the country—has unusual confidence in the ability of the International Farm's farrier, R. E. Nash, who is widely known as one of the most expert shoers of world-champion horses. This confidence has not been misplaced. Since Hedgewood Boy was received on the farm, Mr. Nash has made a careful and scientific study of his peculiar gait, and what he has learned this spring, together with what he already knew of the horse, has been applied and has brought results.

Hedgewood Boy is today training sound and is pacing absolutely smooth, without a sign of a hitch. The rolling of last season has entirely disappeared. Unless some new and unforeseen complication arises, or an accident occurs, Hedgewood Boy will be ready to go to the races in better condition than ever before in his life, in which event the many admirers of the great stallion insist that he will not need to take the dust from George Gano, Lady Maud C., or even Minor Heir.

Mr. Nash naturally feels very much pleased with the results of his work, and a few days ago talked freely about it to the writer. In substance, he said: "Hedgewood Boy is one of the most peculiarly gaited horses I ever had to deal with. I had a chance to study him a year ago last summer when I shod him several times for Al Sweet. As a result of this shoeing, I think the horse went better gaited than ever before in his life. At any rate, he made a better showing than he has before or since."

"This spring I have spent a good deal of time studying him. His principal trouble is that the cross-fires so badly that every once in a while he pulls his left front with his right hind shoe. In order to correct this, I have modeled and made a shoe that in some respects is different from any that I have ever used. For so big a horse, Hedgewood Boy needs very little weight. I use six and one-half ounces in front and four and one-half behind. I have made a special swedge with which I make his hind shoes. This checks the sideward movement of his foot before it leaves the ground and has effectually stopped his cross-firing."

"I have made the inside heel somewhat shorter than the outside and so rounded the shoe that even if he does get over and strike he cannot pull his front shoe. The shoe is rounded and filed out at the nail holes to make it light enough. I feel satisfied that, shod in this way, Hedgewood Boy will not be found going rough. I shall continue to study the horse, however, and if I see anything later on that will better his way of going I shall of course try it."

If the International Farm's farrier has solved the problem of making Hedgewood Boy good gaited, and it seems that he has, he is certainly entitled to a large amount of credit and will get it from horsemen all over the country. People in various parts of the United States will have a chance of judging as to the value of Mr. Nash's work in this particular when Hedgewood Boy is seen in his races with George Gano, Lady Maud C. and Minor Heir, and in his team races and exhibitions hitched with Lady Maud C. against Minor Heir and George Gano.

FAST SPEEDWAYS.

What Speedway can beat Chamounix, in Fairmont Park, for speed? Three different trotters on Carnival day went half-mile heats in 1:00½, 1:01½, 1:01 and three pacers in 1:00, 1:00½, 1:00.—Philadelphia Record.

We hate to do it neighbor, but we are too proud of our own speedway to let you get away with this. The honor belongs to the Charles River Speedway for being the champion piece of dirt. On June 30, 1908, Little Sidney started the ball a-rolling by going two halves in 1:01, 1:01½; then his stable-mate Claymoss bit off a chunk from the record by going in :59¾ and 1:00½. These two were pacers. The trotter Dodie K. capped the climax by stepping a dead heat in 1:00¼ with Chase, and coming back the next trip in 1:01¼. The average time for the six being 1:00¾, against a shade slower than 1:00½, for Philadelphia.—American Horse Breeder, Boston.

Andy Welch is a pretty good judge of a horse and he predicts that Captain George by Admiral Dewey 2:04½ will "beat them all from Detroit to Lexington."

Drink Jackson's Napa Soda.

NOTES AND NEWS

Mona Wilkes 2:03¾ is to be bred to Constenaro 2:16¾ and then raced.

The Broncho 2:00¾ is going so fast and sound that there is a chance of her reducing her record.

Senator Joseph Bailey, owner of Prodigal 2:16, will give a cup to the winner of the Matron Stakes.

A mare in Bordenham, Tenn., foaled twins last week, one being a mule and the other a horse colt.

Up to the 15th of June there were 24 foals of 1910 at Mr. M. W. Savage's farm, sired by Dan Patch 1:55¾.

Entries closed yesterday for the principal races at the Breeders' meeting, the California State Fair and the North Pacific circuit.

Charley De Ryder will probably race at Terre Haute which opens July 12th. Adam G. and Charley D. are both entered in the 2:06 pace there.

The State Agricultural Society and the Breeders' Association have settled several bills for unpaid entrance recently on a basis of fifty per cent.

Sonoma Girl 2:05¼ and Aileen Wilson 2:02½ are the fastest record holders respectively in the trotting and pacing divisions of the American Derby.

Country Jay has been several heats in 2:10 this spring and seems to be in fine shape. He is at Detroit with the campaigning stable of Mr. Geo. A. Estabrook.

Frank Ruhstaller's Wild Bell, Mr. Heenan's Joe Dick and Mr. Cowell's Kermit will come down from Sacramento to take part in the races at the stadium on July 4th.

Woodland offers a good program of harness races with liberal purses for its August meeting. Entries will close July 15th. See the program in our advertising columns.

Misty Morning 2:21 by Landmark, a son of Volunteer 55, is the dam of Custer, an Austrian bred horse that recently won a race at Trieste over a half mile track in 2:10 2-5 and 2:11¼.

William Higginbottom is having considerable fun with his pacer Der Teufel. This son of Diablo is pacing very fast in his work and should win often in the matinees this summer.

Remember that the conditions of the Pacific Futurity require that the starting payments in the two and three-year-old divisions must be paid ten days before the first day of the meeting.

Grace R. by Demonio, in De Ryder's string, did not show up very well in her race at Beatrice, Nebraska. She was 7-7-5-6-drawn in the 2:18 pace, the heats of which were paced in from 2:16¼ to 2:20.

O. A. Martin has sold the Nutwood Wilkes mare he advertised in this paper two weeks ago to Dr. Bodkin of this city. The Doctor owns a Kinney Lou stallion and will probably mate the mare with him.

According to the Sacramento Bee some of the starters in the Occident and Stanford stakes this year will be protested on the ground that all the payments required by the conditions of the stake were not made on them.

Sterling McKinney and Paderewski both trotted a mile in 2:06¼ for Tommy Murphy at Terre Haute last week. If Sterling McKinney is a good actor for Murphy he will get a mark very close to Sweet Marie's before the season ends.

The San Francisco Driving Club will make a number of entries in the races to be held at Concord track on Sunday next, July 10th. The managers of the Concord track will hang up several hundred dollars in purses for the races that day.

Bert Logan 2:16¼ is to be raced again this year and is said to be in prime condition. He will make his first start at Erie, Pa. Pat Logan, a two-year-old by him, is considered the fastest youngster ever trained at Memphis.

Senator J. W. Bailey, president of the American Association of Trotting Horse Breeders, has notified the managers of the Empire City track that the Matron Stake of this association will be raced at the New York City Grand Circuit meeting.

The new rules of the National and American Trotting Associations are out, and every horseman who expects to race a trotter or pacer should have one; 25 cents in paper and 50 cents in leather. Get them at the office of the "Breeder and Sportsman."

It is announced that several of the get of the once champion yearling trotter Freedom 2:29¾ are in the hands of trainer Samuel Longwell, who is working them on the half-mile track of the Oradell Stock Farm, Oradell, N. J., and that they are showing speed of a high order.

Fred Ward, the popular Los Angeles trainer, will probably be seen on the Pacific Coast circuit this year with a small string of good horses. Ward is always in the money on his campaigns and generally has a string of money winners that have good manners as well as speed.

Lon McDonald will have three gray trotters in his string which will be rather an unusual number to go down the line in one trainer's hands. The trio consists of Bob Douglass 2:06¼, Robbie B. McGregor 2:14½, and Little Trouble, a green prospect, owned by John Robbins of Greensburg, Ind.

Dawn o'Light, or Peaches as she was formerly called, was taken north by her owner Mr. W. J. McBride, of Aberdeen, and is now being trained at Salem by E. S. Train. This mare is by Searchlight and is in as good fix now as she ever was and seems to have more speed. She may be raced this year.

Mr. F. Holmes, the New Zealand trainer, who has been in California the past few weeks looking over the training tracks and the trotters and pacers in training, as well as visiting several of the breeding farms of the State, left for home last Wednesday on the steamer Mariposa.

Every meeting, matinee or regular, should be reported. We cannot have a representative at every meeting, but will gladly print reports sent in by reliable persons. Every secretary in California should see that an official report of every meeting is published in the "Breeder and Sportsman." This is the only way to have the records kept straight.

Mr. Frank J. Kilpatrick and Mr. W. E. D. Stokes, the latter proprietor of the Patchen Wilkes Stock Farm at Lexington, Kentucky, spent last week visiting Mr. Stokes' farm and other leading Kentucky farms. There are at Patchen Wilkes farm many high class broodmares that were selected for Mr. Stokes by Mr. Kilpatrick here in California.

The Wheatley Stock Farm, Napa, Cal., has just received a consignment of eleven fine stallions, nine of them registered Shires, the other two French coach stallions. These horses came direct from Liverpool and came from New York by special car at an expense of \$1000.

Sweet Bow (2) 2:17¾, winner of last year's Pacific Breeders' Futurity, has trotted a mile in 2:17 over the Sacramento track his year. As that track is several seconds slow at this time of year, the horsemen think this showing a particularly good one, especially as John Quinn, her trainer, is not given to letting his horses step their best in work outs.

There will probably be a big field of starters in the three-year-old trotting division of the Pacific Breeders' Futurity this year. The largest field that has ever started in this stake was in 1908 at Chico, when ten three-year-olds started, of which four were distanced the first beat, and another in the third.

Samuel A. Smith, secretary of the Sacramento Driving Club, having resigned, President Thos. Coulter has appointed M. C. Delano, the popular veterinarian and horseman, to fill the unexpired term. Mr. Delano will make a very energetic and competent secretary of this thriving organization.

P. Donnelly with his pacing mare Sister Bess, and R. J. Lathrope with his pacer Marin, both of this city went by steamer to Marshfield, Oregon, this week to take part in the races to be held by the Coos Bay Racing Association on July 1st, 2d, 3d and 4th.

The famous old mare Bush 2:09½, by Alcyone 2:27, now 24 years old, started in a free-for-all matinee race of half-mile heats, on Memorial Day at Newark, N. J., driven by her owner, Geo. Stengel and she made a good showing, being a close second in 1:09½, 1:08½. She has trotted quarters this season in 32 seconds.

Mr. T. M. Hartsock of Selma, California, writes that his handsome stallion Victory by Nearest that he purchased from T. W. Barstow of San Jose, died recently. The horse died very suddenly and the veterinarian called in did not seem to know the cause of death. Victory was proving to be a fine breeder and his colts were extra good lookers.

Over 80 mares have already been bred to Zombro 2:11 at Columbus, Ohio, this year, and more are booked. About thirty record mares are among them, and some of the best known are Early Alice 2:06¼, Amelia W. 2:10, Clourist 2:09¼, Aline 2:11¼, Edna Beard 2:12¼, Sybilla 2:13¼, Amida 2:14¼, and many others. Before he left California Zombro was bred to La Belle (2) 2:16, daughter of Sidney and Amabelle 2:27½, and many more highly bred producing mares.

Dick Wilson, who is training Mrs. Shreve's two-year-old filly Ruby Light by Aerolite 2:11¾ at Portland, stepped her a quarter in 37 seconds last week. This filly is out of Bertha, the dam of Diablo 2:09¼, Don Derby 2:04¼, Derbertha 2:07¼, Owyho 2:07¼, etc., and is good gaited and a nice acting pacer. She will doubtless add still more speed fame to the Bertha family.

Frank E. Alley, proprietor of Bonaday Stock Farm, Roseville, Oregon, owns a three-year-old filly by Bon Voyage out of Mabel Wynn 2:21½, by Zombro, second dam Grace Kaiser, the dam of Coney 2:02, etc., by Kaiser. There are few fillies whose pedigrees will make a better showing than this one when tabulated. This filly recently worked a mile in 2:24½ with the last half in 1:07½.

On account of his continued ill health C. H. Sears, veterinary surgeon, of Bakersfield, would like to dispose of his practice there. He has an established practice and also manages a horseshoeing shop in connection with the business. Dr. Sears owns the handsome stallion Donello by Washington McKinney that has won matinee races in 2:18 and he thinks will trot in 2:10 in good hands, and would like to sell the horse. Correspondence solicited. See advertisement.

The three-year-old colt trotter Bon Guy whose picture appears on the front page this week is owned by W. E. Detels of Pleasanton and is now in training there for his engagements in the Occident, Stanford and Pacific Breeders' Futurity stakes. Bon Guy is by Bon Voyage, dam La Moscovita, dam of Yolanda 2:14¼, by Guy Wilkes 2:15¼, second dam Muscova, dam of two in list, by Belmont 64. He is a rich bay in color and one of the most determined and gamest youngsters in training. He has beaten 2:20 in his work several times this year, and is considered one of the best prospects in California for a stake winner.

Col. C. S. Newman, owner of the Macroose Farm, near Littleton, Colorado, has a good two-year-old trotter in the filly Vesper Rose, sired by his stallion Macroose, dam Vesper Bell, youngest daughter of the great Beautiful Bells. Vesper Bells is by Advertiser, and the sire of Vesper Rose is by McKinney out of Sweet Rose by Electioneer, second dam Rosemont by Piedmont 2:17¼ and third dam Beautiful Bells. This is one of the best bred fillies in the country and she has already been a mile in 2:22 as a two-year-old. She is a trotter and seems to have a lot of stamina, as she has always finished her miles strong and full of trot.

A work horse parade is to be one of the features of Sacramento's celebration this year. The "old horse" class will be open to all horses that have not had less than ten years service, and a handsome cup will be awarded to the winner. Sacramento is to enter a horse in this class, and stands a good chance of carrying off the trophy. Old Jack, now employed in the Street Department hauling a dump cart, has seen twenty-three years' active service. For seventeen years he was in the Fire Department and when he became too old to pull around a fire engine, he was transferred to the Street Department, where he has since worked. He is still regarded as a good horse, although there is a movement on foot among the city employees to place him on a pension and pasture him for the rest of his days, because of his long and faithful service.

The third payment on the six early closing stakes for the Kalamazoo Grand Circuit meeting, July 25 to 29, have been made and the \$5000 Rickman Hotel stake for 2:13 pacers remains intact with the original nineteen entries. Two, Belle Tollus and Robert B. McGregor, have been drawn from the 2:15 trot, twenty-six remaining in the class. The 2:16 pace has lost Hal B. Jr., but still has seventeen left. Shakespeare, Bland S. and Shamrock have been declared out of the 2:06 pace, leaving fourteen eligibles to start. Adele Margrave, Parthenia and Thistle Doune, all from Thistle Doune Farm, Cleveland, have been drawn from the Paper Mills purse, \$10,000, for 2:11 trotters, but there are still twenty-five in the class and a big field for the classic is certain.

Any person who is looking for a highly bred trotting mare or a well bred young horse should go to the Avenue Market, Thirty-fourth street and San Pablo avenue, Oakland, and ask for Mr. Pitts, who has for sale a twelve-year-old mare by Egyptian Prince out of Hattie, the dam of Monterey 2:09¼ and Montana 2:16, also five of her colts. As Egyptian Prince was by Onward and out of the dam of Guy Wilkes, this mare is one of the best bred ones in California or anywhere else. She has a three-months' old colt at foot by Monte McKinney (son of Monterey 2:09¼ and Dot McKinney by McKinney), and is in foal now to that good son of Nutwood Wilkes, Chestnut Tom 2:15. Mr. Pitts also offers the following foals of this mare for sale: A yearling by Monte McKinney, a two-year-old by Chestnut Tom, and a three and four-year-old by Silver Bow Jr. The four-year-old is a filly and is in foal to Chestnut Tom. Anyone who will look up the full breeding of this mare and her foals will find that they carry the blood of some of the best trotting families, and Mr. Pitts will give a bargain price on any one or all of them. See the advertisement in this issue.

PARK AMATEUR RACES.

The attendance was light at the stadium track in Golden Gate Park last Saturday when the Park Amateur Driving Club gave its third matinee of the cup series. The feature of the program was expected to be the free-for-all trot, but after a fine beginning it turned out to be a very disappointing race. There were four starters, Reina Directum, Charley T., Modicum and Dr. O'Brien. The first two named were supposed to be the class of the race and in the first two heats they finished out in front by themselves. In the first heat starter Gay sent them off to a fair start after some delay owing to Dr. O'Brien refusing to come up with the others, and the little mare Modicum immediately took the lead and came down past the stand several lengths in the lead, maintaining her position to the half-mile pole with Reina Directum second and Charley T. third. But Modicum was pacing all this time instead of trotting, and when her owner and driver, H. Boyle, finally tried to shift her to a trot at the half-mile pole she broke and the two blacks soon had the lead. In a drive from there to the wire Charley T. out-trotted Reina Directum and won the heat by three or four lengths in 2:14, good time as there was a strong wind blowing. Dr. O'Brien was so far out of it that he was not started in the second heat. In this heat the Rey Direct mare and the Zombro gelding raced close together to the half mile pole where Ottinger was seen to quit driving his horse and when they had rounded the turn and came into the stretch Charley T.'s muzzle was seen to be covered with blood. He had burst a small blood vessel in his throat or mouth and Ottinger pulled him up. The heat went to Reina Directum. Modicum trotted all the way but was again third. The time was 2:15½, Christenson driving his mare out to make the time as fast as possible. Charley T. was then withdrawn and the race looked like a gift to Reina Directum, but it was not her day. The two mares went away to a good start in the third heat, Reina Directum leading by about two lengths as they came down the stretch the first time. Christenson was driving her for a record, and still had his lead of two lengths at the half when she broke and by the time she regained her feet Modicum was ten lengths in the lead and trotting fast. Reina came very fast again after getting squared away but she was not able to catch the bay mare and Modicum won the heat in 2:16½. The fourth heat Modicum trotted faster than she had in any of the previous ones and beat Reina Directum easily. There have now been three races trotted in the Clark-Hoffman cup contest which is for the horse winning the most races in the free-for-all trots between May 30th and August 15th inclusive. Modicum has won two races and Charley T. one.

A veterinarian examined Charley T. after the race and gave the opinion that the bleeding came from the bursting of a small abscess in the nasal or throat passage and was nothing serious. Mr. Ottinger thinks he will be ready to start in the next matinee.

The first race of the day, the free-for-all, was a walk over for Dioden, H. Boyle's pacer, as Little Dick was scratched. Boyle sent his horse the mile in 2:14.

Little Medium made it straight heats in the class A pace, defeating his field easily, the fastest heat in 2:18¼. This horse is improving every time he is raced, and as he is in good condition, being big and strong, he should be able to pace a pretty fast mile before the amateur season is ended.

In the race for class A trotters Secretary Thompson won in straight heats with Lady Washington, but in the second mile there was a very close finish, Mr. Cerciat bringing California Belle through the home stretch very fast and putting Thompson to a hustle to keep his mare in front. Just before the wire was reached and while California Belle was gaining fast, she broke and Lady Washington had the race won.

There were but two starters in the race for Class B pacers—Dr. Dalziel's roan horse John T. and Dan Hoffman's three-year-old Balhoa by Kinney Lou. Balhoa won the first heat in 2:30¼, but the roan pacer got the next two in faster time.

In the sixth race Mr. F. L. Matthes won very handily with Walter G., trotting the first mile in 2:23¼, and the second three seconds slower. In the first heat of this event Red Velvet was simply jogged around the course, and Mr. Matthes thought she should not be permitted to start in the second heat. The rules of the club do not provide for a distance flag, but there would be much better racing were one used. It is very unfair on horses that race honestly each heat to be compelled when tired to race against horses that have not been extended in earlier heats.

The last race of the day resulted in quite a contest. There were four starters, Ottinger's Lily Dillon getting the first heat in 2:23¼. Capt. Matson won the second heat with Bird Eye in 2:24, and in the next heat was unintentionally fouled by Mr. Borden with Barney Barnato, the latter finishing first in 2:22½ and Bird Eye second. Capt. Matson's claim of foul was allowed and the heat and race awarded to Bird Eye, with Barney Barnato second.

The racing by this club is improving and with a few changes in the club's rules and a little more promptness in getting the races started, the sport will be as good as can be seen anywhere. The results of the day's races follow:

Free-for-all Pace:
Dioden (H. Boyle).....walkover
Time—2:14.

Free-for-all Trot:
Modicum (H. Boyle).....3 3 1 1
Reina Directum (S. Christenson)2 1 2 2
Charley T. (A. Ottinger)1 2 dr
Dr. O'Brien (D. E. Hoffman)4 dr
Time—2:14, 2:15½, 2:16¾, 2:15¼.

Class A Pace:
Little Medium (J. Perry)1 1
Dictatum (D. E. Hoffman)4 2
Roberta (I. L. Borden)2 4
Ringrose (H. M. Ladd)3 3
Time—2:20, 2:18¾.

Class A Trot:
Lady Washington (F. W. Thompson).....1 1
Sunset Belle (H. C. Ahlers)2 3
California Belle (E. Cerciat)4 2
Lady Nell (M. W. Herzog)3 5
Raymond M. (F. L. Matthes)5 4
Time—2:21¾, 2:19½.

Class B Pace:
John T. (I. B. Dalziel)2 1 1
Balboa (D. E. Hoffman)1 2 2
Time—2:30¼, 2:25, 2:25.

Class B Trot:
Walter G. (F. L. Matthes)1 1
Red Velvet (J. W. Smedley)3 2
Lady Irene (A. Ottinger)2 3
Time—2:23¼, 2:26¼.

Class C Trot:
Bird Eye (Capt. W. Matson)4 1 1
Lily Dillon (A. Ottinger)1 3 3
Barney Barnato (I. L. Borden).....2 2 2
Charles II (A. P. Clayburgh)3 4 4

NEW YORK PLAN A FAILURE.

The folly of the indiscriminate mating of horses has been brought into prominent notice again recently by a controversy in the East over the merits of colts from common mares and Thoroughbred stallions. During the last few years many Thoroughbred stallions have been distributed through the East, especially in New York, and farmers have been advised by interested parties to breed their mares to them with the assurance that excellent offspring would result whether intended for home work or for sale. For some reason not explained by anyone interested in the scheme of foisting these racing stallions onto farmer patrons, none of the colts have so far developed into desirable form for any purpose. F. M. Ware, a dealer of wide experience, prominent in eastern circles alike for his interest in equine affairs and for his business acumen, argues that nothing useful should be expected from this cross. Most of the offspring of this breeding that he has seen have been either faulty in underpinning or weedy in type to such a degree as to make them merely market trash. He states that the cross seems to accentuate the mental, physical and moral short-comings of both parents in the offspring and it partakes of the virtues of neither. Additional evidence of the failure of this cross is furnished by D. E. Howatt from an experience of 12 years, from 1870 to 1882, in the attempt to produce something of value from over 600 good cold-blooded mares bred to high-class Thoroughbred stallions. He states that the half-breeds never amounted to anything and that he does not recall a single one that had any real merit. He assumes that the experiment was a failure because the cross was too radical and the sire had no power to transmit qualities not found in the Thoroughbred race horse.—Breeders' Gazette.

A strong foal will be on its feet and trying to nurse in less than an hour from birth. Such a foal needs no help, but a weak one will have to be held up to suck until strong enough to do so without help. In case the mare dies or has no milk the foal may be raised on cow's milk, if the attendant conducts the work patiently and intelligently. Choose the milk of a cow that has recently calved, preferably one, which gives milk low in butter-fat, for mares' milk, while rich in sugar, is poor in fat. Sweeten the milk with sugar and dilute with warm water. Give this at intervals from a scalded nursing bottle with a large rubber nipple. Keep the latter scrupulously clean. As the foal grows, gradually increase the amount of milk fed and lengthen the intervals between meals. In a few days food may be given six times a day and, later, four times daily. The foal will soon learn to drink from a pail, if allowed to suck the attendant's fingers at first. At all times supply pure cold drinking water. Let the foal run out in a lot or grass paddock for exercise. Accustom it to be handled daily. Feed small quantities of nutritious food often, keeping all food vessels clean, and the foal should thrive and develop well.

An eastern writer says Native Belle (2) 2:07¾, has not grown much since last fall, probably half an inch, but she has filled out considerably and looks as fit as a horse can look. As she has no engagements until fall Murphy has been bringing her along very carefully and a mile in 2:30 has been her best to date. For a picture of perfect muscular development Native Belle is a study. She is full of life and spirit and one would never think to look at her that she had accomplished what had been considered impossible up to the commencement of the Lexington meeting, last fall. There is not a puff or a blemish on this marvelous filly and it would seem that she has merely to avoid accidents to become the greatest three-year-old the world has ever seen.

PICKS DUDIE ARCHDALE AND LILLY W.

Henry White Thinks These Trotters the Best Prospects for M. & M.

If now begins to look as if my statement of a week ago that Lilly W., from the Estabrook stable, and Dudie Archdale of the Geers string probably were the best horses in the M. and M. and other early closing purses for slow class trotters was fully justified, says Henry White in the Chicago Tribune.

At all events, that estimate of the nags was hardly cold from the press when, in the course of their training work, those horses did some remarkable work in the trotting line, Dudie Archdale being credited with a mile at Memphis in 2:07¼, while Lilly W. worked in 2:10 at Detroit. On the face of things the Archdale mare's heat at Memphis makes her look the best green trotter in training, and, assuming that both her workout and that of Lilly W. were made with the same relative amount of ease at the finish, Geers is likely to have things pretty much his own way in the long list of fat purses in which the daughter of Archdale already is named.

Two years ago Spanish Queen, starting the season "green" but well engaged, was credited with over \$30,000 at the close of the campaign. It is true she was forced to take a record of 2:07, but Dudie Archdale, with her June mile in 2:07¼, should have fully as much in the speed line as Spanish Queen showed in her initial trip down the grand circuit, and with Geers doing the training it is a sure thing his stake trotter is not going to be called on for all she can do a month before her first start.

Geers does not ask his horses for as fast workouts as are demanded by some other good trainers. For instance, when he won the Chamber of Commerce pace with Walter Direct in 2:05¼, practically jogging at the end, that horse had been no such mile in his work, and the year the same race fell to him with Direct Hal, a pacer that never was beaten, and whose record at the close of that campaign was 2:04¼, the same policy was pursued as the best mile done in the training process by the son of Direct was about 2:08.

Consequently those who are familiar with the Geers system of training are obliged to figure Dudie Archdale a high class trotter, indeed, so far as mere speed is concerned, and as she showed perfect manners two seasons ago when racing as a three-year-old and being asked to go fast for that age, there will be no trouble with her on the score of behavior after the word is given, the only point apparently remaining to be decided being whether or not she has that indefinable quality known as "class," without which no horse can be a notable grand circuit winner. It is the verdict of his fellow horsemen that Geers takes as few bad horses to the races as any man, and from what I have been told concerning Dudie Archdale's work and general deportment at Memphis she seems to be a real stake trotter.

As for Lilly W., her owner, George H. Estabrook of Denver, told me shortly after he bought the mare that she worked a mile before the purchase in 2:06¼, and that the last half of the distance was done in 1:01¼. That was an exceedingly high class trial, and on what the mare has done this year she may be a 2:06 horse before the season ends.

A good deal of reticence as to what the Estabrook horses did before leaving Denver for Detroit, where they are now quartered, has been maintained, but there is no secret about Lilly W.'s work at the Michigan town the other day. She worked five miles there in company with Spanish Queen, a fine trial nag, and the time was 2:39, 2:29, 2:24, 2:10, 2:10. A half mile in 1:03¼ also is charged to her, and right at the end of that hrush she stepped away from Spanish Queen, which means something. Outside watches made this half as fast as 1:02¼, but Gus Macey, who drives Lilly W., says it was not that good.

Ed. F. Geers, the famous trainer and driver of harness horses, is now in his sixtieth year. For more than thirty years he has been actively identified with harness racing in the Grand Circuit, and during a great portion of this long period, says the New York Herald, he has stood at the head of the list of winning drivers at the end of the annual campaign. Subjected constantly to temptation to which a weaker or less honest man would have yielded a thousand times, Geers has maintained a reputation equal to that of Hiram Woodruff or Budd Dohle, and has not once been disciplined or even reprimanded by the judges of a race for anything savoring of fraud.

Geers' style of driving is peculiarly his own. No other man has ever been seen who exercised such control over his horses with so little apparent effort. He sits immovable in the sulky, no matter what the crisis, never raising his hands, spreading his arms, bracing himself by lying back in his seat or in any way showing the employment of any particular physical force. Only on rare occasions does he touch his horse with the whip, and then with mere taps, even in an eyelash finish. For twenty years or more the Tennessee trainer has made a practice of falling back at the start and bringing his horse up with a well-timed drive in the last quarter of the mile to win by a head or a neck in the final strides. By letting the other horses' breast the resistance of the atmosphere and from a wind shield for his own, Geers probably won hundreds of heats before anybody woke up to the fact that he was taking advantage of an unseen but important factor of speed which has lately been shown to mean four or five seconds to the mile.

ROD, GUN AND KENNEL

CONDUCTED BY J. X. DOWITT.

GOVERNMENT HATCHERY WORK.

Uncle Sam as a Good-Fairy to fishermen is a rather unusual conception of the character which personifies the nation. Yet he is—and one who showers his gifts upon the disciples of Isaac Walton not by the piece, or by dozens, or even by hundreds—but by the billions! Did he not play the part of the good fairy each year, the followers of the rod and line and the commercial fishermen all over the country would long since have been compelled to abandon their attacks upon the finny creatures, for just as the forests have been depleted so have the fish in our rivers and streams. But Uncle Sam foresaw such a calamity a number of years ago, and straightway took steps to prevent it.

Each year now he plays the part of the Good Fairy in the conservation of the country's fish supply. For several years past he has propagated over three billions of fish annually and scattered them broadcast over the country in its rivers, streams, ponds and creeks. Right now he is busy in shipping the results of the season's work at the various hatcheries to nearly every state in the Union. He has raised and nurtured hundreds of thousands of young perch, shad, trout, salmon, whitefish and even lobsters by a most interesting system of propagation in hatcheries, and is distributing them with a lavish hand for the benefit of fishermen. His first concern, however, is the supplying of the large rivers of the country with his finny proteges in order that they may increase and multiply and thus be a true element of conservation. After that he is more than willing to send out the young fish to whoever desires them—provided the individual can show the honesty of his intentions and his ability to care for the fish.

The vast amount of fish thus disposed of easily totals over two and one-half billion fish a year. For example, the other year Uncle Sam propagated and distributed at large over the country some eighty million young shad, almost four hundred million whitefish, nearly eleven million bass, almost eight hundred million perch and hundreds of thousands of eggs, fry and "fingerlings" of these and other species.

Among the fishes most extensively cultivated for distribution in private and public ponds, streams, lakes, fishing preserves, etc., are the landlocked salmon, several species of trout, the grayling, the basses, crappie, bream and catfish. The various members of the trout family are artificially hatched from eggs taken from both wild and domesticated stock; the basses, catfish and others are derived from mature fish held in ponds for breeding purposes. The young fish obtained, the process of distribution begins, and the task of filling the "orders" from applicants is no light one. The annual demand from fish enthusiasts all over the country totals nearly ten thousand applications, and they are mostly for game fish.

Fishes are distributed at various stages of development, according to the species, the supply on hand and the facilities for rearing them in the applicant's stream. The bass and sunfish are distributed from the various fish cultural stations and ponds from three weeks after they are hatched until they are several months old. In the last lots sent out each season the bass usually range from 4 to 6 inches in length, and the sunfish from 2 to 4 inches.

The commercial fishes—shad, whitefish, lake trout, pike, perch, cod, etc., hatched in lots of many millions—are distributed as fry. Atlantic salmon, landlocked salmon and various species of trout are reared from 1 to 6 inches in length and then distributed. Gold fish are propagated for ornamental purposes, but not distributed.

Some idea of the vastness of the total distribution of fish may be gained from the fact that they are shipped to every state in the Union and to foreign countries, including Argentina, France, Germany and Switzerland. Two years ago the following were the total shipments of fish and fish eggs, in round numbers: Catfish, over 275,000; shad, 80,000,000 fry and nearly a million eggs; white fish, 384,000,000 and 140,000,000 eggs; salmon, all varieties propagated, over 120,000,000, and 70,000,000 eggs; trout, all species propagated, over 48,000,000, and more than six million eggs; bass, all species propagated, over 1,000,000; bream, or sunfish, 200,000; perch, all varieties propagated, over 900,000,000, and 226,000,000 eggs; cod, over 235,000,000, and 3,000,000 eggs. Besides these there were large shipments in flat-fish, pollock, tautog and lobsters.

To supply this enormous demand the Bureau of Fisheries maintains fish cultural stations in over 25 states in the Union and in Alaska, with some 60-odd main stations and again as many sub-stations. These latter are often but collecting points and are changed yearly. The whole is under the direction of George M. Bowers, commissioner of fisheries, at Washington, D. C. Directly in charge of the fish-cultural and of the work is Robert S. Johnson, an employe of the bureau for many years and but recently advanced to his present position.

The propagation of these fish distributed so broad-

cast over the country is a story in itself, fascinating and wonderful in the extreme to the uninitiated. It is a science to which government experts are devoting their lives. Naturally its salient features only can be presented here. A brief description of the propagation of perch and shad, and trout and salmon will convey a general impression, at least, of the manner in which Uncle Sam obtains his Good-Fairy gifts.

The perch are caught and placed in live-boxes kept in a creek near the station. At regular intervals the boxes are opened and the spawntakers dip out the spawn from the surface of the water with small wire dipper-nets made for that purpose. In these boxes the female perch deposits her spawn, or row, at a suitable time, and the male does likewise with his milt. The coming in contact of the two "fertilizes" the eggs. They float to the surface, are dipped out and carried to the station where they are placed in the glass jars—each holding 150,000 eggs—until hatched out.

A variation of this process is to seize the female perch, when in spawn, expel the spawn from her gently into a tin pan made for the purpose; then seize a buck, or male, perch and expel the milt into the same pan. The pan is then shaken, with a rotary motion, for a moment and water is added. This process is called "dry." The eggs are then ready for the glass jars. As soon as the eggs have been hatched out into young "fry" they are distributed as described above.

The taking and fertilizing of the shad eggs is quite similar, though it is all done by hand, that is—the "dry" process only is used. After a female shad is caught, the spawntaker lifts her with his right hand at her back, near the head, and his left just above the tail. The head is then carried to the left side under the arm and retained by the arm, the tail being bent slightly upward with the left hand. This leaves the right hand free to remove all slime and loose scales by passing over the fish two or three times in quick succession.

The fish is held firmly over a moist pan and, with a moderate downward pressure of the right hand, the eggs are forced to flow freely out into the pan. Two fish are thus stripped into each pan. The fish is then discarded, or it can be marketed, for it has not been injured as food. A male shad is then seized by the back with the left hand, the right holding the under side. Without relaxing pressure at any point the milt is forced out with the thumb and forefinger in a steady stream into the pan. Water is added and the pan given a slow, rotary motion until the milt is thoroughly mixed and the water has a milky appearance.

Then, the eggs, now "fertilized," are taken to the hatchery and placed in the hatching jars where they are more carefully watched and nursed than eggs in an incubator. The eggs are shipped in crates of 20 shallow trays, the frames of the latter being of wood with a wire mesh. Each tray is covered with cheesecloth soaked in water, and, after being filled with eggs, 20 of them are wrapped in a long cotton-goods apron and strapped together. While in transit the crates of trays are sprinkled every hour with water and kept at an even temperature.

The propagation of salmon is a much longer and more complicated process. They are collected from the 20th of May until around the 1st of June in "cars" built especially for that purpose and planned to give the fish the utmost protection. A portion of a stream is selected as an inclosure for the collected salmon and wooded rack barriers are erected across it, nearly a half mile apart, so that the current is retarded slightly, but the salmon confined securely within. The salmon are then taken from the "cars" in nets and liberated in the inclosure.

In October the fish are taken from the barricaded stream and placed in floating wooden pens 12 feet long and 4 feet wide, moored to the bank in front of the spawnhouse. When the females are ripe the spawn taker, wearing waterproof clothing and woolen mittens, seizes them and "strips" them of their eggs in much the same fashion in which shad are stripped.

As soon as the spawn of a single female is taken and deposited in the large tin pan a male is seized and the milt expressed upon the eggs. The pan is then swayed until the milt becomes well distributed over the eggs. The pan is then passed to a washer, who continues shaking them and pours in a small quantity of water. This is done several times and the eggs are placed on shelves to await the process of swelling.

Afterward they are laid on trays and carried to the hatchery, where they are piled up, 10 to 20 deep, in frames so arranged as to allow the passage of water through the "stack" freely. The entire winter is passed in these stacks. After long and careful treatment they are ready for hatching and can be shipped in specially prepared packing cases. The hatching is gradual and great care must be exercised in feeding and nurturing them. Finally the vigorous young salmon appears in full-fledged form and is ready to be released, after reaching a certain age, to shift for itself.

In the propagation of trout, ponds are constructed of wood about 50 feet long by 15 feet wide, with a free water circulation through them. The spawning season varies in different parts of the country, beginning in the middle of November in some places and in Colorado as late as the early part of May. The fish, both male and female, are lifted out of the pond in nets at the proper season and the eggs are stripped and impregnated by the "wet" or "dry" process as described before.

After being stripped the females are placed in one pond and the males in another, for the latter are very pugnacious and often fight each other until exhausted. They lock their jaws together, sink to the bottom of the pond, rest a while on the bottom still holding each other in the grip, and then rise to the surface again to continue the fight. Their teeth are long and not infrequently they bite pieces of skin and flesh from each other.

The fertilized eggs are incubated on trays, which are placed in troughs arranged for the passage of water through them. They are watched carefully as to the temperature and aeration of the water and the dead eggs are picked out. After they have hatched out they are kept in troughs until too large and then placed in rearing ponds. Trout are distributed and shipped as eggs on trays prepared for that purpose, and as fry. In several instances trays of eggs have been shipped to England, Mexico, South America, New Zealand and Japan.

SAN FRANCISCO FLY-CASTING CLUB.

But few members of the club were at the lakeside last Saturday and Sunday, and this attendance was perfunctory for the reason that the dates were appointed for re-entry casting—making up back scores and completing the classification quota for qualifying in the final series of five contests.

As will be seen below, the gentlemen who make good for the class competition are to be reckoned with in the class contest for medals.

Class Re-Entry Contest No. 1. Stow Lake, Saturday, June 18, 1910.

	1	2	a	3	b	4	5
F. H. Reed	99.1	99.4	99.40	99.22	95.3
J. H. Reed	98.9	99.1	99.10	99.55	98.1
T. C. Kierulff	99.8	99.20	99.14
F. J. Cooper	87.3	123.

Class Re-Entry Contest No. 1. Stow Lake, Sunday, June 19, 1910. Wind, southwest. Weather, rainy.
Judges, H. B. Sperry, F. J. Cooper, C. A. Kierulff.
Referee, Austin Sperry, Clerk, E. O. Ritter.

	1	2	a	3	b	4	5
F. H. Reed	98.13	98.28	99	98.44
C. A. Kierulff	92	97.11	96	99.20	97.40	87.5	111
F. J. Cooper	90
A. Sperry	87.5	87.8	62
T. C. Kierulff	96
F. J. Cooper	96

NOTE: Event 1—Distance casting feet. Event 2—Accuracy casting, percentage. Event 3—Delicacy casting: a, accuracy percentage; b, delicacy percentage; c, net percentage. Event 4—Lure casting. Event 5—Long distance lure casting, average. Fractions in Event 2, fifths; in Event 3, sixtieths; in lure casting, tenths.

Monterey Fish and Game Laws.—The Monterey fish and game laws, as adopted by the county supervisors and now in force are the following:

Deer—July 15th to November 1st.
Ducks, Black Sea Brant, Rail, Curlew, Ibis, Plover or other shore birds—October 1st to February 15th.
Doves—July 15th to October 15th.
Valley Quail—October 1st to February 1st.
Wilson Snipe—October 1st to April 1st.
Tree Squirrels—September 1st to January 1st.
Trout—(none less than five inches long) Whitefish—May 1st to November 15th.
Steelhead Trout—(found only in coast streams, none less than five inches long) April 1st to November 15th.
Steelhead Trout (in tide water)—April 1st to February 1st.
Golden Trout—(none less than five inches) June 1st to September 1st.
Salmon—(above tide water, close season extends to November 15th) October 23rd to September 17th.
Striped Bass—(open May and June, hook and line only, closed to net and seine fishing) July 1st to May 1st.
Black Bass—June 1st to January 1st.
Crab—March 1st to November 1st.
Clams and Quahaugs—August 31st to May 1st.

A Tip on Outings.—The joys of outdoor life in the Rocky Mountains are pictured and described in a new booklet issued by the passenger department, Denver & Rio Grande Railroad, Denver, Col., entitled "Camping in the Rockies."

There is a very interesting introduction by Edwin L. Sabin, who writes knowingly about places to go, supplies to be taken, tackle to be used and other valuable suggestions to the man who contemplates an outdoor vacation.

The story is supplemented by some estimates showing the cost of outing tours in the Rocky Mountains, which includes railroad, hotel, carriage and other incidental expenses.

The cover, which is a pleasing effect in colors, is a camping scene in the Rockies.

Since protection of game fishes was enforced at Catalina and the work placed in charge of Assistant Fish Game Warden A. L. Beebe, the rod and reel catches have been increased over 100 per cent. Never in the past five years of the Tuna Club has the winter fishing equalled this last season.

GOSSIP FOR SPORTSMEN.

Two weeks ago, trout fishing at the Truckee river resorts was superlatively excellent. The upper stretches of the river, from the San Francisco Fly Casting Club's bungalow to far below Boca was dotted with scores of jubilant anglers who creeled many limits of fine trout. Last Sunday these grand conditions were shaded by the irrigation officials, the government dam at Lake Tahoe poured a flood of water into the river, raising the stream about two feet and changing the complexion of the water. Average baskets were about 8 or 9 trout in consequence.

Taken all in all fly-fishing on the river this year has recently developed into a sport, not exceeded for many past years. The fact that the sportsmen can leave, for instance, on the Saturday evening train, spend a comfortable night in a Pullman, get off the train at Union Mill station, Truckee, or Reno, in the early morning, fish all day, take a down train at night and arrive in the city early Monday morning makes the trip a most convenient and enjoyable one all round.

Anglers who have been pinning their faith on 12 and 14 hooks recently find that 10 hooks are preferable, particularly for the evening fishing. The experience of some anglers has been that as many trout were lost as were caught on 14 flies. Flies tied on a 12 hook were found better for the up-stream fishing.

The list of killing flies for the Truckee just now is given out as Murdock's Little Truckee, Scotch blue upright, without wings; cow dun, whirling blue dun, English royal coachman, beaverkill and red ant.

Watson's fancy, tinsel body, yellow tail and heavy dark junglecock wing, has proven recently a killing fly. Watt's Truckee, white-winged with a bit of red between and black silk body wound with gold tinsel is a petit moreau that the trout have taken to. In fact, most of the Eastern flies with gold and silver bodies, the former especially, are very effective during the mid-day fishing. They look very much like a spinner.

Both Independence and Webber lakes are in grand fettle for the angler. The season in these Sierra lakes usually opens about June 15th. This year the season is early and good fishing is in vogue at both resorts.

W. C. Murdock, who has not missed a fishing trip to Webber lake in many years, writes to a brother angler in a most enthusiastic vein, saying:

"Webber fishing is now what it was ten years ago. My catch on the 15th was thirteen, on the 16th eighteen trout and on the 17th twenty fine fish, the average weight being nearly one pound. I used the following flies: Coachman, California pattern; professor, red spinner and black spider, No. 12s, in the order named."

The mosquitos have disappeared and there is a daily auto service to meet trains arriving and leaving Truckee. A heavy north wind prevailing early this week put a temporary ban on the fishing.

A report from Independence lake states that "the fishing was never better than this year. The water is alive with nice fish, running about three to the pound."

The upper Sacramento resorts continue to invite anglers' attention through the many opportunities for excellent fly-fishing. Del Cooper found trout fishing near Lemoine most excellent during a two weeks' outing.

On previous trips a preference for peacock bodied flies usually had a strong influence in filling the creel. On his recent trip all of the best and largest trout were taken on gray hackle, yellow bodied flies, and the red ant was also a good killer.

Contrary to a recent report, fishing in the McCloud river has been first class. The story that the salmon are spawning in the river and the trout feeding on salmon roe is disputed by several anglers who have recently enjoyed the sport on the McCloud. The fact that over 200 seines have been used in the Sacramento river below the McCloud since the trout season opened has made a visible decrease this year in the salmon, so much so that it is feared the take of salmon eggs at the hatcheries will be materially reduced.

William Ellery, Harry Blatchley, Ben Parker and G. E. Parsons have recently enjoyed fine trout fishing in the McCloud. George W. Bonney and W. L. Hathaway propose to stay on the river until August 1st at Bonney's mountain cottage.

Among the anglers at Klamath Hot Springs are David Harefield and sons, Al Baker, Jules Levy and George Bass. From the Klamath river and nearby creeks nearly every angler lands trout limits daily.

For an extended trip of two weeks or more the Williamson river and Spring creek, near Pelican bay, on Klamath lake, Ore., seems to be growing in the favor of anglers daily. J. B. Coleman, Joe Harlan and George Uhl propose to spend two or three weeks in that delightful angling resort. Alec Vogelsang, Walter D. Mansfield, M. Osborne and John D. Seibe are also booked for Williamson river.

Salmon creek is within pleasant reaching distance of this city by automobile. Phil B. Bekeart and Ned Bosqui a week ago found the creek running through the Salmon Creek Rod and Gun Club preserve good for two baskets of nice fish from 6 to 8 inches long.

A number of anglers caught baskets of nice trout in Purissima creek recently. Among those at Fred Sarcanders' sportsmen's hostelry were George J. Rodolph, E. G. Rodolph, George Hall, G. Beall, Tom Wright, Joseph Lynch, Louis Lacy and Charles F.

Brandenstein. The last named angler landed fifteen fine fish in about an hour and a half.

A pleasing variety for the outing along the creek banks is the luxuriant abundance of ripe blackberries. One fisherman gathered fifteen quarts of the luscious fruit.

Anglers should by no means overlook the splendid trout fishing available in the pools and riffles of the Merced river in the vicinity of El Portal. W. J. Street upon two recent visits to the Yosemite has enjoyed excellent fishing.

Early this week in coming out from the valley, he stopped over at El Portal and tested trout possibilities, between train times, from 5:30 until 7 a. m. with the pleasing results that 15 nice trout were landed, that many more were struck but were too strenuous for gossamer leaders—he lost three casts, one of which was pre-empted by a 20-inch trout. The river here is too turbulent for ought save a heavy leader. His best killers were a yellow bodied gray hackle and a wasp professor.

The fishing at this resort is said to be getting better daily, the river is clearing and becoming lower and is at an acceptable fly-casting stage.

The south fork of the Merced, some anglers are inclined to believe this water is one of the best trout streams in the State, is almost a virgin trout stream, has been re-stocked time and again and is fairly teeming with trout. Government regulations forbid fishing in the valley, this applies to soldiers guarding the valley, the Indians who were wont to fish for the hotels and civilians. The stream is immune from the angler until 1912.

Recent angling in the Little Yosemite and Emerald pool, both waters just a bit above the prohibited zone, resulted in satisfactory baskets of trout.

At Wawona the south fork of the Merced offers excellent trout fishing just now.

The black bass fishing resorts above Rio Vista still continue to yield enthusiastic returns for the anglers visiting Prospect, Cache, Miners, Duck and other sloughs in the Yolo overflow.

Carlos G. Young, Colonel George C. Edwards and Charles L. Miller composed a recent launch party on Prospect slough. They caught several limits of bass, using "ahbey" flies.

Fred Feudner had the pleasing experience, while trolling for black bass in the Yolo overflow, to hook a forty-pound salmon, which he landed. This big salmon was caught on a No. 4 Wilson spoon.

Striped bass are still in evidence in the waters of the San Pablo flats. The fish run comparatively small in size, however.

At the Petaluma creek railroad bridge a number of small sized striped bass have recently been caught by hand-liners.

A few bass have been taken at Point San Quentin and also at Greenbrae. All during the past week anglers have been catching a few bass in the Tiburon lagoon.

For half a century the seawall and rocky beach at Fort Point has been a favorite resort for salt-water anglers. Recently several of the newly erected wharves on the Presidio beach have afforded good fishing.

The depredations and damage done to government property, particularly on the engineers' wharf, led to sentries being posted to keep fishermen away, both soldiers and civilians, from the wharves and seawall. This restriction has, however, been modified, and it is reported that anglers who will observe the privilege, with good conduct and the nonviolation of property rights, may now fish on the seawall again.

J. B. Tate of this city recently broke the season's record at Catalina island for black sea bass. It took him a half hour to land the big fish, which weighed 240 pounds.

This monster bass will probably carry off the prize for this class of fish in the tournament given by the Freeholders' Improvement Association.

Bay fishing for rockfish has been extremely good at the Marin shore resorts for the past two weeks.

The picturesque resorts along the ocean shore of San Mateo county are gaining in popularity each week with salt water anglers.

The week-end holiday and Sunday outings are increasing gatherings and noticeably so. The variety of fish caught embraces gray cod, several kinds of eels, some weighing six or more pounds, rockfish, capazoni, perch, porgies, sea-trout, etc., these being supplemented with bags of fat mussels, rock clams and abalones, these latter saline dainties being gathered from the reefs at favorable low tides.

Salmon are yet running in Monterey bay, but principally in the channel waters on the Monterey side. A very few fish have been caught by anglers recently trolling off Capitola.

Nevada county streams have recently been restocked with 100,000 trout fry provided by the State Fish and Game Commission. The young trout were distributed in different creeks by members of the Nevada City Fishing and Hunting Association. The association will hold a big camp stew and outing at Pleasant Grove on July 17th.

A new fish hatchery has been established at Glenbrook, on the Nevada side of Lake Tahoe. It is proposed to distribute 750,000 trout fry in the tributaries of the lake on the Nevada side. In the California tributaries of Lake Tahoe the distribution of baby trout numbers about 3,000,000. This restocking of the streams will be pleasing news to the angling fraternity.

A recent run of big steelhead in the Carmel enabled two Salinas anglers, H. Linder and L. Tittmore, to land seven large fish that were caught at the Carmel dam.

AT THE TRAPS.

New Oakland Gun Club shoots for this month took place June 12 and 26.

At the first meeting the scores in a 25-bird practice shoot were: C. H. Lancaster 24, W. Lancaster 23, Faulkner 23, Blanchard 22, Woolner 22, Clark 22, Price 22, Cook 21, Rink 20, Sherwood 19, McAuley 19, Willet 18, Nelson 17.

The initial match in a 600 target shoot for a Ballistite trophy was participated in by 16 shooters. This match was arranged to run the third and fourth Sundays of June, July and August, 100 targets each meeting, the high gun to win. Tony Prior with 94 breaks won the first leg in the race. The scores were:

Prior 94 out of 100, C. H. Lancaster 93, Blanchard 92, Ashlin 91, Faulkner 90, Clark 90, Nelson 89, Haas 88, Sherwood 87, Willit 82, Rink 81, Price 80, Woolner 78, W. Lancaster 76, McAuley 75.

The second monthly shoot on the 26th inst was handicapped by a gale of wind. Rube Haas shot a strong clip in the 25 target practice short, losing but one bird.

The results at 25 targets were: Haas 24. Barclay 23, Haight 22, Sherwood 21, Blanchard 21, Prior 20, Robertson 19, C. Lancaster 19, Clark 19, Nelson 19, W. Lancaster 19, Knick 18, "Weatherwax" 17, Wood 16.

Blanchard came to the front in the second Ballistite trophy shoot, breaking 96 out of 100, ranking Prior by two birds and tying him for first place so far—200 targets having been shot at. Blanchard broke two 20's straight, Prior one. C. H. Lancaster's drop to 78 breaks looks as if he will have a hard task to be in the winning squad. The scores were:

Targets	20	20	20	20	100
Blanchard	20	18	19	20	96
Prior	20	19	18	19	94
Barclay	19	16	18	19	91
Robertson	19	19	18	16	89
"Weatherwax"	18	16	17	19	85
Knick	18	18	17	16	84
Sherwood	14	16	16	17	82
Clark	14	18	16	15	79
C. Lancaster	18	15	15	15	78
Haight	15	16	15	12	78
Wilson	12	16	11	17	70
W. Lancaster	15	17	11	11	—
Haas	15	16	16	13	—
Wood	16	18	11	11	—
Patrick	12	17	15	11	—
Woolner	16	18	20	11	—
Blake	14	17	18	16	—

Tom Barclay, the Walla Walla crack shot, has been in this city on a brief visit. Following the bent of his favorite pastime he shot over a 90 per cent clip, at the new Oakland Gun Club shoot last Sunday.

Tom is popular with California shooters and is a tower of strength at the Northwest traps. During his residence at Walla Walla he was a leading factor, as secretary of the Walla Walla Gun Club.

His headquarters have been changed to Spokane by reason of his recent connection as "trade representative" for the Selby Smelting and Lead Company in that territory.

W. A. Robertson, an erstwhile familiar and popular figure at local trap shoot gatherings was in the city during the week. "Bob" looks well and holds his own in every congenial respect. His "shootin' iron" barked on the firing line at the Oakland shoot last Sunday. He will, for the time being, shift the scene of his smokeless powder demonstrations, from the Northwest to points in this State.

The California Wing Club live bird shoot for July is the card at Stege tomorrow. Blue rock mangers will gather at the Bay View Gun Club grounds in Alameda tomorrow when the regular monthly club shoot will come off, assisted by a delegation of ham-merless talent from this side of the bay.

The Pacific Indians' second annual tournament (Registered) will take place at Nelson, B. C., July 26, 27 and 28, the program for which has been issued. The schedule for the first and seconds days is the same, two 15 and six 20-target events. For the third day the forenoon program calls for five 20-target events. The annual trophy match, 50 targets, three classes, for medals will be the closing regular feature.

For the first and second day 150 targets each day, eight events, \$25 will be added to each event. On the third day, 100 targets, five events, the added pure for each race will be \$25.

For the ten high guns, shooting the entire program, exclusive of the medal event, there will be a prize of \$10 each, the next five, \$5 each, and \$5 apiece for the ten low guns will be a pleasing distribution of cash. Purses in all events will be divided into four moneys—40, 30, 20 and 10 per cent.

The concluding function of the smokeless pow-wow will be a special race, the shooters being attired in Indian costume, participated in by Indians. The winner will receive a special trophy donated by an Indian.

The shoot is open to all and visiting American or Canadian Indians will be received on the same basis as members of the Pacific tribe.

For further particulars or programs address Frank C. Riehl, Tacoma, Wash.

Salinas sportsmen have arranged a big blue rock shoot for July 3d. The meeting will be under the auspices of the Salinas Trapsshooters' Association, A. E. Pearson, secretary; G. C. Tholcke and Roy G. Westlake, managers.

The program will be ten 20 target events, class shooting, merchandise prizes. Event No. 11 will be a three-man team shoot for professionals. Entrance free in all events, targets 2 cents, three high average prizes. Sergeant system, targets thrown 45 yards.

The Salinas sportsmen have the reputation of being congenial entertainers and good fellows. It is anticipated that there will be a large attendance, at all events San Francisco and Oakland will be well represented.

San Mateo Gun Club members have the enthusiastic reputation of shooting every Sunday at the Easton trap ground. The regular club shoot comes off on the fourth Sunday of each month, a 100 bird trophy event being the leading feature. In the interim practice shoots at 50 targets take place.

The club has recently installed a McCrea trap, this with a set of experts gives ample opportunity for indulging in the sport.

On June 12th the scores in four 25-bird practice events were:

Cuthbert 14, 17, 16, 15; L. Whitney 10, 10, 15, —; Hoelle 22, 22, 23, 22; Shanhan 13, 14, 17, —; Gracier 17, 16, 20, 20; Levy 14, 12, 16, 17; Bassett 16, 18, 19, —; Duffy 21, 21, 20, —; MacDonald 12, 9, 14, —.

Daily press notices of trap shooting affairs in Seattle demonstrate a lively interest in the clean sport up north. Accounts of two June shoots of the West Seattle Gun Club are as follows:

Twenty-eight shooters participated in the club's weekly practice shoot. Poston of San Francisco, "Bill" Hillis, of anywhere west of the Rocky Mountains, and Forbes and Logan, of Seattle, were the professionals present. Poston and Forbes tied for high professional honors with 94 out of 100 shot at. Hillis was second with 92.

Baldwin was high amateur with 93, McLaughlin second with 92, and Steele third with 89 out of 100. Steele also won the Selby watch event all by his lonesome with the only straight score in that even. "Fussy" Arnold won the Balliste cup. The scores were:

	Sh. at	Bk		Sh. at	Bk
Poston	100	94	Olson	100	77
Forbes	100	94	Arnold	100	76
Baldwin	100	93	Williams	100	75
Hills	100	92	Babcock	100	74
MacLaughlin	100	92	Scott	100	74
Steele	100	89	Kelleher	100	73
Miller	100	87	Valleen	100	67
Bergen	100	87	Peterson	100	56
Barr	100	85	Stangroom	100	56
Ross	100	85	Armstrong	100	37
Reed	100	83	Stadtfeld	100	33
Logan	100	82	Bandy	45	33
Wood	100	79	R. Finn	50	19
Marbit	100	77	Finn	50	11

There were thirty shooters present at the following weekly practice shoot. L. H. Reed was the only professional present. He was high man for the day with a score of 93.

Steele was high amateur with a score of 91. He also won the Balliste cup. Randlett was second high amateur and won the Selby watch event. This makes four wins of this event to his credit. It looks as though he just had to have that watch.

C. Bandy is one of the beginners and he proved that he knows how to point a gun. It was his second try at clay targets and he put up a creditable score.

J. Thompson, late of Tucson, Ariz., but now again a resident of Seattle after an absence of twenty years, was out and showed the boys that he had not forgotten how to shoot. He left Seattle immediately after the big fire in 1889 and returned here last Friday night.

W. Smith and Messrs. C. and J. Stewart of Kent were visitors who shot through the entire program. B. Alexa had his first try at the targets today. He says if somebody else would call "pull" for him he could break more of them. Wallace got half of what he shot at and that is certainly good for the first time.

Scott, Valleen, Ross, Saunders, Reid, Smith and Berger all tied on 76. Something was radically wrong with all of them, as ordinarily any one of them is good for 85 or better. Berger was the only one, though, who wanted to give his gun away and he backed out when his bluff was called.

"Stub" Williams says shooting doubles is too much like sawing wood for him. He agrees with all practical shooters, though, that there is no better way to quicken a man up and teach him to shoot in good time than to shoot a few pairs at each practice shoot.

It is remarkable the number of spectators that are out every week. Today they outnumbered the shooters. It is not generally known, but Seattle has the best attended weekly shoots of any city on the Pacific Coast and incidentally it is the home of some of the best shots west of the Rocky Mountains. "Bige" Hall also shot. The scores were:

Targets	15	15	20	15	15	20	100
Reed	13	15	20	15	12	18	83
Steele	14	14	18	15	13	17	91
Randlett	11	14	20	12	13	19	89
Miller	15	13	17	14	11	18	88
Thompson	13	14	17	13	12	16	85
Stewart	13	13	13	13	13	19	84
Wood	10	13	12	15	14	19	83

Baldwin	13	13	12	12	13	19	82
Williams	14	10	18	13	10	16	81
Nelson	12	10	18	12	13	16	81
Barr	12	12	18	11	11	16	80
Babcock	13	11	19	12	10	15	80
Marbet	10	13	18	13	10	15	79
Scott	13	13	15	11	11	13	76
Valleen	11	10	16	12	11	16	76
Ross	13	11	16	12	10	14	76
Saunders	12	10	16	11	18	19	76
Reid	12	11	18	10	11	14	76
Smith	13	11	14	11	11	16	76
Berger	13	11	14	11	11	16	76
Berger	0	12	18	12	10	14	76
Bandy	7	10	17	12	12	16	73
Stewart	10	10	11	14	10	13	68
W. Smith	5	5	12	8	9	11	50
Peterson	12	12	17	41
Wallace	13	6	6	25
Currier	9	6	10	25
Alexa	8	7	10	25
Peterson	8	4	10	22
Stadtfeld	6	5	11	22
Hall	6	3	9	18

Dick Reed has certainly had a siege of illness, having undergone two operations, but happily we can now state is on the mend. A communication this week from Dick, written by his wife, addressed to the "boys" who daily gather in Bill Price's gunsmith shop, says that he expects to be all right in two or three weeks. An expectation that is evidently hoped by his many friends will materialize early.

Live bird shooting is still popular in Pennsylvania. Fred R. Coleman of Pottsville and Miss Anna M. Rieker of Lancaster recently shot a 100 live bird match at Tumbling Rock Park, near Pottsville. Over 2000 spectators were present at this remarkable shoot. Coleman won, killing his 100 birds straight, at 33 yards rise, which is a world's record for this distance. Miss Rieker grassed 93 pigeons, scoring the final 33 without a miss. She shot from the 28 yard mark. Her shooting in this race gives her a record score for live bird performances at the traps by the fair sex.

POISON DESTROYS ALL FEAR.

Curari, the vegetable poison with which the Indians of the upper Amazon tip their hunting arrows, remains a mystery in its composition after a hundred years of investigation by scientists. The Indians will sell it for its weight in silver, but will not reveal the plants from which it is derived. Not long ago a professor in a German university was sent to the Amazon wilderness for the express purpose of discovering the secret, for curari, or urai, as it is otherwise called, is now thought to be of great value in medicine. The professor lived two years in Indian villages, and while he was permitted to witness the boiling of the "witches' broth," which lasted several days, he could not tell what plants went into the brew. Returning from his baffled quest down the Amazon with a quantity of the poison, the professor was met by another traveller, Dewey Austin Cobb, who had got possession of a native blow gun. The latter tells in "The National Geographic Magazine" how he put some of the professor's curari on some of his blow gun arrows, which are like toothpicks feathered with cotton, and tried it on a buck deer in the forest.

After a deliberate aim our hunter fired, says Mr. Cobb, "if I may use such a word for the little puff, scarcely heard by us, and entirely inaudible above the rustling corn leaves at the distance of the deer. The animal gave a slight start as it felt the prick of the arrow on its flank and turned partly around, sniffing the air for a scent, and looking about as if searching for the insect that had bitten or stung it. At the end of a minute, or a minute and a half at most, its head dropped a little, as if it was sleepy.

When the hunter saw this he arose and stepped out in plain sight. The deer turned his head and looked at him, and moved forward, not away from him, a few steps and stopped, it showed no fear, but simply curiosity. After another minute the professor and I arose, and all three walked quietly to within reach of it. It made no movement to run away, but watched us intently, and shifted its position a little. Its movements seemed perfectly easy and natural. Absence of fear was the only observable change, until at the end of three minutes more; then it lay down, not falling, but as naturally as a cow or sheep when ready for sleep.

We all approached its side, and the hunter laid a hand on its shoulder. It looked up at him, but showed no resentment or fear. Even its breathing seemed easy and natural, which surprised me, as I had heard that death resulted from paralysis of the lungs when caused by urari. At the end of ten minutes, though it opened its eyes when touched, its breath became shorter and slower. Eighteen minutes after it was struck by the arrow it was dead."

A month hence and the spawn-taking season for native trout at the Lake Tahoe hatchery will be finished. The Eastern brook trout, however, will occupy attention until about the waning of summer. It is estimated that the hatched product of the Lake Tahoe hatchery will be about 6,000,000 trout fry this season. Many thousands of these troutlets will be planted in the Truckee river and its tributaries.

Drink Jackson's Napa Soda.

DOINGS IN DOGDOM.

The preliminary skirmish between the American Kennel Club and the "insurgents" for Coast supremacy in the conduction and regulation of organized kennel affairs will take place next month. Two rival bench shows will be on tap at the same time. Under American Kennel Club license the Santa Cruz County Kennel Club will hold its annual two-day midsummer show at the Casino, Santa Cruz.

The Marin Kennel Association announces its first annual dog show Saturday, July 16th, at Redwood Grove, Larkspur, license for which was granted by the National Dog Breeders' Association, recently incorporated under the laws of this State to act as the governing body of show-giving kennel clubs. It is predicted that the Marin Kennel Association show will indicate strongly the sentiment of the local fancy toward the American Kennel Club and materially reduce entries at Santa Cruz, where in the past a majority of the exhibitors at the Surf City summer show were from San Francisco and Oakland.

The Santa Cruz show premium lists have been mailed. Entries for that show will close on July 3d. The show secretary and superintendent is J. C. Berrett. Marin Kennel Association entries close on July 9th. Prize lists will be mailed June 29th. Entries will be received at 48 Geary street, and also as announced on page 12 of this issue.

The list of cups and trophies offered at each of the rival shows is an extended one. The Santa Cruz donations are mainly local in origin. The Marin county club list of prizes contains the names of many of the leading local fanciers and exhibitors, strong supporters of past shows in this city and vicinity.

Entries for the Larkspur show will be \$1.50 in the first class and \$1 for each additional entry.

The regulations governing National Dog Breeders' Association shows are the following:

1. Every dog when entered in a show must be the property of the exhibitor.
2. No entry can be made in the name of a kennel unless the name has been registered with the National Dog Breeders' Association.
3. Exhibitors must abide by their own errors. Show officials cannot transfer a dog incorrectly entered.
4. Every dog entered in this show must either be registered or listed with the National Dog Breeders' Association previous to being exhibited. The fee for registration is one dollar, and for listing 25 cents. The registration of a dog gives the privilege of competition during its life. The listing of a dog gives the privilege of competition at this show only.

Challenge Class.—Open to all, no dog being barred from competing.

Graduate Dogs.—For dogs which have not won more than five first prizes in this class, Champions barred from competing herein.

American Class.—For dogs bred in the United States of America or in Canada, Champions barred from competing herein.

Maiden Class.—For dogs which have never won a first prize in any class under these rules.

Selling Class.—For dogs entered for sale within the limit of a stated price set by the show officials to govern this class. Dogs may be claimed out of this class by any person at any time during a show at their catalogued price.

Senior Puppy Class.—For dogs over nine months old and under nine months on the opening day of the show. In puppy classes the date of birth, breeder, sire and dam must be stated or the entry cannot be accepted.

Champion Class.—For Champions only. Dogs winning a first prize in this class are not eligible in the Winners' Class unless they have won a first prize in the Challenge or Selling Class at the same show. Dogs which have won the title of Champion in the United States prior to July 1, 1910, are not eligible in any classes under these rules in which Champions are debarred from competing.

Field Trial Class.—For dogs which have won a place at a recognized Field Trial where competition was open to all. First prize winners in this class are not eligible in the Winners' Class unless they have won a first in another recognized class at the same show.

Miscellaneous Class.—For dogs of recognized breeds for which no regular breed classification has been provided. Entries in this class must specify the breed or they cannot be accepted and the breed must be printed in brackets immediately after the name of each exhibit in the catalog."

It will be noticed in the foregoing rules that Canadian dogs may be entered at N. D. B. A. shows, a sportsmanlike concession.

The regulations in regard to selling classes are needed and a step forward in the right direction.

Another matter that has long needed directory attention is the "price" of a dog entered in the catalogue. In this respect the Association is on record in a businesslike and sensible manner.

"When an exhibitor sets a price on an exhibit it is distinctly understood that the dog shall be subject to claim at the figure named on the entry form at any time during the show by any person desiring to buy that dog. A prohibitory price is optional with the exhibitor, but the order of the show secretary in all cases of dogs claimed shall be binding on the seller and the club holding the show may retain ten per cent of the sale price in all transactions passing through the secretary's office except where dogs are entered in selling classes, in which event no commission shall be charged."

THE VANCOUVER EXHIBITION.

Six days in which to win premiums totaling \$30,000, to become acquainted with the industrial, agricultural and mineral resources of British Columbia, to revel in amusement of the highest and most varied type—these are the main features offered by the holding here of the Vancouver Exhibition from August 15th to 20th.

At the present rate construction work is proceeding the grounds and buildings will be ready long before opening day. The Industrial hall is already completed, work has been started on the mammoth machinery hall, poultry and dog show buildings, horse and cattle stables, sheep and pig pens, and on the foundation of the grandstand, which is to seat 4,500 persons. The latter, by the way, will be unique in itself in that it will have room on the intermediate floor for an immense cafe and shelter exhibition booths on the ground floor. The floating landing stage which is to be built to receive freight and passengers coming by water from Chilliwack and other points will be started shortly.

Of the 60 acres which the exhibition ground comprise 40 are cleared in fine shape for the buildings themselves while the Association will turn the remaining twenty into a natural park of great beauty. The lighting scheme to consist of millions of incandescents outlining buildings and grounds, is nearly completed and will be undertaken by the British Columbia Electric Company.

Space applications for the machinery hall have been received in such quantity that the Association is up against it to know what to do with them all. Applications for amusement concessions are also so numerous and of such high quality that it is assured this feature will alone be a notable one. Combined with the regular concessions will be daily band concerts, vaudeville shows and six races under the auspices of the Local Hunt Club. Although no betting will be allowed at the races, sufficiently large purses have been hung up to ensure the best of sport.

The division of days at the exhibition will be particularly interesting, as follows: Merchants' Day, American Day, Labor Day, and Canadian Day. The decision of the Trades and Labor Council to hold the regular labor celebration on one of the fair days and at the fair grounds will be a big feature, including as it will extra sports and amusements. For Merchants' Day all retail grocers in the province will assemble here to be the guests of the Vancouver Retail Grocers' Association, in convention. On American Day special excursions will be run to Vancouver from all points in Washington and Oregon. On that day a crowd of 100,000 is expected to attend the exhibition and an equal number, if not greater, on Canadian Day.

Of the greatest interest, probably, will be the daily races to be held, for which big purses have been hung up. The races for which entries will be received up to July 15th, are divided as follows:

Trotting races:	
Three-year-olds, for horses owned in British Columbia previous to July 1st; half-mile heats. Purse, value	250
Two-year-olds, trot for horses owned in British Columbia previous to July 1st, half-mile heats. Purse, value	200
2:40. Purse, value	400
2:20 Stake; entries close July 15th.	500
Stallions in service, having served ten mares or more in 1910; half-mile heats. Purse, value	300
Pacing races:	
Three-year-olds, for horses owned in British Columbia previous to July 1st; one-half mile heats. Purse, value	250
Two-year-olds, pace, for horses owned in British Columbia previous to July 1st; one-half mile heats. Purse, value	200
2:25. Purse, value	400
2:17. Stake; entries close July 15th.	1000
2:12. Purse, value	750
Stallions in service, having served ten mares or more in 1910; half-mile heats. Purse, value	300
Trot or pace races:	
Free-for-all. Purse, value	1000
Farmers race, green horses. Purse, value	250
Gentlemen's road race to four-wheeled buggy; owner to drive; half-mile heats; cup, value	50
Running races. Weight for age. No entry fee.	
Entries close day before race:	
Half-mile dash. Purse, value	150
Five-eighths mile dash. Purse, value	150
Three-quarter mile dash. Purse, value	200
Team running race, to harness; half-mile heats. Purse, value	500
Hunt Club races:	
Flat race, six furlongs.	Cup or trophy
Flat race, eight furlongs.	Cup or trophy
Hurdle race, two miles, over 10 flights hurdles	Cup or trophy
Hurdle race, 1 1/4 miles, over 5 flights hurdles	Cup or trophy

A glance at the prize list just issued by the association indicates the immense scope of the competition in the exhibition to be encouraged. For horses there are the following classes: Breeding-thoroughbreds, Hackneys, Standard bred, Clydesdales, Shires, Percherons, heavy draught, general purpose, general purpose (in harness) and Suffolk Punch. For ponies: Shetland, Welsh, Hackney, general purpose, sweepstakes. Harness classes: Roadsters, carriage, commercial high steppers, saddle horses, hunters, ladies' hunters, jumpers, special classes, amateur only, horses suitable for military purposes, open class and ponies.

For cattle there are the following classes: Beef classes, Shorthorns, Herefords, Aberdeen Angus, Galloways, fat cattle, Devons, West Highland and Sussex cattle. Dairy classes: Ayrshires, Jerseys, Holsteins, Guernseys, Kerry or Dexter Kerry and Red Poll.

For sheep: Cotswolds, Leicesters, Shropshires, Oxford Downs, Southdowns, Dorset Horn, Lincolns, Hampshire and Suffolk Downs.

For swine: Berkshires, Yorkshires, Tamworth, Chester Whites, and other distinct breeds.

The poultry and pet stock classes include prizes for all classes of pigeons, cage birds, rabbits and Cavies.

Classes for competition in agricultural products are: Grain, seeds, field roots, vegetables, flowers, fruit, honey and miscellaneous special classes.

Dairy products classes will be divided into cheese, butter and special class competitions.

The Indian of British Columbia is not to be neglected. There will be an Indian Department, in which prizes will be offered for all kinds of Indian's handicraft, including antique symbolic carvings and Indian agricultural products.

The natural history division includes prizes for classes in birds, bird skins, insects (collections), shells (collections), flowering plants, weeds (collections), woods, leaves and flowers, illustrating best the forest trees of Canada.

The Fine Arts department has prize classes in paintings, modeling, photography, wood carving, drawing, applied arts, designs and miscellaneous.

Prize classes for all kinds of women's work will be offered, as for embroidery, lace crochet, knitting, sewing, quilts, rugs, stenciling, and drawn thread work.

An exceedingly long list of prizes are offered in the educational exhibits class for various children's work, domestic science, manual training, public school drawings, household arts, etc. Although the exhibition will be open to the public on August 15th the formal opening will be reserved until Tuesday when Sir Wilfred Laurier will be on hand to deliver the chief address at the ceremonies.

DEATH OF A FAMOUS HORSE.

On the eve of the International Horse Show, for which he was once more being prepared, though in his twenty-third year, the American trotter Barney F. has died.

It was favorite of all the choice animals in Mr. Walter Winan's Surrenden Park stables, and the sorrow of his owner will be shared by many thousands of people who delighted in the great speed and beautiful action of the old horse as he flew round the Olympia arena. In the stables at the International Horse Show Barney's box was always surrounded by an admiring crowd, and generally Mr. Winan was in the midst telling about his pet.

In spite of his great age Barney's pace and action at Olympia last year called forth tumultuous applause, and only a few days ago at a private view of Mr. Winan's show horses at Surrenden Park the old favorite, trotting in pair with Fides Stanton, made all the pace and behaved so beautifully on the soaking turf track that the crowd were moved to wave their hats to him. He seemed certain to carry off more honors this year. Barney F. was by Achilles, a son of Mambrino Patchen and had considerable Morgan blood through his dam.

Here is his owner's tribute now Barney F. is no more: "The old horse all the years I had him never did a wrong thing, or shied, or refused to do his best. I never touched him with a whip in all that time.

"When crossing the Channel in a gale on returning from a Continental show his attendant was found lying sick under Barney, who was standing with his legs wide apart in order not to step on the man, and standing in such a manner that he must have had difficulty in keeping his balance in the rolling ship.

"Barney had a trotting record of 2:24 and when he came to England the 'Spirit of the Times' said that 'the handsomest horse that ever left America had gone in Barney F.'

"He was the best horse in looks, disposition and action I have ever owned. He won me over eighty first prizes in pace and action classes, and several more in stepping classes against hackneys."—London Daily Mail.

An English breeder writing in the London "Live Stock Journal" states that his experience has proved that Shire fillies, which have been thoroughly well fed and cared for, may be put to the stallion at two years old with very satisfactory results, as instances of winners breeding winners could be mentioned. Owing to the growth of the show system the young stock of most breeders are fed with a view to getting big animals, consequently the two-year-olds of today are bigger and more developed than the three-year-olds of twenty years ago and quite as well able to breed. There is, however, one precaution which he considers necessary to take before a three-year-old gets heavy with her first foal, and that is to see that she learns to work; otherwise she may grow up to be a non-worker, or very difficult to manage.

"WORKED WONDERS."

Mr. H. G. Mason, prominent horseman of Chester, Pa., writes: "Enclosed find check for one bottle of Quinn's Ointment. I have tried it on Windgalls and it has worked wonders." Quinn's Ointment is a tried and true remedy for curbs, splints, spavins, windpuffs and all bunches worth many times its cost. It cannot be obtained from drugstore or dealer, address W. B. EDDY & CO., Whitehall, N. Y. Price, \$1.00 delivered.

DENVER DRIVING CLUB.

A very large crowd of people were at the Gentleman's Driving Club races at City Park, Denver, June 18th, and were entertained with the following program:

First race—1:20 trot, 1/2-mile heats:
Baron Prodgal (W. O. Reynolds).....1 1 1
Jim Noble (Ed Mathews).....2 2 2
Delphin Delmas (E. A. Colburn).....3 3 dr
Time—1:19 1/4, 1:17 1/4, 1:15 1/2.

Second race—1:12 trot or pace, 1/2-mile heats:
Evelyn Walsh (Jack Crawford).....1 1 1
Ginger (W. G. Purington).....2 2 2
Time—1:12 1/2, 1:12, 1:11 1/4.

Third race, 1:10 pace, 1/2-mile heats:
Condon (H. C. Craig).....1 1 dh 1
Fanawill (Dr. J. M. Norman).....3 2 dh 2
Rex Colorado (E. H. Hutsinpillar).....2 3 3 3
Time—1:12 1/2, 1:09 3/4, 1:11, 1:11 1/4.

Fourth race—2:30 trot or pace, mile heats:
Fannie Lawson (George H. Estabrook).....1 2 1
Jay M'Kay (A. J. Donaldson).....2 1 2
The Comet (J. K. Stuart).....3 3 ac
Time—2:22 3/4, 2:22 3/4, 2:20 3/4.

PORTLAND MATINEE RACING.

The Riverside Driving Club, of Portland, Oregon, held an afternoon of racing on Saturday, June 18th, with the following results:

First race, Class A, pace:
Georgia Rose, O. J. Brown.....1 1
Alexandra Queen, Dr. T. Jones.....2 2
Chico, D. C. Ailsworth.....3 3
Byron Lace, F. T. Merrill.....4 4
Deputy, C. W. Todd.....5 5
Time—2:29, 2:23 1/2.

Second race, Class B, trotting:
Bessie Lovelace, J. J. Kaddery.....4 1 1
Red Skin, A. C. Lohmire.....1 2 3
Dottie Dimple, T. K. Howitt.....2 3 2
Hunky Dory, G. K. Howitt.....3 4 4
Mobile, McCann & Hoy.....5 5 dr
Time—2:27, 2:30, 2:21.

Third race, Class C, trotting:
Ora May, Johnson Porter.....1 3 1
Alice Jones, A. O. Ball.....2 3 3
Cantatrice, C. W. Flanders.....3 2 2
Sargo, Ed Ailsworth.....4 4 dr
Time—2:35 1/2, 2:32 1/2, 2:29.

Fourth race, Class D, trotting:
Planter, C. A. Akerson.....1 1
Hallie B., L. W. Watts.....2 2
Ella M., M. J. Myers.....3 3
Mistle, McCrum & Hoy.....4 4
Time—2:49, 2:38.

McMINNVILLE RACES.

Some closely contested races were held at McMinnville, Oregon, Saturday, June 18th. Results:

2:24 Pace:
Sable Hal.....2 2 1 1 1
Florence Vaughn.....1 1 2 2 2
King Lovelace.....3 3 3 3 3
Time—1:10 1/2, 1:09, 1:06, 1:11, 1:07 1/2.

2:15 Pace:
Lou Miller.....1 1 1
Lord Sidney Dillon.....2 3 2
Sunny Jim.....3 2 3
Time—1:04 1/2, 1:06 1/2, 1:06.

2:30 Trot:
Bois D. Arc.....1 1
Padishah.....2 2
Redwood McGregor.....3 3
Time—1:14 1/2, 1:15.

King George has inherited the racing and breeding studs of the late King Edward, and has announced officially that he will carry on these establishments on the same lines as in the past. For the remainder of this year the race horses will remain in the King's own training establishment, but will be under Lord Derby's sole control and will be run in his name, for although King George has decided to carry on the racing establishment bequeathed to him by his father, he will not run any horses in his own name while the court is in mourning. The horses of the breeding stables will go immediately into the new king's control.

THE FARM

AMERICANS EATING

GOAT FLESH.

Goat flesh may be known as the poor man's meat in America, said a Kansas City trader who handles them extensively. When that time comes it will not be vended by unscrupulous hutchers as mutton, but for what it really is, and a healthier or more palatable meat never had a place in culinary operations.

Goats by the hundred thousand are slaughtered in the United States annually and the product sent into the food supply. How much of it reaches the consumer as goat flesh can only be conjectured. Among the immigrants from southern Europe the meat, especially that of kids, is highly esteemed. It has a venison like flavor that wins favor promptly and the taste for it has not been acquired. Naturally a prejudice exists in the popular mind for the reason that the American people have not been accustomed to it, but tons of goat meat are sold every year as mutton. On account of misrepresentation by retailers one of the principal slaughtering concerns recently decided not to kill any more goats.

Kansas City is the world's greatest goat market, killing over 100,000 annually. Over 50,000 reach Chicago. Some are marketed after doing a good job as brush cleaners, others have been in feed lots, but the bulk come direct from the arid ranges of the southwest, the natural home of the goat. Missouri has fed goats numerous during the past year and those who handled them made money. They do not put on the same gains that are possible with sheep and lambs, but their cost as stockers is less, mortality is practically nothing, and they will convert feed into marketable shape that neither sheep nor lambs would look at. They are gross feeders, however. One Missouri man who fed over 1000 head during the winter voices the objection that they tear around too much and their natural habit of restlessness undoubtedly impairs their gain making capacity.

New Mexico and Texas are the principal goat breeding grounds of the United States. Possibilities of production all over the southwest are unlimited. For a year past the Kansas City goat market has been on a 4c. to 6c. basis, and if these prices continue breeding will receive a decided impetus, as there are millions of acres of land now producing little or nothing that are available for the purpose. Goat raisers have been put into circumstances of comparative affluence by current scarcity of sheep and lambs, which has created a demand for their output at very remunerative prices. In justice to the goat man this output ought to have a place in the market, and until it is sold on its merits he will not get his dues.—Breeder's Gazette.

When heifer calves are to be reared for milk cows a dairyman cannot be too particular about breeding the cows to dairy sires. While occasionally a good dairy animal has been produced from a sire belonging to either the beef or general purpose breeds, this is the exception. The only safe plan is to give each heifer calf the strongest possible inherited tendency towards milk production and then use all reasonable means to develop this tendency by proper feed and care. It is by such a system that a good dairy herd may be built up. Cull all the poor animals and keep only the best. From these secure the best heifer calves.

The Most Perfect Colt Bit Made EVERY COLT

Should wear the ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE from the very beginning of its training, as it is the easiest, most comfortable and most humane bit on the market. With its use the colt will not fret, worry, pull, toss its head and get into the bad habits so often caused by the use of other bits and checking devices that inflict punishment or keep it under too much restraint, and at the same time you will have absolute control over it at all times.

Patented Aug. 11, 1896. Patent No. 565,631

BEWARE of worthless infringements and Checking Devices claimed to be as good as the ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE. Illustrations of some of these check bits and devices are made to look as near like the genuine as possible, but the article itself is very different, and will not give the same results.

ALL GENUINE are stamped G. S. ELLIS & SON on the supporting strap and back part of Check Rein. Any that are not so stamped are not genuine.

FREE—Our new Catalogue No. 45, with wholesale discount sheet, the largest, finest and most complete Horse Goods Catalogue ever published, is ready for distribution. It contains illustrations, descriptions, and guaranteed to be lowest prices on Harness, Horse Boots, Horse Clothing and Tack Goods of every description. Every horseman should have a copy. You can save many a dollar during the season by buying direct from us, as we are now selling direct to horsemen and allowing them from 30 to 50 per cent discount from list prices. Write us today for a copy and we will take pleasure in sending it to you all charges paid.

REDUCINE

THE HUMANE TREATMENT

WILL CURE YOUR LAME HORSE,
CURE HIM PAINLESSLY, REMOVE
THE ENLARGEMENT AND YOU
CAN WORK HIM ALL THE TIME
MADE IN IRELAND

NORFOLK, VIRGINIA, APRIL 1, 1910.

The Reducine Co.:

My Dear Sirs: I write to get some information regarding a trotting horse I have. His right hind ankle was badly sprained more than a year ago and he had been very lame ever since. He has been blistered, fired, treated with * * * and iodine. All have been tried thoroughly. As a last resort, I decided to treat him with Reducine. I began on Feb. 15, applied it for ten days, then waited ten days and applied for ten days more. Since then he has not been treated. The joint is still slightly swollen and a little fever. I have been driving him on the road and he is going very sound. I would like you to inform me if it is better to give him another series of ten days' treatment or let him rest? Also, how soon will it be safe to brush him? Thanking you in advance for any suggestions you may offer, I remain, Yours truly,

R. L. PERKINS, M. D., 146 York St.

M. EUGENE CULVER, Attorney and Counsellor at Law.
Middletown, Conn. Telephone, 114-5.

MIDDLETOWN, CONN., FEB. 22, 1910.

The Reducine Co., New York City, N. Y.:

Dear Sirs: Enclosed find check for \$4.00, upon receipt of which please send me as soon as possible one can of Reducine. Since I first bought some of you last summer I was so well satisfied with its results that I have recommended it to several parties, and at least three or four persons have sent in orders for some. I now have a horse that turned its left fore ankle while being driven double on the road, and evidently sprained the ankle. We have commenced to apply Reducine, but have used it all up and consequently want another can immediately. Yours truly,

M. EUGENE CULVER.

For sale by all druggists and horse goods dealers or direct from us.
Cash with order in all cases. Please send **PRICE \$4.00 PER CAN**

THE FORESTS OF AMERICA.

On the coast of southeastern Alaska the average annual precipitation is about ninety inches and trees grow to a large size; in the Central Plateau, the precipitation is less than 15 inches, including the melted snow, and the average size of timber is small; while on the Arctic Slope, north of the Rocky Mountains, and the region adjacent to the Behring Sea, climatic conditions make forest growth altogether impossible, and those vast tundras are covered chiefly with moss, sedges, and a few small shrubs; hence, the discussion of Alaska forests in Forest Service Bulletin 81, recently issued by the United States Department of Agriculture, is necessarily confined to the southeastern coast region and to the Central Plateau, lying between the Pacific Mountain system on the south and the Rocky Mountain system on the north and east and drained principally by the Yukon and the Kuskokwim rivers.

It is estimated that the total forest and woodland area of Alaska is approximately 100 million acres, or about 27 per cent of the land area of the territory. Of these about 20 million acres may possibly bear timber of sufficient size and density to be used as saw timber, while the other 80 million acres is woodland which bears some raw timber, but mostly only firewood.

The coast region has a mild climate, not colder than the northern part of Puget Sound or of Scotland. The stand of trees is dense, averaging for considerable areas 25,000 feet per acre; Sitka spruce forming about 20 per cent of the stand and western hemlock about 75 per cent. Although by far the most abundant species, western hemlock does not produce as large individual trees as the spruce or western red cedar—the former occasionally showing a diameter of six feet with a height of 150 feet, and the cedar attaining diameters of from 3 to 4 feet.

The usual lumber cut in the coast forests of Alaska is about 27,000,000 board feet, almost entirely spruce, as hemlock is but little used, a large part of this output, probably one-third, being used for salmon cases, and much of the best lumber is used in this way. The southern and southeastern coast have a much larger supply than will be needed locally for a long time to come, much of the hemlock should be cut and the spruce he given an opportunity to increase. The cutting that has so far taken place on the coast of Alaska has had but small effect upon the forest, the hulk is yet untouched and as it is now overmature, utilization for other purposes than lumber should be encouraged as much as possible. Both spruce and hemlock are good pulpwood and taken together they comprise almost the entire forests. There is faint prospect that, so far as the coast lumber is concerned, it will ever be needed for use in Alaska. The permanent industries of the coast region are fishing and mining, the mountainous character of the country will forever prevent this lumber from being of present benefit to the interior where the need is greatest and the price high. Besides the timber itself is not suitable for the structural work that will be needed in the interior when that region is more fully developed and made accessible by railroads. The annual growth of the coast forests is in excess of the local needs, and unless methods of utilization which will result in exportation are developed, these products cannot be rightly handled or properly conserved.

But the interior conditions tell a different story. There the forest stand varies from practically nothing, in areas of scrubby black spruce, to 20 or more cords per acre in the best white spruce forests. The best timber of spruce, hirsch and poplar grows in the valleys, particularly along the Tanana in the Fairbanks district. Black spruce predominates in the more poorly drained situations: The average of timber is small, white spruce rarely, and balsam poplar sometimes attaining 18 to 24 inches in diameter; the white hirsch and aspen average 8 inches in diameter, though maximum of 18 inches on unusually favorable sites are noted, and

PALACE HOTEL COMPANY

TO THOROUGHBRED HORSE-
OWNERS.

FOR SALE AT A SACRIFICE.

First six volumes of Bruce's American Stud Book, practically unused. Cost \$10 per volume. Hard to get.

Two volumes of American Horse Breeders' Guide and Hand Book, with 100 tabulated pedigrees of leading stallions (work now out of print).

The American Thoroughbred, by Capt. Thos. B. Merry.

Two volumes Goodwin's Turf Guide for 1907. Cost \$12.

About 50 thoroughbred catalogues, including Rancho del Paso, Palo Alto, Rancocas, McGrathiana, Nursery Stud, Marcus Daly and all the great stock-farms of the country. These are handier than a studbook, because they are tabulated.

Price, \$60 for all these works.

Address F. W. KELLEY, 366 Pacific Building, San Francisco, Cal.

FOR SALE.

Broodmares, Colts and Horses in
Training.

Owing to the stables and corrals at Agricultural Park having been torn down preparatory to rebuilding and no suitable place in the neighborhood being available, and wishing to devote all his time to the progeny of Carlokin and Copa de Oro, W. G. Durfee will sell about twenty head of colts, broodmares and track horses. All are sound, unless otherwise stated, bred in the purple, and the best of their kind in the country. Among them is

Brown gelding, 16 hands, 6 years old, by Osito, dam by Sidney Dillon. With 90 days' work trotted half in 1:10. Lady can drive him. Very handsome. Good race prospect. \$500.

Yearling bay colt by Del Coronado, dam Beatrice Zombro. Broken and shows extreme speed on a trot; best of the yearlings. Entered in all the Western futurities. Extra good looking and size. \$550.

Two-year-old gelding by Owynex, dam Beatrice Zombro. Nice size and good type. Very promising trotter. Thoroughly broken. \$225.

Owynex 2:22, 11 years old, bay stallion, trial 2:16, by Owyhee 2:11, dam Inex, dam of Our Jack 2:12. Is 16 hands, weighs 1200 lbs., sound, sure foal getter. Grand style. Lady can drive. \$1000.

Rose of Peru, 10 years old, standard and registered, by Charleston 2:12½, dam Gracewood, two-year-old record to high wheels 2:27, by Nutwood Sue. Is 16 hands, solid bay. Was injured as three-year-old and never trained. Bred to Carlokin this spring. \$375.

Kid Dillon, ch. stud, by Sidney Dillon, five years old, 15½, been driven always by lady. With 90 days' training worked mile in 2:14½, last eighth in 14½ seconds; no straps; never breaks; sound and level headed; compactly built. He is another Velox. \$1500.

Martha Zolock, three years old, by Zolock, dam Martha Whips 2:09. Extremely fast lot trotter; was broken and showed extreme speed; was hurt as two-year-old and never been worked since. Bred to Carlokin. \$375.

Ludenia, dark bay mare, 13 years, 16 hands, 1200 lbs., standard and registered, by McKinney, dam Lucy R. 2:13½ by Sultan, second dam Lady Mackay, dam of Oakland Baron, third dam the dam of Stamboul (about \$150,000 worth of pedigree). Bred to Bon Voyage. She had two-minute speed; could trot in 2:10 first year she was worked (not counting work as yearling). Hurt and never raced. \$550.

For further particulars of these and others, address

WM. L. JAMES,

317 West 17th St., Los Angeles, Cal.

A cow yielding at the rate of five gallons of milk a day, or 600 quarts a month, and sold at 8 cents per quart, earns \$48 gross per month, against an outlay for feed amounting to \$4.25. It is easy to see a good margin of profit, or return for labor, on such cows.

FOR SALE.

A handsome bay mare, 3 years old, sired by Nutwood Wilkes. Absolutely sound and gentle, afraid of nothing, and is sure to make a fast trotter. Must be seen to be appreciated. Can be seen at 206½ Santa Clara Ave., Alameda, Cal.

FOR SALE.

A fast trotting mare by Egyptian Prince 14,431, dam Hattie, the dam of Monterey 2:09½ and Montana 2:16, by Commodore Belmont. Is 12 years old, sound and gentle and a lady can drive her. Has 3-months-old colt by Monte McKinney by her side, and is in foal to Chestnut Tom 2:15. Also a yearling, and a two, three and four-year-old out of this mare by Monte McKinney, Chestnut Tom and Silver Bow Jr. respectively. The four-year-old is in foal to Chestnut Tom. Will sell one or all of them, and at a bargain.

J. M. PITTS,

Avenue Market, 34th and San Pablo, Oakland.

FOR SALE.

On account of illness I desire to sell my veterinary practice and horseshoeing shop at Bakersfield. Will also sell my stallion Donello 2:30 by Washington McKinney. He has a matinee record of 2:18 and should trot in 2:10 if trained. Is a grand looker and his breeding is royal. Correspondence solicited.

C. H. SEARS, V. S.,

2211 Chester Ave., Bakersfield, Cal.

FAST TROTTER

FOR SALE.

The Fast Trotting Gelding LONGITUDE by Meridian 2:12½, dam Media by Anteeo 2:16½, is for sale. Longitude has no record, but has shown miles better than 2:15. He is perfectly sound, kind and gentle and anyone can drive him. He is now in good condition and can be seen at the McKinney Stables, 36th avenue and Fulton street, where he is in charge of Charles James. For further particulars, apply to W. L. MILLS, 2005 Market Street. Telephone Market 194.

FOR SALE.

Pedigreed tri-color Scotch Collie bitch, one year old, perfect markings and color; also one dog pup, 3 months old, tri-color.

For sale by Langley & Michaels, San Francisco, Calif.; Woodward, Clark & Co., Portland, Ore.; F. W. Braun Co., Brunswick, N. J.; Western Wholesale Drug Co., Los Angeles, Calif.; Kirk, Cleary & Co., Sacramento, Calif.; Pacific Drug Co., Seattle, Wash.; Spokane Drug Co., Spokane, Wash.

black spruce rarely attains a diameter of 6 inches; while the heights of the different species run from 20 feet for the black spruce to 75 feet for the best white spruce. Naturally it is impossible for timber to grow rapidly or to large size in soil permanently frozen. Unlike the coast forests those of the interior have suffered much

from fires; in some cases ten times as much timber has been killed by fire than has been cut for fuel or lumber.

The bulk of the timber cut in the forests of the Central Plateau is for firewood, several times as much being used for that purpose as for lumber. Nor is this surprising, as the interior of Alaska depends entirely upon wood for heat, light and power. Wood is burned by the Tanana Valley Railroad, which has 45 miles of track out from Fairbanks; the river steamers, except three large boats on the Yukon which use oil, burn wood; and the severe weather of the eight months winter, when the thermometer sometimes goes down to 80 degrees below zero, makes the consumption for fuel in domestic affairs much larger than the population—about 30,000—would use under conditions existing elsewhere.

The present sparse population will undoubtedly be greatly augmented, and its need for timber will be large, therefore, its timber supply would be conserved to lessen as far as possible the heavy expense which importation will entail, as transportation is slow, expensive and uncertain, and by boats which operate only a few months of the year.

Obviously all the forests of Alaska should be protected and made of the utmost permanent use. They should be managed so as to increase the stand of the best timber—spruce—and decrease that of the less desirable hemlock. Utilization of the present overmature timber of the coast should be encouraged, while the insufficient supply in the forests of the interior should be given the best of care for it is not likely, with most intelligent management, to be able to furnish more than a part of the home demand, as the high grade timber which may be needed will always have to be imported.

SUPERFLUOUS ROOSTERS.

Does not the poultryman know that the food a rooster eats each month will produce a dozen eggs, if fed to the right kind of a hen; that two or three males with two or three dozen hens will produce all the eggs needed for incubation; that the rest of the flock will lay as many, as large, and as good eggs without the males around; that by reason of such selection his young stock will be more uniform in size, shape, color, more vigorous and thrifty, and therefore more profitable; that the old tough grand-

RICHARD WALDRON,
Manufacturer of
Fine Havana Cigars.

Paterson, N. J., May 5, 1910.

Troy Chemical Co., Binghamton, N. Y.:
Gentlemen: Enclosed find check for \$5 for bottle of "Save-the-Horse." It cured a bad case of strained tendon, and is well worth the money. Respectfully,

RICHARD WALDRON.

Port Deposit, Md., May 19, 1910.

Troy Chemical Co., Binghamton, N. Y.:
Gentlemen: I tried "Save-the-Horse" on a valuable mare that had been lame for over a year with bone spavin. It effected a complete cure. I consider it an invaluable remedy. My mare is as fast this year as ever and does not favor her leg the slightest. I am entirely satisfied. Very truly,

PHILIP R. BOND.

Benton Harbor, Mich., May 22, 1910.

Troy Chemical Co., Binghamton, N. Y.:
Gentlemen: I have a fine horse that is lame, and I would like your opinion, &c.

Five years ago I got "Save-the-Horse" of you to use on a fine horse that had injured his hind leg, and it cured him when veterinary surgeons said it could not be cured. This is one reason I am writing you. Can you tell me what is the trouble, and if you can cure him? Kindly give this your attention, and oblige, J. E. BARNES.

\$5.00 A BOTTLE,
with signed GUARANTEE.

This is a binding contract and protects purchaser absolutely in treating and curing any case of Bone and Bog Spavin, Thoroughpin, Ringbone (except low), Curb, Splint, Capped Hock, Windpuff, Sheshoff, Injured Tendons and all lameness. No scar or loss of hair. Horse works as usual.

Send for copy of this contract, booklet on all lameness and letters from prominent business men, bankers, farmers and horse owners the world over on every kind of case.

At all druggists and dealers, or express paid.

and 4 more now in training at San Jose that will trot in 2:10 this year.

Will make the Season of 1910 at the

San Jose Driving Park, San Jose, Cal.

TERMS: \$75 for the Season.

Mares not proving with foal will be given a return privilege next season, or money refunded at our option. Good pasturage for mares, with no wire, at reasonable rates, but no responsibility assumed for accidents or escapes.

Believing Kinney Lou destined to become the greatest speed siring son of the great McKlnney, we have leased him for a term of years from Mr. Doble and reduced his service fee to \$75.00 to induce liberal patronage. Kinney Lou has not only proven himself to be a uniform sire of trotting speed, but gets the best-looking, best-gaited, best-headed and best-limbed colts of any sire on the Pacific Coast. To be convinced of the truth of the above statement, make a visit to the San Jose Driving Park, where some twelve or fifteen of his colts, from one to five years old, are now being trained, look them over and see them step. Ship mares to Ray Mead, Hillsdale, Cal. For further particulars, address RAY MEAD, San Jose, Cal., Phone State 511. or DR. J. P. NICHOLS, Salinas, Cal.

FOR SALE.

PRINCE DEXTER—A handsome 6-year-old bay gelding, pacer, never trained for speed, sown a 2:30 gait on the road. Fine driver, sound and gentle for a lady. Sired by Prince Nutwood, be by Dexter Prince. Price \$250. Call at Lacy Co., Central Ave., Melrose Heights, Oakland. Address Fruitvale, R. F. D. No. 189.

father chicken will bring him half as much on the market at two years of age as he would at two months?

No wonder he says the hens eat their heads off when one-half his flock are drones—males that were never meant to lay eggs and hens that never do—drones that are supported by the workers. Why does he not cull—select? Try it. Select a dozen of your most energetic, active, happy hens, and a male of like quality, the best fighter in the bunch. Give them a small house and yard by themselves, with lots of straw to compel exercise; all the grain they will dig for, milk, alfalfa leaves, table scrap; then use the eggs from this pen for hatching. If you don't get better chicks than you ever had by the old haphazard way—better hatchers, better growers, better lookers, and better and earlier layers—we'll never say a word against the old roosters again.—W. E. Vaplon.

THEY ALL SHOT

SMOKELESS POWDERS

SMITH GUNS

HUNTER ONE-TRIGGER

WEATHER conditions aren't always at their best in the "blind" or in the skiff. That's when you don't want your gun to balk or double.

YOU CAN easily wear gloves if you shoot with a Hunter One-Trigger. And without "fiddling." It won't balk—because there is no friction to make it balk. And it won't double—because there is no second trigger to get tangled up in your glove.

The very newest Hammerless Smith Gun is the 20-Gauge Hunter One-Trigger. Weighs only 5 3/4 to 7 lbs. Just the finest gun that can be made at the low price.

Write for free Catalog to-day.

Isn't He Worth Saving?

Why trade off or sell at a beggarly price a good horse just because he "goes lame," "throws a curb" or develops some other blemish? There is nothing in the way of Spavins, Curbs, Splints, Windpuffs or Bunchees which will not yield readily and permanently to treatment with

QUINN'S OINTMENT.

Dr. L. H. Davenport, a prominent physician of Sheridan, Ind., writes: "I have used a number of remedies for the removal of curbs, splints, thickened tendons and issues generally, but for the last two years I have not been without Quinn's Ointment." I have tested it thoroughly at different times, and say without hesitancy that it is the only reliable remedy of the kind I have ever tried." Price \$1.00 per bottle. Sold by all druggists or sent by mail. Write for circulars, testimonials, etc.

WINCHESTER

RIFLE CARTRIDGES

Selected by the Government Board of Experts as "the Most Accurate."

At the conclusion of the tests of various makes of .30 Caliber Rifle Cartridges held at Sea Girt, N. J., May 12-13, the Board of Experts appointed by the Assistant Secretary of War to conduct the trials selected Winchester .30 Caliber Rifle Cartridges for use in the National Matches in 1910, as the tests proved them to be "The Most Accurate."

Result of Tests in Figures Showing Mean Radius of Targets:

	600 Yards	1000 Yards
Winchester	4.93 Inches	9.66 Inches
Frankford Arsenal	4.955 "	10.15 "
United States Cartridge Co.	5.167 "	10.40 "
Union Metallic Cartridge Co.	6.17 "	12.93 "

2.—2:15 Pace	300	8.—2:08 Pace	600
3.—Matinee.		9.—Matinee.	
THURSDAY.		SATURDAY.	
4.—2-Year-Old Pace	400	10.—2:20 Pace	500
5.—2:24 Trot	300	11.—3-Year-Old Trot	400
6.—Matinee.		12.—Matinee.	

CONDITIONS.

FIVE TO ENTER AND THREE TO START.

All races three in five, except 2 year old will be two in three, and any race not completed at the end of the fifth heat will be declared ended and the money divided according to the position of the horses in the summary.

Entries to close Friday, July 15th, when horses are to be named and eligible to the classes to which they are entered.

Entrance fee five per cent and five per cent of the amount of the stake will be deducted from each money won.

Purses will be divided into four moneys: 50, 25, 15 and 10 per cent.

The Association reserves the right to change the hour and day of any race, except when it becomes necessary to antedate a race, in which instance the nominators will receive three days' notice by mail to address of entry.

The right reserved to reject any or all entries and declare off or postpone any or all races on account of weather or other sufficient cause.

Entries not declared out by 5 o'clock p. m. on the day preceding the race shall be required to start and declarations must be in writing and made at the office of the Secretary of the track.

Racing colors must be named by 5 o'clock p. m. on the day preceding the race and must be worn upon the track in all races. Colors will be registered in the order in which they are received and when not named or when said colors conflict, drivers will be required to wear colors designated by the Association.

Hobblers barred in trotting races, but will be permitted in pacing races.

Member of National Trotting Association.

Address all communications to the Secretary.

A PROTEST was filed by a half dozen owners of three-year-old trotters when it was announced last week that the California Breeders' stake for trotters of that age would be trotted at the California State Fair this year, arrangements having been made to that effect by the Los Angeles association that inaugurated the stake. The protestants made it plain to the Southern California organization that it would never do to start a three-year-old in three stakes during eight days, and that association immediately opened correspondence with the State Fair directors and those of the Woodland Driving Club to see if this stake could not be decided over the Woodland track during the fair and race meeting there. By the time this issue of the "Breeder and Sportsman" is printed, it is very likely that the necessary consent of both boards will have been obtained and an official announcement that the California Breeders' Stake will be trotted at Woodland this year may be expected next week. It is pleasant to know that the Los Angeles association has acted so promptly in the matter after having its attention called to the fact that three races in eight days were too much for any three-year-old, and the owners as well as the Woodland Driving Club are to be congratulated upon the change. The stake will doubtless be a fast one, as the best of the colts named in the Occident, the Stanford and the Pacific Breeders' Futurity are also named in the California Breeders' stake. There is not a horseman in California but expects the records of all these stakes to be beaten this year, and the colts that win either of them will certainly get a mark better than 2:15, while there are certain to be heats trotted as low as 2:12 if the tracks are in good shape and the weather favorable.

WOODLAND'S ENTRIES will close on Friday next, July 15th. We want to see a big entry list, one that will assure high class racing at this excellent track. In this off year, when but very few associations have had the courage to announce a harness race meeting, the Woodland Driving Club has come to the front with a program of generous purses, and deserves the support of every horseman who owns a horse in train-

ing. The Woodland track is in fine shape and everything points to a very successful meeting. Those of the California stables that will be shipped north to begin racing at Portland, will have a full week intervening between the close at Woodland and the opening at Portland, giving ample time to ship the horses and get rested after the long trip. Enter at Woodland this year. There is a race for pretty near every class.

CALIFORNIA HORSEMEN are all coming to the conclusion that a circuit of twelve or fifteen meetings for small purses would be better than no circuit at all. We are pleased to see that this opinion is becoming so prevalent, and hope that by next year California associations will be able to organize such a circuit. For years past many of the horsemen (trainers generally, instead of owners) have insisted that they would not race for purses ranging from \$300 to \$500, but would go east instead. This was only a bluff on the part of the majority for not one trainer in forty can get together a string fit to compete with Grand Circuit horses. Horsemen are now announcing their willingness to race for \$300 purses, and some are saying that \$200 purses would get plenty of entries. The associations that have tried to give purses of from \$500 to \$1000 have found themselves deeply "in the hole" at the end of a meeting and declined to continue such a losing and unsatisfactory game. If they will next year organize a circuit of meetings with purses ranging from \$300 to \$500 they will find it no trouble to secure sufficient entries to fill them all and the result will be profitable meetings. California, with the least population of any of the harness racing States, has been giving more money for harness racing in proportion to the number of meetings given than any State in the union. The associations have been the losers and retired from the field. A lessening of the purses and getting back to business principles will cause a revival in the sport of harness racing. There are hundreds of owners in this State that would like to race their horses for \$300 purses if there were twelve or fifteen weeks of racing in the summer.

THERE WILL BE some great colt racing at the California State Fair this year, but the regular program of purse races will be rather meagre. Only four of the ten purses offered have filled as nearly all the best horses in training in California this year will be taken north after the Woodland meeting to race at Portland, Salem, Spokane and other points on the North Pacific Circuit. It is to be hoped that before the fair dates of 1911 are fixed there will be a conference between the representatives of the California, Oregon and Washington fair associations, which will result in dates being selected that will comprise a coast circuit in which dates will not conflict. The stock breeding and farming interests of this coast are such that the three states should work together in the matter of a fair circuit. The greatest harmony should prevail in this matter and those associations that refuse to act in that spirit are not friends of the breeding and farming interests.

GOOD PRIZES drew big fields for the racing at the stadium in Golden Gate Park, San Francisco, held July 4th under the auspices of the Fourth of July celebration committee. There were 45 starters in the five races, an average of 9 to the race, and in one race 14 horses lined up for the word. One reason for the big list of entries was the generous list of prizes. In each race first prize was a \$90 speed cart, second a \$30 harness, and third a \$10 buggy robe. It is seldom that such valuable prizes as these are given at a free matinee, but the big entry list and the immense crowd out to see the sport fully justified the committee in providing them. The meeting was very successful in every way.

Woodland's fair and race meeting promises to be one of the best ever held at this thriving town. The track is in fine shape and there will be a big attendance this year. Entries for the harness races close next Friday, the 15th inst. Don't forget the date. Many horsemen will ship direct to Portland from Woodland.

Chiquita, the mare by Highland C. that Walter Maben will race through the coast circuit this summer, paced a mile in 2:05 3/4 at Los Angeles last week, the last half being in 1:02 and the last quarter in 30 3/4 seconds. This looks like money winning speed. Chiquita is out of a Diablo mare.

STATE FAIR ENTRIES.

Only Four of the Ten Races Advertised to Close July 1st, Declared Filled.

As the leading California stables of harness horses are to be raced at Portland and Salem, Oregon, this year, the purses advertised by the California State Fair have received a very few entries, and of the ten races advertised to close July 1st, but four have filled, and these with an ordinary lot of horses. The 2:20 trot has six entries, the 2:15 trot six entries, the 2:20 pace seven entries, and the 2:15 pace ten entries. These are the only races having enough entries to fill. The races declared filled are the following:

- No. 2. 2:30 Trot. Purse, \$1,000.00.
1—Harold K., b. g. by Wm. Harold-Humming Bird, J. V. Galindo Jr.

BRANCH FAIR AT OAKLAND.

OAKLAND, July 6.—At a special meeting of the executive committee of the Chamber of Commerce and representatives of the State Agricultural Society at the Chamber of Commerce this morning it was decided to hold a State auxiliary fair in Oakland immediately following the State Fair at Sacramento.

The fair will be held at Idora Park from September 17th to September 24th, and will be given under the auspices of the Chamber of Commerce in conjunction with the State Agricultural Society and the Idora Park management. It will take the form of an industrial fair, as the proposed stock fair was not found feasible because of the difficulty in securing adequate quarters and the expense attending such an enterprise.

At one time the Chamber of Commerce decided to abandon the idea of a fair altogether, but upon further urging by the State Agricultural Society it decided to take up the matter once more. A number of locations were considered, among them the State League baseball grounds and the old Dewey Theater on Twelfth street, but these were abandoned because of the expense necessary to put them into shape, and an agreement was finally reached with the Idora Park people to hold the fair there. The park has already all the necessary equipment for the enterprise, as the last fair was held there.

J. A. Filcher, secretary of the State Agricultural Commission, was notified this morning of Oakland's decision to hold the fair. The matter will be taken up more fully with the board of directors of the chamber next Tuesday, and ways and means will be planned for making the fair a success by enlisting the interest of the merchants and manufacturers in the enterprise.

Joe Twohig drove William Detels' Bon Voyage colt Bon Guy a heat in 2:17 a week ago Saturday at Pleasanton, then gave him a mile in 2:15 1/2 with the first half in 1:08 and the last quarter in 33 3/4 seconds.

GOOD PROGRAM FOR SAN JOSE.

Breeders' Association Fills Every Race But One for Its Annual Meeting.

The 2:08 pace was the only race advertised by the Pacific Coast Trotting Horse Breeders' Association for its August meeting that failed to fill. It received but four entries, Moortrix 2:07½, Solano Boy 2:07½, Happy Dentist 2:11½ and Amado 2:16, and an effort will be made to bring these horses together in another race.

All the other races advertised to close July 1st were declared filled by the directors of the association at a meeting held last Tuesday.

At the same meeting the applications of W. J. Kinney and J. L. McCarthy for the position of starter were received and by a unanimous vote the latter gentleman was selected to line the horses up at the meeting this year. The board considered that the very excellent work done by Mr. McCarthy at the meeting of this association held at Salinas last summer, deserved endorsement.

The races declared filled were the 2:20 trot with 12 entries, the 2:12 trot with 8 entries, the 2:14 pace with 10 entries, the 2:15 trot with 12 entries, and the 2:20 pace with 7 entries. The entries received for each race were:

SPLENDID RACING AT STOCKTON.

There was a large crowd in attendance at the Fourth of July matinee of the San Joaquin Valley Driving Club and fast racing with close contests was the rule during the afternoon.

The races were the best ever held by the club, the horses racing from wire to wire in every event and in a majority of the heats the finishes were close.

The Nutwood Wilkes pacer T. D. W. won the fastest heat of the day when he took the second heat of the free-for-all pace in 2:11. Bert Kelly, a son of McAdrian, was the fastest trotter of the afternoon, winning the free-for-all in 2:17½ and 2:18.

The officers of the day were as follows: Judges, A. B. Sherwood, J. W. Galway, M. Henry; Starter, A. B. Sherwood; Timers, F. Lieginger, J. N. Jones and F. J. Post; Marshal, F. H. Johnson. The official summaries, furnished by F. Lieginger, secretary, are as follows:

First race, special:

McAdrian, trotter, b. s. by Guy McKinney (C. F. Bunch) 1

Trix McAdrian, br. m. by McAdrian (Chalmers) . . . dr

Time—2:19½.

Second race, free-for-all pace:

T. D. W., b. g. by Nutwood Wilkes (Kemp) . . . 2 1 1

Guy Vernon, b. s. by Guy McKinney (Parker) . . 2 2

Noble, b. g. by Diabolo (Helm) 3 3 3

Time—2:13½, 2:11, 2:16.

Third race, free-for-all trot:

Bert Kelly, b. g. by McAdrian (Bunch) 1 1

Little Branch, b. m. by Nutwood Wilkes (Chalmers) 2 2

Time—2:17½, 2:18.

Fourth race, 2:15 pace:

Jim Corbett, b. g. by Seymour Wilkes (Lieginger) 3 1 1

Blanch A., b. m. by Royal McKinney (Aker) . . . 1 2 3

New Port, blk. g. by Raymon (Morris) 2 3 2

Time—2:17½, 2:18½, 2:24.

Fifth race, 2:20 trot:

McDougal, b. g. by Stam B. (Kemp) 1 1

Auget Baron, blk. g. by Baron Wilkes (Chalmers) . 2 2

Allan Polak, b. g. by Nutwood Wilkes (Nana) . . . 3 -

Time—2:19, 2:21.

HOLIDAY SPORT AT SONOMA.

A feature of the Fourth of July celebration at Sonoma were the races held in the afternoon under the auspices of the Sonoma Driving Club. The day was fine, the track fast and the attendance big.

The road race was won by Lyttaker's Bernice. The time was 2:30, 2:45. The other horses entered were Dupont's Dick, Silva's Chicken, Lauteresser's Blue Dick and Calhoun's Babe C.

The mile race for pacers or trotters, purse \$100, won by Dunlap's Satmour. Time, 2:15, 2:15. The other entry was O'Kane's King V.

The half mile gallop for thoroughbreds, purse \$50, was won by Charles Green, owner G. Silva, in fifty-one seconds. Anderson's Coney Island, McGovern's Two Step, and Silva's Shenandoah were the other entries.

The trot or pacing event, purse \$75, was taken by Mayor M. E. Cummings' Mike C. with Lonergren's Myrtle, second. Time 2:15, 2:15 and 2:18.

The eighth of a mile race for saddle horses was captured by Millerick's Babe in thirty-four seconds. The other entries were W. Offutt's Button, and F. McGovern's Petaluma Boy.

The pace or trot, purse \$50, was annexed by Marty's Jim Chase. Offutt's Pat O. being second.

G. Silva's Charley Green won the quarter mile dash for runners in twenty-four seconds. Coney Island and Shenandoah were the other entries.

WATSONVILLE'S NEW HALF-MILE TRACK.

Mr. J. P. Soares of Watsonville, writes us that the new half-mile track there will be done and ready to drive on in another week. The stalls are all up, and work is about to start on the grand stand and judges' stand. The fences will also be up on both sides of the track in a short time. The horsemen and others are all very much interested and can hardly wait until everything is ready. The soil is first class, being sediment mixed with black loam and will make a beautiful half-mile track. The stalls are roomy, being 10x12. They intend to have a nice program during the latter part of July.

An experienced ranch manager is open for an engagement for cattle, sheep or general farming. Address C. J. Bromley, care of the "Breeder and Sportsman."

CELEBRATE THE FOURTH AT STADIUM.

Amateurs and Professionals Strive for Prizes With Pacers and Trotters.

The San Francisco Fourth of July Committee set aside \$400 to invest in prizes for harness races at the stadium track in Golden Gate Park July 4th, and the result was bigger fields of starters than were ever seen on the excellent three-quarters track, and a big crowd to see the sport.

The program was in the hands of the following gentlemen:

Starter, W. J. Kenney; Assistant Starter, J. W. Bonney; Marshals, M. Linderman, Dr. Dalziel and H. M. Ladd; Clerk of Course, P. S. Higgins; Judges, P. H. McCarthy, James Finch, William Lang and A. M. Scott; Timers, H. Schottler, William Higginbottom and J. Lombard.

There were five races on the card with big fields in three of them, the last race having no less than 14 trotters to start for the word. Starter Kenney got them all away in good order, however, and the sport was excellent during the entire afternoon.

The free-for-all pace went to Geo. Perry in three straight heats with Little Dick the contender in every heat. In the free-for-all trot, Charley T., A. Ottinger's Zombro gelding showed that the bleeding which caused his withdrawal from a race on Saturday, June 25th, was only a temporary affliction, as he won on Monday very easily after dropping the first heat to that fast sprinter Walter Wilkes. Results:

First race, 2:20 pace:

John Kramer's Celia K 1 1 1

P. Kohn's Alfred D. 2 2 5

D. E. Hoffman's Dictatum 8 8 2

Chase & Giannini's Kitty D. 5 3 3

W. Higginbottom's Der Teufel 3 10 9

N. Burk's Jim Rankin Jr. 9 4 4

H. M. Ladd's Ringrose 4 6 8

R. P. Giovannoni's Golden Buck 5 7 7

J. V. Galindo's Patery 7 7 6

E. C. Chase's Dollie 10 9 dr

Time—2:16½, 2:16, 2:16.

Second race, 2:25 pace:

W. J. Kenney's W. J. K. 1 1 4 4 1

H. Schottler's Lulu S. 9 3 1 1 2

Bert Edwards' Baldy Mitchell 2 2 3 4

T. H. Corcoran's Caliente Girl 8 5 3 2 3

J. S. Campodonico's Lucero 4 6 5 5

I. B. Dalziel's John T. 7 7 5 6 6

D. E. Hoffman's Balboa 3 8 dr

H. E. Chase's Don C. 5 6 dr

G. Tassi's Lady B. 6 9 dr

Time—2:19, 2:21, 2:21½, 2:22, 2:24.

Third race, free-for-all pace:

George Giannini's George Perry 1 1 1

Luke Marisch's Little Dick 2 2 2

George Kitto's Deroll 3 3 4

J. V. Galindo's Pilot 4 4 3

J. L. Borden's Cresco Wilkes 5 5 dr

Time—2:13, 2:13, 2:13.

Fourth race, free-for-all trot:

A. Ottinger's Charley T. 3 1 1 1

F. Burton's Walter Wilkes 1 2 3 4

G. E. Erlin's Major Cook 2 4 4 2

H. Boyle's Modicum 4 3 2 3

Time—2:14½, 2:14, 2:18, 2:21½.

V. Verilhac's Dr. Hammond 1 1 1

Matthes & Buckley's Walter G. 2 7 4

J. V. Galindo's Harold K. 11 2 5

M. W. Herzog's Lady Nell 13 10 2

J. W. McTigue's Darby Mc 3 3 3

F. W. Thompson's Lady Washington 4 5 6

Fred Clotere's Monk 9 4 9

H. D. Chase's Sunset Belle 5 14 7

D. E. Hoffman's Dr. O'Brien 7 6 10

J. W. Smedley's Red Velvet 6 8 11

H. Hagensen's Search Me 14 9 8

F. L. Matthes' Raymond M. 8 11 13

A. Ottinger's Lady Irene 10 13 12

T. Murphy's Babe Benton 12 12 dr

Time—2:21, 2:19, 2:20.

None of the Sacramento horses came down to compete in the matinee races at the stadium on July 4th, as the classification was made too late for the Sacramento owners to know in which races their horses were expected to start.

The San Francisco Driving Club will go to Concord to-morrow, where several good purses have been hung up for the horses owned in this club to compete for.

SANTA MARIA DRIVING CLUB.

A large crowd saw some very good racing at the Santa Maria half-mile track on July 4th by horses owned by members of the local driving club. Results:

First race, class A:

Wm. Mead's b. g. Black Bart (Mead) 1 1

T. J. Steele's br. g. Honas Bismark (Blossom) . . . 2 2

Time—2:21, 2:20.

Second race, class B:

F. E. Lewis' blk. m. Moorita (Lewis) 1 1

John Boyd's b. g. Billy Taft (Mead) 2 2

H. H. Bardin's br. g. Arrow B. (Bardin) 3 3

Time—2:34, 2:25.

Third race, class C:

F. A. Smith's dun. g. Rex (Smith) 1 1

Harry Adams' b. m. Maud A. (Adams) 2 2

A. L. Stanley's b. m. Kitty Wilkes (Yates) 3 3

S. T. Coiner's br. m. Hattie C. (Coiner) 4 4

Robt. Earl's br. g. Don Gara (Earl) 5 5

Time—2:52, 2:54.

NEWS FROM THE NORTH.

C. A. Harrison Tells of Trainers and Horses and Predicts Successful Season.

Everything up on the North Pacific circuit looks as if the harness horse sport of 1910 will be a big success. At Spokane Secretary Cosgrove has his track in elegant shape and his program is a good one. Mr. Cosgrove is beyond question one of the best fair managers in America.

The Childs family of horse trainers have a nice lot of horses. Miss Jerusha by Zomhro looks like a 2:07 pacer, and Mayo by the same sire is up to the Zomhro standard.

Trainer Phillips has a fine lot of youngsters and is bringing them along in good shape.

Dave Maloney's pacer Hal Online acts like a 2:10 sbot, and Dave is wearing a two-minute smile.

Over at Yakima Secretary Pace has the Fair Grounds ready and the horsemen who visit Yakima this year will see a change in the appearance of everything. Electric cars to the track, fine grounds, fine stalls, plenty of good water, stalls clean and ready, and men on hand to show horsemen where to go and to accord them that courtesy due a visitor and especially a tired trainer and his crew of tired men and tired horses.

Doctor John S. Kloeber, chairman of the State Fair board, is the best man ever in the position and he will make it his life's effort to prove that the 1910 Washington Fair is the best ever held. Dr. Kloeber owns one of the best herds of Holsteins in the world, besides a flock of collies that are hard to beat. He is a native of Kentucky which means that he is a lover of fine cattle, fine dogs, fine horses, and all the other fine things that a Kentucky gentleman should and does love.

The Western Washington Fair Association at Seattle will give a fall meeting. The city of Seattle will do itself proud by this fall fair. I understand that \$10,000 has been given by the King County Commissioners to the fair association to enable it to give a fair that will be a credit to the county.

Trainer Davis has a big string of horses in preparation for the circuit. His best one looks to be Esther B., a pacer by Alexis, and she is a good mare. His black wonder Black Pilot, has two minute speed. Gloria O'Neal is his candidate for the \$10,000 trots.

Doc Hartnaglo is preparing Henry Gray by Zomhro to bring home the money in the \$10,000 trots. The Doctor states that 2:07 will never stop Henry this year. Henry was wintered by Dan Rice at Lacy, and, believe me, no trotter ever got a better wintering than did Henry Gray.

Joe Maguire, a Marvin graduate, has seven head of pretty fair horses. His fastest pacer is a bay gelding named Cranky Thorne by Hawthorne. This horse is a fast one and wears the arslapants. Doc McKinney by Capt. McKinney (Capt. Jones) is his best trotter and he is a good one.

Charles Deyo has a brother and sister by Zomhro and for looks and action it would be hard to find two nicer trotters. His stake horse, Freddie C. Jr., looks well and may be ready at Portland. Mr. Deyo is very careful of this stallion. Gihhie 2:16½ is ready for a battle now.

At Portland everybody is busy. Mr. Welch will do his part and do it well, and everyone is sure of what it will be. He is an energetic, honest, capable secretary.

Every trainer at Rose City track has good horses and the track is good. Dick Wilson and his assistant Loupe Corella, are busy from daybreak to dark, and they do ride some. All of Wilson's horses act well. The young Hal B. family all look alike, being solid colors, elegant in conformation, disposition and speed.

Fred Brooker will be ready with his stable when the bell rings, and everyone knows Fred is a ding-dong finisher in a race.

P. W. Hodges is at Salem and has a few nice horses. His stallion Montbaine is all his pedigree calls for and that means a most elegant stallion, the best bred one that ever stood on the lone tree track, and will be as good a race horse as The Harvester.

I hope the California horseman will come north this year as every association on the North Pacific circuit will welcome them and our horsemen will do all possible to heat them fairly in the races, and treat them well before and after.

C. A. HARRISON.

Seattle, July 3rd, 1910.

THE OUTLOOK FOR FAST TROTTING.

The racing outlook for 1910 is replete with fast racing material, and if a majority of the trotters who hold these records and are now in training, come to the races fit, there will be witnessed some very stirring contests. There is always more or less uncertainty whether a trotter or pacer that has taken a fast record the previous year will be able to come back showing his true form. Many of them never return, while others do after a rest of a year or so. There are, however, a number of brilliant trotters who took fast records last year that are expected to be prominent this year. Those who won their fame, last season, are Uhlman 2:02½, by Bingen 2:06½, Penisa Maid 2:04½, by Pennant 2:15; Paderewski 2:05½, by Constenaro 2:16; Margin 2:05½, by Time Onward, Bob Douglas 2:06½, by Todd 2:14½, Inner Guard 2:06½, by Guardsman 2:23½; Ruth Dillon 2:06½, by Sidney Dillon; The Harvester 2:06½, by Walnut Hall 2:08½.

In the beginning, it is proper to eliminate Uhlman from the field of professional racing. It is apparent however, did his owner desire to race in the free-for-all trots, the races would be conceded to him. So far as known, he is by all odds the fastest trotter in training, an improved trotter over what he was last season. Penisa Maid and Paderewski are two western trotters that must be considered. They earned their fame last season, one of which commenced the season with a record of 2:19½, while the other had a record in 2:13½. The first named, perhaps, is held by a majority of horsemen over Paderewski, inasmuch as she has a record a second faster. If reports are true about the latter horse, he has already worked a mile in 2:06½, which is the fastest mile trotted so far this season. If this is more than the trainer's show down, it means a new record for the chestnut gelding before the season is past.

Margin was one of the most successful trotters of last season. Not much has been said about her during the past winter and spring, it being doubtful whether she cuts much figure among the trotters of her class. She was not exactly sound last season and again her old ailment may keep her from making a showing this season. Bob Douglas 2:06½ is expected to stand among the first light of fast record trotters. He indicated that he was both fast and game last season, and a stallion that would race out any number of heats. He comes to the season's contests in first class condition, able to show his ability as a race horse. Inner Guard 2:06½ is another trotter that raced well last season. There are few, however, who look upon the son of Guardsman as being a factor in this season's contests. His record is perhaps the limit of his speed. Ruth Dillon 2:06½, the fast four-year-old daughter of Sidney Dillon, may furnish some of the sensational features of the season. The story is that she is faster than her record, that she has trained satisfactorily and will be one of the good ones of the season. This leaves The Harvester as the last one of the number mentioned. There is no doubt about her racing and speed ability, but no one would perhaps care to say how he will succeed in a hard and fast contest with any one of the fast trotters named above.

There are, however, some fast record trotters that won their fame in previous years that will, no doubt be on hand to take part in many of these contests. Some of them were expected to be right last season, but for various reasons were disappointments.

The list includes Jack Leyburn 2:04½, by Alto Leyburn 2:21½, Sonoma Girl 2:05½, by McKinney 2:11½; Wilkes Heart 2:06½, by Great Heart 2:12½, Allen Winter 2:06½, by Ed Winter 2:12½, Gen. Watts (3) 2:06½, by Axworthy 2:15½, Spanish Queen 2:07, by Onward Silver 2:05½.

The first named has proven himself an exceptionally fast race trotter in past years. Two years ago, he was among the fastest and best, but a failure last season. Has he regained his form and can he compete with the best in his class this season? So far as we know, his best racing days are over. There has always been a great deal said about Sonoma Girl. She raced some few times last season, but none of her races were sensational. She has probably done her best racing. Sterling McKinney has, perhaps, been the greatest failure of any fast record trotter of recent years. To his owner, who brought him from the coast, he was a great disappointment. His sale followed when, like magic, his new owner made him over completely, selling him for a large price. So far, he has been a racing disappointment to his new owners. Sensational reports come from his training quarters where in the hands of a new trainer he worked a fast mile in 2:06½. If his many grievous faults could be overcome, he would, no doubt, trot to a faster record. Wilkes Heart, one of the most consistent of fast trotters, thoroughly game, hardly measures up to some of those mentioned above. Allen Winter, who won the first American Derby, will race later in the season and being in condition, should add to his fame as a fast and game trotter. The world's champion three-year-old trotter, Gen. Watts, while being prepared for a record, will not be raced professionally. An attempt will be made to capture the world's champion record for trotters. In 1908 Spanish Queen distinguished herself as a fast and game trotter. It was generally expected that this mare would prove one of the star trotters of last season, but in this she was a failure, owing to the fact that she was perhaps badly out of form during the whole season.

It will be observed that there are enough fast rec-

ord trotters named herein to put up some very exciting and stirring contests, not all of them will be able to appear, but enough of them will respond to make things lively. There is another fact to be considered—there are always some extremely fast trotters that are developed in the first few meetings—these along with the fast record horses should make the racing especially brilliant.—American Sportsman.

RAISING HORSES ON MODERATE SIZED FARMS.

Less than a decade ago the average Eastern farmer thought it more profitable to depend upon the open market for the horses he needed to do his farm work than to raise them. At that time he little thought that in spite of the thousands upon thousands of automobiles that were being made and sold, horses would increase in value year after year as they have done. Today, to go into the open market and buy any kind of a young, sound horse requires the expenditure of from \$200 to \$250 and from \$250 up to \$350 if one wishes to buy a horse possessing unusually good qualifications for service, either as a draught, carriage, road or saddle horse. It is likely that, on the smaller farms of the East where garden truck or small fruits are depended upon principally, horses cannot be raised any more cheaply than they can be bought, but on the medium-sized and large farms where grain and hay comprise the principal crops, or where grain and hay-raising is carried on in connection with dairying and sometimes with potato-raising on a large scale, the farmer can not only raise the horses he must have to do his work cheaper than he can buy them, but he can also raise from one to three foals a year to sell and make money on them. As to the class of horses the Eastern farmer should raise, personal taste must assist in deciding, although always governed by the conditions surrounding the breed, not only as to the class of work required of the horses on the home farm, but as to the local market demands as well. The average farmer who aims to raise horses from the mares he works on his farm will not find it wise to breed with an idea of producing either speed horses or extremely heavy draught horses, although there is a splendid demand for horses of either of these classes. It may also be said that there is an unusual demand for saddle horses and polo ponies, but as the average farmer could neither use mares suitable to produce horses of either class, nor sufficiently train horses of either class to go to market fit to bring good prices, it is evident that their production should be left to the specialist, rather than to the general farmer. On farms of from 50 to 150 acres, which embraces most of those in the Eastern States, horses weighing from 1000 to 1300 pounds are generally regarded as best qualified to do the general class of work demanded, and if sound, good-looking and well-broken horses of that class sell very readily at prices which net their breeder a fair profit considering the fact that their dams may be worked two-thirds of the year while raising a foal, and the foal when old enough to be broken may be made to pay his way from the time he is three years old until he is sold by the assistance he will be in doing the work of the farm. As to the blood lines to use in producing horses of this class, it may be said fairly that the big, good-looking trotting-bred stallions and mares, of which there are many nowadays, will be as satisfactory, if not more so, than those of any other breed. Bred for generations for use in harness, they possess advantages in the way of disposition, action and pace which the thoroughbred stallion—of which there are many in service in New York State—does not possess. They are also superior to the hackneys in finish, quality of bone, pace and stamina. They cannot, of course, equal the heavy draught breeds in the production of horses for heavy hauling, but as extremely heavy loads are not a feature of farming as carried on in the East the big, trotting-bred horses are not only able to answer all demands in this respect, but they will perform other farm tasks more easily and more rapidly than would horses weighing in the neighborhood of a ton. No matter, however, which class of horses the farmer decides to raise he should stick to one breed in its purity and make no experiments in cross-breeding. If he has some real good trotting-bred mares of the size demanded for serviceability on the farm, he should hunt up a trotting-bred stallion having the same qualifications to mate them with. The thoroughbred, the hackney, the draught or the saddle-bred stallion will not be able to furnish any desirable qualifications as a cross for a trotting-bred mare which a trotting-bred horse could not furnish in a much greater degree and in most cases the use of such horses, unless on mares of the same breed, results in a class of misfits for almost any purpose. To the farmer who has mares of the heavy draught type, who can make use of them, the same advice holds good; mate them with a sire of the same breed and raise horses for the draught-horse market. Now and then a farmer may possess the necessary judgment and skill in training saddle horses, or even speed horses, to make him successful in that field, but as the horses of those classes are not fitted to take the part in the farm duties which the 1100 to 1300-pound trotting-bred horse will be able to do, it will be far better to stick to that type of a horse, this advice, of course, being meant for the average farmer of the East, as before stated.—Horse World.

Drink Jackson's Napa Soda.

NOTES AND NEWS

Marian Patch, sister of Dan Patch 1:55½, recently worked in 2:20, last half in 1:06.

The Sacramento Driving Club will hold a meeting at Agricultural Park track to-morrow.

Diamond Mac won a race for Charley De Ryder at the Fremont, Nebraska, meeting.

San Juan by Nutwood Wilkes was outside the money at Fremont, Nebraska, last week.

Diabul got second money in a \$400 purse at Fremont, Nebraska, June 29th. The best time was 2:12½.

Pat Hunt gave Dr. Rae Felt's mare Telltale two heats in 2:14 two weeks ago at Pleasantou and she did the trick quite handily.

W. J. Kenney had some big fields to handle in the Fourth of July races at the stadium, the largest ever seen on the track, but he got them away well.

The trotter General H. 2:09 recently beat Texas Rooker, p., 2:05½ in a free-for-all race at Calgary, though the latter won the first heat.

Gracie R., the Demonio mare in De Ryder's string has not made much of a showing in the Nebraska races, as she has been out of condition since crossing the mountains.

Cleo Dillon won two heats and second money in the 2:14 trot at Fremont, Nebraska, June 29th. Fearless, the favorite, won the last three heats and the race.

San Francisco 2:07½ has served some of the best bred mares at Walnut Hall Farm, including Hettie Case, the dam of Feren 2:05½, and a half-sister to McKinney 2:11½.

Fred Chadbourne gave E. D. Dudley's three-year-old Pal, a mile in 2:18 to cart a week ago Saturday, then hooked him to a sulky and drove what looked to be an easy mile in 2:17.

A. J. Welch sent in his check for \$500 a few days ago as a voluntary subscription to the reserve fund of the Trotting Horse Breeders' Club to finance the Grand Circuit meeting in New York.

The last workout mile of Ario Leyburn at Memphis, was in 2:10, last half in 1:01½. Rosemire worked him a mile at Indianapolis, where he is now quartered, in 2:12½, last quarter in :30.

Flossie Hankins, the fast trotting mare by Klatawah, p., 2:05½, is being staked. She trotted a close second to Justo (3) 2:10½ in 2:11½ at Springfield, Ill., in July, 1908, being a three-year-old at that time.

Penisa Maid 2:04½ is not in good form at present, owing to a catarrhal affection, which is troubling several horses in the Shutt stable. The mare is improving, however, and will shortly be in condition to take sharp work.

One day last week the 10-year-old daughter of Dr. Fear of Knightstown, Ind., drove a green pacing mare of unknown breeding a mile over the Indianapolis track in 2:19, the most sensational workout for the day at that track.

Grace, the three-year-old full sister to Czarevna (3) 2:07½, in Mike McDewitt's stable at North Randall, O., looks like a trotter of the right kind. While 2:15 is her best to date for a mile, she has shown two-minute speed parts of the way.

Notwithstanding the fact that public betting has been prohibited—and actually stopped—on every trotting track in the State, more trotting meetings were held in New York last year than in any other State excepting Ohio.

J. O. Gerrety, who is training a string of horses at Wheaton, Illinois, has the pacing stallion Mark Night 2:10½ and the trotting mare Golden Girl by Zombro. The last named mare has no record, but has worked a mile in 2:14½.

T. D. W., the Nutwood Wilkes gelding that has passed through several hands within the past year or two, has begun to show speed at Stockton. He won a race there July 4th and paced one heat of the race in 2:11.

Major Mallow is keeping up his clip this year. At Washington C. H., Ohio, on June 24, he paced the half-mile track there in 2:08½ in an attempt to beat the track record of 2:09½. He was feeling so good that W. H. Mallow, his owner, sent him for another mile, which was covered in 2:05½, the first half in 1:02½, lowering all half-mile track records in Ohio, and a marvelous performance for so early in the season.

Allerton 2:09½, the famous trotting sire, died on Thursday of this week at the Hopper Stock Farm, Indianola, Iowa.

Among the promising yearlings at famous Walnut Hall Farm, Kentucky, are the following: A full brother of Native Belle (2) 2:07½; a colt by Walnut Hall 2:08½, dam Feren 2:05½ and a filly by Walnut Hall 2:08½, dam Ozanam 2:07.

The Pacific Slope's stakes for 2:20 class pacers was declared filled with seven entries this year. This is the smallest number of entries ever received for this stake and even though every entry pays in full and starts the association will be out \$450 on the race.

Most of the foals got by Zombro 2:11 in the East last season were fillies and hay in color. The last one reported is from Belle Gibson 2:27½, whose sire is Bow Bells 2:19½, and whose dam is Lulie J., by Onward 2:25½. This foal is a bay filly and is owned by Leo Ottinger of New York City.

Last Friday week Elmo Montgomery worked the roan stallion Bodaker a mile in 2:12 at Pleasanton and repeated him in 2:13 with the last half in 1:04½. This stallion is being entered through the coast circuit in the slow trots as he has no record. He looks as if he would do.

William Simpson, owner of McKinney 2:11½, and Axworthy 2:15½, recently suggested that men who drive on the speedway might find pleasure and profit in buying three-year-olds and developing their speed on the road instead of buying outclassed campaigners, which seldom improve on their hands.

Andrew Robertson, the well known Australian horseman, is in San Francisco for a few weeks, having come up on the last steamer. Mr. Robertson purchased about twenty head of trotters and pacers in California about three years ago and shipped them to Australia, being well pleased with the result.

Walter Cox paid \$120 for Mary G. as a yearling, sold her to Charlie Greenough for \$1000, and last week she was sold for \$5000 and the last purchaser looks to have as good a bargain as any of her respective owners, for the four-year-old daughter of Walnut Hall is sensationally fast.

The fastest trotters in the hands of the veteran trainer Knap McCarthy, now located at Terre Haute, Ind., are Oro 2:05½, by Little Corporal, p. 2:19½, and Nancy Royce 2:09½, by Allerton 2:09½. Nancy Royce lately trotted a mile to cart in 2:10½, the last half in 1:03½. Oro trotted a work-out mile in 2:11 and repeated in 2:10, the last half in 1:04.

Fanny Samson, the fast filly that Geo. H. Estabrook had out in 1908 as a two-year-old, and was second to Czarevna in 2:12½ and 2:13½ in the Kentucky Futurity, is now being used by the Colorado turfman in the matinees at Denver. She won the 2:30 class at City Park on June 18, trotting the third heat in 2:20½.

The three-year-old Allen Farm bred trotting colt Bruges covered a fourth work out mile recently in 2:28, the last eighth in 15 seconds, on a half-mile track. Bruges is by Bertini (3) 2:22½, and is the first foal that Bertini ever got. He is eligible to start in some of the rich futurities this fall and should easily beat 2:10 before then.

In response to numerous protests the Los Angeles association is endeavoring to arrange for the trotting of the three-year-old California Breeders' Stake at Woodland instead of at the State Fair as was announced last week. This arrangement will doubtless be made as the Woodland association is willing.

Locust Jack 2:06½ has been converted to the pacing gait and probably will be campaigned at that way of going this season by his owner, James Farley. It was Locust Jack that forced Hamburg Belle to trot the fastest three heats on record in the annual race for the Charter Oak purse at Hartford two years ago.

Codero 2:09½ by Bingen 2:06½, is racing in Austria this season, and won second money in a race there not long since. He won the first heat in 2:13½ but was beaten the next two by Fred Leyburn in 2:14½, 2:13½. Fred Leyburn was bred in France, sired by a French horse called Kalmia. His dam is Helen Leyburn 2:14, by Onward 2:25½.

One of the best sales in saddle horseflesh made in Kentucky this season was recently, when George Watson, of Chicago and New York, bought of Shropshire & Matlack, of Winchester, the five-year-old show horse, Chantecler, for \$2500. Chantecler is by Choctaw Chief and out of a mare by Roscoe, and will be shown at the Eastern shows this season.

A great Italian four-year-old is the filly Elisir Kuser which last season reduced the Italian record for four-year-olds to 2:15, nearly four seconds below the previous record. From March 18 to December 12, 1909, she started in thirty races over ten different tracks. Of these she won twenty-four, was once

second, twice fourth, and three times unplaced. She won about \$4500. Elisir Kuser is a daughter of the famous American stallion Colonel Kuser 2:11½, a son of Stranger 3030 and Inez, by Jay Gould 2:21½.

The second beat in 2:14 made by Mr. A. Ottinger's trotter Charley T. 2:10½ by Zombro in the second heat of the free-for-all trot at the stadium last Monday, showed that the bleeding which put him out of the cup race June 25th, was nothing serious. Arter trotting this second heat in 2:14 Charley T. went on and won the race easily, and suffered no ill effects.

Mr. J. M. Pitts, who advertises several well bred trotters for sale, also has a five-year-old mare by Alta Vela 2:11½, dam by Guy Wilkes, that is a great prospect. She is 15.3, weighs 1100 pounds, handsome as can be, sound and well broke, a line trotter and can show a 2:30 gait on the road. This mare was never before offered for sale. The two-year-old by Chestnut Tom mentioned in the ad. is a stallion and a fine looker. He is good enough for a stock farm, as he is a wonderfully well bred colt.

HOLIDAY MATINEE AT MARYSVILLE.

The matinee races held at the Marysville track Saturday and Sunday afternoons, July 2nd and 3rd, under the auspices of the Yuba and Sutter Driving Club, proved attractive to the Fourth of July visitors. Four events were pulled off each day, and they proved above the average.

Saturday afternoon the 2:30 trot and pace was won by J. Strain's King S., against A. C. Powell's Rex, which was second, and W. Middleton's Barney M. and Oliver Keyes' Prince.

The two-in-three pacing match was won by Dr. Jacob. In this race Frank Sealey's Earthquake lost his hobbles while in action, and the driver, John Renatti, was thrown from his sulky, but without serious injury.

The third race was won by George Magruder's Mabel, Lady Alice second, against Anona and Easter, owned, respectively, by William Leech and Fred Cooper.

In the fourth race Fred Park's Chico horse, Joseph D., won in two straight heats, George Magruder's Trilby second and Peggy third.

Sunday afternoon Sir John S., the famous pacing stallion, owned by W. L. Vance of Marysville, gave an exhibition mile in 2:06, two and a quarter seconds short of his record. Ed Strain's young stallion King S. and the promising animal Washington McKinney Jr. also appeared on the track.

Katalina won the mixed trot and pace, best two in three; Mollie second, Mayo M. third and Easter Bells fourth. Time, 2:17 in each heat.

A similar race was won by J. E. Strain's Maurice S., over All Style and Tonopah. Time, 2:16 and 2:17½.

In the third race, Rockaway was scratched. Chiquito bested Monteo, who had an off day. Time, 2:16 and 2:19.

In the mile dash for two-year-old trotters, William Leech's Miss Friday won from Manuel Gomez's Chestnut and Dr. J. L. Sullivan's Dora S. Time, 3:20.

A feature of the meet was the introduction of William S. Harkey's phenomenal filly Aeroletta, sixteen months old. She is entered in all the great stakes in the Union, and is regarded as a promising prospect, destined to make a national reputation.

The following acted as timers and judges in all the events: E. P. McDaniel, Dr. J. L. Sullivan, John Giblin, J. W. Steward, Dr. Gates, Wm. Leech, Geo. Magruder and Frank Luyster.—Democrat.

LATE CLOSING MAKES GOOD CONTESTS.

In the State Fair News, a publication devoted to the exploitation of the Minnesota State Fair, Mr. C. N. Cosgrove, the secretary of the association, tells why it was decided to abandon the practice of giving early-closing races for the big fair at Hamline, in the following words:

For a great many years the date of closing for all the races on the program was July 1, sixty days before the races were held, and during these sixty days the majority of these horses were racing throughout the Western Circuit. It is obvious that long before they arrived here the probable winners in each and all of our races could be reasonably picked out unless some very fast horse arrived from some other part of the country. This led to a "cut and dried" performance here and frequently two horses would combine and win first and second in two different purses, entering and starting in both, because they had the calibre of every other horse sized up long before they arrived here and could therefore work their graft deal. We, therefore, changed our policy and three years ago closed two-thirds of our purses 40 days later than July 1, viz., August 10, and under this plan we have had our most successful contests in the class races—good-sized fields and the sharpest kind of racing. One of the greatest races for blood, gameness and closeness was that of that 2:11 pace two years ago, a late-closing class race for \$1000. A dozen horses started and they were so evenly matched a blanket would have covered the bunch the whole way around, and this is a fair sample of the other races held under the late-closing plan.

Drink Jackson's Napa Soda.

OUR LOS ANGELES LETTER.

Los Angeles, July 5, 1910.

There was nothing doing at the Arcadia track last week beyond the usual routine work of getting the prospective campaigners in shape and developing what speed the colts may have, and we may as well acknowledge right now that with one or two exceptions they are not up to "par." This is certainly an off year in this part of the country for two-year-olds as well as prize fighters.

A couple of years ago Mahen and Ted Hays had a hunch of youngsters here that were the equal of any lot in the country but it is not so at present.

Recognizing the impossibility of the State Fair speed committee being able to program three races for three-year-olds to take place in one week, the California Breeders' Association is endeavoring to make arrangements to have their stake, the California Breeders' stake for foals of 1907, decided the week before at Woodland during the meeting there August 24th to 27th, leaving the two two-year-old stakes, the Canfield for foals of 1908, two divisions, and the Canfield-Clark stake for two-year-old trotters, purse \$1000, to be raced at Sacramento during the State Fair, September 3, 10, 1910.

Frank Williams worked Wm. Morgan's pacer Conny a mile in 2:15 and a half in 1:04½. Crisis owned by the same Pasadena miner, stepped a mile for Williams in 2:14½ and the Zombro mare Era jogged one in 2:18. Luna M., the two-year-old filly by Direcho, worked one in 2:22 and Alta, a two-year-old filly by Redlac in the same trainer's stable, went down to the quarter pole in 38½ seconds.

W. G. Durfee let Zomwalsey step a mile in 2:11¼ and Leonora McKinney one in 2:13.

Jas. S. Stewart worked Del Murray by Murray M., the two-year-old owned by W. A. Glascock, a mile in 2:28½ yesterday and Atlantic Fleet, a pacer of the same age owned by Glascock & Stewart, a mile in 2:17. The black Symbolier colt owned by Christopher, worked a mile in 2:19 on a pace, last half in 1:05.

Walter Maben let the green pacer Chiquita, owned by A. B. Miller, step a mile in 2:05¾, last half in 1:02, last quarter in 30½ seconds and well within herself all the way. He also worked E. A. Montgomery's two-year-old Victor Mc. by Red McK. a mile in 2:28½.

Capt. Springer shipped his four horses last Saturday to Spokane. The good mare Lady Sirius was among them.

Jas. G. Stewart will probably move his string soon to Pasadena as he is anxious to work some of his charges over a half mile track, as at least two of them will be raced next season over the half-mile rings in the east. JAMES.

MATINEE AT PORTLAND.

The Riverside Driving Club of Portland, Oregon, held matinee racing on the 4th of July at the track of the Portland Fair & Livestock Association.

The class B trot has but two entries, G. G. Howitt's Hunkey Dory and J. P. Porter's Ora May. Hunkey Dory won the first heat in 2:23½, but was beaten the next two heats in faster time.

The second race between three crack trotters was won by C. W. Todd's Deputy in two straight heats. A. C. Lohmire's Red Skin took second honors, while third place went to T. R. Hewitt's Dottie Dimple. This was really one of the best races of the day, and the winner was cheered lustily as he crossed the finish line.

After this race Dick Wilson exhibited Mrs. A. R. Shreve's two-year-old filly Ruby Light by Aerolite (3) 2:11½, dam the great broodmare Bertha by Alcantra. Ruby Light has had but six weeks' training but she paced a mile in 2:27½ with the last half in 1:12½. Trainer Wilson thinks she is the most remarkable two-year-old he ever handled and thinks 2:15 will be easy for her in another month. He said: "Six weeks ago she was one of the greenest pacers I ever handled, and now she shows class enough to warrant me claiming her to be one of the best in the world when she matures. Right now she is the greatest filly in the world for the training she has had."

After this a special novelty race between W. B. Linn's Alex Williams and A. C. Lohmire's Arc Light was introduced. Mr. Lohmire drove Alex Williams, while Dick Wilson, trainer of that horse, handled the ribbons over the Lohmire entry. Alex Williams won the race in a nice drive, Lohmire driving hard to beat his own horse and accomplished the purpose.

Ed Aylsworth's Sargo took the Class F trot from L. W. Watts' Hallie B. and J. M. Edwards' Wenlock in two straight heats.

The next race was the Class D pace, which was cleverly taken by Dr. Treve Jones' Alexandra Queen, which entry was easily the class of the event. With Dr. Jones handling her, the roan mare took the lead in both heats and scored winner with a wide margin each successive heat. Fred T. Merrill's Byron Lace was second and C. A. Crofford's Frederick Zombro third. The best time was in the second heat, when a mark of 2:26½ was made, and Alexandra Queen could probably have bettered that had she been pressed hard.

George Kilduff, a 13-year-old lad, on his pony, Babe, won the boys' quarter-mile dash. Frank Burch, on Tom, was second and Frank Meek, on Dolly, was third.

THE FREE-FOR-ALLERS,

[J. L. Hervey in Chicago Record-Herald.]

Last week reference was made to the chestnut gelding Paderewski 2:05¾ as the fastest trotter yet bred in Illinois by a breeder of that state. And almost simultaneously therewith the news came from Terre Haute, Ind., where Tommy Murphy is finishing his "grand prep" for the campaign of 1910, of his working a mile, in company with the stallion Sterling McKinney, in 2:06¼. This is undoubtedly the fastest mile trotted in 1910, to date, and signifies that the son of Constenaro 2:16¼ and Baby is in grand form and should be one of the most formidable free-for-all trotters of the seasons.

It is also evidence that the McKinney stallion, whose record is just in the notch in which the pair worked, is still in possession of that wonderful speed which has made him one of the sensations of the past three years. Whether he is still the same ultra-rare horse that has lost so many races which seemed to be at his mercy only the next few battles in which he takes a part will demonstrate.

There will be more or less curiosity anent this question until it is settled—and if it is settled in the stallion's favor, one thing is certain—namely, that Murphy will be accorded the credit for one of the most remarkable and unexpected triumphs ever scored by a trotting horse trainer. For Sterling is generally regarded as a hopeless case.

Mention of these two free-for-all trotters—for such any one must be considered with a record below 2:07—brings to mind the fact that the season of 1910 promises to be graced by some of the most stirring free-for-all trots, and others in the extreme fast classes, that any enthusiast could desire. At least that is what a survey of the material for a series of such races would appear to give full warrant for. The following is a list of trotters eligible to such events that are now in active training or soon will be:

Uhlan 2:02¼, blk. g. by Bingen 2:06¼.
Jack Leyburn 2:04¼, ch. g. by Alto Leyburn 2:24½.
Penisa Maid 2:04¼, b. m. by Pennant 2:15.
Paderewski 2:05, ch. g. by Constenaro 2:16¼.
Sonoma Girl 2:05¼, br. m. by Lynwood W. 2:20½.
Margin 2:05¼, ro. m. by Time Onward.
Bob Douglass 2:06¼, gr. h. by Todd 2:14¼.
Sterling McKinney 2:06¼, hr. h. by McKinney 2:11¼.
Wilkes Heart 2:06¼, hr. g. by Great Heart 2:12½
pacing.

Allen Winter 2:06½, br. h. by Ed Winter 2:12¾.
Inner Guard 2:06½, b. g. by Guardsman 2:23½.
Ruth Dillon 2:06½, b. m. by Sidney Dillon.
General Watts 2:06½, b. h. by Axworthy 2:15½.
The Harvester 2:06¾, br. h. by Walnut Hall 2:08¾.
Spanish Queen 2:07, b. m. by Onward Silver 2:05¼.
Here are fifteen trotters with records from 2:02¼ to 2:07, to which may be added one or two others as possibilities. They include the gray gelding Locust Jack 2:06½, reported as switched to the pace, at which gait he is to be raced in the future, but whose reappearance at the trot will be not unlikely, and that great mare, Early Alice 2:06¾, which is now being bred to Zombro 2:11, but is to be trained later on and started in a few events in the fall if she trains satisfactorily.

However, as Uhlan is the property of Mr. Billings who never races his horses in regular professional races for money prizes, that champion gelding may be described as "hors concours" except in some special event in which he may be allowed to race. It is also unlikely that General Watts may be seen in any races, as it has been reported that the plan is to prepare him solely for an attempt to lower the world's stallion record, the 2:02¼ of Cresceus.

But, in any event, there are a sufficient number of eligibles to insure a series of races which should be in the highest degree notable, and in which more than one record will be in danger of being broken. An unknown element must also be figured in other horses which during the progress of the campaign may, as some always do, graduate from the slower classes and prove themselves capable of holding their own with the best of the year as was the case last year, for instance, with such as Penisa Maid and Paderewski, one of which commenced the campaign with a record of 2:19¼ only, while the other's was but 2:13¼.

Few prophets would dare to risk their reputations, in advance of a solitary meeting, as to which of these trotters will prove the premier trotting race horse of 1910—or whether none of them will. It would probably be the consensus of opinion, however, that if he trains sound and were allowed to race, Uhlan would assuredly bear off the palm. His removal from the field of open competition leaves the contest with a very open look.

Of the others, it is probable that Penisa Maid, Sonoma Girl and The Harvester would poll the heaviest votes, leaving out General Watts for the reason assigned above, while Paderewski would also have many adherents. Among the rest Bob Douglas would in all probability be the preferred one. It will also be conceded that if Allen Winter, after his year's sojourn, proves to have retained the form which enabled him to win that brilliant American Trotting Derby race of 1908 at Readville, and has improved only as much as he might legitimately be expected to, he will certainly have a look in.

Again, there is Ruth Dillon, the champion four-year-old racing filly. She belongs to the sensational Dillon tribe; which never fails to furnish fresh furores, and after a year's rest, if she trains sound and races

kindly, there is no telling what wonderful things she may do.

Jack Leyburn, a truly great trotter in 1908, was only the ghost of his former self in 1909, and it will be a surprise if he plays a star part. A great deal was asked of Margin last season—her first in public—and at the end of it she was several times soundly beaten. She is also afflicted with lameness off and on—all of which makes her a somewhat doubtful quantity. Wilkes Heart is an always reliable and game trotter, but his mark of 2:06¼ dates back to 1907, and while he is by no means to be despised neither will he be looked to for anything particularly surprising.

Sterling McKinney has already been alluded to. Inner Guard is regarded as having outtrotted himself when he made his record of 2:06½ last fall. Spanish Queen, the premier stake winner of 1908, was not her former self in 1909, but she had valid excuses, and it is not impossible that she will vindicate herself nobly this year. She is still young, sound and with a rare flight of speed, while her gameness is of the order that arouses the most cold-blooded to admiration.

Such is the group of free-for-all trotters of 1910 as they "stack up" at this writing. But the year's racing—it is likely to bring many and remarkable changes in their status.

NOTES FROM DIXON.

Meeting a horse owner who resides near Dixon and asking him for the horse news of that section he remarked there was very little just at present, and that the breeders were all hemoaning the fact that the well known trainer Lon Mativia had removed his residence to Woodland. Mr. Mativia was long a resident of Dixon and broke the majority of the fast horses that have made that section famous. He is such a superior hand with colts that he is greatly missed.

Frank Hazzard is training at the Dixon half-mile track a two-year-old by Nutwood Wilkes that is owned by him in company with Sam Silvey. The colt is out of a mare by Demonio, second dam the dam of Ben F. 2:07¼. It is a pacer and has the same color and looks and acts very much like Copa de Oro 2:01¼. It wears nothing but a harness and although only just well broken stepped a mile in 2:26 the other day.

SPEED AT SANTA ROSA STOCK FARM.

Frank Turner has been working his horses a few slow miles recently and letting them brush short distances at speed. None of them are up to any fast miles, but they have speed to show just the same.

California Dillon 2:18 has been a mile in 2:30, last quarter in 30½ seconds.

Dr. William S. Jennings showed a mile in 2:27¼, the last quarter in 30¼ seconds.

Major Dillon, a mile in 2:26½, half in 1:06¾ and the second mile in 2:19, with the last eighth in 15 seconds.

Guy Dillon 2:23½ trotted a mile in 2:21¼, last half in 1:07¼ and the last quarter in 32¼ seconds.

L. Baron's black Washington McKinney showed a mile in 2:28 and a quarter in 35 seconds.

THE NEW YORK LAWS.

The anti-betting bills passed by the last session of the legislature were signed by Gov. Hughes a few days ago and are now a part of the laws of the state, writes "Manhattan" to the Breeders' Gazette. The first bill makes it a misdemeanor for a person to make a book on a race either with or without writing. This eliminates the hookmaker from all racetracks in this state, but this bill does not take effect until September. The second bill repeals a section of the Percy-Gray law which exempted directors and trustees from liability for racetrack gambling provided signs were posted warning patrons against gambling and providing special police were employed to enforce the law. The third act extends the provision of the anti-gambling section of the penal code to racetracks and all other enclosures. The last two acts go into effect immediately.

It is not probable that the second act would have been passed if racetrack officials had in good faith attempted to carry out the provisions of the Percy-Gray law. At every meeting held under that law bulletins were posted announcing that no gambling would be allowed. Having done this the officials then "winked the other eye" and welcomed any and all bookmakers who desired to do business and this provision of the law was thus intentionally violated. Now that every director and other official is made criminally liable for any and all violations of the law it is probable that the gentlemen wearing checker board suits and headlight diamonds will make their exit from the racetrack along with the big bunch of regulars. The only bill relative to racetrack gambling that was introduced at the last session of the legislature which did not pass was the one prohibiting the publication of bookmakers' odds in the different newspapers. But as under the terms of the other laws there are to be no hookmakers in this state, such a law could only apply to bookmakers in some other state or country and it would seem that jurisdiction to pass such a law would belong to the national rather than to the state government.

ROD, GUN AND KENNEL

CONDUCTED BY J. X. DeWITT.

AT THE TRAPS.

Live bird shooters who attended the California Wing Club regular shoot on the 3d inst., shot under a handicap of rather murky weather conditions— heavy wind and drizzling rain prevailed nearly all day. The birds supplied were an unusually good lot, blue or dark colored pigeons were in the majority, this did not help matters to any appreciable extent.

Tony Prior (28 yards) and Lester Prior (25 yards) scored the only straights in the forenoon medal race. Woolner did not connect with his twelfth bird and with the rest of those in the eleven hole cut up the small end of the purse.

In the afternoon Louis Rink (28 yards) shot a clean score and won first money. Rink's handicap was 24 yards but he shot his score at 28 yards rise. Four eleven scores divided the balance of the club purse.

Following the two regular events, six bird pools were shot, the straights dividing the pot in both races. Munday and Nauman with 8 birds each divided in a "miss and out," the supply of birds ceased and brought the shoot to an end.

Club medal race, 12 pigeons, \$50 added, 3 moneys, high guns, distance handicap—	
Tony Prior	28 1 2 2 1 2 2 1 1 1 2 2—12

The Ray View Gun Club monthly bluerock shoot on the 3rd inst. was conducted in the face of a heavy wind and rain squalls. A perusal of the scores shot during the day is an indication of what hard shooting conditions ensued.

Club race, 25 targets.

Selby Trophy event, 50 targets—Jacobsen 37, S. Parker 36, Speetzen 36, Hoelle 34, Wobber 31, Morss 30, F. Parker 30, Price 27, Connelly 22, Ulrichs 23, Adams 22, Gillam 22.

Miss and out—F. Parker 4-5, Hoelle 4-0-3, Morss 2-3-0-1, Jacobsen 4-4-4, S. Parker 0-0-0, Wobber 0-3-2.

"Grub" shoot, 25 targets per man—Captain Hoelle's team, 10 men: Hoelle 19, Blanchard 15, Holling 18, Iverson 16, S. Parker 14, Ricklefson 19, Speetzen 17, Vosburgh 17, Connelly 11, Hardin 10—156 out of 250. Captain Jacobsen's team: Jacobsen 13, Thomas 11, Wobber 13, Morss 16, F. Parker 12, Price 13, Gillam 12, Ulrichs 10, Adams 16, Murdock 8—124 out of 250.

The Interstate Association's eleventh Grand American Handicap tournament at blue rocks was conducted on the grounds of the Chicago Gun Club, Chicago, Ills., June 21 to 24 inclusive. Although the entries were not quite up to that of the past two tournaments, the shoot can well be said to have been successful in every respect. During the four days weather conditions were very favorable for excellent scores. The ground accommodations were ample and convenient for the large number of both shooters and visitors in daily attendance.

Under the management of Mr. Elmer E. Shaner, assisted by a large corps of experts in the office and on the firing line the shoot went through without a hitch.

Scores were remarkably good each day—several new world's records being established. John W. Garrett of Colorado Springs, Col., on the first day, Tuesday, broke 100 straight (including 10 double rises). Another record was 100 straight by a five man squad, H. D. Freeman, Atlanta, Ga.; Harvey Dixon, Oronogo, Mo.; J. W. Garrett, Fred Ellett, Kietshsburg, Ills., and J. R. Graham, Long Lake, Ills., who each broke 20 straight at 20 yards rise, pretty good shooting that. Riley Thompson's 100 straight from the 19 yard mark in the Grand American Handicap, is the first clean score in the history of the big feature event. These were the leading performances, heading a long list of individual exploits, several of which came within one target of landing a big prize.

Monday, June 20, was practice day. Four 20 target events and one race at 10 doubles was the card for the forenoon and afternoon respectively, 200 tar-

gets for the day. Entrance \$2 for each event, Rose system, 8-5-3-2. In the forenoon 103 shooters entered, 119 were on the line in the afternoon. "Billy" Heer was high in the morning with 98, he lost 2 in the doubles. J. R. Graham led with 98 in the afternoon. Fred Bills was second professional with 96, Charley Spencer and John R. Taylor third, with 95, and Guy Ward, R. R. Barber, R. O. Heikes and H. D. Freeman, fourth, with 94 in the morning.

Jim Day, of Midland, Texas, was high amateur, with 97, losing two of them in the double event; C. M. Powers was second, with 96; Jesse Young and Jay Graham, third, with 95, and F. McNair of Houston, Tex., and William Wetleaf of Nichols, Ia., fourth with 94 each. C. A. Young, H. J. Borden, A. Killam, 93; E. S. Graham, Geo. Roll, 92; Mrs. Topperwein, F. T. Stanton, Fred Elliott, H. W. Cadwallader and C. L. Nickle, 91; W. B. Linell, Walter Huff, Ed. O'Brien, Joe Barto, Geo. Nicolai and W. F. Garrett, 90.

In the afternoon Chan. Powers was close up for second amateur, with 97, one lost in the double event. William Wetleaf, was third amateur, with 93, and J. S. Day, W. P. Northcott, W. Clark and L. Holverson, fourth, with 92.

H. W. Cadwallader was high professional, with 95, Charley Young and Art Killam, second, with 94; F. G. Bills and J. M. Hawkins, third, with 93, and W. H. Heer, H. S. Welles, R. W. Clancy, Woolfolk Henderson, J. R. Taylor, Fred Gilbert and Lester German, fourth, with 91. L. J. Humpfer, J. S. Young and F. McNair 91, W. B. Linell, Geo. Nicolai, R. O. Heikes and J. W. Garrett 90. A good stiff breeze prevailed throughout the day.

First day, June 21.—The weather was fine, but quite a breeze prevailed, blowing back on the firing line, good scores generally were shot, however. There was a total entry of 229 shooters who participated in the four 20 target events, singles, and one 20 target event (No. 3) at 10 double rises.

As previously mentioned the star performance of the day was that of J. W. Garrett with a straight string of 100. Billy Heer and H. D. Freeman 98 each, John R. Taylor and W. R. Crosby 96 each, Woolfolk Henderson, Fred Gilbert and Geo. Lyon 95 each.

A. Vance, Capron, Ill., led the amateurs with 97, Chan M. Powers, Jim Day and R. A. King 96 each, F. W. McNair 95, Max Kneussel and C. A. Galbraith 94 each.

Second day, June 22.—The Preliminary Handicap took up practically the whole day. The program was 100 targets per man, shot in five sections of 20 targets each, singles. Total number of entries 318, 82 of whom shot for targets only—236 shooters in the sweepstakes. Entrance \$7.00, handicaps from 16 to 22 yards, high guns, trophy to winner and first money. The purse amounted to \$1180 (236 entries at \$5 each—targets 2 cents not included) added money \$200, total \$1380.

W. J. Raup, of Portage, Wis., and Chas. E. Shaw, Chicago, tied with 99 each. Raup won in the shoot off, 20 to 17. Chan M. Powers was next up with 98. Jim Skelly, Wilmington, Del., broke 80 straight and finished with 98.

First and second money, 99 tied, paid \$138 and \$124.20, 98 breaks \$110.40, 97's \$89.70, 96's \$39.40, 95's \$17.25, 94's \$13.15. The 98 per cent men were not in the money, pretty strenuous shooting in this event. The weather was ideal for high scores.

Preliminary Handicap, 100 targets, 5 twenty target sections, distance handicap—

Third day, June 23—The warmest day of the meeting, little wind stirring and high scores resulted. There were 383 entries (20 of which forfeited) including 47 post entries, a total of 363 shooters.

The Grand American Handicap started promptly at 9 o'clock a. m. and finished late in the afternoon.

The program was 100 targets in five strings of 20 singles each, distance handicaps, 16 to 23 yards (21 yards was the longest distance imposed, however) \$10 entrance, high guns.

The purse amounted to \$2528.00 (316 regular entries at \$8—targets 2 cents not included, 47 penalty entries at \$13.00 each, 20 forfeit entries at \$5.00 each), added money \$500, total \$3729.00.

Riley Thompson, Cainsville, Mo., won the Handicap and also broke all past records in this feature event of American trap shooting. He broke 100 singles straight, shooting at 19 yards rise, not only the record for that distance, but the first time in eleven years of the Handicap that a perfect score has been shot.

Harvey McMurchy, as popular a sportsman with Coast trap shooters as he is with the fraternity of the whole country, was runner-up with the fine score of 99 targets, he lost one in his last 20, a performance ranking with the best previous high G. A. H. record.

Thompson's gun was a Parker made in 1885, veritably an "Old Reliable." He followed next day with a run of 21 straight, making a grand run of 120 or over for a Du Pont gold bar. First money amounted to \$373.90 with which went the Association trophy.

The other moneys were the following: 99 paid \$336.50, 98's \$230.40, 97's \$121.50, 96's \$42.79, 95's \$37.40, 94's \$6.00. The 93 per cent men were again outside the purse division.

Grand American Handicap, 100 targets, 5 twenty target sections, distance handicaps, open to all—

Fourth day, June 24th.—The schedule for the closing day of the tournament comprised two events, the amateur championship and the professional championship, in which were entered 46 amateurs and 33 professional shooters.

The program was the same for both classes—ten 20 target sections, two of which, sections 3 and 8 were at ten double rises, from the 16-yard mark, singles were taken at 18 yards distance.

The amateur championship purse amounted to \$936.00 (46 entries at \$16, added money \$200). First money and a trophy to the winner, high guns.

Guy V. Dering, Columbus, Wis., with 189 out of 200 was the winner after a close race with J. S. Day, Midland, Tex.

First purse division for 189 breaks amounted to \$205.90, 188 breaks paid \$149.75, 184's \$98.25, 183's \$60.85, 180's \$42.15, 179's \$7.05.

C. G. Spencer, Homer Clark and J. W. Garrett tied with 190 each in the professional contention.

On the shoot-off each man broke 19. On the second argument, Spencer broke 20 straight and won the race. Clark and Garrett each connected with but 19. A very close match throughout, won by a difference of but one target.

The professional championship purse amounted to \$628 (33 entries at \$16 and \$100 added). The winner received a trophy and \$157 first money, two 190's \$109.90, 189's \$69.10, 187 \$50.25, 185's \$8.95.

Lester F. Prior, recently located at Los Angeles in connection with U. M. C. and Remington goods, has returned to this city and will look after the interests of Western Field as business manager.

GOSSIP FOR SPORTSMEN.

The open season for deer in this state, under the general statute will commence July 15. Several counties have, however, shortened the season. In Marin county the open season runs from July 15 to September 1. Sonoma county, July 15 to October 1. Santa Cruz, September 1 to October 1. Santa Barbara, August 15 to November 10. Santa Clara, August 1 to October 1. San Mateo, August 1 to October 15. Ventura, August 1 to October 1. Alameda, August 1 to November 1. Will probably be the new county law. Tulare, August 1 to October 1.

The open season for doves will also begin, under the State law on the 15th inst. Here, too, the county officials in a number of counties have shortened the open shooting season. In Merced county the season begins in August 15, Santa Barbara, August 1 to October 15, Santa Cruz, October 1 to October 15, San Mateo, August 1 to October 15. Tulare, August 1 to October 15. San Joaquin, August 1 to October 15.

The above changes in the general law do not complete the list. If current report is true, changes will be again made in San Mateo and several other counties.

Reports from Trinity, Shasta, Mendocino and Humboldt counties are that deer are very plentiful. In Marin county, on the club preserves, bucks are numerous enough to offer the possibility of a fine opening day's sport.

From most of the dove country the advices are that the birds have bred plentifully this season. The open dates, however, are conflicting. July 15 is all right for some sections and decidedly wrong for other territory where the birds are late breeders.

Now that the trout season is in full swing, reports from every fishing locality, far and near, and particularly from the Sierra streams and lakes, are all in tune of accord—that the present year is one of the best in many seasons for extra pleasing recreation in the sport. And what is more satisfactory, is the fact that the angler does not need to go far or make extended trips should he be long on desire and short on time.

About 775,000 rainbow, Loch Levin and eastern brook trout are to be distributed in the streams of Southern California in September. M. J. Connell, Fish and Game Commissioner for the Southern District, has been notified that the fish will be shipped from the Sisson hatchery in the special fish car the latter part of August.

The allotment made to the south this year is nearly twice as large as that of last year. Three years ago 250,000 small fish were sent south and last season the number was slightly over 400,000.

R. W. Requa is in charge of the fish car. The fish allotted to Southern California are to be distributed in forty-seven streams, as follows:

San Gabriel river, east and west forks and tributaries; San Antonio, Bear Creek and Ice House Canyon.

Santa Barbara county: Santa Maria river and Sisquoc creek and tributaries; the head waters of the Santa Ynez, and Giles, Bloods and Rincon creeks.

Ventura county: Ventura river, Coyote creek, San Antonio, Matilija and north fork, See-saw, Santa Paula, Santa Clara and Sespe.

San Bernardino county: Cucamonga, Lytle, Burton and Cable creeks, Devil and Waterman canyons, Plunge, City and Bear creeks, Santa Ana canyon, South Fork, Forest, Mill and Seeley creeks, Dark Canyon, Little Bear, Deep, Grass Valley, Holcomb, Hook and Strawberry creeks, Mountain Home stream.

Riverside county: San Jacinto, Strawberry, North and Snow creeks, and Temecula river.

Orange county: Silverado, Trabuca and Santiago creeks.

San Diego county. Head waters of the San Diego River and Witch Creek.

The glory of old tuna days at Catalina Island has returned. In season to share the excitement incident to the celebration of the glorious Fourth, the largest bluefin tuna caught in these waters for eight years, and the seventh largest ever taken on rod and reel under Tuna Club rules, was brought to gaff this week by Philip O'Mara of Salt Lake City, with A. L. Beebe acting as boatman in the launch Algeria. The fish tipped the scales at 168½ pounds, and was a splendid specimen. Mr. O'Mara owes his catch entirely to his skill in playing this remarkable fighter, for Mr. Beebe, who managed the launch, is a prominent member of the Tuna Club, but a novice as a boatman. The engine broke down for twenty minutes, and during that time the fish took out nearly all the line, but O'Mara managed to make him tow the boat, and soon had the tuna within 100 feet. The honor of gaffing the fish was given to "Shorty Stout," a boatman who will probably share in the prizes offered for such a catch.

ECHOES FROM THE NORTHWEST.

Commercial and sportsmen's organizations in all parts of the Inland Empire will be invited by the Spokane chamber of commerce and the Spokane Fish Protective Association to join in a movement to restock the lakes, rivers and streams in eastern Washington and Oregon, north and central Idaho and western Montana with game fish, and efforts will also be made to plant several million fish fry in the waters in the panhandle of Idaho and in eastern Washington.

"This movement will result in making the Inland Empire the best fishing district in the country within the next five years," said Charles Litchfield, a member of the Spokane Fish Protective Association, in bringing the project before the attention of the com-

mercial organization, "and it will mean thousands of tourists from all parts of America and elsewhere, and will be of benefit to every community in the Northwest."

"This work can be carried on without interfering in the least with what the federal and state commissioners are doing for fish propagation. I believe, in fact, they would co-operate in every way with the chambers of commerce and assist in extending the movement to all parts of the Pacific and Northwestern States."

Charles M. Fassett, president of the Spokane chamber of commerce, has passed Mr. Litchfield's suggestion to a special committee in the form of a resolution, and it is likely he will soon appoint a commission to make inquiry into these questions:

How many fish and the character of the same can be placed in the various waters yearly for the next five years?

What appropriation should be asked from the states and how much from the citizens?

Why the present laws governing fish protection, such as seining, dynamiting and spearing, are ignored?

What amendments should be made to bring about the enforcement of the letter and spirit of such laws?

Why fish ladders are not erected at all dams, and screens provided at the heads of irrigation canals tapping the lakes?

The Spokane Fish Protective Association planted 50,000 fry in the Spokane river during the week ending July 2, and it is expected to put at least 250,000 more before the end of the year. The cost of placing the fry in the river is \$1 for every 3000, so 100 new members of the Association will assure 300,000 fry for this year. Twenty-two new members were enrolled during the week.

Thomas M. Tabor of Lewiston and R. C. West of Sand Point, state game wardens of Idaho, have liberated 50,000 trout fry from the state fishery at Sand Point in the Lolo, Whisky and Fords creeks. The fry are Eastern brook trout. Mr. Tabor says there are at least 1,000,000 in the hatchery now ready for free distribution in the streams of north Idaho.

This is something about James Texas House, a rancher-hunter on Hayden lake in the national forest reserve in northern Idaho, who has had numerous encounters with predatory animals and other wild things in the Spokane country during the last 20 years. John De Witt, a veteran sportsman, living in Spokane, tells the story, as follows:

"Jim" House is a hunter; that's the way he makes his living. He has a ranch on the other end of Hayden Lake, about 45 miles northeast of Spokane, and his cabin contains the dearest of his treasures—his wife and three children.

"House lost an eye and a couple of fingers some time ago. It was annoying for a while, but a little thing like that did not disturb 'Jim' nor did it make much difference to the girl who is now Mrs. House. Before they were united some one asked her: 'So you're going to marry Jim?'

"Yes," was the quiet reply.

"But you are getting only part of a man!" said the friend, laughingly.

"True, but the part I am getting is so much better than any 10 whole men I know in these parts that I am well satisfied to take the chance."

"So 'Jim' has a happy home, a wife who adores him and three of the nicest 'kids' in the world. The rest of his family consists of some splendid dogs. He has bear dogs and lynx dogs, all of the finest breed and splendidly trained. Among his bear dogs are four pups that never hunted until this year, but recently they went off, strayed away from Jim, treed a bear and kept him there for 48 hours.

"Jim" got together his hunting apparatus not long ago, looked over his guns, called the four pups and started after bear. It was not long before they found tracks and 'Jim' was soon in the midst of the thick brush, fighting his way through the heavy undergrowth, and all the time doing his best to keep within the sound of the barking dogs.

"It was not long before he heard the baying of hounds, and working his way toward them found they had treed an immense black bear. 'Jim' took a shot at him from a distance and evidently wounded him, for down he came from the tree and made off through the underbrush, the dogs in close pursuit.

"Again they treed him. 'Jim' took a chance shot, knocked the bark off the tree close to Mr. Bear's head, which was just behind the trunk. His next shot hit the bear in the paw, and out of the tree he came again, making a run for it. 'Jim' was close upon him, however. He threw his rifle to his shoulder to take a shot, when he found that his cartridge was jammed and the gun could not be fired. So close were the quarters that the bear turned upon him and 'Jim' made for the nearest big tree. Round and round he went, followed by the bear, and when the four dogs bore down upon Mr. Bruin he hiked for the nearest tree top.

"By this time fortunately, 'Jim' had gotten his gun clear, fired another shot, which took the bear in the side of the head, and two more before he brought him down. The dogs made a rush for the carcass, but 'Jim' who has a system of training of his own, stopped them, carefully skinned the animal and cut off pieces of the raw meat and fed it to the dogs; then taking a rope which he had brought with him for the purpose he hoisted the carcass of the bear up and left it hanging in a limb so that he might later return with a horse. Then he took the bear skin, rolled it up and carried it upon his back to his cabin, four miles away, followed by the dogs.

GOVERNMENT BREEDING AND STUDS.

All the governments of the great civilized powers are wide awake to the fact that in spite of the enormous private breeding industries, they must rely to a certain extent on big breeding establishments owned and maintained by the nation. Owing to the United States being next to Russia the largest horse owning nation in the world, the war department at Washington has never faced any serious shortage, but it has found of late years a difficulty in getting the right type at the high price, and has begun in a modest way to breed horses at two stations in which Morgan blood is the predominant element. That the United States will ever require a great cavalry is most improbably remote. But a quick demand from Europe is liable to come at any time and there can be no question of the fact that the average trotting bred horse, whether standard or not, makes a first class army horse for cavalry purposes. During the Boer war, England not only took all our surplus stock of horses, but almost cleaned us out of mules, and took all the horses she could get in Europe and Australia. There is money in breeding the middle class horse.

The Royal commission on horse remounts in England is considering several systems for obtaining a sufficient supply of horses and it is a notorious fact that the army is several thousand head short of what it would require in the event of a little flurry in any of the dependencies of the Empire. Farmers and owners have been asked to register their horses and accept a fee from the government on the understanding that they can be called upon either for hire or sale at a given price.

If the American farmer wants to increase his revenue he should raise more horses. It is now and ever will be a paying crop.

While the governments of England and the United States have done very little in the development of the horse breeding interests, private breeders have done splendid work in special lines. The British have devoted too much attention to the thoroughbred and though they have supplied the world with that breed except as a source of profit and of sport, it can be dismissed from practical calculation, except for crossing purposes. The American trotter on the other hand is the most versatile horse in the world. He is a race horse, he is a roadster, he makes a most excellent saddler, he has stamina, durability and intelligence. In fact, he has all the ideal qualities of the high class army horse.

Russia which leads the world in the ownership of horses, has the largest government stud in the world and while the leading sires and dams are either thoroughbreds, or Orloff trotters, of late years American trotters have been imported to cross on the Orloff and with excellent results. The Orloff is in fact the earliest of trotting breeds for it was a full fledged breed before the formation of the American bred began. The claims for the Orloff is that though he is not as fast as his American cousin, he has superior staying power. As Russia is a country of magnificent distances, stamina rather than speed was the leading quality required. For many years the imperial stud has had some American trainers who look after a section of the trotting department.

France never neglects its army and whether it is a kingdom, an empire or a republic she never allows a shortage of horses for military parade. The government not only keeps up extensive studs, but they adopt a variety of other means to encourage breeding. Trotting sport is very popular in France and either adds money to stakes or gives purses with the privilege of buying any of the horses which compete at certain prices. The stallions are distributed through the country and the service fee is almost nominal. Austria and Hungary, the twin kingdoms, have long been famous for their fine horses and maintain great government stud farms, and the Austrian cavalry have always been famous. At the present time, however, the great German Empire with its magnificent organization has, if not the largest, the most perfectly appointed stock farm of its class. In the American Breeders' Magazine Carlos Guerrero gives a most interesting and minute description of Germany's leading breeding farm. He says in part:

Through the courtesy of the Minister of Agriculture of Germany, I was enabled to make an advantageous visit to the Imperial Stud-farm of Trakehnen, where I was cordially received by Baron von Ottingen, the head manager, and his distinguished wife. The Baron himself accompanied me on my visit to the different premises of the stud-farm.

Trakehnen is situated in the northern part of the German Empire, near Russia, where the winters are cold and severe. On my way thither, the fields I could see from the car window were barren and sandy, but, nevertheless, one admires the constant efforts of man in laboring to make them productive. The Trakehnen stud-farm is, of itself, a village of considerable size, having a hotel for visitors, six schools, a pharmacy, an infirmary, and well built houses occupied by the employees of the stud farm and their families. Commodious stables have been erected.

The Trakehnen stud-farm, which comprises a tract of land of about 10,855 acres, was founded in 1732. In winter this area is covered with snow. About half of it is used for the cultivation of hay-producing grasses, including alfalfa, which, notwithstanding the cold, grows luxuriantly. The other half of the property contains the buildings, and fields in which to pasture the horses in summer during the day, al-

though at night they are always housed in stables, where they are fed alfalfa and oats. The farm is divided into twelve lots.

Under the management of Baron von Ottingen, are the following employees: A head veterinarian, with 2 assistants; a director of cultivation, with 4 inspectors; a cashier; a secretary; 3 clerks, a store superintendent; an architect; a physician, with a nurse and an apothecary; 11 school teachers; 11 overseers with 12 assistants; 100 stable grooms, with 50 hof groom apprentices; 30 workmen; 15 store workmen; 3 wood choppers; 12 laborers; 55 plowmen; 12 night watchmen; from 15 to 70 day laborers; and 477 persons engaged in gardening and other occupations. These employees, together with their families, make a population of 2600 souls. All live comfortably, each group of houses having its private orchard for the cultivation of fruits and vegetables for the use of the employees.

The duty of this large force is to care for 1747 head of horses—the total number now at the Trakehnen stud-farm—and the oxen required for the work connected therewith. One can easily imagine the great cost to Germany of each horse raised on this stud-farm.

The aim of this large station is the improvement and breeding of military horses, and to supply horses for the Imperial House. From Trakehnen, also, are chosen annually 70 stallions without defects, for service at the different breeding stations of Germany. If the commission which inspects the stallions finds defective ones, these are castrated, and in April and September of each year, are sold on the premises at Trakehnen for sums varying from 1000 to 4000 marks (\$250 to \$1000). The mares are treated in the same manner as the horses.

The Trakehnen stud-farm has 21 stallions, 13 of which are thoroughbred, 1 an Anglo-Arab, and 7 half bloods born in Trakehnen, but the latter, after undergoing continual crossbreeding with thoroughbreds, may be practically considered pure race horses.

The best thoroughbred stallion is "Red Prince," 20 years old, of a chestnut color, and born in Ireland. The thoroughbred stallion "Shilfa" has recently been purchased. Among the other race horses, I saw the stallion "Americus," a bay horse born in the United States, in 1892, and sired by the Emperor of Norfolk; "Aghan," a chestnut-colored horse, born in France in 1892, and sired by Flying Fox; "Pomp," born in Graditz in 1897, and sired by Chamont; and "Gordon," a bay horse, born in Russia in 1901, and sired by Gayarre.

Of the half bloods, the preference is given to the beautiful chestnut-colored stallion "Morgenstrahl," born in Trakehnen in 1896, and sired by Blue Blood, the favorite horse of the Kaiser, who always inquires concerning it. Another good horse is "Polarschrum," of a black color, born in Trakehnen in 1900 and gotten by Optimus. I saw only one Anglo-Arab stallion named "Nana Sakit," born in France from Rosteted and Namir; the latter sired by Alger. The colts gotten by "Nana Sakit" are the handsomest on the stud farm.

The brood mares are distributed into five lots of from 60 to 90 each. The group I liked best consisted of hay mares, and after that the chestnut-colored mares, some of which are very beautiful. There is a collection of black mares from which the horses for the carriage of the Kaiser are taken, but this group is not so good, as it is extremely difficult to find a thoroughbred black stallion without white marks.

When a year old the colts are separated from the mares, and treated like the rest of the horses, grazing in the pastures in summer during the day, and housed at night in the stables where they are given alfalfa and six pounds of oats.

The writer then goes on to point out that although these horses are large, have good sized bone and can carry considerable weight, they are delicate and require much attention. He points out that military horses should be prepared for war, brought up accustomed to hardships and of sufficient resisting force to stand long journeys. He has a high opinion of the Morgan horse and believes it an ideal horse for army purposes, but is strongly of the opinion that North and South America, Canada, South Africa and Australia must be looked to for the horses which Great Britain and Europe cannot raise. The writer speaks of his own experiments in breeding horses in Argentina and had great success with a stallion who was by the Morgan horse Lion, imported to Argentina by Vincent L. Casares, who he says founded an excellent family of horses for general use. It seems to us that the Russians with their crossed Orloff and the French with their trotters, in which there is a considerable infusion of American trotting blood are on the right track. But the big point for the American farmer and breeder is to increase his output and be ready for the demand which awaits him.—Chicago Horseman.

NO PASSING OF THE HORSE.

Let no one imagine that the horse is soon to become an object of curiosity. Bicycles and tricycles have come and gone and the automobile has been making considerable noise the past few years and cutting up capers and people, while the horse has been quietly sawing wood, or rather, eating oats, until now the farmer with a pasture full of the right kind of horses can sell them and buy a bank. Horses have been steadily going up, which is better than blowing up, as the automobiles have been doing.

Automobiles will come and go, may puff in and speed out, but his majesty, the horse remains monarch of the road against all competition. No machine ever built, or still uninvented, will successfully dispute his reign. He has withstood the locomotive, merely permitting it to do the heavy work, and give him an easier life. Inventions will crop up from time to time, but none will dispute his place in people's hearts, for always, excepting the human race, the horse is the most beautiful thing made of flesh and blood; and perhaps the human animal scarcely deserves to be excepted, when we consider how men and women deform their beauty by foolish habits. Horses we may have as nature made them, only improved and refined by scientific breeding.

You may depend on it, good horses, especially, good carriage, draft and saddle horses, will always be in demand. Buyers are today searching the country for good horses of all kinds and are offering high prices. Very recently the opinion prevailed that the horse was on the high road to extirpation from neglect, but this has been refuted by the revival of common sense, which proves to us that while human beings inhabit the globe, the love of God's noblest animal will continue to demonstrate itself for his improvement.

Horse shows are frequent all over the country, extraordinary inducements being offered for fine animals, and I see in this and other facts signs of increasing interest in the horse beautiful, with an attendant interest in breeding.

Another important factor to be considered is the foreign demand for American horses, which is increasing at phenomenal rate, shiploads of horses being exported weekly. England, Germany, France, Scotland and in fact all Europe concede that America and Canada can raise better horses for less money than any other country in the world, and Europe may be depended upon to take all the surplus stock in the country at fair prices. Haphazard breeding has been the order of the day among breeders; they have been careless and bred without a purpose. Those days have now passed; the numerous stock and horse shows have enlightened the breeders of the country to take fore-thought enough to control by proper breeding, the quality of the stock required by the horse markets of the world.

Illinois, Indiana and Iowa, with more than a million horses each, lead in the statistical tables of the Agricultural department. Kansas, Nebraska, Missouri and Minnesota have about 800,000 apiece, and New York is eighth, with 700,000. The number of horses in the United States, according to the department of agricultural returns, had risen from 14,210,000 in 1904, to 17,057,000 in 1908. In the same time their value had risen from nine hundred and seventy-eight million to one billion seven hundred thousand. The greatest scarcity was in 1900, when but thirteen million five hundred thousand were found.

All this increase came in spite of the fact that about ten years ago it was said that the cable, the trolley and bicycle, and later, the automobile, were destined to put the horse out of business. Instead of the horseless age approaching, it is further off than ever. While the automobile remains blind to kindness and dumb to the sound of your voice, and while the horse is the delightful companion he is, whether in the stables, under the saddle or in harness, certain it is that the horse will always be the friend and the intimate companion of man.

A visit to the great live-stock markets of the world, Chicago and New York in particular, would be of inestimable benefit to breeders and farmers by convincing them that the supply of horses, especially good ones, does not equal the demand. These two markets control the sale of 250,000 horses annually and the supply has never equaled the demand, especially for the heavy weight draft horse and the stylish saddle and carriage horse.

Like produces like. The scrub horse will produce the scrub horse and the scrub farmer will have the scrub stock that will lose him money while the progressive farmer will produce the prize winners, which will prove the source of great pride and profit. It cost no more to raise a good horse than a poor one, one eats as much as the other. Haphazard breeding is the order of the day amongst the majority of farmers. Too often they breed without a purpose, not caring what is crossed with what, so that the result is a colt which cannot be marketed, and yet he persistently neglects the one step which will bring him good prices. Not until he does this will he make breeding pay.—Francis Ware.

The \$1000 stake for five-gaited saddle horses, which was a great feature of the Blue Grass Fair, Lexington, Ky., last year, and which was won by Edna Mae in the presence of about 20,000 people, is to be renewed for the fair of this year. The stake is open to all ages and sexes to be shown under saddle, and will be divided 50 per cent to the first, 25 to the second, 15 to the third and 10 to the fourth.

THE FARM

THE WOOL TRADE.

Concerning the wool trade last week's American Wool and Cotton Reporter said: Last year at this time there was great activity in the West, and buyers were out there out-bidding each other, raising the prices of wool to prices which have been shown to be hardly warranted in view of the severe decline in values during the past six months or so; about one-quarter of the clip had been sold by the dealers to the manufacturers, or had been bought direct in the West, and the process of grading the wools was going rapidly on in the lofts here in Boston. To-day we are witnesses of a great change. It is true that some wool has arrived here in Boston, but it has not been very much in the aggregate when compared with the amount which should be in by this time. While all of the houses, of course, have buyers, in the West looking over wool, we are told that few have as many as are usually out at this time, simply because they have their own ideas of value and the grower has his, and as a result one is waiting for the other to either come down or go up, whichever it may be. There is said to be some little wool coming in on consignment, but very little grading going on, and therefore while it is reported that in general the wool of this year is not as good as a year ago, being heavier and shorter in staple, it is impossible in view of the small amount of grading which has been done to properly judge the present clip. There seems to be no difference in the situation in the California and Texas wools in this market. In fact these wools are said to be pretty well cleaned up now, and the dealers say that as the manufacturers are now particular about taking any new stock off their hands, they are not willing to go into the country and replenish their supplies at the asking prices of the farmers. In Texas the latter are said to be holding off for 22c for twelve months wools, and 20c for eight months, whereas the dealer refuses to give more than 14c for eight months, and 16c for twelve months. Last year the dealer was paying 22c and 24c for these same wools at this time.

By some of the ancient nations the hog was considered a sacred animal. By others it was regarded as unclean, and prohibited as food. This prohibition among the Jews was regarded by Tacitus and others as having been because of a feeling that pork was often unfit to eat in warm climates, and apt to encourage the spread of leprosy. Moses is thought to have forbidden the eating of pork because it was liable to give the Israelites diseases that would make them unable to endure the long march out of Egypt. In those days, when cooking was crudely done, there was no doubt much reason to fear trichina. — From Coburn's "Swine in America."

Summer weather causes the water troughs to collect algae and water slime. It is well to whitewash the inside of the trough and let it dry half a day before turning in more water. The cows must be watched, for although the cow is a clean animal she will drink foul water if she can find it. Mud holes in the pasture must be fenced up or the cows will leave the clean water to drink the green stuff, and this is what typhoid germs thrive upon when once the milk is exposed to the air.

DAIRY NOTES.

Do not let the horns grow on the young heifer calves. A little stick caustic potash rubbed on the button when they are about a week old will remove them without scar.

The best of centrifugal cream separators now skim so closely that but one hundredth per cent of cream is left in the skim milk, or one pound of butter fat to 10,000 pounds of milk. By the old-fashioned method of skimming many dollars on each cow is thus lost each year. The separator is a paying investment.

A good quality of tin or smoothly glazed stone ware makes the best material for milk vessels. Galvanized iron is too rough, holding dirt and bacteria on the surface and being difficult to clean. Wooden vessels absorb fats and give off rancid odors.

Milk is the most perishable of all foods, but with proper care and cooling it may be kept sweet and wholesome for use for several days. Cooling the milk as quickly as possible after it is drawn from the cow and keeping it cool are means of preserving its freshness and sweetness.

Scalding milk vessels and sunning them well before using will not only kill bacteria that cause the milk to sour, but the same treatment reduces the chances for disease germs to enter the milk. For the same reason, allowing the cows to drink unwholesome water may result in disease germs in the milk. They should not be allowed to drink water from any questionable source.

Change of pasture is as good for dairy cows as it is for any farm animals, but of course the pastures must be good. Instead of having one large cow pasture, it is well to build cross fences so that the cows may be shifted frequently. Almost always when cows are changed from one pasture to a fresh one equally as good they immediately show a gain in milk, which demonstrates that the change is beneficial. By having a small pasture for the young stock and keeping the heifers in it away from the producing cows, there will be no danger of them learning to suck after they have been weaned.

The latest equine disorder resulting in death arises from feeding the short clippings of blue grass from the lawn. Blue grass of any length is not injurious but when the lawn is mowed the grass is often short and mats together and this forms an indigestible ball causing death.

THE BEST LINIMENT

OR PAIN KILLER FOR THE HUMAN BODY

Gombault's
Caustic Balsam
IT HAS NO EQUAL

For the Human Body
—It is penetrating, soothing and healing, and for all Old Sores, Bruises or Wounds, Felons, Exterior Cancers, Boils, Corns and Bunions CAUSTIC BALSAM has no equal as a Liniment.

We would say to all who buy it that it does not contain a particle of poisonous substance and therefore no harm can result from its external use. Persistent, thorough use will cure many old or chronic ailments and it can be used on any case that requires an outward application with perfect safety.

The Most Perfect Colt Bit Made

EVERY COLT

Should wear the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE** from the very beginning of its training, as it is the easiest, most comfortable and most humane bit on the market. With its use the colt will not fret, worry, pull, toss its head and get into the bad habits so often caused by the use of other bits and checking devices that inflict punishment or keep it under too much restraint, and at the same time you will have absolute control over it at all times.

Patented Aug. 11, 1896. Patent No. 565,681

BEWARE of worthless infringements and Checking Devices claimed to be as good as the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE**. Illustrations of some of these check bits and devices are made to look as near like the genuine as possible, but the article itself is very different, and will not give the same results.

ALL GENTLE are stamped G. S. ELLIS & SON on the supporting strap and back part of Check Rein. Any that are not so stamped are not genuine.

FREE—Our new Catalogue No. 45, with wholesale discount sheet, the largest, finest and most complete Horse Goods Catalogue ever published, is ready for distribution. It contains illustrations, descriptions, and guaranteed to be lowest prices on Harness, Horse Boots, Horse Clothing and Turf Goods of every description. Every horseman should have a copy. You can save many a dollar during the season by buying direct from us, as we are now selling direct to horsemen and allowing them from 30 to 50 per cent discount from list prices. Write us today for a copy and we will take pleasure in sending it to you all charges paid.

Large hands of sheep do not thrive so well under farming conditions as smaller ones and are moreover especially apt to injure the land for they not only crop the growing plants too closely, but by bunching, tend to puddle the ground. Fifteen head is the maximum that should be allowed to the acre and a sheep pasture should not contain more than twenty.

FEEDING YOUNG LAMBS.

The profit that is to be made from the grown lamb depends very largely upon how well the young lamb was fed. A lamb once gotten into good condition is easily kept in good condition and made into a good sheep. On the other hand a good sheep can not be made from a poorly-fed and ill-cared-for lamb. One of the essentials in successful lamb feeding and in producing good matured lambs is to maintain the "milk" or "lamb" fat. If it loses this valuable property of lamb flesh, a lamb can never mature into a first-class animal. Lambs once stunted can never overcome the disadvantage suffered by the set-back.

Lambs develop a craving for solid food early in life and when they are only a few days old they will be found nibbling at a stalk of straw or hay that they have picked up in the pen. They also like to nose about on anything that their mothers are feeding at and if the troughs in which the latter are fed their grain are low enough for them to get their noses in the lambs will eat ground grain feeds even before they chew on hay and straws.

From the time that lambs are first noticed to nibble at solid food creepers should be provided for them into which they may go and partake of the solid food whenever they wish. A small, low trough in which a little ground oats and corn is kept will be visited by them many times a day as will also small racks filled with clover hay. While they take only a very little each time they satisfy their craving and thus add valuable mites to their nutriment and to their general welfare. When the lambs have become a little older they may have cracked corn and whole oats with a little oil meal, or reduced oil cake added. If roots are still at hand a little of them in the sliced form will also be greatly relished by the lambs and greatly improve their condition. The idea in feeding the young lamb should be to give it a strong digestive and assimilating capacity.

It is usually advised that when the lambs are turned out on grass with the opening of the pasture season they need no longer receive any extra grain feed. It is not well to stop off too suddenly in this respect. In a majority of cases the flocks are turned out on grass before the grass has attained much solid substance or sweetness. The result is a general scouring of the flocks, the lambs usually suffering most. Continuing to feed some whole corn has a tendency to allay the attack of scours and hence saves the lambs from suffering too severe a set-back. Therefore it is good practice to continue to feed some whole grain for some time after the lambs are turned out to grass. When they have become accustomed to the grass and the latter has sweetened and attained greater substance with the advance of the season the lambs will make excellent growth and maintain excellent condition on the pasture alone until the mid-summer, dry and fly season comes on.—Wis. Agriculturist.

DAIRY PARAGRAPHS.

Churn when the cream is slightly acid. Feed the mind of the man behind the cow.

Cream left on the milk too long will get bitter and rancid.

Use only salt that is fine in quality and grain for butter.

When the calves are playful it is an indication of thrift and health.

Buying cows and selling them as fast as they stop giving milk never built up a herd of high-producing cows.

Not only the flavor but the keeping quality of butter is injured by keeping the cream until it gets very sour.

Put bells on the cows if they run in

the woods or brush pastures. It will save time in looking for them.

Skim the milk as soon as all the cream has come to the top. This will be about the time it turns sour in the summer.

By keeping the heifer calves of the best cows and keeping them well, they will make better cows than their mothers ever were.

Butter washed with water that has been boiled and cooled keeps much better than that washed with unboiled water.

Experiments seem to show that the longer the interval between milking, the poorer the milk. The milk is impoverished by the absorption of the fats after it is secreted.

Do not allow smoking near the dairy; nothing absorbs tobacco smoke more quickly than milk, and butter tainted with tobacco smoke is an abomination.

Fine butter has a clear, nutty flavor, a nice color (not too high), a firm, waxy texture, free from moisture, and a grain which, when broken, shows like cast steel.

A cheesy taste in butter is due to lack of thoroughness in washing and removing the buttermilk. Butter will not keep well if any of the buttermilk remains.—Pacific Homestead.

CALIFORNIA'S RESOURCES.

California's soil production for the year 1909 amounted in value to the enormous sum of \$455,368,837, an increase of 12.4 per cent over the value of the production for 1908. Estimating the output of the manufacturing establishments of the State, from careful computations, at a total of \$550,000,000 it gives a total industrial outvalue at \$1,005,368,837.

These figures are from the report of the California Development Board,

As they Sometimes Are.

As "Save-the-Horse" Can Make Them.

Evidence that Is Honest to the Core will convince.

RICHARD WALDRON, Manufacturer of Fine Havana Cigars.

Paterson, N. J., May 5, 1910.

Troy Chemical Co., Binghamton, N. Y.: Gentlemen: Enclosed find check for \$5 for bottle of "Save-the-Horse." It cured a bad case of strained tendon, and is well worth the money. Respectfully, RICHARD WALDRON.

Port Deposit, Md., May 19, 1910. Troy Chemical Co., Binghamton, N. Y.: Gentlemen: I tried "Save-the-Horse" on a valuable mare that had been lame for over a year with bone spavin. It effected a complete cure. I consider it an invaluable remedy. My mare is as fast this year as ever and does not favor her leg the slightest. I am entirely satisfied. Very truly, PHILIP R. BOND.

Benton Harbor, Mich., May 22, 1910. Troy Chemical Co., Binghamton, N. Y.: Gentlemen: I have a fine horse that is lame, and I would like your opinion, &c.

Five years ago I got "Save-the-Horse" of you to use on a fine horse that had injured his hind leg, and it cured him when veterinary surgeons said it could not be cured. This is one reason I am writing you. Can you tell me what is the trouble, and if you can cure him? Kindly give this your attention, and oblige, J. E. BARNES.

\$5.00 A BOTTLE, with signed GUARANTEE.

This is a binding contract and protects purchaser absolutely in treating and curing any case of Bone and Hog Spavin, Thoroughpin, Ringbone (except low), Curb, Splint, Capped Hock, Windpuff, Shoebol, Injured Tendons and all lameness. No scar or loss of hair. Horse works as usual.

Send for copy of this contract, booklet on all lameness and letters from prominent business men, bankers, farmers and horse owners, the world over on every kind of case.

At all druggists and dealers, or express paid.

TROY CHEMICAL COMPANY,

Binghamton, N. Y.

D. E. Newell,

56 Bay Vista Avenue, Oakland, Cal.

1108 Market Street, San Francisco, Cal.

FOR SALE.

A handsome bay mare, 3 years old, sired by Nutwood Wilkes. Absolutely sound and gentle, afraid of nothing, and is sure to make a fast trotter. Must be seen to be appreciated. Can be seen at 2064 Santa Clara Ave., Alameda, Cal.

FOR SALE.

A fast trotting mare by Egyptian Prince 14,431, dam Hattie, the dam of Monterey 2:09 1/4 and Montana 2:16, by Commodore Belmont. Is 12 years old, sound and gentle and a lady can drive her. Has 3-months-old colt by Monte McKinney by her side, and is in foal to Chestnut Tom 2:15. Also a yearling, and a two, three and four-year-old out of this mare by Monte McKinney, Chestnut Tom and Silver Bow Jr. respectively. The four-year-old is in foal to Chestnut Tom. Will sell one or all of them, and at a bargain.

J. M. PITTS, Avenue Market, 34th and San Pablo, Oakland.

FOR SALE.

On account of illness I desire to sell my veterinary practice and horseshoeing shop at Bakersfield. Will also sell my stallion Donello 2:30 by Washington McKinney. He has a matinee record of 2:18 and should trot in 2:10 if trained. Is a grand looker and his breeding is royal. Correspondence solicited.

C. H. SEARS, V. S., 2211 Chester Ave., Bakersfield, Cal.

TO THOROUGHbred HORSE-OWNERS.

FOR SALE AT A SACRIFICE.

First six volumes of Bruce's American Stud Book, practically unused. Cost \$10 per volume. Hard to get.

Two volumes of American Horse Breeders' Guide and Hand Book, with 100 tabulated pedigrees of leading stallions (work now out of print).

The American Thoroughbred, by Capt. Thos. B. Merry.

Two volumes Goodwin's Turf Guide for 1907. Cost \$12.

About 50 thoroughbred catalogues, including Rancho del Paso, Palo Alto, Ranococas, McGrathiana, Nursery Stud, Marcus Daly and all the great stock farms of the country. These are harder than a studbook, because they are tabulated.

Price, \$60 for all these works.

Address F. W. KELLEY, 366 Pacific Building, San Francisco, Cal.

FAST TROTTER

FOR SALE.

The Fast Trotting Gelding LONGITUDE by Meridian 2:12 1/4, dam Media by Anteeo 2:16 1/4, is for sale. Longitude has no record, but has shown miles better than 2:15. He is perfectly sound, kind and gentle and anyone can drive him. He is now in good condition and can be seen at the McKinney Stables, 36th avenue and Fulton street, where he is in charge of Charles James. For further particulars, apply to W. L. MILLS, 2805 Market Street. Telephone Market 194.

San Francisco: 608-612 Howard St., J. S. French, Mgr.
New Orleans: 321 Magazine St., P. R. Litke, Mgr.

which is just from the press. The report is embodied in a book of eighty pages, profusely illustrated with half tones and bearing evidence of thorough and careful compilation. The book is entitled "California Resources and Possibilities," and covers all of the industrial productivity of the State in a terse and concrete manner, and may be taken as authoritative in its statements. It also contains a large folio map of California, which is complete and up-to-date.

In the figures given the amount consumed by the producers is not taken into consideration, only those for the amount shipped, mostly out of the State, being given. The figures are compiled from such authoritative sources as the transportation companies, State and county officials and commercial organizations.

Marked instances of increase are found in orchard products, which shows a gain of six million dollars; vineyards, a gain of six and a half million dollars; dairy produce, two million dollars and poultry products two and a half million dollars.

In addition to these statistical features of the book there is an appendix containing articles on climate, forests, irrigation, intensive farming, etc., by men who are recognized authorities on these subjects.

The book is for free distribution, and may be had on application to the California Development Board, Ferry Building, San Francisco.

DISINFECTING A POULTRY RUN.

A poultry man who evidently knows how the work should be done, gives this information:

The first thing to do will be to well lime the whole, say two inches thick. Let the lime be as newly-burned as can be produced. Dig as deeply as possible. If what is termed "double" digging—i. e., two spades deep—be practiced, it will be all the better. If any portion of the main run or a separate one is grassed this should, after receiving a coat of an inch of lime, be watered with a disinfectant, to wash in the lime and sweeten the ground. For this purpose a very good plan is to mix some carbolic acid with water at the rate of about three ounces of the acid to four gallons of water, or even one ounce to one gallon would not hurt. Some of this might also be sprinkled over the other portion after digging, using a watering-pot for the purpose, and again forking over the soil after it has lain a few days. Let the run remain empty as long as possible.

BARLEY AS A FEED FOR LAMBS.

The Wyoming Experiment Station has been looking into the comparative value of corn, emmer and barley for sheep-fattening purposes with the result that barley stands a little ahead of emmer. At the close of the experiments the station gives the following conclusions:

Corn and the bearded or Scotch barley, when fed with alfalfa, were about equal in value for mutton production. Barley in this test proved to be a shade the better. Twenty-seven per cent less alfalfa and 28 per cent less grain was required where barley replaced emmer in a ration.

Grade lambs with mutton sires made greater gains, conditions being similar, than did Rambouillet lambs, though a record of food consumption for each class was not kept.

All this goes to show that barley can be profitably substituted in lamb feeding where corn is not plentiful.

MILK NOT CAUSE OF DISEASE.

Dr. William H. Park of New York, who stands high in the medical profession, believes that pulmonary tuberculosis among adults is not the result of impure milk or foods. Only two and one-half per cent of all tuberculosis in New York city comes from infected milk. butter or meat from bovine sources, according to a statement made by Dr. Park at the last session of the National Association for the Study and Prevention of Tuberculosis. "Moreover," said Dr. Park, "this small percentage is found mainly in children. In other words, pulmonary tuberculosis among adults is contracted from human beings, and is not the result of impure milk or foods." Dr. Park agrees with Dr. Robert Koch of Berlin, the discoverer of the tuberculosis germ, that cattle do not transmit pulmonary tuberculosis to human beings.

THE FARMERS HARVEST.

He that sows shall surely reap,
Well recalls to the farmer
A truth, available to keep.

The farmers outlook and prospects in the productive State of California were never better than they are this season for a bountiful and prosperous harvest. There has been no damaging drawbacks to be traced to climatic conditions, for the past spring weather has been superb and in all ways favorable to the good of the sower and planter. The fruit yield is exceptionally heavy throughout the Sacramento and San Joaquin valleys; the vegetable crop has never been more productive and luxuriant than this year, the markets at times being oversupplied; the grain fields are all they could be from one end of the State to the other, assuring an abundant supply of good hay for the stock the coming winter and for outgoing shipments, and plenty of barley and wheat, which will both bring big returns to the grower this fall, as prices are good and will continue to be so.

Abundant crops and good prices is what the farmer wants and what he deserves, for there is no one who more deserves to be well remunerated for his toil than the hard working, industrious farmer. It is the products raised from his toil that feeds and sustains the living of the world.

A productive year means abundance for all, the reign of prosperity, happiness and contentment.

Three-Legged Horses

are not curiosities by any means. The country is full of them. The fourth leg is there all right but it is not worth anything because of a curb, splint, spavin or other like bunch. You can cure the horse of any of these ailments and put another sound leg under him by the use of

Quinn's Ointment.

It is time tried and reliable. When a horse is cured with Quinn's Ointment he stays cured. Mr. E. F. Burke of Springfield, Mo., writes as follows: "I have been using Quinn's Ointment for several years and have effected many marvelous cures; it will go deeper and cause less pain than any blister I ever used. I thought it my duty for the benefit of horses to recommend your Ointment. I am never without it." This is the general verdict by all who give Quinn's Ointment a trial. For curbs, splints, spavins, windpuffs, and all bunches it is unequalled. Price \$1 per bottle at all druggists or sent by mail. Send for circulars, testimonials, &c.

STARTING PAYMENTS Due Monday, August 1, '10

(and must be made.)

Pacific Breeders Futurity Stakes No. 8---\$7,000

For Foals Born 1908, Now Two-Year-Olds.

\$35 on Two-Year-Old Trotters. \$25 on Two-Year-Old Pacers.

Colts that start at Two-Year-Old are not barred from starting again in the Three-Year-Old Divisions.

Pacific Breeders Futurity Stakes No. 7---\$7,000

For Foals Born 1907, Now Three-Year-Olds.

\$50 on Three-Year-Old Trotters. \$35 on Three-Year-Old Pacers.

Nominators must designate when making payments to start whether the horse entered is a trotter or pacer.

MONEY IN ABOVE STAKES DIVIDED AS FOLLOWS:

\$3000 for Three-Year-Old Trotters.	\$1000 for Three-Year-Old Pacers.
200 for Nominator on whose entry is named the Dam of Winner of Three-Year-Old Trot.	200 for Nominator on whose entry is named the Dam of Winner of Three-Year-Old Pace.
1250 for Two-Year-Old Trotters.	750 for Two-Year-Old Pacers.
200 for Nominator on whose entry is named the Dam of Winner of Two-Year-Old Trot.	200 for Nominator on whose entry is named the Dam of Winner of Two-Year-Old Pace.
100 to Owner of Stallion, Sire of Winner of Three-Year-Old Trot when mare was bred.	100 to Owner of Stallion, Sire of Winner of Three-Year-Old Pace when mare was bred.

Oregon Futurity No. 3, \$5,000

FOR FOALS OF 1910

Guaranteed by the Oregon State Board of Agriculture

To be raced for in their two and three-year-old form at the

OREGON STATE FAIR

ENTRIES CLOSE AUGUST 1, 1910.

Three-year-old Trotters . \$2000 Three-year-old Pacers . \$1500
Two-year-old Trotters . 900 Two-year-old Pacers . 600

Entrance \$5 to nominate foal on or before August 1, 1910, when breeding of foal must be given; \$10 January 1, 1911, when color, name and sex of foal must be given; \$10 January 1, 1912; \$10 January 1, 1913.

Starting payments—\$10 to start in two-year-old pace; \$25 to start in two-year-old trot; \$35 to start in three-year-old pace; \$50 to start in three-year-old trot. All starting payments due September 1, year of race.

Nominators must state when making payments to start whether the colt entered is a trotter or pacer. Colts that start as two-year-olds are not barred from starting in the three-year-old division. All entries must be accompanied by the entrance fee, but there will be no return of a payment, nor will any entry be liable for more than the amount paid in or contracted for. Failure to make any payment forfeits all previous payments. Right to substitute another foal eligible to enter open until January 1, 1911. Right reserved to declare off or reopen futurity in case the number of entries received is not satisfactory. Each race will be mile heats, two in three. Hobbies not barred on pacers. Money divided in each race 50, 25, 15 and 10 per cent. There will be no more money than there are starters. A colt distancing the field will be entitled to first and fourth moneys only, and in no other case will they be entitled to more than one money. Other than specified, rules of the National Trotting Association to govern. For further particulars address

IN THE ISSUE of June 25th of the "Breeder and Sportsman" appeared the following comment:

"According to a recent ruling of the American Trotting Register Association rule 4 of the trotting standard does not mean exactly what it says. It reads: 'A mare sired by a registered standard trotting horse, provided she is the dam of two trotters with records of 2:30.' The papers for the registration of the mare Petrina by Piedmont 904 were sent on together with the proof of her breeding and the proof that she is the dam of the trotters Belle N. 2:14½ and Lady Petrina 2:27. The applicant was notified that Petrina would not be registered until the money was sent to pay for the registration of Belle N. and Lady Petrina also. This is a queer interpretation of the rule which only requires that proof be furnished that a mare is by a standard horse and has produced two trotters with records of 2:30 to entitle her to registration. It will now be necessary for the applicant for Petrina's registration to get the owners of Belle N. and Lady Petrina to pay \$4 each to have those mares registered or to put up the money himself. We do not think the rule has been properly interpreted by the officials of the Register Association."

A few days ago we received from our highly esteemed friend, Mr. W. H. Knight, of Chicago, Secretary of the American Trotting Register Association, the following letter:

33 Dearborn Street,
Chicago, June 23, 1910.

Editor "Breeder and Sportsman": In noting your editorials on page four of your issue of June 25th, I find that you take exception to our interpretation of Rule 4 on which the mare "Petrina" by Piedmont cannot be registered. I am enclosing herewith a blank application and you will note I have drawn a blue pencil mark about the rule that governs a case of this kind and I believe that after thinking the matter over very carefully you will conclude that possibly the provision is a wise one.

Very truly yours,

W. H. KNIGHT, Secretary.

The rule governing the case which Mr. Knight blue penciled, reads as follows:

"All animals upon which rank depends must first be registered at the expense of the applicant. If a performer makes its sire or dam standard, it must first be registered. All standard dams appearing in a pedigree must be recorded.

"Let it be observed that the standard itself makes registration a condition and requisite to standard rank."

While a casual reading of this rule would lead one to admit that Mr. Knight's interpretation of it

applies to the case of Petrina and that no injustice has been done by withholding her from registration until both her daughters with standard records have been registered, we are still of the opinion that our criticism was justified.

In the first place the Trotting Standard as printed in the forepart of the last volume of the American Trotting Register, consists of nothing but the five rules there given, and the rule referred to above by Secretary Knight nowhere appears in that book. If it is an arbitrary rule of registration it should appear as part of rule 4, and not be printed in the list of "instructions about preparing pedigrees for registration."

In the second place "The Trotting Standard" is supposed to be fixed by the five rules printed on the blank and not by anything else.

In the third place we should like to ask how one or both of Petrina's standard performers is "to be first registered," when she is not registered. In other words if Petrina cannot be registered until both her standard performers are registered, and if neither of them can be registered until she is, which is to get on the register first?

Again, while both Belle N. and Lady Petrina are by registered horses, let us suppose they were by some non-standard trotter, how could they be registered so as to permit Petrina to be registered?

Rule 4 simply states that "a mare sired by a registered horse, provided she is the dam of two trotters with records of 2:30" shall be accepted as a standard bred trotter, and when the American Trotting Register Association holds that the record holding produce of this mare must be registered before she is eligible we think they have made a condition that is impossible to comply with.

We understand that application will be made for the registration of Belle N. and Lady Petrina in order that Petrina may be registered, and if the Association accepts and registers the two fillies first, we would like to know under what rule they are accepted.

We realize the fact that Secretary Knight is trying to follow the rules laid down by the association of which he is a very efficient and worthy official, and our criticism is not intended for him but for the association itself.

THE BIG ENTRY LISTS received by the associations on the North Pacific Circuit, and which will be found elsewhere in this issue, presage great racing in that section this season. The associations and the horsemen, breeders as well as owners and trainers, are to be congratulated on the splendid showing made, the numerous entries proving that where there is enterprise enough to arrange good programs and give generous purses, the horse owners will give them their patronage. The entries show that all the best and fastest trotters and pacers in training on the Pacific Coast will race at Portland, Salem, North Yakima and Spokane this year, and we expect to see all the records of the northwest broken before the season is over. With a revival of the district fairs next year California should have as good programs and as numerous entries as any of these northern associations. It would be possible to have a Pacific Coast Circuit that would be a rival of the Grand Circuit in high class racing and fast time, and we hope such a circuit will be organized some day.

TED BUNCH HAS A FAST TROTTER.

Cleveland, O., July 1.—Friday is the important work-out day at the North Randall track and to-day's grist of fast miles was the most notable of the season to date.

The most surprising performance of the day, and one which set the railbirds agog, was that of the dun trotting gelding Butter Brook 2:19½. This unsexed son of Silent Brook 2:16½ and Lide Lilly by Pretender, driven by Ted Bunch, gave the most brilliant display of speed seen at the track thus far this season. He went away at a two-minute pace, reaching the quarter in 30¼ seconds. Then he was taken back and trotted the middle half at a moderate clip. Coming home he was turned loose and negotiated the last quarter in 29¾ seconds, finishing the mile in 2:08¾.

The fastest full mile trotted during the day was by the great Uhlan, who drew "Doc" Tanner around the course in a wagon in 2:08. He brushed at a terrific rate in spots and seemed fit for a supreme effort had it been asked of him. All the Billings horses in Tanner's care are in wonderful form. Berta Mac 2:08 was moved a mile in 2:11, the last quarter in :31. The veterans, Turley 2:07¾ and W. J. Lewis 2:06¾, were not extended, as they start in tomorrow's matinee, but both look capable of going to their records, if necessary.

Teasel 2:09¾, Jack McKerron 2:07¾ and County Jumper 2:20¾ worked together and the handsome stallion finished in front in 2:12, last quarter in :30¾. Teasel's mile being in 2:12½ and County Jumper's in 2:13. C. F. Emery's unmarked stallion, Del Toro, trotted in 2:15. Capt. David Shaw's Miss Baritone 2:20¾ stepped in 2:14, and the same owner's three-year-old futurity candidate, Grace, own sister of Czarevna 3, 2:07¾, in 2:20¾, the last half at the rapid rate of 1:04¾.

Vance Nuckols drove the two-year-old sister of Native Belle 2, 2:07¾ in 2:27½; Yo San, the handsome green mare owned by F. G. Jones, of Memphis, did a mile for Sandy Smith in 2:18, while the same trainer drove the green filly Blanche T., by John A. McKerron 2:04½, in 2:27, with the last quarter in :33. For Dan Kane the matinee mare Wickliffe Girl, who has no professional record, stepped a pretty mile in 2:12¾.

Among the pacers, Capt. Shaw's Good Goods 2:09¾ was to the fore with a mile in 2:07¾, McDevitt allowing him to come the last half in 1:02½. Bert Shank aired Thistle Doune Farm's C. of C. dependence, Evelyn W., by The Spy, and she reeled off two nice miles in 2:08¾ and 2:03¾. She needs no pajamas and is a smooth piece of goods. Akar, a green pacer by Aquilin, showed Ted Bunch a half in 1:03¾. George Saunders drove his good bread-winner of last year, W. D. S. 2:09½, an effortless mile in 2:11½. This one should be good for the 2:10 classes, for sure.

Capt. Shaw is jubilating over the news which he has received from Lexington, that on Tuesday, June 28, his famous race mare Lillian R. 2:04½ had foaled a stallion foal by Peter the Great 2:07¾.—"Randall" in Horse Review.

STRAINS OF BLOOD RUNNING OUT.

Attention has from time to time been called to various strains of blood that appear to be running out, that are gradually disappearing from the pedigrees of stake winners. This is but history repeating itself, for a study of breeding will prove to any one that certain families, from which have come brilliant performers, die out, deteriorate or are eliminated altogether. It is the family that breeds on that has the greatest worth, and the strains which produce the greatest number of stake winners are those which will last the longest. Many years ago the Wilkes and the Electioneer families vied with each other in popularity, because of sensational trotters. At the same time, representatives of other tribes were regarded as worthy rivals. The Nutwoods, members of the Woodford-Mambrino family, Happy Mediums, the Aberdeens and Almonts, the Patchens, the Clays and many others had their own adherents. In the march of time that has followed, some of these strains have been almost forgotten. The families of George Wilkes and Electioneer are still struggling for supremacy, each has probably held its own, yet except in those instances where their blood has been mingled with the descendants of George Wilkes or Electioneer, a majority of the other families that were conspicuous a quarter of a century ago are today heard of but rarely. Happy Medium through his son Pilot Medium, and by the latter's best representative, Peter the Great, has continued with greater success than any of the others, yet the great colt trotters of his era, the winners of the most remarkable races of the past decade have been invariably descendants in the male or female line or both from George Wilkes or Electioneer. The two most brilliant trotters in the season of 1909 were Uhlan and Hamburg Belle, the former was a combination of the Electioneer-Wilkes blood through the male line. Hamburg Belle was by Axworthy, a great grandson of George Wilkes and her dam was by a son of that great sire. The champion yearlings of last season possessed strong infusions of Wilkes blood, Miss Stokes being by Peter the Great, out of a daughter of Guy Wilkes, while Silent Brigade was a lineal descendant of the champion stallion of his time, being by Silent Brook, a son of Darknight, who was by Alcyone by George Wilkes. Native Belle, the best of the two-year-olds, was a combination of Wilkes and Electioneer blood, being by Moko, by Baron Wilkes by George Wilkes, out of Yellow Belle by George Wellington, who was by Electioneer.

The three-year-olds included Baroness Virginia by Baron Review, a Wilkes line. Czarevna, whose dam was by Onward; Bertha C. by Baronmore. The Harvester, the greatest four-year-old of recent years, and one of the best race horses ever seen, in an Electioneer-Wilkes representative. Many other instances could be named to show how dominant are these two strains and while there are others of great merit there are also very many whose sun is setting.—Stock Farm.

TO REVIVE HORSE RACING.

Jefferson City, Mo., July 8.—A bill is to be presented to the next Legislature for the restoration of horse racing in Missouri, according to John D. Knapp of St. Louis in a communication to the Secretary of State.

The original intention, Knapp says, was to submit a bill through the initiative to create a State racing commission of five members, appointed by the Governor, to supervise and regulate the sport in Missouri.

Knapp says the movement "was initiated by certain sporting members of the Missouri Referendum League at St. Louis, who saw a chance to restore racing in Missouri under proper conditions and safeguards both to breeders and to the public by putting before the voters a reform racing bill."

PARK AMATEUR CLUB.

There was some splendid racing at the stadium in Golden Gate Park last Saturday afternoon, but a strong wind and cloudy sky made it rather unpleasant for the spectators and not more than two or three hundred occupied seats in the grand stand during the time the races were on. It was a great day for Mr. A. Ottinger who won both races in which his horses started and he received congratulations on all sides for his good reinsmanship. Dan Hoffman also won two races during the afternoon and also came in for much handshaking, while the remaining race on the card was won by Mr. J. W. Smedley.

The first event on the program was the free-for-all pace, in which H. Boyle's Dioden was the only horse to appear and walked over for the ribbon in 2:21¾.

The next event had two starters, both three-year-old pacers. Mr. Hoffman won it with his colt Balboa by Kinney Lou, and after taking the first heat in 2:35 let Balboa step the last half of the second heat in a manner that shows this colt to be one of the good prospects for a fast pacer. The mile was in 2:29 but the last half was paced at about a 2:18 gait.

The free-for-all trot had three starters, Mr. Ottinger's Charley T., Mr. Christenson's Reina Directum and Mr. Boyle's Modicum. The race was entirely between the first two named, as Modicum did not seem to be able to keep up with them after the first half had been trotted. Charley T. had the pole and Reina Directum was on the outside. Starter Erlin sent them away to a very good start the first time and Charley T. took the lead at once. As they passed the first quarter pole in front of the stand he was only a head in front of Mr. Christenson's mare, and Modicum was a length back. At the half the black gelding was nearly two lengths in front of the mare, but Christenson began driving her and when the three quarters was reached she was lapped on Charley T. and the race home brought the crowd to its feet. Charley T. beat her to the wire by only a head in 2:15¼, while Modicum was twenty lengths back and her driver was admonished by the judges for laying out of the race so far.

While it was pretty evident that Charley T. had outtrotted Reina Directum in the first heat there were many admirers of the mare who believed she would beat him in the second. It was a repetition of the first heat in nearly every particular. Christenson drove a little closer and began his drive a little sooner after the half had been passed, but the result was the same. The two blacks made a beautiful picture as they came down the homestretch like a double team but Charley T. held the mare safe all the time and beat her a head once more in identically the same time—2:15½. Modicum was about three lengths back at the finish of this heat. The race was one of the best ever seen at the stadium.

The race for class A trotters took four heats to decide. Mike Kelly got the first heat rather handily after a hot race through the stretch with Raymond M., and the second heat went to Lady Washington with Raymond M. again second. Mr. Ahlers' handsome mare Sunset Belle won the third heat with Mike Kelly second, but the gray came back strong in the fourth heat and won from Raymond M. The last named horse was the contestant in three heats and was third in the other. He trotted a splendid race.

Little Medium won the first heat of the Class A pace, but after finishing second in the second heat was withdrawn, the race going to Hoffman's Dictatum who paced a good race, Ringrose getting second place.

Mr. J. W. Smedley's beautiful mare Red Velvet by Zombro took the last race which was for class B trotters, in straight heats, the last heat in 2:24½. Capt. Matson's Bird Eye was a good second in each heat. Results:

First race, free-for-all pace:
H. Boyle's Diodens.....walk over
Time—2:21¾.

Second race, free-for-all pace:
A. Ottinger's Charley T.....1 1
S. Christenson's Reina Directum.....2 2
H. Boyle's Modicum.....3 3
Time—2:15½, 2:15½.

Third race, class A trot:
A. Ottinger's Mike Kelly.....1 3 2 1
F. W. Thompson's Lady Washington.....3 1 4 3
H. C. Ahler's Sunset Belle.....5 4 1 5
F. L. Matthes' Raymond M.....2 2 3 2
D. E. Hoffman's Dr. O'Brien.....4 5 5 4
Time—2:22½, 2:23, 2:24, 2:27.

Fourth race, three-year-old pace:
D. E. Hoffman's Balboa.....1 1
H. Boyle's Zoe Dell.....2 2
Time—2:31, 2:29.

D. E. Hoffman's Dictatum.....2 1 1
H. M. Ladd's Ringrose.....3 4 2
I. L. Borden's Roberta.....4 3 3
J. Perry's Little Medium.....1 2 dr
Time—2:20, 2:15¼, 2:17.

Sixth race, class B trot:
J. W. Smedley's Red Velvet.....1 1
Captain W. Matson's Bird Eye.....3 2
R. Consani's Dividend.....3 4
F. L. Matthes' Walter G.....5 3
I. L. Borden's Barney Barnato.....4 5
Time—2:27, 2:24½.

At Wheaton, Ill., matinee meeting July 4, the trotter, Don Labor 2:13¼ entered in a number of rich events down the Grand Circuit, defeated the pacing gelding Fly-by-Night 2:11½ in 2:10½.

NORTH YAKIMA ENTRIES.

Following are the entries received in the purse races of the Washington State Fair at North Yakima, which closed on July 1st:

2:13 Trot.

Escobado and Paul W., Table Rock Mineral Water Co., Portland, Ore.
Herod, W. O. Reynolds, Denver, Colo.
Freddie C., Jr., and Gibbie, Ed Cudihee, Seattle, Wash.
Densmore, D. A. Dinnie, Minot, N. D.
Prince Lot, Alex Brown, Walnut Grove, Cal.
Zomack, N. W. Thompson, Boise, Idaho.
Lady W., L. C. Shell, Walla Walla, Wash.
Belle N., F. P. Norton, Marshfield, Ore.
Lady Inez, A. L. Scott, San Francisco, Cal.
Bodaker, Thomas Ronan, Pleasanton, Cal.
Zomell and Rapidan Dillon, W. S. Maben, Los Angeles, Cal.
Helen Stiles, C. A. Durfee, San Jose, Cal.
Mayo, E. N. Jones, Spokane, Wash.
Lady Sunrise, Chas. Turner, Davenport, Wash.
Lady Malcolm, Geo. F. Brown, Corvallis, Ore.
Cromo, M. E. Finch, Baker City, Ore.
Packline Sr., John McCormack, Lewiston, Idaho.
Lida Carter, James Dacres, Walla Walla, Wash.
Alfreda B., E. A. Reichel, Great Falls, Mont.
Tell Tale, Dr. Rae Felt, Eureka, Cal.

2:24 Trot.

Dan McKinney, Joe F. McGuire, Winnipeg, Manitoba.
Dr. Wayo, Table Pock Mineral Water Co., Portland, Ore.
Monte Reco, W. O. Reynolds, Denver, Colo.
Lucile Patchen and Miss Herbert, Dick Wilson, Portland, Ore.
Wesos, Alex Brown, Walnut Grove, Cal.
Mrs. Herbert, W. B. Linn, Martinsville, Ill.
All Style, Dana Perkins, Rocklin, Cal.
Zomack, N. W. Thompson, Boise, Idaho.
Professor Heald, A. L. Scott, San Francisco, Cal.
Bodaker, Thomas Ronan, Pleasanton, Cal.
Anita, C. P. Webb, Seattle, Wash.
Dr. Lecco, C. A. Durfee, San Jose, Cal.
Dolly McKinney, Clark Bros., Eugene, Ore.
Robert D., Robert L. Dahlke, Spokane, Wash.
Bonnie McK., Geo. A. Kelly, Walla Walla, Wash.
Victoria McKinney and Harry T., A. J. Agnew, Everett, Wash.
Kingbrook, W. I. Higgins, Deer Lodge, Mont.
Mountain Boy, Springer & Howell, Boise, Idaho.
Tell Tale, Dr. Rae Felt, Eureka, Cal.
Vincomar, Thos. H. Brents, Walla Walla, Wash.

2:18 Pace.

Silvia Onward, A. A. Fowler, Agt., Denver, Colo.
Alex Williams and Rothada, Dick Wilson, Portland, Ore.
Lord Sidney Dillon, Chas. D. Berg, St. Paul, Ore.
Rexie Smith, Ole Dahl, Minot, N. D.
Don Densmore, D. A. Dinnie, Minot, N. D.
Olga S., W. C. Marshall, Vancouver, B. C.
Dell McKinnon, Mrs. Al Lynch, Colville, Wash.
King Seal, E. C. Keyt, Fair Ground, Oregon.
George Woodard, W. R. Merrill, Colusa, Cal.
Sam The Mint, Stokes & Wickers, Great Falls, Mont.
Chiquita, W. S. Maben, Los Angeles, Cal.
Miss Jerusha, E. N. Jones, Spokane, Wash.
Jr. Dan Patch, J. F. Elwell, Colville, Wash.
Harold Welcome, W. L. Knouff, Walla Walla, Wash.
Amy S., A. R. Gibson, Seattle, Wash.
Buck, E. A. Reichel, Great Falls, Mont.
Cranky Thorne, J. K. Love, Seattle, Wash.

2:11 Pace.

Conqueror, A. C. Severance, San Bernardino, Cal.
Hubbub Jr., Joe F. McGuire, Winnipeg, Manitoba.
Fay Denard, A. A. Fowler, Agt., Denver, Colo.
Lord Sidney Dillon, Chas. D. Berg, St. Paul, Ore.
Francona and Don Densmore, D. A. Dinnie, Minot, N. D.
Lou Miller, G. O. Miller, Portland, Ore.
Bonny M., L. C. Shell, Walla Walla, Wash.
Gold Finder, Stokes & Wickers, Great Falls, Mont.
Nancy C., J. C. Rouse Jr., El Paso, Tex.
Chiquita, W. S. Maben, Los Angeles, Cal.
Happy Dentist, C. A. Durfee, San Jose, Cal.
Judge Dillard, E. N. Jones, Spokane, Wash.
Birdal, R. E. Davison, Nile, Wash.

The remaining 3 per cent on these stakes is due and payable September 1st.

Entries in purse races close September 1st for the Washington State Fair, Salem, Spokane, Walla Walla, Southwest Washington Fair and Boise. Please note that purse entries close for Everett and Portland on August 10th.

Orders for stalls should be sent as early as possible, so that proper reservations may be made.

JNO. W. PACE, Secretary Washington State Fair.

HALF-MILE HEATS AT KENTFIELD.

The Kentfield (Marin county) Driving Club held matinee racing July 4th.

Free-for-all—Birdcatcher (Dr. Rydeberg) won first and third heats and race; C. W. Rice's Billy B. won second heat; Frank Pereira's Queen Direct was third. Time—1:19¼, 1:16½, 1:16¼.

2:35 class—Geo. McDermott's Lou Dillon won handily; C. M. Jone's Rosssdale second. Time—1:16, 1:20¼.

2:40 class—O. Emerald's Don won; C. W. Rice's Skidoo second. Time—1:26, 1:25¼.

3:10 class—Ed Martin's Maud M. don easily; Ben Thomkin's Betty second. Time—1:31¼, 1:32¼.

Drink Jackson's Napa Soda.

SACRAMENTO DRIVING CLUB.

An attendance of about 1000 saw some excellent racing at Agricultural Park, Sacramento, last Sunday, the driving clubs of Sacramento and Chico presenting a card of six races that were well contested in fast time. In the class A trot Frank Wright's handsome big stallion Lijero defeated Wild Bell and Katalina in straight heats in the good time of 2:15¼ and 2:13¼. The fastest race of the day was the class A pace, a mile being made in 2:12¾, which is fast time over this track for a pacer, as the track is not considered fast just now, more water being needed. Results:

First race, class D, mixed:
Stamlene (Walter Mastin, Sacramento).....1 1
Katy B. (George Shant, Sacramento).....2 3
Joseph D. (F. G. Parks, Chico).....3 2
MacB. (G. C. Powell, Sacramento).....4 5
Camelia (Charles Silva, Sacramento).....5 4
Time—2:30, 2:29¾.

Second race, class A trot:
Lijero (Frank Wright, Sacramento).....1 1
Wild Bell (Frank Ruhstaller, Sacramento).....3 2
Katalina (Wendell Miller, Chico).....2 3
Time—2:15¼, 2:13¼.

Third race, class A, pace:
Chiquito (Wendell Miller, Chico).....1 1
Kermit (H. C. Cowell, Sacramento).....3 2
The Jewess (A. Levison, Rocklin).....2 3
Time—2:12¾, 2:14¾.

Fourth race, class B, trot:
Dr. Frazier (H. C. Pike, Sacramento).....3 1 1
Lady Alice (W. J. O'Connor, Chico).....1 2 2
Expedio (E. J. Weldon, Sacramento).....2 3 3
Time—2:23, 2:20½, 2:20¾.

Fifth race, class B, pace:
Princess Flora B. (E. O. Burge, Sacramento).....1 1
Joe Dick (J. Francis Heenan, Sacramento).....3 2
Alice Roosevelt (W. J. Hunt, Sacramento).....2 3
Buster Brown (H. C. Pike, Sacramento).....4 4
Time—2:21¼, 2:20½.

Sixth race, class C, mixed:
All Style (Dana Perkins, Rocklin).....1 1
Seymour M. (Thomas Stiles, Chico).....2 2
Briarwood (I. Christie, Sacramento).....3 3
Time—2:18¾, 2:23.

The following gentlemen officiated in the stand during the day: Judges, Col. M. H. Diepenbrack, W. O. Bowers and Dr. M. C. Delano. Times, Dr. A. McCollum, Frank E. Hollister, Jay Wheeler. Starter, Frank E. Wright. Announcer, George Vice.

THE FOURTH AT HEMET.

Over 2000 people witnessed the race meet held in Hemet July 4th, and which was considered one of the most successful matinees ever held in Riverside county. Riverside horsemen were much in evidence and Riverside's horses carried away many of the honors in the races. Results:

Three-year-old trot:
J. W. Batchelder's Larry (Stoppelfield).....1 1
Hemet Stock Farm's Tena G (Holloway).....2 2
Time—2:35, 2:45.

Pacing, 2:30 class:
Charles June's Harry H. (June).....1 1
Joe Clapp's Proctor (Clapp).....2 2
Peter Beatty's Lill (Beatty).....3 3
Time—2:24, 2:25.

Trotting, free-for-all—Broadwell cup:
J. H. Kelley's Bolock (Kelley).....1 1
G. W. Parson's Buster (Bonnell).....2 2
F. Stoppelfield's Dietrick (Stoppelfield).....3 4
Hemet Stock Farm's Louise Carter (Holloway).....5 3
James Senteney's Buck (June).....4 5
Time—2:23, 2:21½.

Pacing, free-for-all:
H. Eigenbrod's Monk (Eigenbrod).....1 1
James Campbell's On Bly (Campbell).....2 2
Time—2:21, 2:17.

Trotting, 2:40 class:
J. M. Holland's Colonel (Holland).....1 1
G. M. Carrigan's Prince Valentine (Carrigan).....2 2
H. E. Webster's Dark Streak (Webster).....3 3
Charles June's Lora Madison (June).....4 4
Time—2:37, 2:38.

Trotting, 2:30 class:
J. H. Kelley's On Conn (Kelley).....1 1
Hemet Stock Farm's Lena Lowe (Holloway).....2 2
Time—2:31, 2:27.

Trotting, 2:20 class:
Dr. Spoor's Nearest (Spoor).....1 2 1
G. W. Bonnett's Marie S. (Bonnell).....2 1 2
F. Van Tress's Mabel Van (Stoppelfield).....3 3 3
Time—2:29½, 2:21½, 2:24.

EUREKA RACES JULY 4TH.

First race, mixed, purse \$100:
Julia M. (Harpst).....1 1
Eulila (Alfred).....2 2
Pearl O. (Felt).....3 3
Time—1:17, 1:16½.

Second race, mixed, purse \$150:
Searchlight colt (Felt).....1 1 3 1
Maud McAtee (Stock).....3 2 1 3
Lady Lystene (Bryant).....2 3 2 2
Time—1:16, 1:07¼, 1:11, 1:09.

Country Jay is a better horse than ever this year and trotted a mile in 2:06 in his work at Detroit last week.

SAN FRANCISCO CLUB AT CONCORD.

About 150 San Franciscans, consisting of members of the San Francisco Driving Club and their friends took the train for Concord, Contra Costa county last Sunday morning to attend the race meeting given on the Concord mile track that day by S. Benson, the lessee of the grounds. Four good races were carded for purses of \$100. The contests were close, but one event being won in straight heats, and while they were all two best heats in three, in two instances it took five heats to decide the winner. W. J. Kenny did the starting and got the horses away well, and to the entire satisfaction of the drivers. Results:

2:30 class, 2 in 3:					
H. D. Chase's Don C.....	1	1			
L. Palmer's Cricket.....	2	2			
E. C. Chase's Dollie.....	3	3			
S. Benson's Sorler.....	4	5			
P. D. Sexton's Sister Vesta.....	6	4			
S. S. Bates' Lassie M.....	5	dr			

Time—2:22, 2:22.

2:17 class, 3 in 5:					
Duncan Campbell's Ginger.....	2	3	1	2	4
Chase & Gianini's Kitty D.....	3	1	3	1	2
R. Bennett's Sydney D.....	1	4	4	3	3
S. Benson's Jim Rankin Jr.....	4	2	2	4	4

Time—2:22, 2:17½, 2:17½, 2:19½, 2:20.

Free for all—					
G. D. Erlin's Major Cook.....	1	2	1	1	
L. Marisch's Little Dick.....	3	1	3	3	
F. Burton's Walter Wilkes.....	2	3	2	2	
G. Kitto's Deroll.....	4	4	4	dr	

Time—2:18, 2:17, 2:20, 2:15½.

2:30 class, 3 in 5:					
W. J. Kenney's W. J. K.....	2	3	1	2	2
H. Schoettlein's Lulu S.....	3	2	3	1	1
H. Cohn's Eden Vale.....	4	1	2	3	3
W. Higginbottom's Der Tenfel.....	1	4	dr		

Time—2:19½, 2:21, 2:21½, 2:21, 2:19.

The officers of the day were: Starter, W. J. Kenney; Judges, Geo. E. Erlin, J. V. Galindo, Jack Holland, Timers, H. Schottler, John Deschler, M. M. Donnelly, Marshal, F. P. Lauterwasser Jr. Secretary, James McGrath.

SALT LAKE DRIVING CLUB.

The harness races given by the Salt Lake Driving Club July 4th were witnessed by a large crowd which filled the grand stand. The card presented brought out the best horses in the state and the three races were featured by close finishes. The half mile track was a little heavy.

Straight mutuels were laid on the results and considerable money was placed in the pools.

James Devine was starter; George Putnam and L. H. Curtis, judges; Dr. George Shores and Thomas Harris were timers. The summaries:

2:35 class, trot or pace; purse, \$200:					
Telephone.....	1	1	1		
Miss Bingo.....	4	3	3		
Bosey.....	2	2	2		
Alherta.....	3	4	4		
Willie Due.....	5	6	6		
Maude C.....	6	5	5		

Time—2:24½, 2:23½, 2:26.

Free-for-all, trot or pace; purse, \$300:					
Queen Pomona.....	1	4	1	1	
Dan Z.....	3	2	4	4	
Laura "B".....	2	1	2	2	
Mayflower.....	5	3	3	3	

Time—2:18½, 2:19½, 2:18, 2:20.

2:25 class, trot; purse, \$200:					
Harmonica.....	3	1	1	1	
Chester "S".....	1	2	2	2	
Foxy Togo.....	2	3	3	3	
Ned Wilkes.....	4	4	4	4	

Time—2:25, 2:24½, 2:24½, 2:25.

W. H. Stubblefield Jd., of Oran, Mo., breeder and former owner of Blacklock 2:04½, Bland S. 2:05½ and many other fast performers, has offered to match his two-year-old pacer, Pat Logan, son of Bert Logan 2:16½, against any two or three-year-old pacer raised in Missouri, mile heats, two in three, for five hundred to one thousand dollars—hopples barred and race to be on a mile track. Mr. Stubblefield says since Mr. James Houchin has offered to match his three-year-old pacer raised in Missouri, that this is a good opportunity for him to be accommodated in a race with a colt one year younger.

There arrived a few days ago at Lexington, Ky., six mares from Russia, consigned to Patchen Wilkes Farm and to R. L. Nash, agent for Empire City Farms. Of this number two will be mated to Axworthy, one to General Watts and the others to Peter the Great. The Russian mare that goes to the paddock of General Watts is a white mare, Toska, and she will remain at Mansfield Farm after having been bred. Those to be mated with Axworthy are Taumannaga and Iadviga. These mares have been sent to this country by a member of the Imperial Driving Club of Moscow, Russia.

The handsome young stallion Jack McKerron 2:07½ is doing all that is asked of him in a way that is pleasing to his large host of admirers. While Bert Shank has not set him down for a mile faster than 2:12, he at all times shows a desire to step a little faster and always finishes the last end at greatly increased speed. This son of John A. McKerron 2:08½ is indeed an impressive looking individual and harring accidents, will close the season with a record that will be both a great credit to himself and his champion sire.

OUR LOS ANGELES LETTER.

Los Angeles, July 12, 1910.

Last week was another dull one at Arcadia track so far as sensational miles were concerned. So many horses have gone wrong out there lately that the trainers are getting timid about letting their charges step to the limit of their speed. Bowed tendons and curbs are not uncommon and of course it's always the best in a man's string that goes wrong. As one of the "groomsters" remarked the other day: "I've never seen so many different kinds of a race track inside of one fence."

In places it is so hard a horse makes no impression, and in others it is as soft as a running track, and no wonder a horse gets injured.

The California Breeders' Association is trying to make arrangements to race off their two and three-year-old stakes in a way that will be satisfactory to all the nominators and hopes by next week to give the readers of the "Breeder and Sportsman" definite information as to the time and the place where they will be decided, and will then notify the owners of entries where and on what dates their colts will race.

Work is at last well under way at Agricultural Park at least on the part of the State. The ceremony of breaking ground for the Historical Museum and Art Gallery was conducted yesterday. The first shovel full of earth was turned by Mrs. W. H. Haush, assisted by Miss Bowen. Mrs. Haush was the representative of the Art League and Miss Bowen is the daughter of W. M. Bowen, the president of the Board of Governors appointed to look after the new buildings. Representatives of the Los Angeles Art League, the Historical Society of Southern California, the Academy of Sciences, the Cooper Ornithological Society, and the Sixth District Agricultural Association were present. When finished the building will comprise a wing for scientific exhibits, a museum of natural and political history, an art gallery and an imposing rotunda to be decorated with statuary, the whole to cost in the neighborhood of \$236,000. The stock building is already under way and the race track and grandstand will be begun about the first of August, and should be completed with the stalls by Christmas, or perhaps in time for the Thanksgiving matinee.

J. Wiesenbach, the Broadway jeweler, has just completed a trophy for Mrs. E. Bonfilio on the order of the Los Angeles Driving Club, in commemoration of the performance of her great horse Copa de Oro 2:01½, last Thanksgiving day, when he paced an exhibition mile in the rain and over a muddy track at the matinee in 2:07.

The trophy is a coffee urn of solid silver and of a most graceful design and tipped with ivory.

It is 15 inches in height and stands on a solid silver salver 20 inches long by 14 inches wide and both pieces elaborately engraved by hand. The urn itself bears the inscription:

Presented by
LOS ANGELES DRIVING CLUB,
Thanksgiving Matinee, 1909,
For exhibition mile by
COPA DE ORO 2:01½.

Owned by
Elizabeth Bonfilio.

It is a beautiful example of the silversmith's art and a very graceful tribute from her fellow members of the Los Angeles Driving Club to one who is a sincere lover of the harness horse and who has never spared time, trouble or expense in furthering the best interests of the club. Mrs. Bonfilio and her trainer, Wm. G. Durfee, are always willing to give an exhibition with either Carlockin 2:08½ or Copa de Oro 2:01½ at a matinee of the club, though most unfortunately Mrs. Bonfilio's health is such that she can seldom see her horses perform and never in professional races away from home.

J. W. Nickerson today bought out his partner's interest in the Zombro filly Ethel G.

George Maben, the well-known horseman and brother of Walter Mahen, died here Saturday.

JAMES.

THE ANGELUS WINS GOOD RACE.

All California horsemen will remember the trotting stallion The Angelus by Zombro 2:11, out of Hazel Kinney 2:09½, that P. W. Hodges bred, raised and trained and took east at the same time he took that other good Zombro trotter San Francisco which afterwards took a record of 2:07½ and was sold for \$15,000. Mr. Hodges started The Angelus in a few races, but did not win with him as the horse was entirely out of condition at the time, and afterwards sold him. At the Pontiac, Michigan, meeting June 29th, The Angelus, driven by Colby, won the 2:24 class trot, purse \$1000, in straight heats, beating a big field easily and turning the half mile track in 2:19½, 2:16½ and 2:15½, a corking good race for this early in the year under the conditions. As will be seen by the breeding given above, The Angelus is an inbred McKinney, being by a son and out of a daughter of that great sire. From the ease with which he won this race, the turf scribes predict a mark of 2:10 or better for The Angelus before the end of the season.

At North Randall, O., a few days ago the European trotter Dora started for a fast workout and went to the first half-mile post alone in 1:05½, at which point she overtook County Jumper 2:20½ (the East-own-owned gelding), and the pair finished the latter end in 1:04½. Dora's mile being in 2:09½ and County Jumper's in 2:15½.

DEATH OF ALLERTON 2:09¼.

A brief item in these columns last week announced the death at Hopper Farm, Iowa, of the ex-champion trotting stallion Allerton 2:09¼. He was foaled in 1886, consequently was 24 years old at his death. He was bred by C. W. Williams, of Independence, Iowa, who also bred the ex-champion three-year-old trotter Axtell 2:12, foaled the same year. Allerton was sired by Jay Bird, his dam Gussie Wilkes by Mambrino Boy, son of Mambrino Patchen, second dam Nora Wilkes by Geo. Wilkes, third dam by imported Consternation, thoroughbred.

"Allerton began his race career," writes A. C. Thomas, "as a two-year-old. He won his first race, a five heat affair, best time 2:50. He won his second start in two heats, best time 2:48½. He won his third start in slower time. He then reduced his time record to 2:42½. At Lexington he was distanced the first heat, but later in the day took a time record of 2:40½."

Allerton continued his race career as a three-year-old. He won third money in his first start, nine starters. In his second start in a field of ten, the others being aged horses, he won a four-heat race and took a record of 2:24½. Two weeks later he heat a field of aged horses in straight heats and reduced his record to 2:23. His next start was on the Grand Circuit at Cleveland, where he was behind the money in a field of thirteen, but three days later he reduced his record to 2:20½, and the next day to 2:19 against time. Three weeks later he won a five-heat race at Chicago, best time 2:21½, and three days later, at the same place, won in straight heats, field of nine, the others aged horses, best time 2:18½. He next went an exhibition mile with Axtell in 2:22 at their home town, Independence, Ia., and closed the season at Des Moines, where he won the first two heats, then finished fourth on account of breaking down and was drawn.

As a four-year-old his season started at Independence on July 4th, where he reduced his record against time to 2:18, and later in the day to 2:16½. Three weeks later, at Detroit, he won the Horseman's Great Expectation \$9450 stake for four-year-olds, after dropping the first heat to Margaret S. in 2:18½. His best time was 2:16½. The following day he was second in a race in 2:23½, and then distanced. He did not start again until October 10 at Terre Haute, where he won a \$1000 purse in straight heats, best time 2:15½. Four days later, at Lexington, Allerton was fourth and then second to McDoell in 2:19½ and 2:17½. Allerton won the next heat in 2:15½, but was second the last heat in 2:15½, losing the race. On October 23, at Independence, he reduced his record to 2:14 against time. Three days later he equalled that time. On November 1 he reduced his record to 2:13½, and on the same afternoon to 2:13½.

As a five-year-old he again began the season at Independence on July 4th, reducing his record against time to 2:13, and on the last day of the same month to 2:12½ and on August 5 to 2:12. On August 27 he met the great Nancy Hanks at Independence and was second in three heats, forcing the mare to trot in 2:12, 2:12½ and 2:12 to beat him. Four days later he reduced his record against time to 2:11, on September 4 to 2:10, and on September 19 to 2:09¼, equalling the performance on September 21. On October 8, at Grand Rapids, he met Nelson in a \$10,000 race. Nelson won the first heat in 2:13 and Allerton the next three in 2:14½, 2:15 and 2:16½. A week later, at Lexington, he met Delmarh in an \$8000 match and won in straight heats 2:13½, 2:15 and 2:15½. Returning to Independence, he gave two exhibitions on October 22 and 24 in 2:10½, 2:10½. During this year he trotted a mile to wagon in 2:15.

As a five-year-old in his efforts against time he trotted fifteen heats in 2:12 or better and five heats in 2:10 or better, all to high wheels."

As a six-year-old he made his last appearance on August 3d at Davenport, Iowa, when he met Lobasco in a \$10,000 match. The first heat was a dead heat in 2:15½. Allerton won the next heat in 2:13½, Lobasco then ext in 2:17½ and Allerton was then drawn and the race awarded to Lobasco.

During his career Allerton started in 19 races, winning 11, was second twice, third once, and behind the money five times. He started against the watch 30 times, being successful 18 times."

As a sire Allerton achieved great fame. Never has there been a horse so persistently advertised, and no owner ever made such efforts to give records to the get of his horse as did Mr. Williams during the time he owned Allerton. Allerton headed the list of sires of new standard performers many successive years because Mr. Williams used every effort to see that the colts were marked.

At the close of 1909 he had 156 standard trotters and 45 standard pacers to his credit, with 58 sons that had sired 157 performers, and 19 daughters that had produced 36.

The fastest of his get are Redlac 2:07½, Gen. Forrest 2:08, Gayton 2:08½, Nancy Royce 2:09½ and Alves 2:09½, all trotters, and Locanda 2:02, Allerson 2:05½ and Charley Hayt 2:06½, pacers.

"FINEST EVER USED."

Mr. D. McDonald of Montreal writes as follows: "Enclosed find money order. Kindly send me five bottles of Quinn's Ointment. I must say it is the finest I have ever used." For Cuts, Splints, Spavins, Wind-puffs and all bunches use Quinn's Ointment. It is the Standard Remedy. If you cannot obtain from your druggist, address W. B. EDDY & CO., Whitehall, N. Y. Price \$1, delivered. Guaranteed to give satisfaction or money back.

NOTES AND NEWS

Less than four weeks until the Breeders' meeting.

The new San Jose track will have a fast record when the meeting is over.

The greatest bunch of three-year-old trotters since Zombro's year will be seen at San Jose.

The Angelus 2:15½ is another new one for Zombro. He is out of the McKinney mare Hazel Kinney 2:09¼.

There is a chance that the county of San Joaquin will own the old Agricultural Park there and hold fairs and races in the future.

Woodland's purses closed for entry yesterday. Here's hoping the list will be a big one and that none forgot to enter.

Good entry lists were received by the associations on the North Pacific circuit. It pays to give good purses and to advertise.

Charlie Dean, the Illinois trainer who lives at Palatine, had eighty horses in his stables during the month of June this year.

James Madison, of Seattle, has purchased Rock Seal by Red Seal 2:10, dams by Boodle, Electioneer and A. W. Richmond. This is a trotter and a good one.

It looks just now as if Helen Stiles, Prince Lot, Lijero and Prof. Heald would be the fighters for first money in the California Stakes at San Jose next month.

On form shown in work-outs, Walter Maben's filly Chiquita, that turned the Arcadia track in 2:05½ recently, looks like the best green pacer on the coast this year.

Miss Jerusha 2:22¼ by Zombro, paced a mile over the Spokane half mile track one day last week in 2:11. She is entered in several races on the North Pacific circuit.

Mr. J. L. McCarthy, who will start the horses at the Breeders' meeting at San Jose, has also been engaged to act in the same capacity at the Oregon State Fair at Salem.

The Grand Circuit will open at Kalamazoo one week from Monday next. It will be one of the best meetings ever held at Detroit and there is certain to be fast time made.

Chas. De Ryder has a good trotter in Diamond Mac, the son of Kinney Lou, owned by John Hogan of Soquel. It would not surprise California horsemen if Diamond Mac took a record of 2:10 this year.

Brown Silk 2:19¼ the best producing daughter of the famous Silk family and noted both as a producer and a race mare, dropped her sixteenth foal recently, a bay filly by Directum Spier 2:11¼.

C. The Limit worked a mile in 2:06½ at Detroit last week. He is expected to start in the Chamber of Commerce stake August 2d. The last half was in 1:01 and the last quarter in 30 seconds.

Hal B. 2:04¼, the Ohio bred pacing stallion now owned in Portland, Ore., was credited with a new performer last week in Hal B. Jr., winner of the 2:20 pace at Pontiac, Mich., in 2:11¼, 2:11¼, 2:11¼.

Lily W., the mare that Geo. A. Estabrook bought to win the M. & M. with was sick with a cold last week and coughing so much that there were fears she would not be ready to race at the Detroit meeting.

Celia K., the mare owned by John Kramer that won the 2:20 pace at the stadium track on the Fourth of July in 2:16½, 2:16, 2:16, is by Arner 2:17¼, dam by Direct 2:05½. Celia K. is a very promising mare and looks to be a 2:10 pacer before the year is over. She has no record.

Chas. A. Durfee let his mare Helen Stiles trot the San Jose track a mile in 2:08½ one day last week. She reached the half mile pole in 1:04½ and came home in 1:04, with the last end of it at a two-minute gait. Helen is one of the greatest young trotters this State has produced.

Grace, the full sister to Czarevna (3) 2:07¼, by Peter the Great, in Mike McDevitt's stable at North Randall, O., looks and acts at the present time as if she would be capable of duplicating her sister's speed feats, as she has been a mile in 2:12½, half in 1:04 and an eighth right at 15 seconds.

Mr. L. H. Todhunter of Sacramento has sold to Lon Daniels of Chico, the three-year-old bay gelding Olmitz by Zombro. This gelding is entered and paid up on to date in the Breeders' Futurity and other three-year-old stakes, and it is Mr. Daniels' intention to start him in these events if no accident happens him.

Chas. Jeffries, who is training at Spokane, has a good pacer in the little McKinney horse Buck that took a record of 2:22 a few years ago as a trotter. Buck is taking kindly to the pacing gait and does not wear "the pants."

The track record for the Libertyville, Ill., track this season was lowered recently by the pacer Ross K. 2:04¼. Dick McMahan was behind the stallion, while Frank Wright with a runner prompted him over to the half in 1:06 and to the end of the mile in 2:05½, last half in 59½ seconds.

C. A. Durfee drove Happy Dentist a mile in 2:06¼ the other day at San Jose. We believe Durfee's record is 2:06 and that he got it riding behind Clipper, a son of Diablo 2:09¼. At any rate he will probably lower his record a little this summer. He has sired one that has been a mile in 2:01¼—W. G. behind Copa de Oro.

At Belmont Park, Philadelphia, a few days ago, Lady Green Goods (yearling record 2:30), now three years old, trotted a mile in 2:12. This daughter of Peter the Great, is a sister to The Wolverine (2) 2:13¼, being out of Cocoon 2:15, by Cyclone, and is evidently one of the three-year-olds that it will do to keep in mind.

T. W. Barstow will hold an auction sale of trotting stock at the San Jose Driving Park during the Breeders' meeting. Mr. Barstow has raised some of the fastest trotters and pacers produced in Santa Clara county and his stock is all high class in breeding as well as in conformation and speed. A more extended notice of what he has for sale will appear next week. See advertisement.

The numerous matinee clubs that have been formed in this State in recent years and the amount of "fun" racing their members indulge in at every opportunity, show that the sport of harness racing is not dead on this coast by any means. With a little encouragement in the way of a few circuits of purse races, the stalls at the training tracks would all be full and the trainers all busy.

Goldennut 2:11¼ by Neernut is in training at Santa Ana for the coast circuit races, and is said to be better than ever this year. He has been handled almost exclusively this season by Arthur Lewis, who took care of him last year, but is not a professional trainer, and this young man drove him in 2:14¼ the other day handily. There is every prospect of Goldennut getting into the 2:10 list this year. He belongs there.

The second renewal of the \$5,000 colt stake, the value of which is guaranteed by the Oregon State Board of Agriculture, is advertised in this issue. Entries will close August 1st, for foals of 1910. Entrance is \$5 and breeding of foal must be given. Second payment will be \$10 January 1st, 1911, when color, name and sex of foal must be given, and \$10 January 1st, 1912, and \$10 January 1st, 1913. No other payments except starting payments. Colts and fillies will race at two and at three years old, and there will be races at both the trotting and pacing gaits. See the full conditions of this stake in our advertising columns.

"Farmer" Bunch was down from Stockton this week and reports that he is training a great young four-year-old trotter for Mr. Chalmers of that city. The horse is Bert Kelly, a son of McAdrian 2:24, he by Guy McKinney. The dam of Bert Kelly is a mare by Mountain Boy, son of Kentucky Prince, second dam by Joe Daniels, thoroughbred. Bert Kelly has trotted in 2:19¼ as a three-year-old and is now one of the most promising trotters Bunch ever handled and he is certain could trot in 2:10 this year if asked. He will not be raced but will be kept in shape for fast work next year. He is a horse weighing not over 1000 pounds, wears about 9 ounces in front and lighter shoes behind, is level headed and game, and is a square trotter that goes with his head low and needs no check or any boots. The Farmer thinks him the best horse ever bred in San Joaquin county, fully recognizing the fact that many high class trotters and pacers were bred in that section.

Mr. F. H. Burke has, at his La Siesta Farm, near San Jose, about fifty head of very choicely bred trotting mares in the rich pasture there. Nearly all are sent by stallion owners in that vicinity who are caring for these mares until it is definitely settled they are with foal. Among the youngest looking is the great money-winner Mr. Burke's Wanda 2:14¼; no one could take her to be in her twenty-sixth year, but she is. Wanda was the first grandchild of Electioneer to enter the 2:30 list; she is also the first mare to produce a trotter by the great pacer Searchlight 2:03¼, Search Me 2:22. Wanda is also the dam of The Roman 2:09¼ and two others in the list. She was by Eros 2:29¼ who was out of Sontag Mohawk (dam of Conductor 2:14¼ and seven others in 2:30). Wanda's dam, Accident, by Elmo 891, also produced Rinconado 2:17, Regina 2:18½, Rex 2:22½, Solita (3) 2:27 and Lady Belle Isle, dam of Mogalore 2:24. Then, add to this list of great broodmares in Wanda's pedigree, Green Mountain Maid, dam of Electioneer (sire of Eros 2:29¼, etc.) and nine in the 2:30 list, it can be seen that Wanda has a natural license to be a great broodmare, the only pity is that she was not bred until her eleventh year. She was bred to Bon Voyage 2:12½ this spring.

GOING SOME AT SAN JOSE.

Jean Val Jean (3) 2:18 paced a mile at San Jose one day last week in 2:10¼ and an eighth in 14½ seconds, and Ted Hayes drove his three-year-old trotter Voyager 2:23¼ a mile in 2:14¼.

The first time Nearest McKinney 2:20½ has been asked to beat his record was last Saturday when he paced a mile in 2:13¼, last eighth in 15½ second. His two-year-old son, The Demon, trotted a mile to cart in 2:30 very easily, last quarter in 34 seconds.

Bonnie Derby by Bonnie Direct 2:05¼, dam by Chas. Derby, trotted a mile in 2:20, and the very promising young trotter owned by James Dunn of Gilroy and also in Jack Phippens' stable, stepped a mile in 2:19¼; three months ago he was chasing cattle on Mr. Dunn's ranch.

In company with Happy Dentist 2:11¼, driven by his owner, Dr. Nash, Helen Stiles, the fast daughter of Sidney Dillon, piloted by the veteran C. A. Durfee, trotted the fourth heat of her work-out in 2:10½, the fifth in 2:13 and the sixth in 2:08½. In the last heat several records were broken. Helen Stiles trotted the fastest mile she has ever gone as well as the fastest mile ever made over the San Jose track. Dr. Nash rode the fastest mile of his life and although C. A. Durfee has been training and racing fast trotters and pacers for nearly half a century, the mile he rode behind the Sidney Dillon mare was faster than he ever rode behind a McKinney or any other trotter and was accomplished with the greatest of ease by one of the greatest trotters this state has ever produced. A few days later Mr. Durfee worked his other green trotter, Dr. Lecco, in 2:12¼.

Mr. Durfee broke his own record, the track record and Happy Dentist's record when he drove that good pacer a mile last Wednesday in 2:06¼ and the track was far from being a fast pacing track that day. When the veteran finished the mile his face was wreathed with smiles and he was singing "Be true, my love, be true."

RACES AT MARSHFIELD, OREGON.

One of the best race meetings ever held at the Coos County Racing Association track came to an end July 5th, after four days of excellent sport.

A correspondent of this journal writing from Marshfield after the races states that Messrs. Lathrope and Donnelly who came up from San Francisco with Marin and Sister Bess, expecting to race against "bush" horses, were greatly surprised when they found they had to go against Ray o' Light 2:08¼ Belle N. 2:14¼ and McClosky Wainwright a horse that was second last year in 2:12, but they were game and made no protest and raced their horses for all that was in them.

The track is a half mile oval and quite heavy, so fast time was out of the question but Sister Bess compelled Ray o' Light to break the track record of 1:07¾ for a half mile to beat her, and he had to keep busy to do it. The summaries:

Trotting and Pacing, half mile heats, \$100:
Wahke, b. s. by Prince Dexter (Norton).....1 1
Angie Malone, b. m. by Alex Malone (Edstrom). 2 2
Mabel S. b. m. by Cronje (Starr).....3 3

Time—1:12¼, 1:09½.
Trotting and Pacing, 3 in 5, \$175.
Ray o' Light by Searchlight (Train).....2 1 1 1
Marin by Commotion (Lathrope).....1 3 2 3
Sister Bess by Senator L. (Donnelly).....3 2 4 2
Belle N. by Bonnie Direct (Starr).....4 4 3 4

Time—1:10¼, 1:07¼, 1:08, 1:08.
Pacing, half mile heats, \$125:
Marin by Commotion (Lathrope).....2 1 1
Sister Bess by Senator L. (Donnelly).....1 2 2
McClosky Wainwright by McKinney (Wilson). 3 3 3
Wahke by Prince Dexter (Norton).....4 4 4
Angie Malone by Alex Malone (Train).....5 5 5

Time—1:08, 1:09½, 1:09½.
Trotting and Pacing, 3 in 5, \$250:
Ray o' Light by Searchlight (Train).....1 1 2 2 2
Marin by Commotion (Lathrope).....4 3 1 4 4
Belle N. by Bonnie Direct (Starr).....5 4 4 3 1
McClosky Wainwright by McKinney (Wilson).....3 5 3 4 3
Sister Bess by Senator L. (Donnelly).....2 2 5 dis

BIG FEATURES FOR STATE FAIR.

The citizens of Sacramento have provided several big attractions for the State Fair this year, the last one to be signed up being the great aviator Glenn Curtiss, who will give exhibitions each day during the fair. The extra attractions provided and paid for by the Sacramento citizens committee are the Cheyenne Frontier Days outfit, a band of Sioux Indians, Paine's Fireworks and Glenn Curtiss and his flying machines. All these will be exhibited in the fair grounds without any extra cost. With the usual exhibits, the races and the stock parades the California State Fair this year will be "the greatest show on earth."

When Theodore Roosevelt landed in New York he met among the rough riders and other equestrians who welcomed his return two little Oklahoma cowboys who had ridden their ponies all the way to New York to greet him. Louie and Temple Abernathy are the six and nine-year-old sons of U. S. Marshall Jack Abernathy who is a wolf hunter and friend of Mr. Roosevelt. It is said the boys averaged about 50 miles a day on their trip. At Washington they were introduced to President Taft.

GREAT RACING ASSURED.

Northern Circuit Has Many California Horses and Big Entry Lists.

SALEM, Ore., July 11.—(Special.)—Secretary Frank B. Meredith, of the State Board of Agriculture, has just announced the early-closing entries for the State Fair races. These entries are large and show exceptional class.

Two new race features this year will be the Oregon Futurity No. 1, for two-year-olds, pacers, purse \$600; and Oregon Futurity No. 1 for two-year-olds, trotters, purse \$900.

All told, \$21,700 will be hung up as purses. The early-closing events represent \$14,800 and besides the late-closing and Futurity races, \$2000 is hung up as consolation purses for the \$5000 trot and \$5000 pace.

The late-closing events will require entries in by September 1st, and include the 2:25 trot, the 2:25 pace, the 2:30 trot, the 2:20 pace and the 2:20 trot.

Entries for the early-closing events are complete as follows:

2:12 pace, \$800—Hubbut Jr., b. g., Joe F. McGuire, Denver, Colo.; King Seal, br. h., E. C. Keyt, Fair Grounds, Ore.; Birdal, r. m., R. E. Davison, Nite, Wash.; Lord Sidney Dillon, b. h., Carl Deering, agent, Fair Grounds, Ore.; Nancy C., br. m., J. C. Rouse Jr., El Paso, Tex.; Amado, bl. h., and Conqueror, br. g., Valencia Stock Farm, San Bernardino, Cal.; Capt. Apperson, b. g., S. S. Bailey, Albany, Ore.; Fay Benard, b. m., A. A. Fowler, agent, Denver, Colo.; Happy Dentist, ch. g., D. E. Nash, San Jose, Cal.; Ab Bender, b. h., Oswald West, agent, Salem, Ore.; Judge Dillard, ch. h., E. N. Jones, Spokane, Wash.; Alex Williams, bl. g., Dick Wilson, agent, Portland, Ore.; Francona, b. m., Al Russell, Minot, N. D.

2:15 trot, \$1000—Cromo, b. g., N. E. French, Baker City, Ore.; Paul W., b. g., Table Rock Mineral Water Co., Portland; Alfreda B., b. m., C. D. Jeffries, Spokane, Wash.; Lady W., b. m., L. C. Shell, Walla Walla, Wash.; Doc Monday, b. g., S. S. Bailey, Albany, Ore.; Blacksmith, c. h., H. G. Cox, McMinnville, Ore.; Belle N., b. m., F. P. Norton, Marshfield, Ore.; Mayo, b. g., E. N. Jones, Spokane, Wash.; Lady Sunrise, b. m., Chas. Turner, Davenport, Wash.; Sonoma Boy, b. h., and Stalene, b. m., Frank Alley, Roseburg, Ore.

2:25 class, 3-year-old trot, \$500—Listerine, b. m., L. T. Reynolds, Salem, Ore.; Mac Alze, b. h., H. C. Fletcher, Salem, Ore.; Woodcock, g. g., H. H. Vandervort, Salem, Ore.; Pegasus, b. h., Valencia Stock Farm, San Bernardino, Cal.; Golden Wave, b. m., S. S. Bailey, Albany, Ore.; Ivan Rose, b. h., H. E. Coil, Woodland, Cal.; Lady Garland, b. m., Springer & Howell, Boise, Idaho; Bonaday, b. h., and Phyllis Wynn, b. m., Frank E. Alley, Roseburg, Ore.; Mamie Alwin, ch. m., A. L. Scott, San Francisco, Cal.; Mable, br. m., Geo. H. Magruder, Yuba City, Cal.

2:20 class, 3-year-old pace, \$500—Holly Brand, b. g., E. C. Keyt, Fair Grounds, Ore.; Sally Younger, b. m., Peter Cook, Rickreall, Ore.; Kid O', b. h., L. C. Shell, Walla Walla, Wash.; Waverly B., bl. m., S. S. Bailey, Albany, Ore.; Bailey S. Wave, b. h., M. Putnum, Albany, Ore.; Night Spook, b. h., M. C. Gunderson, Yakima, Wash.; Lizzie Dillon, b. m., Chas. Bowman, Walla Walla, Wash.

2:08 pace, \$5000—Hubbut Jr., b. g., Joe F. McGuire, Denver, Colo.; George Woodard, b. g., W. R. Merrill, Colusa, Cal.; Buck, b. g., C. D. Jeffries, Spokane, Wash.; Amado, bl. h., and Conqueror, Valencia Stock Farm, San Bernardino, Cal.; Solano Boy, b. g., C. J. Uhl, Vacaville, Cal.; Ray O'Light, br. h., E. S. Train, Fair Grounds, Ore.; Stella A., b. m., Mrs. Florence E. Vaughan, Canby, Ore.; A. R. E., bl. m., S. S. Bailey, Albany, Ore.; Gold Finder, b. h., A. E. Stokes, Great Falls, Mont.; Josephine, b. m., J. McDade, Vancouver, B. C.; Gen. Heurtus, b. h., E. D. Kootz, Idaho, Moortrix, b. h., Mrs. F. W. Chadbourne, Pleasanton, Cal.; Chiquita, s. m., W. S. Maben, Los Angeles, Cal.; Happy Dentist, ch. g., D. E. Nash, San Jose, Cal.; Ab Bender, b. h., Oswald West, agent, Salem, Ore.; Judge Dillard, ch. h., and Miss Jerusha, b. m., E. N. Jones, Spokane, Wash.; Lord Lovelace, b. h., Dick Wilson, agent, Portland, Ore.; Alderday, b. h., and Don Densmore, b. h., Al Russel, Minot, N. D.

2:12 trot, \$5000—Lee Crawford, b. g., and Dan McKinney, c. h., Joe F. McGuire, Denver, Colo.; Lady Malcolm, b. m., George F. Brown, Corvallis, Ore.; Henry Gray, g. g., Arthur Hartnagel, Seattle, Wash.; Zombrunot, b. h., Dr. Wayo, b. h., and Escobado, b. h., Table Rock Mineral Water Company, Portland, Ore.; Alfreda B., b. m., C. D. Jeffries, Spokane, Wash.; Bodaker, r. h., Thomas Ronan, Pleasanton, Cal.; Mrs. Herbert, ch. m., W. S. Linn, Martinsville, Ill.; Prince Seattle, b. h., S. S. Bailey, Albany, Ore.; Katalena, b. m., W. J. Miller, Chico, Cal.; Herrod, b. h., W. O. Reynolds, Denver, Colo.; Tell Tale, r. m., Ray Felt, Eureka, Cal.; Rapidan Dillon, b. m., and Zomell, g. g., W. S. Maben, Los Angeles, Cal.; Helen Stiles, b. m., and Dr. Lecco, bl. h., C. A. Durfee, San Jose, Cal.; Lady Sunrise, b. m., Charles Turner, Davenport, Wash.; Kingbrook, b. g., W. I. Higgins, Deer Lodge, Mont.; All Style, br. h., Dana Perkins, Rocklin, Cal.; Lucile Patchen, br. m., Dick Wilson, agent, Portland, Ore.; Freddie C. Jr., b. h., and Gebbie, br. g., Ed Cudihie, Seattle, Wash.; Lida Carter, b. m., James Dacres, Walla Walla, Wash.; Lady Inez, b. m., and Professor Heald, ch. h., A. L. Scott, San Francisco, Cal.; Zomoak, b. c., N. W. Thompson, Boise, Idaho; Prince Lot, b. g., Woodland Stock Farm, Woodland, Cal.; Densmore, b. h., Al Russel, Minot, N. D.; North Star, b. g., J. B. Iverson, Salinas, Cal.; Goldennut, ch. h., George W. Ford, Santa Ana, Cal.

2:15 pace, \$1000—King Seal, br. h., E. C. Keyt, Fair Grounds, Oregon; Nellie Ash, b. m., Arthur Glover, Salem, Ore.; Buck, b. g., C. D. Jeffries, Spokane,

Wash.; Boney M., b. m., L. C. Shell, Walla Walla, Wash.; Dan Patch Jr., blk. h., J. F. Elwell, Spokane, Wash.; Amy S., b. m., A. R. Gibson, agent, North Yakima, Wash.; Lord Sidney Dillon, b. h., Carl Deering, agent, Fair Grounds, Ore.; Captain Apperson, b. g., S. S. Bailey, Albany, Ore.; Lou Miller, s. m., H. G. Cox, McMinnville, Ore.; Ab Bender, b. h., Oswald West, agent, Salem, Ore.; Miss Jerusha, b. m., E. N. Jones, Spokane, Wash.; Rothada, b. m., Dick Wilson, agent, Portland, Ore.

Free-for-all trot, \$1000—Day Break, b. g. and Lee Crawford, b. g., Joe F. McGuire, Denver, Colo.; Zombrunot, b. h., and Escobado, b. h., Table Rock Mineral Water Company, Portland, Ore.; Lady Sirius, ch. m., Springer & Howell, Boise, Idaho; Bell N., b. m., F. P. Norton, Marshfield, Ore.; Zomell, g. g., W. S. Maben, Los Angeles, Cal.

Spokane Entries.

2:14 trot, \$1500—M. E. Finch's b. g., Cromo; Chas. Turner's b. m., Lady Sunrise; E. N. Jones' b. g., Mayo; John McCormack's s. s., Packline; Oscar Hartnagel's gr. g., Henry Gray; Geo. T. Brown's b. m., Lady Malcolm; C. D. Jeffries' b. m., Alfreda B.; James Dacres' b. m., Lida Carter; L. C. Shell's b. m., Lady W.; Woodland Stock Farm's br. g., Prince Lot; Dick Wilson's br. m., Lucile Patchen and s. m., Miss Herbert; Ed. Cudihie's b. s., Freddie C. Jr. and br. g., Gebbie; W. O. Reynolds' b. s., Herod; A. L. Scott's b. m., Lady Inez and ch. s., Prof. Heald; Thos. Ronan's r. s., Bodaker; F. P. Norton's b. m., Belle N.; Table Rock Mineral Water Co.'s b. s., Escobado and b. g., Paul W.; A. B. Miller's gr. g., Zomell; C. A. Durfee's bl. s., Dr. Lecco; Springer & Howell's b. s., Mountain Boy.

2:24 trot, \$1000—R. L. Dahlke's ch. g., Robert D.; R. W. Clark's b. m., Dolly McKinney; J. H. Fletcher's b. g., Jack Monroe; W. I. Higgins' bl. g., Kingbrook; C. Victor Martin's s. m., Britta, and b. m., Kraka; Thos. H. Brents' ch. g., Vincomar; Wm. Hogboom's b. g., Honey Boy; Dr. Rae Felt's r. m., Tell Tale; Woodland Stock Farm's b. g., Wesos; Chas. G. Dailey's b. m., Geraldine; Dana Perkins' b. s., All Style; Dick Wilson's br. m., Lucile Patchen and s. m., Miss Herbert; Joe F. McGuire's ch. g., Dan McKinney; W. O. Reynolds' b. s., Monti Reco; N. W. Thompson's b. g., Zomoak; Fred Stopplefield's br. s., Dietrich; Table Rock Mineral Water Co.'s b. s., Dr. Wayo; C. A. Durfee's br. m., Helen Stiles; C. P. Webb's br. m., Anita; W. B. Linn's ch. m., Mrs. Herbert.

Three-year-old trot, \$500—J. A. Bush's b. s., Al McK.; Thos. H. Brents' b. m., Princessa Del Norte and br. s., Cotosca; Chas. G. Dailey's b. g., Helena Bay; A. L. Scott's ch. m., Mamie Alwin; Fred Stopplefield's m., Mabel Van; Geo. H. Magruder's br. m., Mabel; Valencia Stock Farm's b. s., Pegasus; Springer & Howell's b. m., Lady Garland.

2:25 Pacers, \$2000—A. Lee's br. m., Brook Belle; Herman Nelson's ch. g., Capt. Wilder; John McCormack's br. s., Norte Wood; W. N. Martin's b. s., Wm. T.; C. D. Jeffries' b. g., Buck; R. M. Sebastian's b. m., Amy S.; W. L. Knouff's b. g., Harold Welcome; Wm. Turner's b. g., Dick; C. H. Anthier's ch. g., H. M. C. and br. g., Harry Luft; C. C. Simmons' br. m., Ella Erickson; Thos. H. Brents' ch. m., Edgarella; Emanuel Steisman's b. s., Price the Banty (formerly Redmont); J. G. Millington's ch. g., Lightout; Al Russell's b. g., Don Densmore; Mrs. Florence E. Vaughn's b. m., Stella A. and b. s., Hattamont; E. C. Keyt's b. g., Holly Brand; A. A. Fowler's b. m., Sylvia Onward and ch. g., George Woodard; A. B. Miller's s. m., Chiquita.

2:10 pace, \$1500—W. M. Newman's bl. s., Jr. Dan Patch; E. N. Jones' ch. s., Judge Dillard and bl. m., Miss Jerusha; R. E. Davison's r. m., Birdal; Carl Deering's b. s., Lord Sidney Dillon; Wm. Hogboom's b. s., Gen. Hurlis; A. E. Stokes' bl. g., Gold Finder; Chas. G. Dailey's b. g., Star King; H. G. Cox's s. m., Lou Miller; Al Russell's b. s., Allerdaw; Joe F. McGuire's b. g., Hubbut Jr.; A. A. Fowler's b. m., Fay Benard; J. C. Rouse Jr.'s br. m., Nancy C.; Valencia Stock Farm's br. g., Conqueror; A. B. Miller's s. m., Chiquita; C. A. Durfee's ch. g., Happy Dentist; L. C. Shell's b. m., Boney M.

Portland Entries.

2:10 pace, \$1000—Birdal, r. m., R. E. Davison, Nite, Wash.; Judge Dillard, ch. s., E. N. Jones, Spokane, Wash.; Gen. Heurtus, b. s., Gene Kootz, Council, Idaho; Capt. Apperson, b. g., S. S. Bailey, Albany; Allerdaw, b. g., D. A. Dennie, Minot, N. D.; Fay Benard, b. m., A. A. Fowler, Denver, Colo.; Happy Dentist, ch. g., Dr. D. E. Nash, San Jose, Cal.; Nancy C., br. m., J. C. Rouse Jr., El Paso, Tex.; Amado, bl. s., and Conqueror, br. g., Valencia Stock Farm, San Bernardino, Cal.; Gold Finder, bl. h., Stokes & Wickers, Great Falls Mont.

2:30 trot, \$1000—Florodora Z., br. m., Maurice Winter, Albany, Ore.; Robert D., Robt. L. Dalke, Spokane, Wash.; Falmont Jr., br. s., Fred Woodcock, Albany, Ore.; Phyllis Wynn, b. m., and Marie Dillon, b. m., F. E. Alley, Roseburg, Ore.; Harry T., b. h., A. J. Agnew, Everett, Wash.; Mercury, gr. Aden D. Fraser, Seattle, Wash.; Bessie Lovelace, J. J. Kaddery, Portland, Ore.; Nada, bl. m., M. C. Keefer, Woodland, Cal.; Kingbrook, bl. g., W. L. Higgins, Deer Lodge, Mont.; All Style, br. s., Dana Perkins, Rocklin, Cal.; Zomoak, b. g., N. M. Thompson, Boise, Idaho; Monte Reco, d. s., W. O. Reynolds, Denver, Colo.; Dietrich, br. s., Fred Stopplefield, San Bernardino, Cal.; Dan McKinney, ch. h., Joe McGuire, Denver, Colo.; Mountain Boy, b. s., Wm. Howells, Boise, Ida.

Three-year-old pace (2:20), \$500—Sally Younger, b. f., Peter Cook, Rickreall, Ore.; Baily S. Wave, b. h., M. Putnam, Albany, Ore.; Sable Hal, bl. s., L. W. Watts, Portland, Ore.; Lizzie Dillon, b. m., Chas. Bowman, Walla Walla, Wash.; Waverly B., b. m., S.

S. Bailey, Albany, Ore.; Kid O., b. s., L. C. Shell, Walla Walla, Wash.; Holly Brand, b. g., E. C. Keyt, Fair Grounds, Ore.; Night Spook, br. h., M. C. Gunderson, North Yakima, Wash.

Three-year-old trot, \$800—Woodcock, gr. g., H. H. Vandever, Salem, Ore.; Bonaday, b. s., and Phyllis Wynn, b. m., F. E. Alley, Roseburg, Ore.; McAlzo, b. s., H. C. Fletcher, Salem, Ore.; Golden Wave, b. m., S. S. Bailey, Albany, Ore.; Mamie Alwin, ch. m., A. L. Scott, San Francisco, Cal.; Iran Rose, b. c., H. E. Coil, Woodland, Cal.; Pegasus, b. s., Valencia Stock Farm, San Bernardino, Cal.; Lady Garland, b. m., Wm. Howell, Boise, Idaho; Mabel, br. m., Geo. H. Magruder, Yuba City, Cal.

2:14 pace, \$5000—Miss Jerusha, bl. m., E. N. Jones, Spokane, Wash.; Buck, b. g., E. A. Reichel, Great Falls, Mont.; Jr. Dan Patch, bl. s., J. F. Elwell, Colville, Wash.; Rathada, b. m., and Alex Williams, bl. g., Wilson & Linn, Portland, Ore.; A. R. E., b. m., S. S. Bailey, Albany, Ore.; Lord Sidney Dillon, b. s., Chas. D. Ray, St. Paul, Ore.; Lou Miller, s. m., G. O. Miller, Portland, Ore.; Esther B., bl. m., R. W. Thompson, Seattle, Wash.; Boney M., b. m., L. C. Shell, Walla Walla, Wash.; Fay Benard, b. m., A. A. Fowler, Denver, Colo.; Francona, b. m., and Don Densmore, b. h., D. A. Dinnie, Minot, N. D.; Stella A., b. m., Mrs. Florence E. Vaughn, Canby, Ore.; King Seal, br. s., E. C. Keyt, Fair Grounds, Ore.; Amado, bl. s., and Conqueror, br. g., Valencia Stock Farm, San Bernardino, Cal.; Geo. Woodard, b. g., W. R. Merrill, Colusa, Cal.; Hubbut Jr., b. g., Joe McGuire, Denver, Colo.; Chiquita, s. m., W. S. Maben, Los Angeles, Cal.; Amy S., b. m., A. R. Gibson, Seattle, Wash.

2:12 trot, \$10,000—Henry Grey, gr. g., Arnold Zbinden, Seattle, Wash.; Mayo, b. g., E. N. Jones, Spokane, Wash.; Lady Malcolm, b. m., Geo. F. Brown, Corvallis, Ore.; Alfreda B., b. m., E. A. Reichel, Great Falls, Mont.; Lucile Patchen, br. m., Dick Wilson & Son, Portland, Ore.; Prince Seattle, b. s., S. S. Bailey, Albany, Ore.; Mrs. Herbert, ch. m., W. B. Linn, Martinsville, Ill.; Kingbrook, bl. g., W. I. Higgins, Deer Lodge, Mont.; Goldennut, ch. s., Geo. W. Ford, Santa Ana, Cal.; Katalena, b. m., W. J. Miller, Chico, Cal.; Freddie C. Jr., b. s., and Gebbie, br. s., Ed Cudihie, Seattle, Wash.; Prince Lot, br. g., Alex Brown, Walnut Grove, Cal.; North Star, b. g., J. B. Iverson, Salinas, Cal.; Lady Inez, b. m., and Prof. Heald, ch. s., A. L. Scott, San Francisco, Cal.; Bodaker, r. s., Thos. Ronan, Pleasanton, Cal.; Helen Stiles, b. m., and Dr. Lecco, bl. s., C. A. Durfee, San Jose, Cal.; Herrod, br. s., W. O. Reynolds, Denver, Colo.; Dr. Wayo, b. s., and Escobado, b. s., Table Rock Mineral Water Co., Portland, Ore.; Zombrunot, b. s., J. P. OPENING OF GREAT WESTERN CIRCUIT.

Terre Haute, Ind., July 13.—The Great Western Circuit harness races opened today with a good card. Favorites were successful in each event. Ed Geers, still using crutch and cane, was given an ovation after winning the first heat in the 2:18 trot with Dudie Archdale. Summary:

Ella Ambulator 2:06½, b. m., by Ambulator—Ella Eddy, by Jerome Eddy (Murphy).....1 1 1
Donax 2:07½, ch. g. (McMahon).....4 2 2
Willie Benton 2:06½, ch. g. (Gosnell).....2 3 3
Richard Grattan 2:07½, br. g. (Elliott).....3 4 4
Doctor M. started.

Time—2:10½, 2:11½, 2:10½.
2:13 trot, purse \$1000:
Billy Burke 2:15, b. h. by Silent Brook—Crystal Maid, by On Dale (Ed Benton)....1 1 1
Vito 2:12½, b. h. (J. Benton).....2 2 2
Bervaldo 2:13½, b. h. (Murphy).....6 4 3
Major Strong, Miss Rosedale, Countess Mac and Lino March started.

Time—2:13½, 2:12, 2:09½.
Three-year-old pace, purse \$500:
Twinkling Dan, b. c., by Dan Patch-Twinkle, by Mercury (Murphy).....4 1 1
Left Witch, b. m., by Moko (Healy).....1 3 3
Fannie Stratton, b. f. (Dodge).....2 2 2
Willis Woodland, Arden Joe and Lee Lock started.

Time—2:19½, 2:15½, 2:12½.
2:18 trot, purse \$2000:
Dudie Archdale, b. m., by Archdale-Dudie Edgmont, by Edgmont Chief (Geers).....1 1 1
Argot Hal, b. h. (Benson).....2 2 2
Lady Vincent, b. m. (Murphy).....3 3 3
Castle Doune (Chandler).....4 4 4
Henry Ham and Belle Cobert started.
Time—2:11, 2:12½, 2:14½.

ROD, GUN AND KENNEL

CONDUCTED BY J. X. DOWITT.

ABOUT NEW GUNS.

Game guns, if properly taken care of, last a very long time. They never seem to wear out. If neglected they may rust out quickly enough. The barrels may be accidentally bent or bulged. A spring or a limb in the lock may break. At last, even the best of guns may work a little loose and get "off the face," as the makers say. Such a gun might go at last like the wonderful "one-hoss-shay":

"You see, of course, if you're not a dunce,

How it went to pieces all at once—

All at once, and nothing first—

Just as hubbles do when they burst."

Just before that happened it would be time to get another. It seems a little curious that, although the wear and tear of shooting is so much greater under modern conditions, guns really do last longer than they used to do. The dearth of improvements in mechanism has afforded opportunities for making them stronger and more simple. The barrels, too, are less prone to reveal unsuspected weaknesses. The guns do not get old-fashioned and out-of-date in five or six years. If they shoot well and handle well, there is not any great inducement to make a change.

When new guns are ordered, it is, perhaps, more advisable now than it ever was before to give the gun-maker enough time to make them. Every gun-maker of repute is unfeignedly anxious that the guns he supplies should give satisfaction. The buyer is even more desirous than the gun-maker that it should be so. He has to use the guns. If they fit badly, shoot nasty, patchy patterns, or develop other defects he will have his sport spoiled. In March or April one naturally does not feel very keen about guns and game-shooting, but there is nothing to gain and much to lose by procrastination. A certain amount of exaggeration, no doubt, envelops the question of gun-fitting. Some of the smaller details have had far too much importance attached to them. A suitable amount of cast-off or cast-on, if a peculiarity of the shooter demands it, a correct length of stock, weight nicely adjusted so that the recoil as well as the gun shall fit the shooter, and perfect balance—all these are essential if a gun is to handle well. The pattern, within limits, can be regulated to any standard desired, but the work is not best done in a hurry. There is one detail, and perhaps only one, that can be left over. If the gun is used in the "white" or unfinished state for a first season no real harm will be done. The shooting qualities are neither worse nor better for the "finish" which adorns and makes durable the completed gun.

In regard to the barrels, it is still, to some extent, a matter of individual taste whether they should be of figured iron twisted and welded, or of steel. Formerly, "Damascus" barrels were much preferred; now gun-makers recommend and sportsmen prefer steel, and some use nothing else. Steel barrels used to be much too hard and brittle, but all difficulties of that kind were overcome years ago. Steel barrels, with their clean-looking blue finish, are now supplied much more frequently than figured barrels, with the brown finish showing the twisted metal, which some shooters like to see. Because steel is more popular, figured barrels should not be condemned. It is still possible to produce twisted tubes of excellent quality, but it might be difficult to advance any point on which superiority over steel could validly be claimed for them.

Hammerless locks and ejector mechanisms, although there are so many different patterns available, are really all very much alike. The shooter will select the kind of action he likes best, or be guided by his gun-maker. There is the broad distinction of side lock or body lock, but when the guns are in use either kind will do the same thing in a similar way. Whether the two locks are on side-plates or mounted in the body of the gun, the opening of the barrels is usually instrumental in tilting the fallen hammers back into bent after firing. An exception must be made in the case of the spring cockers used, for example, by Messrs. Purdey and Messrs. Lancaster. With spring cockers—there are many varieties in existence—it is possible to divide the work of cocking between the opening and the closing of the gun. A spring, generally, but not necessarily, the main spring itself, flicks the fallen hammer back into engagement with the sear when the barrels are dropped. The lock is then cocked, but there is no tension on the tumbler. Afterwards, usually as the gun is closed, the main spring is compressed. With actions cocking directly by the fall of the barrels, the more usual form, the hammer is forced back against the resistance of the main spring. With spring cockers, the hammer is cocked by spring pressure, and the main spring is separately compressed afterwards. Either way, the powerful leverage of the barrels makes it always easy 'nough to break down and re-load an uncocked gun. With a barrel cocker when both barrels have been fired, the opening of the gun cocks both the firing tumblers and "trips" or release, hot ejectors. Then, in closing the gun, the ejector springs are compressed by the thrusting back of the divided extractor.

As all the modifications of lock work can be gen-

erally grouped in a very few classes, so the differences between one ejector mechanism and another are seldom more than difference in detail. The ejectors on game guns are called "automatic," and are said to "operate only on fired cartridges." Whether the cartridge fires or does not fire makes in reality not the slightest difference. If a firing tumbler falls, then the opening of the gun trips the ejector and the cartridge is ejected. If the gun misses fire, or if there is only a snap cap in the chamber, the ejector works just the same. In the accepted sense of that term, no single-loading sporting gun or rifle in existence is really "automatic," or self-operating. Even a so-called "automatic" gun, rifle, or pistol needs to have the trigger pulled. The "automatic" ejector of a game gun is worked by spring power. The springs are compressed by the shooter himself, or by his loader. The mechanism depends altogether upon external stimulus. It is self-operating, just as the locks are self-cocking, no more and no less. It should, however, be added that when the term "automatic" was first applied to ejectors, recoil-operated, or gas-operated small-arms were practically unknown, so that no possibility then existed of the term being misunderstood.

A recent improvement in detail is the provision of detachable locks. With body lock guns, where the limbs of the firing mechanism were inaccessible, this improvement was much needed. Side locks, which never were difficult to take out, formerly had, in that respect, an advantage over the box or body lock guns. With the locks arranged on plates and the plates slipped into slots, in the body it became possible to carry spare locks, or even spare limbs in the gun case. As though to preserve the balance between the two types, side locks have been introduced with snap fastenings or with hand operated screws, so that the lockplates can be taken out without the use of tools, and without the danger of widening the heads of the pins or scratching the engraved surfaces of the locks. The innovation, one of detail only, is interesting, and undoubtedly it will prove a useful development whenever occasion arises for examination or repair of the locks. Being so excellently fitted, it is seldom that the need for cleaning or oiling arises. Detachability, however, is a definite advantage, for when one needs it at all one needs it badly.—E. H. S. in The Country Gentleman.

SAN FRANCISCO FLY-CASTING CLUB.

Five club contests have been completed so far this season. These meetings at Stow Lake were for the purpose of qualifying the various contestants for position in the final series of class contests for medals. The initial class fly-casting contest will take place, at the lakeside today and tomorrow.

The general averages in the five events given below show a satisfactory degree of dexterity and skill. The average of improvement in the scores of several members who have had a comparatively short experience is of noticeable quality.

The names here listed are those of members who have been credited with the full quota of scores for each of the five preliminary contests. Numerous members did not qualify for the class series for the reason that they did not complete the schedule number of contest scores.

Lure casting, particularly the long distance section of this style of bait casting has become a favorite event. The long distance lure casting event was made a part of the program this season. In this work every member competing has shown marked improvement. Bait casting is the trick that is most effective in black bass angling, a sport that is gaining every season in the support of the fraternity.

The delicacy and accuracy averages here shown are big indeed and will compare more than favorably with the published scores of many Eastern clubs.

The general averages for the class series follow:

Saturday Class.					
T. C. Kierulff	102.	98.47	98.153	95.36	104.20
E. A. Mocker	100.6	96.68	98.1	97.35	112.16
L. G. Burpee	87.6	97.13	96.233	79.41	68.20
F. A. Webster	85.4	98.41	98.252	92.24	79.36
G. C. Edwards		98.44	98.193	77.46	108.6
C. G. Young		98.40	98.149	93.44	109.44
F. H. Reed		98.41	98.228	98.2	
F. J. Cooper				92.29	117
Sunday Class.					
J. B. Kenniff	121.6	98.42	98.256	97.10	162.
E. A. Mocker	102.2	97.14	97.228	97.1	111.20
T. C. Kierulff	100.8	99.5	99.38	96.30	106.8
A. Sperry	100.2	96.	96.274	96.17	110.36
H. B. Sperry	98.6	98.56	98.181	97.25	99.30
C. H. Kewell	91.	98.50	98.44	91.11	94.42
S. A. Kierulff	90.	97.68	97.271	88.28	99.14
Jas. Watt		97.35	96.254	94.30	117.4
C. G. Young		98.60	98.216	95.5	108.8
D. W. E. Brooks		98.31	98.150	93.15	97.12
F. M. Haight		98.1	97.94		
H. C. Golcher		98.20	98.84	89.21	93.28
F. J. Cooper		97.38		93.47	104.40
F. H. Reed		98.48	98.231		

Note: Event 1, long distance casting. Event 2, accuracy casting. Event 3, delicacy casting. Event 4, lure casting. Event 5, long distance lure casting.

Fractions in Event 1, tenths; Event 2, seventy-fifths; Event 3, three-hundredths; Event 4 and 5, fiftieths.

Drink Jackson's Napa Soda.

THE COPPER KETTLE CLUB.

Whilst awaiting the appearance of the Bavarian to take the fourth hand in a double-pedro seance at Bill Price's shootin' iron sanitarium, the Duke of Wallahy tell into a reminiscent mood and told the club chairwarmers and others present a story about the way some Eastern sportsmen enjoy their trips and make big bags.

"Of course," prefaced the Duke, "the great majority of hunters who come to Maine for the big game shooting are not satisfied unless they do their own killing, but there are others who come after a moose or the two deer allowed by the Maine law, and they don't care how they get them.

"Many so-called hunters get no further north than a well known little village, which, at the foot of the great Moosehead lake, is the gateway of a vast hunting region," continued the Duke. "They find others who are equally indisposed to venture out of reach of the comfortable hotels, daily papers with the sporting news and stock reports and other marks of civilization to be found there. They are 'game' enough, but it has to do with pastboard affairs, and is pursued in a comfortable corner not far from the great open fire in the hotel office.

"They may buy souvenir cards in great variety to send to friends depicting thrilling scenes in the Maine jungle. Home made ones of birch bark may be had from the stock of the several souvenir stores and are said to be more effective and convincing.

"A most original enterprise, born of the demand by this class of fireside hunters, is the place where 'Hunting Scenes While You Wait' would be an appropriate sign, if any sign were needed. It is a photographic studio, conducted by an enterprising firm of young men whose specialty is providing convincing proofs.

"The studio referred to is an interesting place, located near the lake shore, just outside the village, and has been there for years. It started in a small way, but is now elaborately equipped. It is an odd affair, built of logs, like a hunting camp, but having each of its four sides put up to show a different front.

"Thus when a customer appears he is asked diplomatically, of course, what camp 'he intended to visit, but was detained,' etc.

"If he says 'Camp Comfort,' a well known resort, the side of the studio which most resembles Camp Comfort is selected, and in a few minutes a sign is produced and hung over the door reading 'Camp Comfort.' This makes the background. Then the properties are arranged according to the wishes of the customer. Stuffed moose, deer, bear and game birds galore are carried in the equipment of the studio.

"These may be hung up by the heels in a row or disposed in picturesque heaps on the ground. The hunter is posed, equipped in full hunting regalia. If he is lacking any essential part of the regulation outfit the studio will supply it. If he wants sporting companions to appear the studio people call in their regular 'supers,' who are ready to go on without much change of costume. These are the hangers-on around the steamboat landing at the foot of the lake, who are too lazy to do anything more arduous than have their pictures taken.

"So it is that Mr. Cityman without going a mile from his hotel here may have photographs taken of himself in full hunting rig, apparently at a camp miles from civilization and surrounded by trophies of the chase. If he cares for the pose over the fallen forest monarch he is taken to a little glen a short distance from the studio and two of the supers bring out the fallen forest monarch on their shoulders and dump it down, being careful to handle it gently for fear of wearing off the hair. It is a very fussy hunter who cannot be suited in the way of stage settings or effect.

"A city hunter may go home with his allowance of game and fail to impress upon his friends the fact that it fell before his fatal rifle, but when he produces photographs showing himself in a forest defile standing over the yet quivering monarch of the forest and others of camp scenes with much game hung up, our hero, surrounded by picturesque guides and looking the part of a real hunter—such are convincing proofs. They may be obtained at very reasonable rates."

After the Duke had concluded, the conversation naturally drifted to shooting. John Connelly, possibly to divert criticism of his recent Bay View performances, then turned loose the following:

"We often hear the question discussed as to which is the most difficult bird in the world to shoot. The answer is usually given in favor of the pheasant descending with closed wings from a higher level of flight, though a few give the preference to the second barrel shot at teal scared by the discharge of the first barrel and darting upward and in any direction but that which is expected.

"A bird which I have seen-mentioned and which yet might take a high place in the category is the sand grouse. It is not to be rated as one of our birds of sport, but is familiar to shooters in the East, where it is shot as it comes in swift flight to water-holes to drink. Where I had my first shooting on sand grouse was in India. My uncle owns vast plantations in the Punjab, and I used to have great sport before I came here and went into the irrigation business.

"Its flight is something like that of a pigeon, with very swift curves and undulations, and in its case again, as in that of the Virginian mosquito hawk, those who have acquired the knack can kill it with

a comparative certainty which is the despair of the novice.

"After all perhaps a pheasant aeroplaning downward must still be given the highest marks for difficulty, for we hear of no one who presumes to say he has discovered any infallible trick by which this most perplexing and yet apparently simple shot can be brought off with any great assurance."

The pedro game was postponed for that afternoon.

TRICKS AND MANNERS OF EXHIBITORS.

"You wouldn't believe what a dog show is like, unless you saw it," said Brown to me, when I confessed that such a function had never come within my ken.

Although I do not look upon dogs as four-footed angels, I am very fond of them as intelligent companions or useful helps, but when the natural position between master or mistress and the dog is reversed, and the quadruped, so to say, owns the biped, the former becomes an unmitigated nuisance. Like the dog of Mrs. Themistocles, of whom it was said that the master ruled at Athens, his mistress ruled the master, and he ruled the mistress, writes "Cosmos" in Illustrated Kennel News. It is also putting the proverb, "Love me, love my dog," to too hard a test when one is expected to regard with eyes of affection the comforter—as toy dogs were called in the olden days—who rests on your sweet-heart's arm and snarls and snaps at you when you wish to draw her in loving embrace to your manly breast. I also think the humanity of the lady had 'gone to the dogs,' who, when her canine pet had bitten a poor fellow in the leg, expressed the hope that it would do the dog no harm.

Brown, I must explain, is the doggy oracle of our set. There is nothing in the whole circumference of canine knowledge which is not as easy to him as eating pie to a schoolboy. By simply glancing at a dog, Brown seems to be able to tell the creature's family tree or pedigree, no matter how many "mesalliances" had occurred amongst his ancestors. To be introduced to the fancy and learn all about the facts and fictions of dogdom, by such a mentor, was a rare opportunity, and I naturally accepted Brown's invitation to take me to the grand dog show to be shortly held by the Barktown and District Canine Society.

On the appointed day, although we arrived early at the entrance to the exhibition, there was already a crowd of dogs and their owners assembled, waiting to take their exhibits into the show. Within the door I noticed a gentleman who just patted each dog, and shook paw with him. I said to Brown: "I suppose that kind reception is to give the dogs confidence amongst their strange surroundings?" but he told me that the gentleman I referred to was the veterinary surgeon, who had to see that no dog was admitted with distemper, mange, or any other contagious disease. "Of course," he continued, "that inspection is in many cases one of the fictions of dog shows, as it is manifestly impossible for anybody to examine dogs efficiently when, as it sometimes happens, they have to be passed in at the rate of about a dozen in a few minutes."

Inside the show all was life and hustle. In the gangways and round some of the judging-rings there was quite a crowd—so much so that persons with their dogs had to push their way through; and I noticed with satisfaction that characteristic of English men and women who, under such circumstances, good-naturedly jut up with some inconveniences without losing their temper. I forgot to mention that Brown was a judge at this show, but as the breed of which he had to make the award only came on later in the day, he devoted the intervening time to my doggy education. As we sauntered along we met Robinson, who I know is one of Brown's intimate friends. However, on this occasion he passed by with only a distant nod.

"Hullo," I asked, "is there an 'atmosphere' between you two?"

"Oh, no," replied my companion, "hut, as I believe I shall presently be judging his dogs, we are not supposed to be friends. That is another of dog show fictions. If we had shaken hands and stopped in friendly conversation, some disappointed exhibitor who may have noticed it would perhaps have written to the papers to the effect that when a judge hob-nobs with an exhibitor it is a foregone conclusion which dog gets first prize."

This was a great shock to me, as it somewhat destroyed my illusions about the good feeling and the brotherhood of the fancy.

By and by I paid more attention to what was going on in the rings, and I noticed, in one where terriers were being judged, that some exhibitors had their dogs on long leads, and allowed them to wander about the ring with total disregard to their interfering and inconveniencing other exhibitor's dogs. "Those persons," I suggested to Brown, "must be passionate fishermen, and letting run out and hauling in again a line has become one of those inveterate habits like, for instance, when a confirmed snuff-taker always talks with his thumb and index finger pressed tightly together, as if he was holding an imaginary pinch of snuff."

"Well," said Brown, "I don't know what they do elsewhere, but here they are fishing for prizes, and I have often wondered that some of them have not improved on the present method, and show their dogs with a fishing-rod, and on the end of a long line."

I was particularly struck with the extraordinary attitudes which many of the exhibitors assumed in

trying to attract simultaneously the attention of their dogs and the judge. In fact, what with keeping their eyes on the man and the animal, they seemed to be all eyes, whilst the hands which were not engaged in holding the lead or chain were in perpetual motion, as if their owners had a mild attack of St. Vitus's dance. Some continually jerked their hands with nothing in them, pretending to fling a missile which did not exist, for the dog; others kept on throwing up a ball, and nimbly catching it again, as if they were going through the initial practice of a juggler, whilst all the time quite devoid of self-consciousness, they allowed the rest of their bodies to assume the most ridiculous and clown-like attitudes, so that for all the world the place had the appearance of a circus-ring.

Quite a contrast to this performance were the manners prevalent in the bulldog ring; the exhibitors were sedate and quite dignified, as it behooves those who keep the dogs whose stolid strength and reserve of force are the prototype of the English national character. Here I was fascinated by the behavior of an exhibitor who wore a long ulster coat and kept his dog between his legs, and in that position always managed to face the judge whenever the latter looked at him. In my innocence I remarked to my companion: "That exhibitor must be mad; he only shows half his dog—he does not do him justice."

"No," said Brown; "thereby hangs a tale. There is method in his madness. That dog has a very good head, but a very bad tail, and the owner, knowing it, manages to show the judge only the dog's best end. The gentleman, being a novice at the game, does not know the mysteries of dog showing, but no doubt he will be told about it next week in print."

Soon afterwards I noticed a man who had the appearance of one of those fellows one sees at street corners waiting for something to turn up, who for the nonce had been put in somebody else's coat and wore somebody else's hat. I was displeased to see him drag a dog round the ring who was evidently frightened out of his wits by his leader. I drew Brown's attention to this, and he said: "That is apparently the case of a person owning a dog without the least idea about the sensitive nature of these creatures. He has made an entry, put his dog in a box, and sent it to the show, and expects the rest will follow and be all right in due course. It does follow, but is all wrong. The dog, who is already upset by this journey, is taken in hand without any consideration for his feelings by that man, who is one of the keepers, and paid by the day for his attendance. Being a rough-and-ready fellow, he drags the dog in the ring as, if he were taking a sheep to the slaughter, and, of course, unless the judge takes extra pains to make the dog show himself, he is never noticed. Now look at the dog on the other side of the ring. He is also not shown by the owner, but the man kneeling by the dog's side is a professional handler, and is probably paid by the job—that is, besides perhaps a retaining fee, it is sometimes arranged that he gets part or the whole of the prize-money, and he has, consequently, his heart and soul in the business."

Our next visit was to the Great Dane ring, where I was much amused by the antics of a smart fellow whom I took to be a military man, because he carried a riding-stick after the manner of cavalry men out for a walk. I wondered that he should have taken the little baton into the ring until my guide, philosopher and friend told me the reason. "That trick," he said, "is rarely practiced now, because it is too transparent, but it used to be frequently resorted to formerly in showing Great Danes, who sometimes have the bad fault of carrying the tail curled over the back. Now, the owner of such a dog often indulges in a game with him. The dog has to catch the stick, and he invariably does so with a vengeance, on the tail. This teaches him to keep his tail down, and the sight of the little plaything in the owner's hand always reminds the dog of the game."

It was time to return to the other end of the show, where my friend was soon to officiate as judge. In passing again the terrier ring I observed an exhibitor giving his dog's ears what I thought a course of massage. That also seemed to me one of the mysteries, and on appealing to my friend for an explanation he told me that a terrier's ears ought to lie close to the cheek, but sometimes they are not "built that way," and then nature is assisted, as that is easier than breeding the correct conformation. To enable exhibitors to adopt the easier method without offending against the faking laws, a rule was carefully made that you could do certain things as long as it did not "alter the natural anatomy of the ear," and if a dog has obstinate ears they are stuck down before the show, but every trace of the adhesive substance must be removed. Notwithstanding that, the ears revert sometimes to their incorrect position in the ring, and then they are folded down preferably when the judge's back is turned.

In various parts of the hall other mysterious proceedings were going on. I saw a man dust a dog all over with a white powder. "That," said Brown, "is another of the fancy's fictions. That white powder is supposed to simply cleanse the dog's coat, but coincidentally it may also harden it—anyhow for a time, even after it has apparently all been brushed out. Now, to harden a coat is illegal, so the powder must not be in evidence when the dog comes into the ring, though the effect remains sufficiently long to render the dog's coat harsher to the touch.

Of course, the manipulation does not deceive judges—they know all about it, and many adopt the same method when they are exhibitors—it only throws dust into the eyes of the public, and if a person buys one of these dogs, thinking that he is getting a hard-haired terrier, he finds out after a short time that he has been as 'soft' as that dog's natural coat. The worst of it is that judges quite openly tolerate this shushiness. Recently a case occurred where, as the judge patted the dog, the white dust flew out of the coat. Result, the dog was sent out without a card, strictly according to the rule that no trace of powder must be visible. A few minutes later, after the dog's toilet had been completed with the aid of a brush just outside of the ring, he was brought in again, and was awarded first prize."

It seems that another fiction is the virtuous make-belief that the judges know nothing about the identity of the exhibits except the numbers in his judging-hook, and that is why he must not see the catalog, when all the time I was given to understand that a great many judges not only know most of the dogs, but also the exhibitors who lead them.

A steward now fetched Brown, informing him that his ring was ready, and I was left to commune with my own thoughts, which led me to the conclusion that there are things in the pastime of dog showing which "do not meet the eye," and that reminded me of an incident that happened to me one day when I was going to a race meeting. In the same railway compartment was a hawker with a basket of mutton pies, and on a card it stated that they were a penny each. In course of conversation I expressed my astonishment that he could pay the fare for so considerable a distance, sell these delicacies at such a low price, and still make a profit. My traveling companion answered with a question: "Have you any trade or profession, sir?" I said, "Yes." "Isn't there," he continued, "some art and mystery in it?" I acquiesced in the proposal. "Well," he said, "there's a mystery in these pies."

After my visit to the exhibition at Barktown, I feel convinced that there are some mysteries in dog showing.

THE MARIN SHOW.

Entries closed for the Marin Kennel Association one day show at Larkspur with the flattering number of 235 dogs to be exhibited. This will be the initial show on the Coast under the rules of the National Dog Breeders' Association. When it is taken into consideration that the premium list was issued less than ten days prior to the closing date for entries the response is significant.

The total number of dogs counted on the henching at the Golden Gate Kennel Club last May, in this city, under A. K. C. rules, was only 286. The Larkspur showing of dogs for to-day is therefore significant.

The Santa Cruz show has been practically ignored by bay counties fanciers, and at a critical time when the A. K. C. would be expected to make a good showing. But few entries from this city, Oakland or San Jose were made in the reported total entry of dogs, 137, when the Surf City entries closed on July 3rd.

The Larkspur entries in leading breeds are: Cocker 30, Collies 20, Irish Setters 20, English Setters 23, Gor-Water Spaniels 7, Dachshundes 8, Bostons 11, a total of 163, and 72 entries scattered among other breeds.

This entry of dogs is mainly confined to individual fanciers and breeders, the so-called "one dog man."

There has been no monopoly of entries in any particular by any of the large local kennels. Valverde Collie Kennels, for instance, has only entered two collies, for exhibition only. The owner could have entered twenty or more had he been so disposed.

Leading local fanciers identified with the "break-away" from American Kennel Club domain on the Coast regard this response of the fancier as an earnest of purpose that will meet with strong support from kennel clubs and especially clubs of the Coast and in the Middle West.

LADIES KENNEL ASSOCIATION.

The incorporation last week of the Ladies' Kennel Association of California, under the laws of this State, will probably settle the question as to which of the two factions of lady fanciers have the right to use the club name as the donor of trophies at the rival dog shows this week. The contention is that the legally incorporated club is the arbiter in the matter. The Ladies' Kennel Association of California as originally organized about two years ago, it is claimed, was a copartnership with a fictitious name. This partnership failed to take the steps required by law where a fictitious name is used. It never had any standing whatever as an entity. It was liable to be dissolved at any time on the request of any one or more members, according to the provisions of the Civil Code covering such an organization.

The occasion for dissolving the club arose at a recent election for officers. The minority, claiming that kennel politics and programming tinctured the results, withdrew and suit was instituted for dissolution and distribution of the club treasury containing \$800.

The incorporators of the Club, Mrs. H. B. Lister, Mrs. Clarence Hannum, Mrs. K. Pearl Ellery, Mrs. Dr. W. L. Spriggs, Mrs. A. E. Drendell and others have affiliated with the National Dog Breeders' Association, and thus turned the tables on the other side—there being no legally instituted Ladies' Kennel Club of California, that has joined the American Kennel Club.

N. D. B. A.

An important meeting of the National Dog Breeders' Association was held Thursday evening last. A large number of members, including delegates from San Jose and other points, were present.

In accordance with recent incorporation requirements, a constitution, by-laws, rules governing dog shows, stud-book, etc., have been prepared and compiled.

The present board of officers were unanimously re-elected. Applications for membership, registrations of dogs, dog show licenses, and general information anent the popular movement for home rule were received from numerous sources—a flattering recognition of the preliminary efforts of the association.

The association is represented in the list of the Marin Kennel Association officials at the Larkspur show by about 30 members. Under A. K. C., threats they will all be disqualified—or what?

CALIFORNIA COCKER CLUB.

A general meeting of the California Cocker Club, the largest specialty club on the Coast, was held Wednesday evening at the St. Francis Hotel. The main question discussed was whether or no the club would affiliate with the National Dog Breeders' Association. The meeting indorsed the National Association, its objects and principles unanimously. Final action in the matter remains ex-officio with the Executive Committee. If current report is reliable, the Committee will take the same course as did the club meeting. Although originally affiliated with the A. K. C. will declare itself en rapport with the N. D. B. A. Before so doing, in a spirit of fairness, the Committee will poll the members of the club, a majority of whom favor, however, the new kennel organization for "home rule."

The club has offered two trophies to be awarded at the Marin Kennel Association show at Larkspur on Saturday. A club trophy has also been given for the Santa Cruz show on Friday and Saturday. These trophies have been given in accordance with the past custom of the club to offer to cocker spauel breeders club prizes at all bench shows where club members exhibit their dogs.

About one-half of the club members will show their dogs at Larkspur, less than a half dozen have entered dogs at Santa Cruz.

The anticipated action of the American Kennel Club in applying the disqualification rule upon exhibitors under any other than A. K. C. rules is not regarded seriously, as a wholesale penalty. The rule applies to show officials only at "outlaw" meetings. There is nothing, however, to prevent bringing pressure to bear upon A. K. C. kennel clubs to refuse individual entries from those who have wandered from the fold. But—?

DEER AND DOVE SEASON.

For a week or more past, sportsmen have daily left this city and other points bound for distant deer hunting territory, ready for the opening day, the 15th inst. The exodus this year is a record one, if the sale of rifles and ammunition is any criterion. Numerous parties have journeyed to the deer country by automobile.

Both deer and doves are reported to be exceedingly numerous this season.

AT THE TRAPS.

On Sunday, July 10, the third shoot for the Ballistite cup on the ground of the new Oakland Gun Club was held with the good attendance of twenty shotgun artists. Ed Schultz, C. H. Lancaster, Emil Holling and Lon Hawxhurst made remarkable scores in spite of the strong wind that blew directly into the faces of the shooters and blurred the vision with powder smoke and dust.

The scores for the day, out of a possible 100 birds were: E. L. Schulz 92, C. H. Lancaster 91, Emil Holling 91, Lon Hawxhurst 90, Tony Prior 89, Robertson 87, Barclay 86, C. J. Ashlin 83, Guy Clark 82, Al Cook 81, Monaghan 81, Blanchard 80, Sherwood 80, L. Rink 76, W. J. Lancaster 75, L. Prior 74, F. Adams 71, F. Nelson 70, French 67, Brown 63.

Tony Prior is still in the lead for the cup, having broken 277 out of the 30 targets shot at. Blanchard is second with 268 and C. H. Lancaster third with 262. There are still 300 targets to be shot in the race.

The Interstate Association's Pacific Coast Handicap tournament will be held at Seattle, Wash., under the auspices of the West Seattle Gun Club, on August 2, 3 and 4, with \$1000 added money by the Interstate Association and the gun club under whose auspices the tournament is to be held. August 1 will be practice day and the program for that day calls for four events at 20 single targets each, and one event at 10 doubles. The purses on this day will be divided on the per cent system into four moneys 40, 30, 20 and 10 per cent, and the shooter can use his own discretion about entering the sweepstakes. For August 2, the program calls for ten 20-target events, \$2 entrance to each event and \$25 added to the purse in each event, the purses to be divided into four moneys as on practice day. The program for August 3 schedules four single target events, one event at 10 doubles, \$30 added to the purse in each of these events, and the Preliminary Handicap, 100 single targets per man, \$7 entrance, \$100 added to the

purse. The amateur shooter making the highest score in this last event will win first money and be awarded a handsome trophy by the Interstate Association. On August 4 there will be five 20-target events, \$30 added to the purse in each event, and the Pacific Coast Handicap, 100 targets per man, \$10 entrance, \$200 added to the purse first money, and a handsome trophy to the high amateur. In no event can manufacturers' representatives compete for the purses or prizes but they will be permitted to shoot the program through for the price of the targets if they wish. In the two handicaps the shooters will be handicapped from 16 to 23 yards by a committee selected from the shooters on the grounds. Each contestant at the time of making entry for the Preliminary or Pacific Coast Handicaps will be required to state his average in order that the handicap committee can act on as near absolute knowledge of the contestant's ability as it is possible to obtain. There will be two sessions of the handicap committee. The handicaps contestants receive for the Preliminary Handicap will not govern in the Pacific Coast Handicap. New handicaps will be allotted for the Pacific Coast Handicap. Ties that are shot off in the handicap events will be at 20 targets per man, and the original distances contestants stand at will govern. The manner of shooting the Pacific Coast Handicap (and in fact all events scheduled for the tournament) will depend, says the program, entirely upon the number of entries. However, contestants are assured that a reasonable equity will be maintained under all conditions. For programs address either A. L. Mottinger, Seattle, Wash., or Elmer E. Shaner, 219 Coltart Square, Pittsburg, Pa.

Clarence A. Haight and D. W. King left this city last week bound for Ogden to attend the Ogden tournament this week. King will make his headquarters for the present at Salt Lake, from which point he will radiate, keeping the good qualities of Ballistite in unison with shooting circles.

Haight will make the circuit of Utah, Montana, Idaho and Washington points—taking in the Pacific Indian shoot at Nelson, B. C. and winding up at the Pacific Coast Handicap in Seattle.

Tom Barclay left for Spokane last Wednesday. He is now identified with Selby Factory Loads and will make Spokane his residence from now on.

A. Hoelle recently a representative for the Selby Smelting and Lead Company, is now "on the road" for the Pacific Hardware and Steel Company. Hoelle is very popular with the Coast trapshooting fraternity.

Lester German, it is reported, will be in this city in the near future. German is known by reputation to every shooter on the Coast. Local sportsmen intend to celebrate the appearance of the Eastern expert with a big live bird shoot.

The shoot of the West Seattle Gun Club on the tide flats June 26th was well attended. C. C. Wright, J. C. Jensen, J. A. Dague, E. W. Cooper, J. Cooper, O. Peterson, H. D. Miles and C. Miles came over from Tacoma for a practice shoot in preparation for the big handicap shoot.

J. C. Peterson won the Selby watch event and Robb won the Ballistite Cup event. Following are the scores:

Williams shot at 100 broke 84, Robb 100-93, E. Cooper 100-89, Fisher 100-86, Barkley 100-85, Miller 100-85, Barr 100-84, J. Cooper 100-83, Jensen 100-81, Dague 100-81, Randlett 100-81, Logan 100-80, Baldwin 100-80, Wood 100-80, J. Peterson 100-80, J. Wright 100-80, C. Wright 100-79, Berger 100-77, Scott 100-76, Blood 100-75, Smith 100-75, Kirschner 100-75, O. Peterson 100-71, M. Miles 100-71, C. Miles 100-67, Maltbie 65-57, Ole 50-36.

T. L. Eden was high gun at a recent trap shoot of the Phoenix Gun Club, Arizona.

The scores were: T. L. Eden 70 out of 75; W. A. Robertson 60 out of 75. C. W. Clement 84 out of 100. A. W. Galpin 42 out of 50. W. B. Twitchell 63 out of 75. C. Slankard 63 out of 75.

The Nevada Fishing and Hunting Club has a blue rock shooting section. Regular meetings are held with general averaging good scores.

E. E. Stone was high gun in the initial handicap club shoot on the 10th inst. He broke 22 out of 25 singles.

Auburn Gun Club members carried out a well attended blue rock shoot July 10. Particulars were received too late for this issue.

Hanford Gun Club shooters are regular in attendance at the club traps, with the result that there has been decided improvement in the work of several members who have recently taken up the sport.

TRADE NOTES.

Some Du Pont Records.

What was accomplished with Du Pont smokeless at the Grand American Handicap recently at Chicago is only a repetition of innumerable victories and wins by shooters using Du Pont.

The Grand American Handicap, for the first time, was won with a straight score of 100. Riley Thompson of Cainsville, Mo., accomplished this record feat with Du Pont smokeless, shooting from the 19-yard peg.

John W. Garrett of Colorado Springs, broke straight through the entire program on the first day, 80 singles, 10 double rises, 100 straight from the 16-yard mark, another record for Du Pont smokeless.

The high score in doubles 57 x 60, J. W. Garrett.

Long run on doubles, 41 straight, by W. N. Stannard, more Du Pont smokeless powder shooting.

Two ties for first place in the Professional Championship—J. W. Garrett and Homer Clark. Long runs: Riley Thompson 130, J. W. Garrett 100, J. R. Graham 125, J. R. Graham 102—all made with Du Pont smokeless.

"Long Runs," 100 straight or better made during 1909 with Du Pont smokeless powders is a booklet that should be perused by every devotee of the shotgun. Send for it. E. I. Du Pont de Nemours Powder Company, Wilmington, Del.

U. M. C.-Remington Wins.

At the recent Grand American Handicap, the blue ribbon event in the trap shooting world, U. M. C. steel-lined shotgun shells won every amateur trophy.

The Grand American Handicap was won by Riley Thompson with a score of 100 straight from 19 yards, shooting U. M. C. steel-lined shells, this being the first time the Grand American Handicap was ever won with a perfect score.

The Preliminary Handicap was won by W. J. Raup with a score of 99 out of 100 and 20 straight in the shoot-off, using U. M. C. steel-lined shells and a Remington pump gun.

The Amateur Championship was won by Guy V. Dering with a score of 189 out of 200 with U. M. C. steel lined shells.

J. R. Graham tied for second place shooting U. M. C. steel-lined shell and a Remington pump gun.

Last year every one of the five big Interstate Handicaps, which are the leading shooting events in the trap shooting world were won with U. M. C. shells and three of these were also shared by Remington guns.

So far this year there has been three of the Interstate Handicaps held, all of which were won with U. M. C. steel-lined shells. The continual winning of all the prominent trap shooting tournaments is further evidence that the best amateur trap shooters in the country pin their faith to the U. M. C.-Remington combination.

It is also a notable fact that at the Grand American Handicap more shooters use U. M. C. steel-lined shells than any other make.

Shoot U. M. C. and Remington guns, the records of whose past achievements are a guarantee of quality and efficiency.

Peters Points.

Mr. L. H. Reid, at the Vancouver Midsummer Tournament, July 1st, tied for second high average, including championship and team races, scoring 180 out of 200. He used Peters Factory Loads.

L. S. Hawxhurst won second high general average at Salinas, July 2d and 3d, score 263 out of 300, and was high on all targets, including practice, 333 out of 375, using Peters Factory Loads.

H. E. Poston tied for high average at Vancouver, B. C., July 1st, 114 out of 125 and was high on all targets 183 out of 200. He was also high in the B. C. Championship, scoring 25 straight, this being the only straight score in this event, using Peters Factory Loads.

Ralph Miller was high amateur in the B. C. Championship event at Vancouver, July 2d, scoring 22 out of 25, using Peters Factory Loads.

Government Selects Winchester Ammunition.

Winchester .30 caliber rifle cartridges outshot all other makes at the United States Government tests held at Sea Girt and are selected as "the most accurate" by the Government Board of Experts.

At the conclusion of the tests of various makes of .30 caliber rifle ammunition held at Sea Girt, N. J., May 12th and 13th, the Board of Experts appointed by the Assistant Secretary of War to conduct the trials passed the following resolution:

"Whereas, the measure of the .30 caliber shots made on the targets fired under the supervision of the experts during the tests, May 12-13, 1910, at Sea Girt, New Jersey, having shown that the .30 caliber rifle cartridges manufactured by the Winchester Repeating Arms Company were the most accurate, therefore, be it resolved, that the .30 caliber rifle ammunition manufactured by the Winchester Repeating Arms Company be, and is hereby selected for use in the National matches of 1910, and that the Honorable Secretary of War be so notified."

The results of these tests in figures showing the mean radius of targets were as follows:

Winchester, 600 yards, 4.93 inches; 1000 yards, 9.66 inches. Frankford Arsenal, 600 yards, 4.955 inches; 1000 yards, 10.15 inches. United States Cartridge Co., 600 yards, 5.167 inches; 1000 yards, 10.40 inches. Union Metallic Cartridge Co., 600 yards, 6.17 inches; 1000 yards, 12.93 inches.

That Winchester ammunition would prove their superiority over all other makes in the trials was to be expected. Their record of victories won, and high scores made last year put them in a class by themselves, and made their selection almost a foregone conclusion. It is futile to attempt to try and compare results of the trials made in different years, as weather conditions, style of bullets and type of arms used in the tests are not alike, but in the opinion of competent experts, the targets made by Winchester cartridges, this year, have never been equalled, all things considered. Winchester cartridges have always been good. They are not good one year and poor the next, but, on the contrary, are better each succeeding season by reason of careful and consistent study and progress in their manufacture.

GRAND RAPIDS MEETING NEXT WEEK.

Great Racing Looked for at the Mile Track in the Furniture Town.

Aside from the grand circuit meetings one of the best this summer will be that at Grand Rapids, Mich., beginning July 19 and preceding by a week the races at Kalamazoo.

It looks right now as if the \$10,000 purse for 2:12 trotters at Grand Rapids was going to bring out one of the best fields of the year and already horsemen are talking of the event, its probable winner, and the showing every horse that trots "into the money" in the affair will have to make. It is in this race that the Geers mare Dudie Archdale, at present the most fancied of all the M. and M. entrants, will make her first start, and there is every prospect that she will be opposed by Lilly W., which also is one of the choices for the big Detroit race. Of course both mares are going a good way out of their class to start in this Grand Rapids race, but the \$10,000 purse is what gets them, and apparently their trainers believe them to be equal to racing with a lot of horses that were going around 2:10 last season.

Ario Leyburn is another M. and M. nag named for the 2:12 trot at Grand Rapids which is considered a sure starter, and if he, Dudie Archdale and Lilly W. hook up together their performance should give a true line on the Detroit classic. It may be that Lilly W. will not start, as reports from Detroit are to the effect that she is coughing a little and that Macey looks pretty serious over the matter.

Alfonso, from the "Lon" McDonald stable, is another horse about which there has been a lot of talk that is named in the Grand Rapids \$10,000 purse. He has admittedly been out of order for the last ten days, but now is going sound again, and if he takes a couple of workouts between now and race day, one of them pretty stiff in places, he probably will go after the money. The fourth payment in the purse was made last Thursday, and judging from that the field will include Dudie Archdale, Lilly W., Ario Leyburn, Major Strong, Gamar, O'Neill, Telemachus, Safeguard, Bisa, Charley H., Jennie Constantine, and Lady Vincent or Bervaldo from the Murphy string. I have no advice as to others, but it is pretty safe to look for a field of from ten to a dozen high class trotters, among them the Chicago horse Don Labor, which I understand was kept in.

A man in Grand Rapids, who keeps a close tab on the horses, writes me that "none of the boys here concedes the race to Dudie Archdale. None of the others has been as fast a mile as the Geers mare is charged with, but they have done everything asked of them, and miles around 2:11 with some exceedingly fast last quarters have shown me it will take a real trotter to win this race. I think Creighton will not be here, as his stable companion, Oakland Flobar, has gone wrong."

As to the other events at Grand Rapids, the \$5000 2:06 pace will be a great race, Asa Wilkes, the New England horse, which won a lot of races last year and was touted as likely to be one of the grand circuit sensations this summer, has been declared out, and as the field now stands it consists of Maggie Winder, unbeaten last season as a three-year-old; the Chicago horse, R. F. D.; Walter W., from the Geers string; Tony Swift, driven by Dean; Major Brino, Branham Baughman, driven by Cox; Walter Hal, Baron Whips and Ella Ambulator, from the Murphy lot, and Maconda. There probably will be seven or eight starters, and on what is known of their work this year Walter W. is likely to rule favorite. He worked well before leaving Memphis and in 1909 had speed enough to step half a mile in a minute.

The class events at Grand Rapids have filled well with the exception of the three-year-old pace and the four-year-old trot, in which not enough nominations were received to make a race, and the 2:18 trot and 2:18 pace. In the seventeen races that filled the average entry is ten, which insures good fields, as in late closing events only horses ready to answer the bell are named.

The 2:06 trot looks creamy, with Sonoma Girl, The Harvester, Margin, Bob Douglass, Sterling McKinney, Wilkes Heart and Oro down to start, and while The Harvester, on account of his campaign last year, undoubtedly will be the choice, he will be meeting a great field, three of the horses, Sonoma Girl, Sterling McKinney, and Wilkes Heart, having speed enough to step a fast track in 2:05 any day they are right. The performance of Sterling McKinney will be watched with particular interest, as Murphy seems to have got the bang of the stallion, driving him a workout mile not long ago in 2:06½ in company with Paderewski.

Soprano, that is touted to be after the four-year-old record before the season ends, is named in the 2:09 trot along with Ruby Clay, Demarest, Nancy Royce, Teasel and Aquin, every one of which is known to be good. Demarest, which Geers took in hand late last year and won a good race with at Lexington, is regarded by horsemen as likely to be up to as much as anything in his class at Grand Rapids, as he worked well before leaving Memphis, and made the railbirds there think him a greatly improved trotter. In the 2:11 trot another great four-year-old, Bertha C., will start. She was one of the heat winners in the Kentucky futurity last fall, and is another that had the benefit of early work at Memphis. Opposed to her will be Alice Roosevelt, Justo, Countess Mac, Ed Monahan, Melva J., Startle, Tearoline and Vito. Justo is in the McDonald string and as a three-year-old in 1908 he showed to be a great colt trotter.

The 2:14 trot has Avanel, Beauty Wright, Ber-

valdo, Billy Burke, Dan K., Fair Hazel, Hailworthy, Howard, Linemarch, Margate, Miss Law, Bobbie B., McGregor, The Angelus and Willy. The last named is a foreigner, having been bred in Europe, and was sent over here with several other trotters by Winans, the American who has taken so many trotters and pacers abroad during the last decade.

Willy is being prepared at Cleveland, and the talk there is that he can beat 2:10. Billy Burke cau do that, also, and The Angelus is said to have worked around the 2:10 notch last year, so the race should be a good one. In the 2:07 pace there are ten entrants, and the 2:09 pace has twelve. The slower classes filled well, so the meeting would seem assured of fine racing from start to finish.

Should the sickness of Lilly W. keep her out of the Detroit M. and M. one of the factors in the furnishing of a great contest will be missing. While she might not have been the winner, it is certain that if she went to the post without any training mishaps she would be up to a good race, and on her work it has seemed probable that it would take a mile around 2:07 to beat her. That the Geers entry, Dudie Archdale, will be up to that sort of a heat seems assured from her 2:07½ mile at Memphis, and with her and Captain George (the son of Admiral Dewey, which last season worked in 2:07¼ as a three-year-old), among the entrants, it appeared certain that a great three cornered race between Geers, Murphy, and Macey would result. As matters now stand, it is likely Geers will once more add the big Michigan trotting event to his string of victories. All who have seen Dudie Archdale work say she is a trotting machine of the first class, and it is not likely a four-year-old, even one with as much speed as Captain George has shown, can beat her.

The little trotting meeting at Chicago last week brought before the public a pacer in which horsemen will be interested from the fact that he is a brother to Blacklock 2:04¼, which horse a few seasons ago was hailed as a sure two-minute pacer. In fact, it was said he worked a mile at Cleveland in 1:59½, and whether or not this was so there is no question that Blacklock had the speed to do the trick. The brother to Blacklock is a better looking horse than his distinguished relative, being smoother made, more shapely in every way, and while he did not have to go better than 2:16¼ to win his Chicago race, there were things about his work that made the critics like him.

It is not often that the brother to a great performer amounts to much in the speed line, and it is very probable that Walnut Boy, which is the name of Blacklock's brother, never may be a sensation in the pacing world, but there is no question about his beating 2:10 any time he starts over a fast mile track and the field opposing him is good enough to carry him that sort of a mile. He is a horse of good track manners, seems to like company, and in his Chicago race Charley Dean, who has the pacer, took pains to try him out a little as to some of the things that go with a good racehorse. Speed is only one part of the equipment of a classy pacer, but the Blacklock nag seems to have department as well.

A New England man who is much interested in trotters and has bred and raced some good ones writes to complain that in giving the news about the good three-year-olds that are to figure in the big stakes for that age, beginning at the Detroit meeting, no mention has been made of Chatty Direct, owned in Massachusetts and named in the Horseman \$15,000 stake for three-year-olds to be decided at Detroit, as well as in like events at Buffalo and Lexington.

The New England man calls attention to the fact that Charley Direct trotted a trial mile as a two-year-old better than 2:11 and wants to know why the other three-year-olds that have been mentioned in this column are any better than the daughter of The Director General. As to this I can only say that races are what count in the case of two-year-olds. It is true that Chatty Direct trotted the Lexington track in 2:10½ last fall, but she did not race up to the work, while Native Belle, Colorado, Eva Bellini, and other two-year-olds not only raced well but in every mile trotted they beat anything they had done in the training line. The Detroit race for three-year-olds should be an unusually interesting one, because as Native Belle is not eligible, it promises to furnish a great contest between the other three-year-olds, some of which look to be able to beat 2:10. Last summer 2:10½ was the best heat in the three-year-old Detroit race, and that was faster than trotters of the age previously had gone in July.

With a good day and track to help 2:10 should be beaten in the Horseman stake, Anvil, the colt which Geers wintered at Memphis, and which worked around 2:13 before leaving for the north, is one of the entrants. It should take a 2:10 or better mile, everything favorable for fast time, to beat him. Eva Bellini, on what she has done, seems certain to be a 2:10 trotter at Detroit and, while in a general way it is not reasonable to expect 2:10 colts in July, it should be remembered that this season the cracks that are in the Detroit fixture have been keyed up for a hard fight. A \$15,000 stake is worth getting a colt good and ready for, no matter when it is to be trotted, and my guess is that when Geers and the other good colt handlers come on the track at Detroit their pupils will be trained to the minute and will go about as good miles as any they will show later in the campaign. Last year Nancy McKerron was as good at Detroit as anywhere, and her second heat in 2:10½ gave the filly a standing among the high class three-year-old trotters that a considerably

faster mile later in the season would not have furnished, because in October Czarevna, Soprano and Baroness Virginia were beating 2:10 every time they took the wire.—H. T. White in Chicago Tribune.

GOING EASY AT FIRST.

The wisdom of programming races in which the main object is to trot a mile in certain time, instead of giving events in which the various horses can race their heads off at the beginning of the season, has been shown in the history of the Cleveland Driving Club. It was found very early in the life of this organization that at the beginning of the racing season, drivers were inclined to do too much to their horses, and as a consequence, before the year was half over a majority of the matinee performers were out of business. In order to prevent this from happening, this association gives its races on a different plan, and the driver who succeeds in turning the track nearer to a specified time than any of his competitors wins the ribbon. At almost every matinee which is given early in the year, the starters are half fit and the drivers over anxious. They cut loose from the word, and the fastest miles possible are the result, all of which is very gratifying to the winner at that particular time, but leaves nothing left for the end of the season. While professional trainers are bemoaning their fate and procrastinating until this becomes no longer endurable, the amateur without the slightest fear, and possibly less judgment, drives his horse as fast as he can go, and a glance at any of the summaries during the month of June will convince one that the man who drives for pleasure alone is just as likely to destroy the usefulness of his horse, as the professional is to put off the evil hour when he must show his hand. The Cleveland Driving Club furnishes its programs so as to gradually bring the horses belonging to members into condition for gruelling contests, and the season is well advanced before anything is done in the way of heroics. The history of this organization is a remarkable one, and the enthusiasm that keeps up year after year is creditable to both the sport itself and the sportsmen engaged in it. Of all the other clubs which have come and gone during the past, the one at Cleveland alone holds its own, each year finds it more popular among the citizens of the Forest City and it is safe to say that but for this organization, light harness racing would not be what it now is at that point in the Grand Circuit—Hawley in Stock Farm.

TAFT LOVES A GOOD HORSE.

President Taft was among the first subscribers to the recently organized Washington (D. C.) Riding Club, notwithstanding the fact that he was generally credited with not being favorably inclined toward horseback sport. When President Roosevelt made his exit from the White House last year word was passed around that Mr. Taft would take his daily airing in an automobile. But such is not the case.

The President has been a most enthusiastic horseback rider, and seldom fails to take his daily ride, which is considered the best exercise he could possibly take to preserve his health. Starrett, the President's favorite saddle horse, is a golden sorrel, standing 16 hands high and weighing 1280 pounds. This horse came from the vicinity of the Virginia Hot Springs.

General Clarence R. Edwards, who accompanies the President on these rides, was on the lookout for just such a horse for many months, before he finally succeeded in securing the kind he most desired. There are two other fine riding horses in the White House stables—Tate and Greenbrier. They are also from Virginia and stand 16 hands high, weighing 1250 and 1300 pounds, respectively.

President Taft is greatly interested in the plan of holding horse carnivals throughout the country, and at the Washington horse carnival last December he was among the first to arrive and the last to leave the ground.—Philadelphia Record.

Dr. J. C. Jones
Baltimore, Md.
Baltimore, Md.

Received June 17, 1910

Dr. J. C. Jones,
Baltimore, Md.,
Gentlemen,
I have used your Elber Improved,
Kuttin Patent Checking Device for the
past 12 years on many of my best
horses, and with not a single horse
without them. I have also given all
similar tests and checks a thorough
trial and consider the Kuttin Patent
simplest, most practical and humane
device ever offered to horsemen and
far superior to any other checking
device that I have ever seen or used.
With kindest regards, and wishing
you success, I remain,
Yours truly,
E. M. Geers

Drink Jackson's Napa Soda.

THE FARM

THE INJURY OF IRRIGATION.

The character of the soil has a great deal to do with the frequency of irrigation. Soils that are deep and homogeneous have obviously a large storage capacity and hence can hold much water in the subsoil reserve. During the drouth of this summer everybody must have noticed that on such soils crops do not suffer so quickly for lack of water. With shallow soils the condition is different. As the storage capacity is limited the irrigation must be more frequent. Any one who is observant and who studies his soil and notes the behavior of the crops should in the course of a few years learn to know how to irrigate so as to secure good yields.

What constitutes proper irrigation is a matter of much importance. It does not consist of a complete saturation of the ground or putting as much into it as it will hold for no crop will thrive with its roots in waterlogged soil. Under average conditions long continued irrigation and the use of large amounts of water are uncalled for. A sufficient irrigation should carry water to every part of the soil where there is a lack of it and it should replenish the reserve supply in the subsoil. Anything more than this is a waste and usually an injury. The mistake of applying too little is rarely made but that of too much is not infrequent.

Porous soils soon take up all that is required and any excess goes into the under-drainage and is lost. On soils that absorb water very slowly the irrigation must be continued longer than required to run the water over the ground. Where there is no under-drainage and where the soil is shallow over-irrigation will set up excessive surface evaporation which may result in accumulation of alkali in injurious quantities. Where furrows are used it is not always necessary that the irrigation shall be continued until percolation has proceeded in a lateral direction to the extent that all the surface between the furrows is moist. If sufficient water has gone into the subsoil and the moisture has met a few inches below the surface this is all that is required.—Field and Farm.

Dr. Otis, Wisconsin Experiment Station, says that skim milk is a cheap feed for calves, but should be fed carefully in limited quantities and only while it is warm and sweet. Skim milk may form the principal diet of the calf for eight months or a year. Factory skim milk should always be pasteurized to avoid the spread of tuberculosis. The best skim milk is that which is fresh from the separator and still warm. Experiments show that it is only one-fourth as expensive to raise a calf on skim milk as whole milk. Two pounds grain with the proper amount of skim milk equals one pound of butter fat. Buttermilk or whey may profitably be fed to calves.

Our common feeds can be grouped under two heads: first, those rich in fat, beat and energy producing substances; second, those rich in milk and muscle producing substances. The feeds belonging to the first class are wild hay, timothy hay and the various kinds of corn fodders, corn, wheat, speltz and barley. Some of the feeds belonging to the second group are clover hay, alfalfa hay, oats, bran, linseed meal and cottonseed meal. The latter class composes those which the dairyman should grow and provide in liberal quantities for a good milk-flow.

THE VALUE OF A

PURE BRED BULL.

There is, perhaps, no other important factor connected with beef production that is as often disregarded as that of the selection of bulls to head the herds of grade cows from which are produced the feeding cattle of the country.

The breeder of feeding cattle, whether he fattens them himself or sells them to cattle feeders, can not afford to use a common bull of indiscriminate breeding. Feeding cattle that are well bred and possess quality enough to weigh one thousand pounds or better at two years old are worth all the way from \$40 to \$50 per head, depending upon their individual quality and condition. Such feeding cattle can be produced from grade beef cows mated with choice beef bulls.

Common and inferior feeding cattle that are produced from common cows and grade or scrub bulls frequently attain an age of three or more years before they reach one thousand pounds in weight are worth from \$27 to \$30 each. The lesson should be plain that it does not pay to use an inferior bull that sires the steer that pays the owner but nine dollars per year for his keep as against the one that pays twenty-two dollars to twenty-five dollars per year.

It may be claimed that the fault is not altogether with the bull. We grant that. But suppose the cows are the same in either case, the well-bred bull will produce feeding cattle which will grade at least two grades higher than the feeding cattle produced by the mediocre bull.

There is usually about thirty-five cents per hundred-weight difference in price between one grade of feeding cattle and the next higher grade. If the well-bred bull raises the grade of his offspring two grades, he adds to the value of each animal he sires seventy cents per hundred-weight, or to the one thousand pound steer seven dollars.

Properly cared for, a bull should sire from forty to fifty calves per year. For sake of argument, suppose we say he sires forty. If he should increase the value of each of his offspring but five dollars, a very conservative estimate, he earns at the least \$200 with his first crop of calves. It is no exaggeration to say that as compared with the use of an inferior bull the registered beef bull pays for himself the first year.—Herbert W. Mumford, Chief Division of Animal Husbandry, University of Illinois.

PEOPLE SHOULD EAT MEAT.

Dr. Harvey Wiley, chief chemist of the department of agriculture in an interview at Chicago said:

Too little eating and too much eating are equally dangerous, he said. The meat boycott may be useful in one way—that of diminishing the consumption of meats and thus reducing prices. Economically speaking I will say nothing against it, dietically it is all a mistake.

Man can live of course, but he is naturally an omnivorous animal. Take away one-half of his natural food and you have only half a man. He loses power in proportion. The English probably eat more meat than any other nation—the English and the Germans. And look at them. They are the greatest colonizers, the most aggressive people in the world. They are best fitted, too, to live in any climate and under any conditions. Why, if we would take to eating vegetables only in this country it wouldn't be long before our neighbors were walking all over us. The Japanese are often pointed out as fine examples of what a vegetarian diet can do. But the Japanese consume enormous quantities of fish.

The Most Perfect Colt Bit Made EVERY COLT

Should wear the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE** from the very beginning of its training, as it is the easiest, most comfortable and most humane bit on the market. With its use the colt will not fret, worry, pull, toss its head and get into the bad habits so often caused by the use of other bits and checking devices that inflict punishment or keep it under too much restraint, and at the same time you will have absolute control over it at all times.

Patented Aug. 11, 1896. Patent No. 565,681

BEWARE of worthless imitations and Checking Devices claimed to be as good as the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE**. Illustrations of some of these check bits and devices are made to look as near like the genuine as possible, but the article itself is very different, and will not give the same results.

ALL GENUINE are stamped **G. S. ELLIS & SON** on the supporting strap and back part of Check Rein. Any that are not so stamped are not genuine.

FREE—Our new Catalogue No. 45, with wholesale discount sheet, the largest, finest and most complete Horse Goods Catalogue ever published, is ready for distribution. It contains illustrations, descriptions, and guaranteed to be lowest prices on Harness, Horse Boots, Horse Clothing and Turf Goods of every description. Every horseman should have a copy. You can save many a dollar during the season by buying direct from us, as we are now selling direct to horsemen and allowing them from 30 to 50 per cent discount from list prices. Write us today for a copy and we will take pleasure in sending it to you all charges paid.

Nearly all persons who profess to be vegetarians eat milk and eggs, which are just as surely animal food as a piece of chicken or beefsteak, went on the doctor. If we eat only vegetables our whole digestive system would have to change in time and we would be shaped differently. Even our brains would be affected. It is of course impossible to say precisely whether this change would be for better or for worse, but I am convinced it would be much for the worse.

The human machine needs plenty of fuel to supply its energy and really ought to have a little surplus for an emergency. Theories of cutting ones diet down a half or two-thirds are unsound. A generous diet of wholesome, sound and nutritious foods will resist infection, and I consider this especially good advice at this time of the year.

One yearling bull sold for \$5,000 at the annual Jersey sale of the Kinloch Stock Farm at Kirksville, Mo., June 30th. He was purchased by a Bentonville, Ark., woman. The animal is said to be one of the finest young Jersey bulls on the continent. He bears the prosperous name of "Financial Countess Lad," being a son of Financial Countess, one of the high priced cows of the Kinloch herd. The bull will be shipped to Arkansas. Another yearling bull, "Beatrice Stockwell," brought the handsome price of \$2,100. The highest priced cow sold for \$980. Altogether 166 head were sold, representing approximately \$50,000. This is the largest stock sale in the history of North Missouri. Practically every section of the country was represented by stockmen at the sale. The Jersey cows and bulls which were sold will be shipped to practically every State in the Mississippi Valley. Many of the stockmen who came to attend the sale brought their families and spent several days in Kirksville.

JOSEPHINE BREAKS WORLD MILK RECORD.

The world's record for milk production has been broken by Missouri's Chief Josephine, the prize cow of the College of Agriculture. In the four months' contest which ended recently, the daily record of the production each day has been kept, and the total exceeds the world's record ten per cent. Chief Josephine gave 11,568 pounds of milk in the four months, and the previous world's record was 10,513 pounds in the same length of time.

The production averaged 96.4 pounds

Warranted to give satisfaction.

GOMBAULT'S CAUSTIC BALSAM

A safe, speedy and positive cure for

Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a **HUMAN REMEDY** for Rheumatism, Sprains, Sore Throat, etc. it is invaluable. Every bottle of **Caustic Balsam** sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio

a day for the 120 days. The cow that previously held the record was Colantha Fourth Johanna. The great amount of milk that Josephine gives can be appreciated when it is said that she gives twice as much milk in a month as an average cow gives in a year.

The four months' production would be worth more than \$450 if it were sold in Columbia at the regular rate.—University Missourian.

Sheep scab and cattle mange have been confined to smaller areas by the efforts of the Bureau of Animal Industry, and a considerable area in the south has been released from the quarantine against the Texas fever tick. Co-operation between sheep owners and the authorities has greatly facilitated the fight against the lip-and-leg ulceration. Tests have been completed which show that the characteristic lack of thrift and the nasal ulcers occurring among stock grazing in the vicinity of great smelters are due to the baneful effects of smelter fumes laden with great quantities of arsenic and other irritating mineral substances. The injurious effects are noticeable on vegetation and stock for many miles around large smelters.

Some fellow has discovered that the reason why cold-storage eggs never taste like fresh ones is that they are living things, and die of old age if not allowed to hatch within their appointed time. It is proposed to remedy this defect by electrocuting the eggs before they are put in storage.

It is reported that over 300 new cattle brands were offered for record in Montana this spring. That means that new breeding herds are being started and that probably in a little while there may be a material increase in the demand for pure-bred bulls. The progress of the owners of small herds under the forthcoming system of limited range and extensive alfalfa feeding will be watched with interest because of its influence on the future beef supply.

RINGBONE AND SPAVIN.

Any conditions which favor sprains, such as fast driving over hard or uneven roads, unequal paring of the hoof, thus causing the weight to be unequally distributed in the joints, and severe labor in early life. In addition to these may be mentioned blows, bruises, or any injuries to tendons, ligaments or joints. There is no doubt that colts inherit a predisposition to ringbones.

Symptoms.—Just as soon as the covering of the bone is bruised a liquid hardens and forms the uneven growth known as ringbone. If the covering of the bone continues to be inflamed more growth is formed.

Before the ring-bone has become chronic the disease passes unnoticed. If the abnormal growth of bone is between the bones of a joint or if it tends to injure ligaments or tendons, when they are moved, a ring-bone is very painful.

On the other hand, a ring-bone may be very large and not cause very much annoyance, from the fact that it may not interfere with the free movement of ligaments or tendons or encroach on the gliding surface of a joint. In addition to the growth that can be readily seen, a horse affected with ringbone is very lame when first taken out of the barn, but after moving for a few hundred yards gradually "works out of the lameness," as horsemen call it, but when allowed to stand and become cool and is then moved again the lameness reappears.

Treatment.—Preventative treatment consists in keeping horses' feet trimmed properly, not overworking colts while young, careful driving on hard and uneven roads, and avoiding all injuries that are liable to strain tendons.

Even after a ring-bone has developed it may be cured by proper treatment of the feet, and applying a fly

blister. The fly blister is prepared by mixing thoroughly one ounce of pulverized cantharides, one ounce of biniodide of mercury and eight ounces of lard. The hair is clipped over the ring-bone and the blister applied with considerable rubbing.

The horse's head should be tied so as to avoid his biting the part blistered. A second application of the blister is to be used about a month after the first.

If blistering fails to cure the ring-bone, point-firing may be resorted to. It is necessary to "fire" rather deeply to secure good results, care being taken not to fire into a joint. After firing, a fly blister should be rubbed into the bores where the hot iron has been used.

When all these methods have failed and the animal is not worth keeping for a long and uncertain treatment, a skilled veterinarian should be employed to perform an operation for the removal of the nerves supplying the limb in the region of the ring-bone. After a horse has been operated on, great care should be taken of his feet, from the fact that there is no feeling in the foot operated on and serious results may come from stepping on nails, etc., and carrying them for many days before the driver would notice the foreign bodies.

Bone-spavin is an enlargement of the hock joint similar to a ring-bone about the coronary joint. It may effect the hock joint in such a way as to cement the small joints together, not causing lameness and apparently no blemish, but the free movement of the limb is impaired.

Causes.—In addition to the causes given for ring-bone may be mentioned sprains caused by jumping, galloping or trotting animals faster than they are accustomed to; also straining by starting a heavy load, slipping on an icy surface or sliding on a bad pavement.

Symptoms.—If the patient is examined before any bony growth has developed, inflammation will be detected on the inside of the hock joint

As they Some-
times Are.

As "Save-the-Horse"
Can Make Them.

Evidence that Is Honest To the Core will convince.

RICHARD WALDRON,
Manufacturer of
Fine Havana Cigars.

Paterson, N. J., May 5, 1910.

Troy Chemical Co., Binghamton, N. Y.: Gentlemen: Enclosed find check for \$5 for bottle of "Save-the-Horse." It cured a bad case of strained tendon, and is well worth the money. Respectfully,
RICHARD WALDRON.

Port Deposit, Md., May 19, 1910.

Troy Chemical Co., Binghamton, N. Y.: Gentlemen: I tried "Save-the-Horse" on a valuable mare that had been lame for over a year with bone spavin. It effected a complete cure. I consider it an invaluable remedy. My mare is as fast this year as ever and does not favor her leg the slightest. I am entirely satisfied. Very truly,
PHILIP R. BOND.

Benton Harbor, Mich., May 22, 1910.

Troy Chemical Co., Binghamton, N. Y.: Gentlemen: I have a fine horse that is lame, and I would like your opinion, &c.

Five years ago I got "Save-the-Horse" of you to use on a fine horse that had injured his hind leg, and it cured him when veterinary surgeons said it could not be cured. This is one reason I am writing you. Can you tell me what is the trouble, and if you can cure him? Kindly give this your attention, and oblige,
J. E. BARNES.

\$5.00 A BOTTLE,
with signed GUARANTEE.

This is a binding contract and protects purchaser absolutely in treating and curing any case of Bone and Bog Spavin, Thoroughpin, Ringbone (except low), Curb, Splint, Capped Hock, Windpuff, Shoeboil, Injured Tendons and all lamenesses. No scar or loss of hair. Horse works as usual.

Send for copy of this contract, booklet on all lamenesses and letters from prominent business men, bankers, farmers and horse owners the world over on every kind of case.

At all druggists and dealers, or express paid.

FOR SALE.

PRINCE DEXTER—A handsome 6-year-old bay gelding, pacer, never trained for speed, shown a 2:30 gait on the road. Fine driver, sound and gentle for a lady. Sired by Prince Nutwood, he by Dexter Prince. Price \$250. Call at Lacy Co., Central Ave., Melrose Heights, Oakland. Address Fruitvale, R. F. D. No. 189.

FOR SALE.

A handsome bay mare, 3 years old, sired by Nutwood Wilkes. Absolutely sound and gentle, afraid of nothing, and is sure to make a fast trotter. Must be seen to be appreciated. Can be seen at 2064 Santa Clara Ave., Alameda, Cal.

FOR SALE.

A fast trotting mare by Egyptian Prince 14,431, dam Hattie, the dam of Monterey 2:09 1/4 and Montana 2:16, by Commodore Belmont. Is 12 years old, sound and gentle and a lady can drive her. Has 3-months-old colt by Monte McKinney by her side and is in foal to Chestnut Tom 2:15. Also a yearling, and a two, three and four-year-old out of this mare by Monte McKinney, Chestnut Tom and Silver Bow Jr. respectively. The four-year-old is in foal to Chestnut Tom. Will sell one or all of them, and at a bargain.

J. M. PITTS,
Avenue Market, 34th and San Pablo, Oakland.

FOR SALE.

On account of illness I desire to sell my veterinary practice and horseshoeing shop at Bakersfield. Will also sell my stallion Donello 2:30 by Washington McKinney. He has a matinee record of 2:18 and should trot in 2:10 if trained. Is a grand looker and his breeding is royal. Correspondence solicited.

C. H. SEARS, V. S.,
2211 Chester Ave., Bakersfield, Cal.

TO THOROUGHbred HORSE-OWNERS.

FOR SALE AT A SACRIFICE.

First six volumes of Bruce's American Stud Book, practically unused. Cost \$10 per volume. Hard to get.

Two volumes of American Horse Breeders' Guide and Hand Book, with 100 tabulated pedigrees of leading stallions (work now out of print).

The American Thoroughbred, by Capt. Thos. B. Merry.

Two volumes Goodwin's Turf Guide for 1907. Cost \$12.

About 50 thoroughbred catalogues, including Rancho del Paso, Palo Alto, Rancocas, McGrathiana, Nursery Stud, Marcus Daly and all the great stock-farms of the country. These are handier than a studbook, because they are tabulated.

Price, \$60 for all these works.

at the junction of the cannon bone and the joint. While in the stable the horse prefers to rest the diseased leg by setting the heel on the toe of the opposite foot with the hock joint flexed. In traveling the patient is very lame when first taken out of the barn, but after traveling for a short distance goes sound.

The diseased leg is not lifted clear from the ground, but nicks the toe in the middle of the stride, which is very noticeable on a pavement. Like a ring-bone, a spavined horse becomes very lame after being allowed to stand for even a very short time, then moved again.

The treatment for a spavin is the same as for a ring-bone.—C. L. Barnes.

One of the largest items of profit, and one that the dairymen cannot get along without and be successful in this day, is the cream separator. By the gravity hand method of skimming milk there is lost at least 30 pounds of butter fat from each cow in a year; besides the separator is such a great labor saver and time is certainly money on any farm. Cream of a much greater uniformity and purity is secured by means of the separator and so commands a higher price. Then the feeding value of the skim milk is so much greater when the milk is separated immediately after being milked than where the milk has to set around waiting for the cream to rise. Good profit cannot help but be made if intelligent care is given to both the feeding and the general care of the stock. Special attention should also be paid to sanitary methods of handling the products.

DAILY CREAM DELIVERY BEST.

The plan of carrying cream from the farm to the shipping station once in two or three days may do for the peculiar conditions existing in a new country during the formative stage of dairying, but it can not be recommended to creamery patrons generally as a good plan. For best results there is no doubt that cream should be sent from the farm to the churn with the least possible delay. Daily delivery and shipment of cream should be the aim. How this is to be accomplished, especially where quantities are small, on scattered farms, is a question which must be worked out by local conditions. It may be done by co-operative effort among farmers, by a carrier employed by the creamery, or in some other way. The matter should not be considered as settled right, however, by the owner of the cows or the buyer of the cream, until deliveries of cream at the creamery or the shipping station

SMOKELESS POWDERS

SMITH GUNS HUNTER ONE-TRIGGER

WEATHER conditions aren't always at their best in the "blind" or in the skiff. That's when you don't want your gun to balk or double.

YOU CAN easily wear gloves if you shoot with a Hunter One-Trigger. And without "fiddling." It won't balk—because there is no friction to make it balk. And it won't double—because there is no second trigger to get tangled up in your glove.

The very newest Hammerless Smith Gun is the 20-Gauge Hunter One-Trigger. Weighs only 5½ to 7 lbs. Just the finest gun that can be made at the low price.

WINCHESTER

.401

Caliber

Self-Load-
ing Rifle

THE TRIGGER CONTROLLED REPEATER

This new Winchester is all that the big game hunter's heart could desire. It is reloaded by recoil, and has a detachable magazine which enables it to be fired a series of shots with great ease and rapidity without the sacrifice of accuracy. Although the cartridge it handles hits a harder blow than the .30 U. S. Army, it is compact and light to carry. In the sureness, strength and simplicity of its action, and in its hitting power, no other recoil operated rifle approaches it.

Send to the Winchester Repeating Arms Company, New Haven, Conn., for circular describing this new rifle which has strength and power plus.

IT HITS LIKE THE HAMMER OF THOR.

Oregon Futurity No. 3, \$5,000

FOR FOALS OF 1910

Guaranteed by the Oregon State Board of Agriculture

To be raced for in their two and three-year-old form at the

OREGON STATE FAIR

ENTRIES CLOSE AUGUST 1, 1910.

Three-year-old Trotters . \$2000 Three-year-old Pacers . \$1500
Two-year-old Trotters . 900 Two-year-old Pacers . 600

Entrance \$5 to nominate foal on or before August 1, 1910, when breeding of foal must be given; \$10 January 1, 1911, when color, name and sex of foal must be given; \$10 January 1, 1912; \$10 January 1, 1913.

Starting payments—\$10 to start in two-year-old pace; \$25 to start in two-year-old trot; \$35 to start in three-year-old pace; \$50 to start in three-year-old trot. All starting payments due September 1, year of race.

Nominators must state when making payments to start whether the colt entered is a trotter or pacer. Colts that start as two-year-olds are not barred from starting in the three-year-old division. All entries must be accompanied by the entrance fee, but there will be no return of a payment, nor will any entry be liable for more than the amount paid in or contracted for. Failure to make any payment forfeits all previous payments. Right to substitute another foal eligible to enter open until January 1, 1911. Right reserved to declare off or reopen futurity in case the number of entries received is not satisfactory. Each race will be mile heats, two in three. Hobbles not barred on pacers. Money divided in each race 50, 25, 15 and 10 per cent. There will be no more money than there are starters. A colt distancing the field will be entitled to first and fourth moneys only, and in no other case will they be entitled to more than one money. Other than specified, rules of the National Trotting Association to govern. For further particulars address

COLT STAKES GO TO WOODLAND.

Los Angeles, July 20, 1910.

Breeder and Sportsman:—Sacramento has released us, therefore the California Breeders' Association's Stakes will be decided at Woodland. By so doing they will not conflict with Breeders' meeting. The starting payments of \$50 in the California Breeders' stake, and \$25 in the Canfield two-year-old stake are due July 25th.

W. T. JAMES, Secretary.

PARK AMATEURS WILL RACE TO-DAY.

Five races are on the card of events which the members of the Park Amateur Club has arranged for this afternoon at the Stadium and there should be some excellent racing.

In the free-for-all trot, Modicum, Charley T. and Reina Dictum will again meet, and as the last named trotted a work out mile the other day in 2:10½, she should be able to get a leg on the cup this afternoon if carefully driven. The entries for the five events are:

Free-for-all Pace—Dioden.

Class A Pace—Little Medium, Ringrose, Dictatum, Little Dick, Roberta.

Free-for-all Trot—Modicum, Charley T., Reina Dictum.

Class B Trot—Billie Burke, Bird Eye, Dividend, Walter G., Barney Barnato.

Class A Trot—Lady Nell, Sunset Belle, Mike Kelly, Raymond M., Lady Washington, Red Velvet, Ceta Dillon.

Class A Pace—Zoe Dell, John T., Balboa.

Officers of the day—Starter, Geo. E. Erlin; Judges, J. A. McKerron, A. J. Molera, H. A. Rosenbaum; Timers, A. Joseph, R. Nolan; Marshal, H. M. Ladd, Secretary F. W. Thompson.

A pacing bred pacer that has been made into a good trotter was second to Dudie Archdale when she won at Terre Haute. This is the stallion Argot Hal, and Ed Benyon is the man who did the converting. He trained the horse, which is bred to pace, on his hereditary gait in 1908, and could step him a mile under 2:10 at that way of going. But Benyon, who is observant as to horses, noted that Argot Hal could trot pretty well when he took a notion to, although shod and otherwise rigged for pacing. So last summer he made the shift, and now Argot Hal is a 2:10 trotter when everything is favorable for a fast mile, and Benyon has added another feather to his cap in the way of training harness horses.

WOODLAND RACES FILLED.

California Breeders' Stake of Los Angeles Will Be Raced at Yolo County Track.

There will be a good fair and race meeting at Woodland next month. The dates are August 24th to 27th inclusive and word has just been received from Los Angeles that the California Breeders' Stakes will be raced at Woodland. Owing to the fact that the Los Angeles track has been torn up to make room for a new mile track and fair grounds, the Los Angeles association was compelled to find another track on which to decide this year's colt stakes. It was first decided to take them to Sacramento during the State Fair, but objection was raised by the owners of three-year-olds that it would be unfair to ask colts of that age to trot three races within eight days (the State Agricultural Society having two three-year-old stakes of its own) and asked that the Los Angeles stakes be decided over some other track. This has been agreed to and the California Breeders' stakes will be trotted and paced at the Woodland track, thus adding a big feature to the already excellent program provided.

In this connection it might be well to state that the starting payments of \$50 in the California Breeders' stake and \$25 in the Canfield stake are due July 25th and must be paid on that date to Secretary W. T. James of the Los Angeles association.

Of the races advertised by the Woodland Driving Club for its fair and race meeting to be held August 24th to 27th inclusive, the following have been declared filled with the entries as below given:

Race No. 1—2:30 Trot, \$600.

Harold K., b. g. by Wm. Harold, W. J. Fleming, Concord.

Geo. Woodard, b. g. by Senator B., William Duncan.

T. D. W., b. g. by Nutwood Wilkes, Ernest Kemp.

OUR LOS ANGELES LETTER.

Los Angeles, July 19, 1910.

Last week was a repetition of the week before at the Arcadia track, the horses getting just about enough to keep them good. There were a few quarters and halves worked at speed but no miles as the trainers were afraid of the first turn, which has always been bad. However, it will be over now, as I am told the Los Angeles Driving Club has notified the trainers that they will have to find other quarters after this month, as the expense of keeping up the track is too great, notwithstanding that the trainers' rent was raised when they went there from \$1.50 to \$2.00 per stall. The water bill, I understand, for last month was \$125 and this, added to the expense of the extra men and team that were required to keep the track in any kind of shape was more than the club could afford.

W. G. Durfee will take his string down to Santa Ana on or before the first, where the track is pretty good and always safe, but where the stabling is poor; however, with weather like this a stall cannot have too much ventilation.

Walter Maben leaves with his racing string next Monday for the north, taking the green pacing mare Chiquita, owned by A. B. Miller, Zomell, the gray trotter by Zombro, owned by the same man, and Rapidan Dillon, the trotting mare owned by Mr. Joseph H. Bohon, that he campaigned last year. Both these trotters are entered in the \$10,000 stake at Portland. He will also take C. A. Canfield's stallion Walter Barker by Heir at Law and I believe E. A. Montgomery's two-year-old Victor Mc by Red McK. that is entered in the Canfield-Clark Stake No. 1.

James S. Stewart will, I understand, move to Pas-

adena from Arcadia, as he is anxious to train two or three of his charges over a half mile track preparatory to a trip east next season, where it is intended to race them over one of the half mile circuits, probably the Maryland and Virginia, or the Oil circuit of Pennsylvania.

Will Durfee is getting Carloklin and Copa de Oro in shape for some fast miles somewhere this fall, though he does not himself know yet when or where he will start them. So far he has made his entries anywhere except in one or two colt stakes. The two studs are getting five heats each twice a week; both have been miles in 2:29½ and they are both big and strong and Durfee says they suit him better at this stage of their work than ever before.

Santiago by Carloklin, a 14-months' old colt that has had but four weeks' handling, can now step a '40-gait and do it like a trotter.

Durfee's two-year-old stake candidate Hastings by Del Coronado worked an eighth in 17 seconds the other day and Del Oeste, a two-year-old pacer by the same horse, came through the stretch in 31¼ seconds.

Another promising thing in Durfee's stable is Zorina by Zolock, whose dam is a full sister to Zulu Belle. She has only been at the track five weeks and has worked a quarter in 37 seconds.

Kid Dillon, the great little green pacer in the same stable, certainly has his speed on tap. He stepped an eighth in 14¼ seconds with very little effort.

Durfee has eased up on all the rest of his horses, as their work was satisfactory and as they were not entered anywhere it was no use keeping them on edge.

A telegram just received from Secretary Aronson of the Woodland Driving Club, states that the meeting there filled and consequently the California Breeders' Stake for foals of 1907 with \$400 added will be raced there between August 24th and 27th.

A telephone message just received from Mrs. C. S. Hastings announces the death of her good three-year-old colt Juddy Dillon by Judge Dillon, of distemper. He was entered in the California Breeders' stake and showed a lot of speed. JAMES.

ALDEN ANDERSON FAVORS DISTRICT FAIRS.

704 Postal Telegraph Bldg.,

San Francisco, July 6, 1910.

Mr. F. W. Kelley, 366 Pacific Bldg., San Francisco, Cal.

Dear Sir:—I find your letter of July 2d on my return to San Francisco this day and contents of same have been carefully noted. Replying thereto I would say that California is a producing State and her most marked characteristic is the variety and extent of her agricultural productions. Her most lasting greatness will come from this source. Therefore, anything that is conducive to the development of the State along agricultural or horticultural lines should be fostered and encouraged by the State.

I know that the old Agricultural Fairs did much good in that direction and I believe that much can be accomplished in the same way now if painstaking and intelligent endeavors are made along that line. We could place this State in the same class with the Eastern States that make much of and receive great benefits in that direction. We can excite competition, emulation and general interest. We can improve the varieties of our agricultural and horticultural products, breeds of horses, hogs, cattle, etc. I have watched with much interest the success of the District Fairs in Iowa, Minnesota and other States, and know that they do great good in those localities for the upbuilding of the State.

Replying particularly to your inquiry wherein you ask: "If elected Governor, would you favor and sign a bill appropriating money for District Fairs, and would you lend your influence and aid in placing our State and District Fairs on a higher plane than heretofore, making them of greater educational value and high class exhibitions of the best productions of the State?" I would say that I would favor an appropriation for the purpose indicated and would sign a properly drawn bill for such purpose.

I am a producer myself and believe that my experience, both in that direction and as one knowing California and her possibilities, would be of much benefit in helping to arrange the matter on the right basis. I would take pleasure in signing any bill that had to do for the development or improvement of agricultural conditions in any way in our great State.

Yours very truly,
ALDEN ANDERSON.

AUCTION SALE AT SAN JOSE.

There will be an auction sale at the San Jose Driving Park during the Breeders' meeting next month that will be worth attending if good young trotting bred horses are wanted. There are a number of yearlings, two and three-year-olds by Nearest McKinney, The Angeles 2:15½, Nearest 2:22, Star Pointer 1:59½, and all out of high class mares. In addition the stallion Nearest 2:22, full brother to the great John A. McKerron and sire of Highfly 2:04½, Alone 2:09½, etc., will be offered. This horse is a large grand looking individual, and sires splendid roadsters with size, style and fine disposition. He is by the great Nutwood Wilkes, and will be a profitable stallion in any horse breeding country. Read the advertisement in this issue giving a description of all the horses to be disposed of at this sale.

Drink Jackson's Napa Soda.

SAN JOSE TRACK GOSSIP.

San Jose Driving Park, on the grounds of which is one of the best mile tracks ever laid out in California, is quite a busy place these warm summer days, and the trotters and pacers in training there are showing by their work that fast time will be the rule during the four days in August which the Pacific Coast Trotting Horse Breeders' Association has selected for its annual meeting. If everything is favorable the first regular race over this track should give the track a record below 2:10. This race will be the 2:20 class trot for a purse of \$1000, in which the following twelve entries were made July 1st: Diedrich by Direct Heir, Little Branch 2:22½ by Nutwood Wilkes, Dr. Mayo 2:24½ by Wilkhurst, Lijero by James Madison, Helen Stiles by Sidney Dillon, Prof. Heald 2:24½ by Nutwood Wilkes, Mike Kelly by Gossiper, Bodaker by Antrim, Harold K. by William Harold, Prince Lot 2:29 by Prince Ansel, Bobby H. by Hanford Medium, All Style by Stam B. Of this dozen, three, Helen Stiles, Bodaker and Prince Lot are reported to have beaten 2:10 in their work. By the majority of horsemen in California Helen Stiles is now being picked as the winner of this race and there is no doubt but the horse that beats the daughter of Sidney Dillon will have to have class as well as better than 2:10 speed. But if Prof. Heald, Prince Lot, Bodaker and Lijero get to the race in good shape there will be one of the best contests ever seen in the history of this purse.

The 2:12 trot on the same day should also be a very close contest, although it is not expected to be as fast a race by two or three seconds. Here are the names of the ten trotters originally entered, from which the field will be chosen on the day of the race: Lady Inez 2:14 by Nutwood Wilkes, Katalina 2:11½ by Tom Smith, North Star 2:11½ by Nutwood Wilkes, Wenja 2:17 by Zolock, Dr. Lecco by Lecco, Golden-nut 2:11½ by Neerut, Zombronut 2:11½ by Zombro, Escobar 2:13½ by Escobado, Rapidan Dillon 2:12½ by Sidney Dillon, Zomell 2:14½ by Zombro. Here is a race that would make the layers of odds work overtime in a betting country. On last year's form of these horses first choice would be picked from Katalina, Goldenut, Zombronut and Rapidan Dillon, as they all won heats in from 2:11½ to 2:12½ and were able to trot several right around that mark, but of the other six are several that can trot very close to 2:10 right now and are looked to equal that time before the season is over. Dr. Lecco is the only green horse in the bunch but from reports he is trotting much better than a farmer's horse and may be a very dangerous factor in the race. North Star 2:11½, who won the Breeders' Futurity when a three-year-old in 2:13½, is to be tried again after a rest of two years, and may prove that unlike Jeffries, he can "come back." This race should be one of the most closely contested of the year.

The 2:14 pace does not look like a very classy race and Walter Maben's mare Chiquita by Highland C. should win it easily as she has beaten 2:06 this year in her work. The other entries are Alto Genoa Jr., David St. Clair, T. D. W., Joe Athby, Little Dick, Sister Bess, Patery, Ice Man and Chino Prince.

The above is the card for the opening day of the Breeders' meeting which is Wednesday, August 10th, and it will be worth going to see. Both trotting races should prove close contests, with 2:15 beaten in every heat, which the pacing race should furnish more than one beat below 2:10 if the field can make Maben's mare extend herself.

The San Jose track is now in good shape and with careful work, which will certainly be devoted to it, it will be as fast as any race track in America. The grand stand is very large and there will be room on it to seat about three thousand spectators. Advertising matter is being distributed and posted this week, so that the public will have ample notice that the Breeders' Annual Meeting will open at San Jose on Wednesday, August 10th. There are probably 100 head of horses being trained at this track at the present time.

A late arrival at the track is Sam H. Hoy, the Winters almond orchardist and horseman, who has a couple of colts by his grandly bred stallion Jules Verne—a two and three-year-old. The two-year-old is a very handsome little filly that has only just begun to be well broken to harness and is just learning what is wanted of her. She has not been a mile better than 2:28, but eighths in 16 seconds are very handy for her. She is a pure gaited pacer and her flaxen mane and beautiful head make her very attractive in harness. The other is the three-year-old trotter Babe Verne by Jules Verne, owned by Harry Peters. This colt took a two-year-old record of 2:25½ last year and got second money in the Breeders' Futurity. He is a dark brown colt, very handsome and a beautifully gaited trotter, as well as game. Hoy should get a good share of the colt stake money with him this year.

Chas. Durfee has the two track record holders in his stable—Happy Dentist, pacer and Helen Stiles trotter. The former has turned this track in 2:06½ and the latter in 2:08½. Both look and act like horses of grand circuit calibre, and the mare especially bears all the earmarks of a free-for-all. In her work she is the most business-like trotter one can imagine, trots as well in behind a bunch of horses as out in front, never makes a mistake, has never yet shown the limits of her speed and wears less harness than any other trotter that has appeared since Lou Dillon—she even wears less than the peerless queen as she has no martingale and no

blinds. Every horseman that has seen her in action praises her gait and her manners, and the fact that she has worked a sixth heat in 2:08½ with the last end of the mile at a two-minute clip is enough to stamp her as one of the highest class trotters seen in this State for a long time. She is entered in about \$20,000 worth of stakes on the North Pacific circuit. Happy Dentist is certainly some pacer. He goes about his work in a manner that accounts for the adjective in his cognomen, and his mile last week in 2:06½ did not cause a ruffle in his disposition or looks. He is well entered through the northern circuit and Nutwood Wilkes will have another 2:10 performer to his credit before Happy Dentist returns home. Durfee has two other good ones in Dr. Lecco and Almaden 2:22½, both trotters. The former had a lot of bad luck early in the year but is working well now and both have beaten 2:15 rather handily.

Joe Cuicello will race three horses this year for Mr. A. L. Scott of this city. They are Lady Inez 2:14, Prof. Heald (3) 2:24½, and Mamie Alwin, a three-year-old filly by Lord Alwin, dam Louise Carter (3) 2:24 by Chestnut Tom 2:15. All three of these trotters are working nicely—Lady Inez looks in the very pink of condition, while Prof. Heald will trot a very fast mile before the season ends if no accident happens him. He is a grandly made horse and is admired by everyone. Mamie Alwin is a good filly that unfortunately is not staked, but is being entered in the three-year-old purses here and up north. Joe worked Flashlight by Searchlight a mile in 2:16 the other day.

Ted Hayes has a Bon Voyage colt, a black fellow called Jean Val Jean that is out of She 2:12½ and is a leg pacer of the sort that looks like a race winner. He is not in the Breeders' Futurity, which is lucky for the other fellows. When this colt took a mark of 2:18 last spring it was only a warm up mile for him. He has worked close to 2:10 within the last two weeks. The Bon Voyage colts are getting ready to sustain the reputation as three-year-olds they established as two-year-olds last year.

T. W. Barstow's two-year-old trotter The Demon by Nearest McKinney is beating 2:30 now. This is not a large colt but he is a strongly built youngster and knows how to trot. His sire Nearest McKinney that has been put to pacing, is beyond all question one of the best made and best looking sons of McKinney living. Had he not received an injury to his foot a mark of 2:10 or better would have been opposite his name at the trotting gait, and his mile in 2:13½ last week at the pace is good evidence that with a little training he will get into the exclusive speed circle at that way of going. He is a grand horse in or out of harness.

The Breeders' whilom correspondent, C. C. Crippen, has a small string of horses—none of them being trained for the races this year, however. The three-year-old colt by Guy Dillon out of Carlotta Wilkes, dam of three with records below 2:10, Crippen calls "the best bred young stud in America," and anyone who looks over a tabulation of his pedigree will have a hard time naming a better bred one. The colt is black as a coal with a beautiful mane and tail, not large, but splendidly proportioned. He was unbroken when Crippen brought him down from Santa Rosa a few weeks ago, but he says he has a nice way of going and he has no fears but he will step fast. He led out a two-year-old bay filly by Bodaker that he says is bound to be a two-minute pacer. The filly is out of Mystle by Arronax a son of William L. This filly was the greatest lot trotter one ever saw, but when broke to harness would not trot a bit. All sorts of schemes were tried to induce her to trot even a slow gait but she refused to receive any instructions in the trotting class and so Crippen changed her shoes and gave her a few pacing lessons. That's her natural gait now without the hopples and she is learning to go very fast and with her conformation will surely make a race mare.

Patsy Davey has the mare Wenja 2:17 in such good shape that Mr. Frank Burke has entered her at the Breeders' meeting and Sacramento. She is fast enough to lower her record a few seconds. Patsy was working the Zombro horse Laddie G. last Saturday but the former matinee trotter was not showing very well.

One of the most attractive yearlings ever seen in this section is owned by Mrs. F. H. Burke. It is a beautiful roan filly by Birdman, brother to the fast trotter Bodaker, and is out of the great brood mare Wanda 2:14½. This yearling is a trotter too, and may be the best one Wanda ever foaled. Davey is handling another yearling by Bon Voyage that is also very promising, but she has nothing on the roan although Patsy likes her the best—perhaps because she is a Bon Voyage.

Among the horses that have recently come to San Jose to prepare for the Breeders' meeting are a couple from Arroyo Grande, that are being trained by E. P. Hamilton and they look and act like a pretty shifty pair of racers. One is Bobby H. 2:19½ trotting, a bay gelding by Hanford Medium that is entered in the 2:20 class trot. He is a good looking, good gaited fellow that worked an easy mile the other day in 2:14, and a quarter in 31½ seconds to cart. The other is Choro Prince 2:15, a nice free legged pacer that came from the half home a few days ago in 1:03. He is by Morris A., a son of Dictatus 2:17, out of a mare by Gaviota, a son of Electioneer, and is entered in the 2:14 class pace.

Sweet Bow 2:17½, winner of last year's Breeders' Futurity for trotting two-year-olds, and Normona 2:14½ winner of the two-year-old division of the same stake are here in charge of John Quinn, the

Sacramento reinsman. Both are looking first class and while neither has been sent any fast miles as yet they could probably show some if their trainer asked for it.

B. Soto is here with Mr. Galindo's horses the fast pacer Pilot, the diminutive trotter Harold K., and the green pacer Patery. Pilot is by Abbottsford Jr. and has paced very fast in races. Three years ago he was up against Charley D., Copa de Oro and Inferlotta, and of course did not win from them but he paced several heats better than 2:10 and was timed one in 2:07 in a race. Harold K. is probably the fastest trotter of his inches in California. He has been a mile in 2:15 and there are few better gaited ones than this son of William Harold. Patery is by Comet Wilkes and has a lot of speed.

H. C. Connors of Porterville has the fast pacer Joe Athby 2:21 by Athby in training here for the circuit races. He has not shown him up yet, but looks ready.

Jack Phippen has worked Bon Roy, his two-year-old son of Bon Voyage and Athene 2:22 by Dexter Prince a mile in 2:27. This youngster is improving with every workout and as he is engaged in all the California stables has a good chance to be a money winner before his three-year-old form has passed.

The unusually promising "cow horse" trotter in Mr. Phippen's stable, owned by James Dunn of Gilroy, that has been mentioned heretofore as a great prospect, stepped a mile the other day very handily in 2:16¾. At the rate of improvement he has made since his training began it will not be very long before he will be able to reel off a mile in 2:10.

Prof. William Montgomery drove T. A. Carroll's handsome dapple gray daughter of McKinney, a half in 1:08. If the professor could get about 80 pounds of beef off his little mare she would be quite a trotter and add one more to her sire's 2:15 list.

Henry Imhof worked Prince Del Norte (3) by Kinney Lou, dam Princess Bessum 2:29½ by Egyptian Prince, a mile in 2:21½.

SAN JOSE DRIVING CLUB.

The newly reorganized San Jose Driving Club held another matinee last Sunday that was fairly well attended and consisted of three races of small fields with hotly contested finishes though the time was not fast.

Ted Hayes officiated as starter and Jas. Howard, Al Hanks and Dr. Browning were the judges and timers. Although this is the first Sunday matinee of the San Jose Driving Club reported in the Breeder and Sportsman, several have been held and some good contests have been furnished and miles around 2:16 frequent, and with an open gate the attendance has been good but not large. Summaries:

2:25 class pace:
Lady Rea, by Iran Alto (Cuicello).....1 1
Fanny James, by Barondale (Thererkau).....2 2
Chief K. (Villar)3 3
Time—2:28½, 2:26.

Free-for-all pace:
Mike, by Scott McKinney (Hubbard)1 1 3 1
Princess Lou, by Kinney Lou (Montevaldo) 2 2 1 2
John C. by Kinney Lou (Villar)3 3 2 3
Time—2:20½, 2:20½, 2:19½, 2:24½.

2:40 class, mixed:
Kiss-Kee-Dee, by Scott McKinney (Ferri) 1 1 2 1
Sidmont, by Altamont (Cuicello)2 2 1 2
Lady Patrone, by Guidon (Patrone)3 3 3 3
Charley T. (Hanks)4 4 4 4
Time—2:30, 2:33½, 2:34, 2:32½.

HALF MILLION DOLLARS WORTH OF MULES.

Laden with the unique cargo of 1400 mules, the largest shipment of livestock ever made from the West, the British steamer Waitamata sailed from San Francisco for the Fiji islands last Sunday afternoon at 5 o'clock. The big freighter has been fitted like a veritable Noah's Ark, with three decks, and the mules were quartered in specially-made stalls between decks, on the main decks and on a high superstructure. Each stall was fitted with electric lights and fans, and thirty-five muleteers went along to care for the long-eared cargo.

The expert attendance on the mules will be supplied by a half dozen veterinarians. Four hundred tons of hay was shipped for feed, as well as great quantities of grain. The fast freighter will make the trip to the islands in eighteen days, and unless something unexpected happens a loss of only a few animals is expected.

The mules were loaded at Port Costa. They were all bred in this State. Most of them were raised at Crows Landing. They are all the finest animals procurable and have been inspected by experts and all subjected to the Mallein test for glanders. They will be worth \$500 each on their arrival at the islands. The aggregate value of the cargo here is a quarter of a million dollars.

The mules are consigned to the Colonial Sugar Company at the Fiji islands and are to be used for hauling cane, plowing and packing sacks through the swamps and almost impassable muddy roads. The method of loading and of unloading the mules is also unique. At Port Costa they were swung on deck in cages by means of a great crane. At their destination they will be driven singly down a long gangplank onto a raft. The raft is made light enough to sink under the weight of the mule and with his natural instinct for self-preservation he will be expected to swim to shore.

Drink Jackson's Napa Soda.

FAST MILES AT CHICO.

Mr. H. C. Cowell's Kermit Paces Two Heats in 2:10 in Matinee Race.

Members of the Sacramento, Rocklin, Oroville, Vallejo and Marysville driving clubs took their horses to Chico last Sunday and had it out with the members of the Chico club in a program that furnished excellent sport and resulted in fast time by both trotters and pacers.

It was keen but friendly racing from start to finish and some of the finishes were close enough to satisfy any harness race enthusiast. In the class A pace Kermit, chestnut gelding by Henry Nutwood, dam by Wildnut, owned by Mr. Cowell of the Sacramento club, won two straight heats in 2:10, a performance that stamps him as one of the best pacers racing in the California club events this year, and another Sacramento club horse, Mr. Frank Wright's handsome big trotting stallion Lijero by James Madison, showed class by winning from Wild Bell and the good mare Katalina 2:11½ in 2:13 and 2:15½ after the latter had taken the first heat of the Class A trot in 2:13.

Expedio, the good three-year-old by Lijero, owned by Dr. Wilson of Sacramento, won the Class B trot in straight heats in 2:20 and 2:21, beating a good field.

The last race of the day which was for both trotters and pacers, was won by The Ice Man, a Vallejo owned pacer that is being entered in the circuit races this year by A. T. Jackson. He won the second and third heats in 2:16½ and 2:15. Dana Perkins' All Style getting the first heat in 2:16.

Dr. M. C. Delano of Sacramento acted as starter and got the horses away well. The judges were E. P. McDaniel, Jay Wheeler and John Wannop. Thos. Coulter and Jake Martin held the watches, and Geo. Vice did the announcing. Results:

First race, class B, mixed trot and pace:
G. F. Parks' Joseph D. (Chico).....1 1
Phil McCune's Rex (Marysville).....2 3
Ed Strain's King S. (Marysville).....3 2
G. C. Powell's May B. (Sacramento).....4 1
Chas. Silva's Camelia (Sacramento).....5 x
Time—2:26, 2:31.

Second race, class A trot:
F. E. Wright's Lijero (Sacramento)3 1 1
W. J. Miller's Katalina (Chico).....1 2 2
Frank Ruhstaller's Wild Bell (Sacramento).....2 3 3
Time—2:13, 2:13, 2:15½.

Third race, class A, pace:
H. C. Cowell's Kermit (Sacramento).....1 1
W. J. Miller's Chiquito (Chico).....2 4
Wesley Bennett's Delmas (Chico).....3 5
John Renna's Monteo (Marysville).....4 3
A. Levison's The Jewess (Rocklin).....5 2
Time—2:10, 2:10.

Fourth race, class B, trot:
E. J. Weldon's Expedio (Sacramento).....1 1
Wm. Leach's Anona (Marysville).....2 3
W. J. O'Connor's Lady Alice (Chico).....3 2
J. R. Magruder's 3-year-old (Marysville).....4 5
H. C. Pike's Dr. Frazier (Sacramento).....5 4
Time—2:20, 2:21.

Fifth race, class B, pace:
W. Hunt's Alice Roosevelt (Sacramento).....2 1 2 1
John Silva's Economizer (Sacramento).....1 3 2 3
J. F. Heenan's Joe Dick (Sacramento).....3 2 1 2
Time—2:19, 2:17, 2:21½, 2:27.

Sixth race, class C, mixed trot and pace:
A. T. Jackson's Ice Man (Vallejo).....4 1 1
Dana Perkins' All Style (Rocklin).....1 3 2
Sam Wolever's Molly Button (Oroville).....2 2 3
T. F. Stile's Seymo M. (Chico).....3 4 4
Time—2:16, 2:16½, 2:15.

In Millard Sanders' stable at Indianapolis is a very beautiful five-year-old chestnut mare with silver mane and tail called Ida Dillon. She is a full sister to Mary Dillon 2:06¼, half sister to Carloklin 2:08¼ and Inferlotta 2:08¼, and three-quarter sister to Carlo Dillon, the handsome black three-year-old that C. C. Crippen has at the San Jose track. Ida Dillon is expected to beat 2:10 considerably this year. She trotted a mile in 2:11 in 1909. There are several sons and daughters of Sidney Dillon that are likely candidates for 2:10 honors this year.

Marque, of the Horse Review, saw the Peter the Great colt Azoff at Libertyville recently and says of him: Accompanied by a runner, Azoff stepped a mile in 2:28, last half in 1:10, and in a repeat did a mile in 2:40, last quarter in 32¾ seconds. The colt can fairly fly, and Dick says it is not a question of making speed with him, but rather of keeping him in condition to carry his lick. Azoff is owned by John R. Thompson and is to be raced in the futurities. If all goes well with him, he should be one of the good two-year-olds of the year.

The Abbe, full brother to The Abbot 2:03¼, and holding a trotting record of 2:10½, has been shifted to the pace by Ed Geers and at Terre Haute last week won the 2:07 class pace and took a record of 2:07¼.

Ralph Fuller, of Orange, California, has had a lot of bad luck with his broodmares this year, losing several. His stallion Raymond 2:27¼ has made a good season in the stud however and is well liked by the breeders of that section.

Drink Jackson's Napa Soda.

GOOD SPORT AT STOCKTON.

San Joaquin Valley Driving Club Puts Up Some High Class Racing.

The matinee of the San Joaquin Valley Driving Club last Sunday was one of the best ever seen on the Stockton track, and when it is considered that a crop of hay was harvested from the track this spring the time made in the free-for-all pace was remarkable as the track cannot be considered a fast one. In this race Guy Vernon, a son of Guy McKinney 37625 won the second heat in 2:09½ hooked to a cart and without hoppers, while his competitors wore the straps and pulled sulkies.

A good green horse showed up in the winner of the 2:15 pace. Beauty Dick is his name and he is owned and was bred by C. Peirano, of Lodi, who expects to race him through the circuit this year. He is by Alto Genoa 2:14½, and also goes without hoppers. The following full summaries of the races, together with a list of the horses worked out over the Stockton track last week and time made in these workouts, was sent us by Secretary Frank Lieginger of the club.

First race, 2:50 class, mixed:
McRey, t. by Monterey, dam by McKinney (F. A. Murray).....1 2 1
Loyd A., p., by Royal McKinney (J. Aker).....2 1 2
Laura D., t. by Monochrome (M. Carroll).....3 3 3
Time—2:50, 2:50, 2:54.

Second race, free-for-all pace:
Guy Vernon, by Guy McKinney, dam by Mt. Vernon (W. H. Parker).....1 1
T. D. W., by Nutwood Wilkes, dam by Wilkesdale (E. Kemp).....2 2
Alto Genoa Jr., by Alto Genoa (J. Pierano).....3 3
Time—2:12, 2:09½.

Third race, 2:15 class, pace:
Beauty Dick, by Alto Genoa, dam Thoroughbred (J. Peirano).....1 1
Blanche A., by Royal McKinney, dam by Derby Ash (J. Aker).....2 2
Time—2:15, 2:16.

Fourth race, free-for-all trot:
Little Branch, by Nutwood Wilkes, dam by Antevolo (P. J. Chalmers).....1 1
McDougal, by Stam B., dam by Fallis (E. Kemp).....2 2
Time—2:19½, 2:19½.

Judges, A. B. Sherwood, W. J. Miller and A. W. Cowell; Starter, A. B. Sherwood; Timers, J. N. Jones, Chas. Helm and Frank Lieginger.

Work-Outs During the Week.

FAST PACER FROM OAKDALE.

Guy Vernon, the pacer that won a second heat at the Stockton matinee last Sunday in 2:09½ is owned by Dr. J. B. Thompson of Oakdale, Cal., and is one of the most promising young pacers in the State. It is stated that he was pulled up the last forty or fifty yards of this heat and could have beaten 2:09 had it been necessary. The track was nearly two seconds slow owing to lack of water, and Trainer Parker is certain that Guy Vernon will make an exceptional race horse. His training this season does not extend over two months. Guy Vernon is by Guy McKinney (son of McKinney 2:11½ and Flossie Drals by Guy Wilkes) and his dam is the registered mare Maud Vernon by Mount Vernon 19514, (son of Nutwood and Daisy by Chieftain) second dam by Gen. McClellan 143. It is Dr. Dr. Thompson's intention to have Guy Vernon driven an exhibition mile during the Breeders' meeting next month.

PRICES PAID FOR ARMY HORSES.

The average price paid by the United States Government for horses and mules for army use is stated by an army officer to be as follows:
Cavalry horses\$173.53
Artillery horses205.25
Draft horses227.69
Draft mules234.15
Riding mules213.95
Pack mules195.95

ANSWERS TO CORRESPONDENTS.

M. Z., Arroyo Grande—San Luisito, pacing record 2:14½, was bred by J. H. Hollister of San Luis Obispo, California. He was sired by Monroe Chief 875, dam Alta by Altona 8850, grandam Nelly, dam of Allorita 2:16¼ and Allo 2:22½, untraced. San Luisito is registered as a pacer, No. 14398.

MATINEE AT SAN BERNARDINO.

Bolock, Son of Zolock, Trots a Third Heat in 2:15 and Wins.

Joe Kelly's Bolock again demonstrated his ability to hold the place at the head of the trotters of San Bernardino and Riverside counties when he outstepped the classy Hemet mare, Louise Carter, in the deciding heat of the free-for-all-trot, at the racing matinee of the San Bernardino County Driving Club, held at Association Park, Thursday, July 14, says the Riverside Sun. Down the stretch the two horses came neck and neck in the prettiest race seen on the local turf in many months. Bolock went under the wire a nose ahead of the Hemet mare, receiving the ovation of the day. The Zolock horse and the pride of the San Jacinto valley rounded the track the entire distance together but on the home stretch the big chestnut cleanly outstepped his rival. The delegation of supporters of Louise Carter who came from Hemet to back their favorite were doomed to disappointment in their belief that she could nose ahead of Bolock if both horses reached the finish without a break. The local champion simply outstepped the Hemet mare.

In the first race Louise Carter broke badly shortly after the start, allowing Bolock to fight it out with Buster, G. W. Parson's horse. The former needed little urging from Kelly to finish first, although Buster was a close second. The time of this heat was 2:23. In the second heat Bolock broke at the three-quarter and Louise Carter, who was trailing but a few yards behind, took the lead and won the mile in 2:17. The deciding heat, which won the race for Bolock, was trotted in 2:15.

Monk, H. Eigenbrod's horse, took the free-for-all pace in two out of three heats. On Bly, Jim Campbell's horse, put up a hard fight, taking second in the first heat by a few feet, giving Monk a hard run around the track to the finish. This heat was done in 2:15. Campbell pushed his horse into the lead at the quarter in the second heat and took the mile in 2:19. In the third heat Monk and On Bly raced almost side by side around to the stretch, but with an eighth yet to go, Campbell's horse had spent his energy and fell behind, Monk winning in 2:19. The winning horse had been a favorite through the entire race. Harry H. was scratched after the first heat.

On Conn, another of Kelly's horses, proved his speed when in the 2:25 trot, he took two of the three heats against Mable Van, the San Bernardino favorite in the race.

Kelly took his horse under the wire a winner in the first heat, Mable Van having broke early, finishing third, with Larry second. This heat was in 2:25. In the second Mable Van was brought to the finish in the same time, with On Conn second and Larry third. The deciding heat was the last of the day. Mable Van broke bad, after On Conn had trailed her close to the three-quarters, and the Kelly horse took first easily in 2:21½. Larry again took third.

G. W. Bonnell's Marie S. put up a classy exhibition when she took both heats of the 2:20 trot. Nearest, owned and driven by Dr. W. L. Spoor of Redlands, was an even favorite with Bonnell's entry, but could not either hold her feet as well or show up the speed as did the other. Bonnell drove both miles in 2:21. Spoor's horse broke badly in the first heat and was set back from second to third by the judges. In the second heat the Redlands horse did better, taking second. Buck, driven by F. H. Hollway, was looked for to do something but failed to exhibit speed or ability to hold his feet, taking last in both miles. James Poole's Dedrick took second in the first and third in the second heats.

Miss Lott took the first event of the day when she outstepped the other entry in the 2:40 trot, in two straight heats. Lora Madison, the favorite, showed up badly, taking third in both miles. Dark Streak took fourth and second and Prince Valentine second and fourth. Time was 2:34 and 2:30.

The 2:30 pace was scratched.

In an exhibition race Lady Worth While made the mile in 2:34. She is owned by Binder of Riverside. Results:

2:40 trot—
Miss Lott (F. S. Pond).....1 1
Prince Valentine (G. M. Carrigan).....2 4
Dark Streak (H. E. Webster).....4 2
Lora Madison (Chas. June).....3 3
Time—2:34, 2:30.

Free-for-all trot—
Bolock (J. H. Kelly).....1 2 1
Louise Carter (Hemet Stock Farm).....3 1 2
Buster (G. W. Parsons).....2 3 3
Time—2:23, 2:17, 2:15.

Free-for-all Pace:
Monk (H. Eigenbrod).....1 2 1
On Bly (James Campbell).....2 1 2
Harry H. (Chas. June).....3 dr
Time—2:15, 2:19, 2:19.

2:20 trot—
Marie S. (G. W. Bonnell).....1 1
Dedrick (Jas. Poole).....2 3
Nearest (Dr. W. L. Spoor).....3 2
Buck (F. H. Hollway).....4 4
Time—2:21, 2:21.

2:25 trot—
On Conn (J. H. Kelly).....1 2 1
Mable Van (F. Van Tress).....3 1 2
Time—2:25, 2:25, 2:21½.

The officers of the day were: Starter, Mr. Stanley; Judges, William Rourke, W. L. Scott, H. P. Herman; Timers, C. H. Thomas, Al McRae, W. E. Phelps; Marshal, Hiram Kelley.

NOTES AND NEWS

C. The Limit 2:06¾.

Bertha is now the dam of five 2:10 performers.

Her daughter Ruhy Light will join the 2:10 club as soon as she is of age.

The Great Western Circuit has opened successfully with fine racing.

The Grand Circuit starts next week at Kalamazoo with a grand program of races.

Henry Helman made his first start of the year at Grand Rapids Wednesday last with Demonio Wilkes 2:09¾, but was outside the money.

Sterling McKinney 2:06¾ and Sonoma Girl 2:05¾ were beaten in 2:08¾ at Grand Rapids. They are entered at Kalamazoo next week.

The racing held by the driving clubs in California this year has been particularly good. Good contests and fast time are the rule at nearly every meeting.

There will be some good racing at the stadium this afternoon under the auspices of the Park Amateur Driving Club.

Superintendent Woods of the Palo Alto Farm, says that Expressive 2:12½ as a three-year-old, was the last foal sired by Electioneer.

Hailworthy, a trotter entered on the Grand Circuit this year, won a fourth heat on the Rockport, Ohio, half mile track last week in 2:11¾. This is a new record.

California Breeders' Stake, for foals of 1907, will be trotted at Woodland this year during the meeting of the Woodland Driving Club, August 24 to 27.

Communications intended for publication in the Breeder and Sportsman should reach this office not later than Wednesday to insure insertion.

Worthington Parsons of Salinas has worked his two-year-old trotter Merry Mac by Alhert Mac, dam by Diahlo, a mile in 2:35, last quarter in 35 seconds. Merry Mac is in the Pacific Breeders' Futurity.

S. Christenson's mare Reina Directum was driven a work-out mile by Charley James at the stadium the other day in 2:10¾. She should be good today in the cup race.

Horsemen wanting new sulkies or carts or old ones repaired, should not forget that W. J. Kenney is still in business at the old stand 531 Valencia street. He has sulkies that will help your horse to win if possible.

Fernloc, the leg and body wash, is meeting with great favor among California horsemen. It has met with a large sale recently and those that use it once come back for more. W. J. Kenney is agent, at 531 Valencia street, San Francisco.

Spanish Queen 2:07, trialed a mile in 2:05 the other day with the last half in 1:00¾ and the last quarter in 29 seconds. Geo. H. Estabrook, her owner, believes she will reduce her record this year.

John Dickerson is quoted as saying that he is confident that Lou Billings, the three-year-old daughter of Lou Dillon 1:58¾, will trot in 2:10 the coming season. The fastest he has asked her to go being 2:20, but she has trotted parts of the mile at a faster clip.

A county fair will be held at Escondido this year, the dates selected being September 27th to 30th. There will be a general exhibit of the county's productions and a good program of races. The directors of the fair association are: H. E. Lockett, president and manager; James Carroll, secretary and treasurer; Mr. Thompson, vice-president.

Ed Geers was thrown out of his sulky while working out a horse at Grand Rapids on Monday and quite seriously hurt, but on Thursday he sat in a harouche at the track and saw Mr. F. G. Jones, owner of Dudie Archdale and The Abbe, pilot both horses to victory in their races. Geers had bought Dudie Archdale for Jones a week previous for \$16,000 and there was a big ovation when the Minneapolis amateur reinsman drove this mare to victory.

Alma Sedley, the three-year-old daughter of The Director General and Miss Rita (4. p.) 2:08¾, by J. J. Auduhon 2:19, that is owned by the well known actress, Viola Allen (Mrs. Peter Duryea), is credited with being the speediest thing in the trotting line at the Lexington track. She recently hooked up with Shakespeare (3. p) 2:09¾, who had worked in 2:07¾, and she gave him quite a warm argument for a piece. She has not beaten 2:16 for a mile but has gone some dizzy fractions. They are picking her to heat Native Belle in the Futurity.

The Los Angeles colt stakes will be pulled off over the Woodland track at the meeting of the Woodland Driving Club next month.

There is a huyer of trotting and pacing horses in California who has a short advertisement of what he wants in this issue of the Breeder and Sportsman. He is huying to sell again, consequently must huy horses at right price. He wants twenty head of mares and ten stallions or stud colts that are well bred and with or without records. He also wants a few with records. If breeders have horses to sell at what they are worth this is a chance to dispose of them at fair figures.

Matt Zahner, who owned the stallion Walstein 2:22 at the time that horse died, is now located at Arroyo Grande, California, and is training several good horses. He has the stallion Fred Branch 45525 that he won a race with in 2:22 last year over a slow half mile track, the horse being a three-year-old then, and beating a field of aged horses. Fred Branch has since shown Mr. Zahner eights in 14¾ seconds. He also has a horse called Pilot owned by M. Rodriguez that with very little work has paced a mile in 2:29, also a mare owned by Herman Zing of San Luis Obispo that is hardly hridle wise yet paced an eighth in 19 seconds to a Frasier cart. Mr. Zahner thinks he will have a free-for-all pacer for next year in Fred Branch.

WATSONVILLE TRACK OPENED.

Between eight and ten hundred enthusiasts were present at the opening meet of the Watsonville Driving Club's new half-mile track last Sunday. The events were interesting and great interest was displayed by the spectators, who applauded and cheered the drivers as they passed the stand. The meet was a success from all standpoints and the game gives promise of becoming a fixture in the community. The track is in fine shape and when used more will show much improvement. Results:

First race—Won by Lettie S., driven by J. P. Soares; second, Charles Sumner, driven by J. E. Foster; third, Maud W., driven by Chris Larsen. Time, first heat, 1:35; second heat, 1:42.

Second race—Won by Little One, driven by J. P. Soares; second, Lottie D., driven by Joe Nunes; third, Queen, driven by Joe Woods. Time, first heat, 1:37; second heat, 1:23.

Third race—Running race—Won by Circo, ridden by A. J. Gonzales; second, Gold Ledge, ridden by Albert Martin. Time, 3:34; three-eighths mile.

Fourth race—Won by Little Pete, driven by J. P. Soares; second, Black Diamond, driven by Geo. Mann. Time, first heat won by Black Diamond, 1:16; second heat, won by Little Pete, 1:13; third heat won by Little Pete, 1:11.

Between the third and fourth races, Frank Vincent, Manuel Soares and Manuel Veda rode a saddle race for three-eighths of a mile, which was won by the last-named.

Mr. Soares was the star driver of the meet, winning six out of seven heats in which he started.

T. J. Kelly acted as starter, T. J. Horgan, Gus Hushbeck and Jess Neilson were judges, and Robert Mann and Jas. Redman kept time.

FOUR DOUBLE PRODUCING DAMS.

Not long ago reference was made to the trotter Ouida Courtwright 2:19¾, over a half mile track, as probably being the only member of the 2:20 list whose first four dams were the dams of two or more trotters apiece, while her fifth dam has five daughters, all of which are double producers or better—that is, are members of the Great Broodmare list.

A correspondent who is a breeder of trotters on a large scale and well posted in matters appertaining to his fad, writes to ask that the names of the four double producing mares in the pedigree of Ouida Courtwright be given, being anxious to learn if they are well bred as well as above the average in the matter of having their get trot fast. The correspondent adds that if my statement was correct the Courtwright mare is not only distinguished in the particular named above all other members of the trotting list, but that she is unique among all trotters. Fortunately the history of Ouida Courtwright is so well known, having been a matter of official record since she was a yearling, there is no question as to the facts. She is a chestnut mare, with flaxen mane and tail, was foaled in September, 1904, and bred by A. H. Danforth & Son of Washington, Ill., whose establishment has been prominent on the trotting map for a quarter of a century.

When Sphinx, one of the best sons of Electioneer, was well along in years he was bought by the Danforths, who owned at that time Maytell, three-year-old record 2:24, a daughter of Axtell 2:12, and by mating her with Sphinx they got the filly now known as Ouida Courtwright, whose dams and their produce are as follows:

First dam Maytell (3) 2:24 (dam of Ouida Courtwright 2:19¾, and Gelo 2:26¾) by Axtell.

Second dam Della (dam of Maytell 2:24 and Disarm 2:24¾) by Nutwood.

Third dam Dalphine, dam of Highwood 2:21¼; So Long 2:13¼, Delphina 2:22¾, and Dalphia D. (3) 2:29¼, and Della, a great broodmare) by Harold.

Fourth dam Dahlia (dam of Dalreen 2:21¼, Dacia 2:29¼, Dalliance, dam of Baron Belt 2:14; Doska, dam of Monette 2:14¾; Debutante, great broodmare; Duenna, great broodmare, and dam of two great broodmares; Dalphine, great broodmare; Dominica, dam of Rostoko 2:24¼, a sire, and Davenant 2:26¾, a sire) by Pilot Jr.

Fifth dam Madame Dudley (dam of Sue Dudley, Belle Dudley, Dahlia, Dulce and Tulip, great broodmares, and Dudley 2:32¾) by Bashaw Horse.

In other words, the first dam of Ouida Courtwright produced two trotters; her second dam produced two trotters and one great broodmare, her third dam produced four trotters and one great broodmare, her third dam produced four trotters, two sires, and one great broodmare; her fourth dam produced three trotters, one sire, and eight dams, four of them great broodmares; her fifth dam produced five dams, all great broodmares. They are the dams of eleven trotters, two pacers, eleven sires, and eleven dams. These eleven dams produced twenty-three trotters. Being a fall colt, and undersized, Ouida Courtwright got little attention as a yearling, and was included in a consignment the Danforths sent to a Chicago auction. She changed hands there at about \$200. As a two-year-old she could trot fast, but was unsteady, and had rounded hocks, which horsemen shy at. Then she threw a curb and was turned out as a two-year-old, but not until she had shown considerable speed, but an inclination to make breaks. When just three years old a pair of elbow hoots was put on her, and in less than two weeks the filly could beat 2:30. From that stage she improved rapidly, and a year ago worked the Austin half mile track in 2:15¾.

As an example of breeding to speed for speed Ouida Courtwright is a good one. There may be other members of the 2:20 list that can equal the showing made by her first five dams, but I doubt it.—H. T. White.

INCREASE THE CROWDS.

It may seem absurd to a trotting track secretary that a difference of ten minutes in the playing time means a decrease of gate receipts, but it would seem that there is no question about it being a fact, for all of the big leagues have demonstrated it by experience. Race managers are anxious to secure the patronage of the public, or at least they should be, yet if it is impossible to get the people out to see a game of two hours, while big crowds attend when the game is curtailed twenty minutes, does not that go to show that one reason why the trotting races are so slimly attended is because of the long waits between heats? The average theatrical performance is limited to about two hours and fifteen minutes and in the theater there are few long waits.

Such being the case with these two popular amusements, is it not absurd to think that the same spectators will spend five or six hours at a trotting meeting? If the racing was started promptly at 2 o'clock each afternoon and the starter was instructed to live right up to the rules as regards the time between heats, so that the sport would be all over by 5 or 5:30 at the latest, would not the attendance quickly double or treble? There is no excuse for the long delays between heats and once the public is convinced that there is something doing all the time and that the racing will be all over at an hour that will enable the spectators to get home in time for supper or dinner, then there will be little complaint about the lack of attendance. That light harness racing is a most popular sport is attested by the fact that in spite of the many discomforts to which the spectators are subjected there are hundreds of meetings every year witnessed by hundreds of thousands of people. Yet by a little hustle of the right kind the attendance could easily be trebled or quadrupled.—Western Horseman.

GEERS AGAIN HURT.

The great reinsman, Ed. F. Geers, was thrown out of his sulky on Monday of this week at Grand Rapids by the horse he was exercising falling. Geers was badly shaken up and was taken to a hospital but was out at the track in a carriage on Wednesday, contrary to the doctors' orders, and saw Mr. Jones, owner of several horses in his string, drive and win two races. Geers is now in his sixtieth year. For more than thirty years he has been actively identified with harness racing in the Grand Circuit, and during a great portion of this long period, says the New York Herald, he has stood at the head of the list of winning drivers at the end of the annual campaign. Subjected constantly to temptation to which a weaker or less honest man would have yielded a thousand times, Geers has maintained a reputation equal to that of Hiram Woodruff or Budd Dohle, and has not once been disciplined or even reprimanded by the judges of a race for anything savoring of fraud.

Geers' style of driving is peculiarly his own. No other man has ever been seen who exercised such control over his horses with so little apparent effort. He sits immovable in the sulky, no matter what the crisis, never raising his hands, spreading his arms, bracing himself by laying back in his seat or in any way showing the employment of any particular physical force. Only on rare occasions does he touch his horse with the whip and then with mere taps, even in an eyelash finish. For twenty years or more the Tennessee trainer has made a practice of falling back at the start, and hinging his horse up with a well-timed drive in the last quarter of the mile to win by a head or a neck in the final strides. By letting the other horses' breast the resistance of the atmosphere and form a wind shield for his own, Geers probably won hundreds of heats before anybody woke up to the fact that he was taking advantage of an unseen but important factor of speed, which has lately been shown to mean four of five seconds to the mile.

ADDITIONAL NORTHERN CIRCUIT ENTRIES.

Horses Named for the Meetings at Everett and Walla Walla, Washington.

Everett, Wash. Entries.

2:25 Pace, \$500.—H. M. C., b. h., C. H. Authier; J. D. L., b. g., L. Lendrum; Palestine, b. h., E. S. Knowlton; Buck, b. g., E. A. Reichel; Ella Erickson, b. m., C. C. Simmons; Don Densmore, b. g., D. A. Dinnie; Lightout, ch. g., Millington Bros.; Jennie M., s. m., J. R. Smathers; Amy S., b. m., A. R. Gibson; Romeo, b. g., Joe F. McGuire; Sylvia Onward, b. m., W. O. Reynolds.

2:40 Trot, \$500.—Robert D., ch. g., Robt. L. Drake; Mamie Alwin, ch. m., A. L. Scott; Royal Meath, b. s., J. B. Rogers; Doc McKinney, bl. Ed. Cudihee; Zomoak, b. g., N. W. Thompson; Honey Boy, b. g., Clyde Weatherford; Nellie Morris, b. m., Millington Bros.; Nada, bl. m., M. C. Keefer; Independence Girl, br. m., Frank Skinner; Rox Seal, b. h., Jas. Madson; Marguerite, b. m., A. J. Agnew; Lady Pocahontas, b. m., J. V. Hunter; Dietrich, b. s., Fred Stoppelfeld; Kingbrook, bl. k., W. I. Higgins; Dan McKinney, ch. g., Joe F. McGuire; Monte Reco, b. s., W. O. Reynolds.

2:17 Trot, \$500.—Croma, b. g., M. E. Finch; Wesos, b. g., Alex. Brown; Densmore, b. h., Al Russel; Gebbie, br. g., Ed. Cudihee; Lady W., b. m., L. C. Shell; Lida Carter, b. m., Jas. Dacres; Mayo, b. g., E. N. Jones; Herrod, br. g., W. O. Reynolds.

2:14 Pace, \$400.—Francona, b. m., D. A. Dinnie; Bonney M., b. m., L. C. Shell; Olga So., b. m., W. C. Marshall; Hubbert Jr., b. g., Joe F. McGuire; Fay Bernard, b. m., A. A. Fowler.

2:25 Trot, \$500.—Prof. Heald, ch. s., A. L. Scott; Anjella, b. m., Alex. Brown; Anita, b. m., C. P. Webb; Shamrock, b. s., W. P. Williams; Victoria McKinney, b. m., A. J. Agnew; Kingbrook, bl. g., W. I. Higgins; Dan McKinney, ch. h., Joe F. McGuire.

2:08 Pace, \$1000.—Birdall, r. m., R. E. Davison; Nancy C., b. m., J. C. Rouse; Allerdaw, b. s., D. A. Dinnie; Josephine, b. m., J. McDade; Gen. Heurtis, b. s., E. D. Koozt; Goldfinder, bl. h., Stoker & Wickers; Hubbert Jr., b. g., and Tommy Grattan, b. s., Joe F. McGuire.

Walla Walla Entries.

2:18 Trot, \$500.—Lady Malcolm, b. m., Geo. F. Brown; Lida Carter, b. m., Jas. Dacres; Brilliant, b. s., F. E. White; blacksmith, ch. s., G. O. Miller; Wesos, b. g., Alex. Brown; Densmore, b. h., D. A. Dinnie; Prof. Heald, ch. s., A. L. Scott; Almaden, bl. s., C. A. Durfee; Herrod, b. s., W. O. Reynolds; Tell Tale, r. m., Dr. Rae Felt; Stalene, b. m., Dick Wilson; Dr. Wayo, b. s., Table Rock Mineral Water Company.

2:25 Pace, \$500.—Norte Wood, b. s., John McCormack; Edgarelia, ch. m., Thos. H. Brents; Harold Welcome, b. h., W. L. Knouff; Lauretta H., b. m., F. B. Martin; The Bantz, b. s., Emanuel Steinman; Amy S., b. m., A. R. Gibson; Buck, b. g., E. A. Reichel; Don Densmore, b. h., D. A. Dinnie; Chiquita, b. m., W. S. Maben; Sylvia Onward, b. m., A. A. Fowler; Romeo, b. g., Joe F. McGuire; Geo. Woodard, b. g., W. R. Merrill; Oregon Patch, b. s., and Dick Hal, b. s., Dick Wilson; Brook Bell, br. m., A. Lee.

2:25 Trot, \$500.—Bonnie McK., b. s., Geo. A. Kelly; Robert D., ch. g., Robt. L. Dalke; Vincomar, ch. g., Thos. H. Brents; Shamrock, b. s., W. P. Williams; Royal Meath, b. s., J. B. Rogers; Kingbrook, bl. g., W. I. Higgins; All Style, b. s., Dana Perkins; Anjella, b. m., Alex. Brown; Zomoak, b. g., N. W. Thompson; Dr. Lecco, bl. c., C. A. Durfee; Monte Rico, b. s., W. O. Reynolds; Mountain Boy, b. s., Wm. Howell; Dan McKinney, ch. h., Joe F. McGuire; Anita, b. m., C. P. Webb; Bessie Lovelace, b. m., Dick Wilson; Dietrich, b. s., Fred Stoppelfeld.

2:14 Trot, \$1500.—Croma, b. g., M. E. Finch; Packline, s. s., John McCormack; Mayo, b. g., E. N. Jones; Lady Sunrise, b. m., Chas. Turner; Lady Malcolm, b. m., Geo. F. Brown; Lida Carter, b. m., Jas. Dacres; Alfreda B., b. m., E. A. Reichel; Prince Lot, b. g., Alex. Brown; Mrs. Herbert, ch. m., W. B. Linn; Lady Inez, b. m., and Prof. Heald, ch. s., A. L. Scott; Bodaker, r. s., Thos. Ronan; Zomell, g. g., W. S. Maben; Helen Stiles, b. m., C. A. Durfee; Herrod, br. s., W. O. Reynolds; Escobado, b. s., and Paul W., b. g., Table Rock Mineral Water Company; Tell Tale, r. m., Dr. Rae Felt; Dan McKinney, ch. h., Joe F. McGuire; Lady W., b. m., L. C. Shell; Henry Gray, g. g., Arnold Zbinden; Lucile Patchen, b. m., and Miss Herbert, s. m., Dick Wilson.

2:20 Pace, \$700.—Norte Wood, b. s., John McCormack; Miss Jerusha, bl. m., E. N. Jones; Harold Welcome, b. h., W. L. Knouff; The Bantz, b. s., Emanuel Steinman; Buck, b. g., E. A. Reichel; Cranky Thorne, b. g., J. K. Love; King Seal, br. s., E. C. Keyt; Romeo, b. g., Joe F. McGuire; Geo. Woodard, b. g., W. R. Merrill; Dixie Smith, b. m., Olie Dahl; Rothada, b. m., Dick Wilson.

2:10 Trot, \$1000.—Katalina, b. m., W. J. Miller; Goldenhut, ch. s., Geo. W. Ford; Rapidan Dillon, b. m., W. S. Maben; Lady Sirius, ch. m., Wm. Howell; Lee Crawford, b. g., Joe F. McGuire; Daybreak, g. g., J. W. Dound; Zombronut, b. g., Table Rock Mineral Water Co.

2:15 Pace, \$500.—Louladi, bl. m., Chas. W. Shields; Jr. Dan Patch, bl. s., J. F. Elwell; Lou Miller, ch. m., G. O. Miller; Dell McKinnon, bl. g., Mrs. Al Lynch; Francona, b. m., D. A. Dinnie; Sam the Mint, b. g., Stokes & Wickers; Zoney M., b. m., L. C. Shell; Alex Williams, bl. g., Dick Wilson; Amo, bl. s., Mrs. A. C. Severance.

2:10 Pace, \$1000.—Birdal, r. m., R. E. Davison; Judge Dillard, ch. s., E. N. Jones; General Hurtis, b. s., Gene Kuntz; Allerdan, b. g., D. A. Dinnie; Nancy

C., b. m., J. C. Rouse Jr.; Gold Finder, bl. h., Stokes & Wickers; Chiquita, b. m., W. S. Maben; Happy Dentist, ch. g., C. A. Durfee; Fay Denard, b. m., A. A. Fowler; Hubbert Jr., b. g., Joe F. McGuire; Cinqqueror, b. g., Mrs. A. C. Severance.

2:30 Trot, \$500.—Bonkin, b. g., Geo. A. Kelly; Robert D., ch. g., Robt. L. Dalke; Dorothy Alton, b. m., J. H. Pridemore; Vincomar, ch. g., Thos. H. Brents; Honey Boy, b. f., Clyde Weatherford; Nada, bl. m., M. C. Keefer; Royal Meath, b. s., J. B. Rogers; Kingbrook, bl. g., W. I. Higgins; All Style, br. s., Dana Perkins; Zomoak, b. g., N. W. Thompson; Mamie Alwin, ch. m., A. L. Scott; Monte Rico, b. s., W. O. Reynolds; Mountain Boy, b. s., W. Howell; Bessie Lovelace, br. m., Dick Wilson; Lada, b. m., W. Mar-ding; Dietrich, br. s., Fred Stoppelfeld.

TERRE HAUTE RACES.

Terre Haute, Ind., July 14.—Straight heats and fast finishes marked the second day's racing of the Great Western circuit meeting. Geers drove Direct Hal Jr. to win first money in the 2:13 pace, but was forced by Peter Pan to set a mark of 2:06½. Fair Maiden, a second choice, proved a surprise in beating Captain George in the 2:16 trot. Summaries:

2:16 trot, purse \$1000:
Fair Maiden, b. m., by Prince of India (Mahon) 1 1
Avanell, br. m. (Geers) 2 4 2
Captain George, b. s. (Murphy) 5 2 4
Belle Colbert and Madelle started.

Time—2:13½, 2:10, 2:12.

2:13 pace, purse \$1000:
Direct Hal Jr., b. s., by Direct Hal (Geers) 1 1 1
May Day, b. m. (Murphy) 3 2 2
Peter Pan, b. g. (Chambers) 2 3 3
Ashline, b. g. (Cummings) 4 4 4
Prince S. and Oscar Wilde started.

Time—2:06½, 2:08, 2:07½.

2:07 pace, purse \$800:
The Abbe, blk. h., by Chimes (Geers) 1 1 1
Andy N. J., b. h. (Cummings) 2 2 4
Howtella b. m. (Pixley) 7 7 2
Kandy Onval, g. g. (Wilson) 4 3 3
Nettie McEwen, Prince Norbells, Axme, Pearl Pick started.

Time—2:07½, 2:09½, 2:12½.

Terre Haute, July 15.—Close finishes and fast racing made the program today a very interesting one, but rain put a stop to the sport and the meeting was declared ended, with two races unfinished and all of Saturday's program was afterward's declared off. Summaries:

2:06 pace, purse \$2000:
Walter W., b. g. by Little Frank (Geers) 3 1 1
R. F. D., blk. g., by The King Maker (Robin-son) 1 3 4
Baron Whips, ch. g. (Murphy) 2 2 3
Walter Hal, blk. h. (Garth) 5 4 2
Tony Swift, Rock C. and Macolda started.

Time—2:05, 2:05, 2:07.

2:11 trot, purse \$3000:
Alice Roosevelt, ch. m., by The Searcher (Murphy) 1 1 1
Justo, b. h. (McDonald) 2 2 2
Jennie Constantine, b. m. (Dodge) 5 3 3
Safeguard, b. g. (Stout) 3 6 6
Charley H., Beauty Wright and Don Labor also started.

Time—2:08½, 2:09, 2:10.

2:21 pace, purse \$700 (unfinished):
Walnut Boy, br. h. (Dean) 2 1 0
Nathan B., br. s. (McMahon) 1 5 0
Tiger Lilly, blk. m. (Selvage) 5 2 5
Eloretta, b. m. (Fenelson) 3 3 3
Colin D., and Silver Maid also started. Walnut Boy and Nathan B., finished together in last heat.

Time—2:14½, 2:10, 2:12.

Three-year-old trot, \$500 (unfinished):
Lulu Arion, ch. f. by Peter The Great (J. E. Benyon) 1
Anvil, b. s. (Geers) 2
Enara, b. f. (Healey) 3
Barytes, b. h. (Ed Benyon) 4
Borsch Medium, b. f. (Green) 5

Time—2:15 1-5.

WILL COACH TO THE RACES.

Morris E. Howlett is going to add an attractive feature to the Grand Circuit trotting meeting in New York, August 23-27, by putting the public coach Magnet on the road between the Holland House, in Fifth avenue, and the club house at Empire City Park. He has booked out a route, by way of Central Park, Riverside Drive, the Boulevard Lafayette, Van Cortlandt Park and Aqueduct avenue, which he considers more attractive than any other coaching run he has yet found around New York. The distance is eighteen miles each way, and three teams will be required in making the trip. The time cards for the Magnet announce that it will leave the Holland House daily at eleven o'clock, reaching the track in ample time for luncheon at the beautiful club house before the first race is called. For the return trip the coach will leave the track immediately after the last race. The fare for the round trip is to be \$5, or \$50 for the whole coach, seating twelve passengers besides the whip and guard. Mr. Howlett will be the whip and he expects to have as guard Charles Tuppen, winner of the coach horn blowing competition at the London International Horse Show in 1909 and 1910. With Mr. Howlett on one end and Mr. Tuppen on the other the Magnet will be manned by two holders of the world's records, as the trotting horse men would say.

UHLAN PULLS A WAGON IN 2:02¾.

Great Sport at Cleveland Matinee on Saturday, July 9.

The greatest afternoon's sport in the history of the Gentlemen's Driving Club, was the general verdict passed out by 1500 spectators that were present at the Field Day of the Forest City Live Stock and Fair Company, last Saturday, says American Sportsman.

From the opening of the exercises at 1:00 o'clock until the conclusion at 5:30, there was not a dull, listless moment, as the association had provided a combination orchestra that between heats furnished very enjoyable music, both vocal and instrumental.

Naturally the chief attraction was the fact that the great trotter, Uhlán 2:02¾, with owner, C. K. G. Billings up, was to make an effort to beat 2:10 in wagon. No one in the crowd entertained the least idea that the son of Bingen 2:06¼ would have any difficulty in negotiating the distance quite a degree faster than the time set, the question was, how much faster?

Numberless parties made predictions; the most sanguine had him down for a mile around 2:04, while others thought that 2:06 would be quite an achievement for him at this season of the year. The result was, that everyone was surprised and very agreeably so; in fact, quite a few well-posted horsemen afterwards stated that Uhlán 2:02¾ could in all probability have shaded his professional record a fraction, had Mr. Billings entertained the faintest idea how good he really was, and moved him over to the first quarter at a faster clip.

Uhlán is indeed a wonderful horse and if he meets with no misfortune and the chance is given him of trying for a reduction of his sulky record, the present low mark for geldings, held by Major Delmar 1:59¾, is sure to be surpassed.

When Mr. Billings appeared on the track with his \$35,000 purchase, it was the signal for much applause, and both owner and horse showed their appreciation of the good wishes of the spectators.

At the first score the word was given and the handsome black gelding started on his mile. It appeared as though Uhlán was not going at a very stiff clip, so effortless was his stride. But the time at the quarter, which was 32 seconds, indicated that he was a deceptive gaited individual indeed. Down the back stretch he seemed to be veritably flying, reaching the half in 1:02, the second quarter being at a two-minute gait. At this point, Mr. Billings started to ease up on Uhlán a trifle, just to protect him in negotiating the turn, yet his speed was not diminished much, as his time for the third quarter was 31 seconds. Now everyone was in a momentary state of excitement, awaiting the appearance of Uhlán at the head of the stretch, and in almost an instant they were given the pleasure. With machine-like rapidity the grand gelding made the turn and started down the straightaway for the wire.

His finish was magnificent, and, in fact, he was going with apparently so much ease to himself that Mr. Billings, perhaps unconsciously flirited his whip in the air, yet the effect was instantaneous, as the gelding went past the stand at a faster clip than he had shown during any part of the journey. The time for the final quarter was 29¾ seconds and for the mile 2:02¾, a new world's record for trotters to wagon. The performance was a wonderful one and greatly appreciated by both Mr. Billings and the large crowd present.

The nine contests on the card were especially interesting. In the first, six starters appeared and all performed very nicely, the duel between Albert W. 2:20¼ and Thelma 2:24½ was a very exciting one, both horses being under a hard drive through the stretch in both heats and finishing heads apart.

Event number two was a professional one, and the good gray trotting stallion, General Miles, with owner H. A. Watterson up secured a new record of 2:13½ in winning the second heat.

Three trotters and three pacers furnished the sport in the next contest and Lydia Curzon (3) 2:25 with John Ray of "Hot Old Time" fame, doing the driving, won the first ribbon by stepping the second heat in 2:16½.

DeWitt 2:08¼ defeated Turley 2:07¾ and Berta Mac 2:08 in both heats of the fourth race, by a close margin.

The free-for-all pace which was expected to be extremely interesting, proved the reverse, owing to the unsteadiness of Evelyn W. 2:08¼ and Morning Star 2:04. When the word was given in the first heat, the last named horse was several lengths back, but going around the first turn, passed Evelyn W., who had gone to a break. Baron Grattan 2:03¼ in the meantime was pacing fast his first quarter being in :31¼ and the half in 1:02½. At this point Morning Star moved up, the little pony having stepped the half in 1:01½. The two veterans were about on even terms at the three-quarter pole in 1:35, when the Star Pointer 1:59¼ gelding again made a break, which left Baron Grattan in command, as Evelyn W. again made a mistake. The next heat was considerably faster, although the same pair were again unsteady, yet they did not lose so much as in the previous heat; The Spy mare showing lots of speed after striking her gait and almost nosing Baron Grattan out at the wire.

Tolling Chimes 2:23½ and Carrie Mac trotted two close heats, the former winning and in the last pacing event, Anna Brown (3) 2:24½ defeated the two

ROD, GUN AND KENNEL

CONDUCTED BY J. X. DeWITT.

AFRICAN GAME FOR ARIZONA DESERTS,

Major Frederic Russell Burnham, a one-time resident of this valley, and the personal friend of a great many people still living here, states the Phoenix, Arizona Republican, recently wrote an article on the feasibility of transplanting African game animals.

It voices the opinion that many game animals may be introduced into the southwestern part of the United States without interference with the stock interests, either by killing livestock or appropriating its forage, and that these animals, if transplanted here, would thrive as well as in their native land. Congressman Basard of Louisiana having been inspired by Mr. Burnham's article, has introduced a bill designed to put his recommendation to a practical test, and Major Burnham was recently in Washington for the purpose of backing up his story before the congressional committee. Should the bill become a law Arizona would be much interested, and whether it does or not, the opinion of Major Burnham on the subject is interesting. It is reproduced in full:

"There is in Africa a wonderfully varied range of interesting animals. Most of the desirable ones could easily be introduced into our own southwest. They would multiply where our own domestic animals cannot live. Vast tracts of our lonely deserts could be teeming with life interesting, beautiful, harmless, very useful for food and leather, displacing not a head of our cattle or other domestic stock, offering a grand hunting ground, a true pleasure land to all lovers of animal life.

Throughout all the foothill region and far south, into Mexico, the hushbuck would thrive. It is mostly a browsing animal about the size of our deer; one variety has peculiar white markings, like a harness, and it is called the harness buck; the horns are slightly spiral, measuring about fifteen inches in length. Great skill is required to stalk it, and a quick, sure shot when found, or it will escape every time. Its flesh is of a very fine flavor, and its hide makes one of the strongest leathers known. It is commonly used by the Boers to make forelashes on their immensely long ox-whips and stage-whips. Another possible importation is the oribe, a marvelously swift and graceful gazelle, weighing about 30 pounds, which ranges over the drier regions of Africa, especially in the north. The gemsbok, called the oryx in the north, is a much larger animal, which is equally adaptable to conditions in this country. Its marked characteristic is perfect, straight, tapering black horns, that reach a length of 36 to 40 inches. The buck weighs from 200 to 250 pounds, and will fight savagely when hard pressed. It has been known to kill a lion with its dagger-like horns. The gemsbok is a true game animal, and can live out on the desert a hundred miles from water. Its eye-sight is wonderfully strong, so that it is exceedingly difficult to stalk. Its meat is well flavored, and its hide equal to the best calf. The gamshok should have for a pal on our plains the speedy sesipe. I think most of the hunters of South Africa are well agreed that the sesipe is the fleetest antelope known. Some swift horses are bred in South Africa, but it is a rare one that can outfoot this game. The Posselt brothers had the only horses in Rhodesia that I ever personally saw run down a sesipe.

The springhok, that corresponds to our pronghorn, is readily bred. It is a beautifully marked antelope, and exceedingly agile. Often a whole herd in running will give a series of marvelous bounds several feet high, and, it may be, 30 feet span, apparently for sheer joy in the sport. A wagon road across the veldt will almost always tempt them to show how far they can leap. The Boers on the farms now preserve them, and have a series of great hunts every year, coming with their families and wagons and making a picnic of the chase, each farmer taking only what he needs, or what the herds can well spare, to avoid overstocking. In the hilly country the roihuck and duiker, as well as the quick darting stembok, add variety to the small game, all successfully preserved now, and adding to both the food supply and the charm of life in the African veldt.

East Africa, broadly viewed, seems designed by nature as a vast game preserve, and should be held largely with this aim in view, for the greater part of the country is of no value for settlement. The English government, on the strong advice of its local officials, has set aside a domain that shelters everything—the elephant with his valuable ivory, even the lion. Yet these officials, almost to a man, are skilled hunters and fond of sport. But they restrict themselves as well as others, and allow in no part of the country indiscriminate slaughter. Possibly from this preserve we may, at some future time, be allowed to bring enough specimens to start a herd in our own country. We, too, have an immense area, fully 1500 miles long and 1000 wide, that would hold countless thousands of rare game to add greatly to our national wealth, and furnish a reserve food supply.

Take, for example, the giraffe, which is a browsing

animal, living almost exclusively on a thorny scrub, like the mesquite. Its flesh is very palatable and its hide extremely tough and serviceable, making the favorite lash of the Boer, and a shield for the Somali warrior that no spear can pierce. This picturesque and harmless animal would thrive from the borders of Nevada to Texas, and far into Mexico. No enemy save man would touch it. A full-grown animal weighs over a ton, and must stoop his towering head to feed from your hand at the second-story window of a good-sized house. In contrast, there is that little fairy antelope, called the dick-dick, with sharp hoofs the size of a dime, and jet black horns about an inch and a half long. It weighs about 15 pounds and stands a foot high. It is easily tamed, and its flesh is of delicate flavor. In South Africa it goes by the name of nosebuck, as its upper lip is prehensile, though it is a true antelope. It would thrive certainly on the cactus patches in our southwest.

There is further the lordly eland, weighing from 800 to as high as 1500 pounds. It can go great distances from water, and would help stock many an arid range if given the chance. On our cliffs and mountains the clipspringer would be perfectly at home, and think he was again in his own Rhodesia or Transvaal. Its peculiar hollowed hoofs enable it to cling to a pinnacle of rock that would baffle a wild cat or even a goat. It weighs about 40 pounds. Its hair is hollow and very springy, making excellent paddings for saddles, and its flesh is delicate meat. Like the gemsbok, it would be an excellent curative for weaklings if they hunted him in his natural surroundings. Mr. Warthog, big and ugly, would be quite happy and most useful in the everglades or swamps of the south. Many beautiful and harmless waders, flamingoes, plover, francolins, cranes, herons, and certainly the royal bustard, could be introduced through all our southern lands very profitably.

In short, Africa is a wonderland of animal life to draw from. We can exclude its venomous reptiles and insects, and take the useful animals that have worked out from a hard environment a way to survive. By transportation to our land they would be delivered from their chief natural enemies. To this new world were brought the ass, the cow, the horse, sheep, goat and hog. All of these ran wild at once and thrived, except the sheep, which is and always was a mollycoddle. Camels, valuable for both flesh, milk and hair, grew wild in Arizona from a government herd until an enterprising Yankee rounded up every female, old and young, shipped them east and sold them to a circus. Otherwise we should have had good-sized herds long ago, and made use of them, as the Australians have, if we were equally enterprising. The Cape buffalo would thrive also, but might be considered too fierce for the rising generation to play with. Any one hunting him will not complain of a dull time. Its flesh is very good eating, and its hide much better than that of an ox. When a Boer wants a good pair of shoes he tries, if possible, to have the soles of buffalo hide.

The zebra would dot our plains with color, if we gave it the chance, though from experience, I do not think it a valuable animal either to work or ride, and its hide does not make a leather of any value. Its flesh is good to eat, and it is one of the most beautiful of all the game animals.

These are only a few of the animals and birds that might be introduced into our own vast solitudes, where, for hundreds of miles, can only be seen a lonely raven or solitary coyote. African game lives ever in dread of attack. It is more savage than lions, crocodiles in every stream, eagles and vultures that prey on the young, pythons beside the trails, poisonous snakes and other foes too numerous to mention. Yet millions survive and endure further the scourge of droughts and the hardships of the desert. Why, then, should these hardy game animals not thrive and multiply in a country exempt from these perils, with a climate corresponding exactly in range to that of their native land? We ourselves are the only reason why none of this precious game can ever live in our wild plains. So intent are we on destruction that we have become the wonder of the world. We have dynamited our fish, killed all our buffalo, carried off even his bones in train loads, then came back with herds of cattle, tramped out and ate out the finest natural grass ever known. When it was eaten level with the ground, for fear it might, with its great recuperative powers, renew itself, we have put that curse of God, the sheep, to tear it up by the roots and gnaw to death every little shrub left by the cattle. I have seen forest fires 40 miles wide burning in the Sierras to make early grass for herds of sheep. If it were known that a herd of eland were on the Rio Grande, a thousand guns would be after them and their hides sold to the nearest tannery; even a rare bird would surely be slaughtered. Again and again I have known of individuals trying to introduce useful birds and animals; their fate is always the same. Only a national law and a changed public opinion can make it possible to ever either save what animal life we have or introduce new and valuable additions.

The man with a natural and wholesome love for

sport and all forms of sturdy life is confronted by the ruthless pot-hunters, who gather the eggs and feathers of every bird that flies, and trap, poison and kill every animal within reach for the immediate gain. To this class must be added a small number of simply destructive men who kill and kill and let the game rot where it falls; men who use a stick of dynamite to get a mess of trout, killing one hundred and catch-jug may be three or four. All these men naturally hate game laws. Still another class looks upon all sport and pastime, especially hunting and fishing, as so much time wasted. I remember an old farmer in Iowa saying he would be glad when the last duck was shot and the last fish caught, as then, maybe, he could get his boys to attend to the plowing. Well, he has his wish. His house now stands where it did in my boyhood. Not a duck, nor a goose, nor a plover ever passes by. Scarcely a bird, save the ominous raven, ever breaks the silence. The prairie chicken and quail are all killed; they sometimes ate the corn. The once clear stream is now the wallow of his favorite breed of hogs. Everything is as he planned it. Hogs and corn, barbed wire, more hogs, more corn. His wife is dead, his boys long years ago left the farm. His one happiness is when he goes into the hog pasture and calls "Suke, Suke, Sook, Sook," in quavering voice, more dismal to hear than the caw of the crows. Naturally he is against any game laws, and will poison the first covey of quail that crosses his cornfield. Another element that opposes every form of hunting and fishing is the supersensitive people who are teaching the rising generation that all life is sacred and that animals should not be sacrificed to the demands of man. These people would find in India this conceit of protection to life carried out to the full. Even the vermin that infest the natives may not be killed. When they become intolerable they are picked off and laid in the hot dust, their belief being that if God intended the pests to live He would cool the dust; otherwise they perish at His will, not theirs.

In the animal world nature seems to work out the essential end by means apparently harsh. If it were not for the natural enemies of the great game herds, they would increase so fast that there would be no food supply, and starvation would be their end. The greater part of the grass-eating animals are not long lived. With the heat of summer the old must die of thirst and weakness. But as it is now arranged, the lion and leopard and many other enemies kill in one instant, or, at most, in a short, sharp fight, in which the animal can feel no pain. Its not yet emaciated body gives food and life to others. Furthermore, it is among the sick and weak that disease in spread, and infection there may reach a point that endangers the whole healthy herd. Always when some unnatural increase occurs, some disease sweeps them off. So even the lions and tigers, vultures and eagles, serve a merciful and proper purpose. In the countries where they are found, any animal that is born deficient in its faculties, or becomes ill or aged or wounded, is at once usefully destroyed as a means of preserving the high average of the herd."

SAN FRANCISCO FLY-CASTING CLUB.

San Francisco Fly-Casting Club members cast off the initial contests in the class series for medals Saturday afternoon and Sunday forenoon last. The attendance was rather limited, and for good cause; the attractions of numerous troutng resorts could not be denied. The absentees, however, will make up back scores later on.

Computation of the averages in the preliminary five contests resulted in the following placement of the contestants:

Saturday contests: Champion classes—No contestants up to championship form.

First classes—Long-distance casting, T. G. Kierulff, E. A. Mocker; accuracy casting, T. C. Kierulff, F. A. Webster, G. C. Edwards, C. G. Young, F. H. Reed; delicacy casting, T. C. Kierulff, E. A. Mocker, F. A. Webster, G. C. Edwards, C. G. Young, F. H. Reed; lure or bait casting, E. A. Mocker.

Second classes—Long-distance casting, L. G. Burpee, F. A. Webster; accuracy casting, E. A. Mocker, L. G. Burpee; delicacy casting, L. G. Burpee; lure casting, T. C. Kierulff, G. C. Edwards.

Novice class—Lure casting, L. G. Burpee, F. A. Webster, C. G. Young, F. H. Reed, F. J. Cooper.

Sunday contests: Champion classes—Long distance casting, J. B. Kenniff; accuracy casting, T. C. Kierulff, H. B. Sperry, Charles H. Kewell, Carlos G. Young; delicacy casting, T. C. Kierulff.

First classes—Long-distance casting, E. A. Mocker, T. C. Kierulff, Austin Sperry; accuracy casting, J. B. Kenniff, C. A. Kierulff, Dr. W. E. Brooks, F. M. Haight, H. C. Golcher, F. H. Reed; delicacy casting, J. B. Kenniff, H. B. Sperry, C. H. Kewell, C. G. Young, Dr. W. E. Brooks, H. C. Golcher, F. H. Reed; lure or bait casting, J. B. Kenniff, E. A. Mocker, T. C. Kierulff, Austin Sperry, H. B. Sperry.

Second classes—Long-distance casting, H. B. Sperry, C. H. Kewell, C. A. Kierulff; accuracy casting, E. A. Mocker, James Watt, F. J. Cooper; delicacy casting, E. A. Mocker, A. Sperry, C. A. Kierulff, James Watt, C. G. Young.

Novice class—Accuracy casting, Austin Sperry; lure casting, C. H. Kewell, C. A. Kierulff, Dr. W. E. Brooks, H. C. Golcher, F. J. Cooper.

The contests in the accuracy and delicacy events promise to be close. This style of rod-wielding is

what counts on a trout stream. The results of the two days' fly-casting follow:

Saturday Contest No. 6. Classification series, Stow Lake, July 16, 1910. Wind, southwest. Weather, fair. Judges, C. G. Young, E. A. Mocker, Geo. E. Edwards. Referee, F. H. Reed. Clerk, E. O. Ritter.

	1	2	3	4	5		
		a	b	c			
E. A. Mocker	102	97.7	97.40	98.10	97.55	98.4	80
Geo. C. Edwards		97.14	98.16	98.10	98.13	93.6	97
C. G. Young		98.11	98.48	98.30	98.39	97.8	96
L. G. Burpee		96.9	95.48	98.30	97.9	74.1	60
F. H. Reed		98.10	98.8	99	98.34		

Sunday Contest No. 6. Classification series, Stow Lake, July 17, 1910. Wind, southwest. Weather, fair. Judges, C. H. Kewell, A. Sperry, F. H. Reed. Referee, E. A. Mocker. Clerk, E. O. Ritter.

		a	b	c	
E. A. Mocker	103	99.4	98.44	99.50	99.17 98.8 54
C. G. Young		98.14	98.24	98.50	98.37 93.2 114
Austin Sperry	108	98.1	96.40	97.40	97.10 97.9 113
Dr. W. E. Brooks		98.12	97.36	99.10	98.28 97.2 113
C. H. Kewell		92	97.13	97.52	98.10 98.1 96.6 114
F. H. Reed		99.1	99	99.40	99.20 75.7
H. B. Sperry		94	99.2	98.40	98.40 98.40 94.4 87

NOTE: Event 1—Distance casting, feet. Event 2—Accuracy casting, percentage. Event 3—Delicacy casting, a, accuracy percentage; b, delicacy percentage; c, net percentage. Event 4—Lure casting. Event 5—Long distance lure casting, average. Fractions in Event 2, fifteenths; in Event 3, sixtieths; in lure casting, tenths.

MARIN KENNEL ASSOCIATION SHOW.

Awards.

St. Bernards (Rough coated)—Challenge and winners dogs—1 J. W. Alexander's Linda Vista Eboracum. Junior puppy bitches—1 A. L. Hamilton's Queen Ann. Graduate bitches—1 Queen Ann. Challenge bitches—1 W. R. Trusty's Katrina. Winners bitches—1 Queen Ann, res. Katrina.

St. Bernards (Smooth coated)—Maiden and winners bitches—1 Mrs. N. B. Smith's Juno.

Special—Best, Linda Vista Eboracum.

Great Danes—Challenge and winners dogs—1 J. Snook's Ch. Dick. Maiden and winners bitches—1 J. Snook's Lady Speckles.

Special—Best, Ch. Dick.

Bloodhounds—Challenge dogs—1 F. P. Howard's General. Challenge bitches—1 F. P. Howard's Queen. Winners dogs and bitches—1 General, res. Queen.

Special—Best, Ch. Dick.

Greyhounds—Challenge and winners bitches—1 T. J. Cronin's Ch. Forepaw.

Special—Best, Ch. Forepaw.

American Foxhounds—Maiden dogs—Absent Carroll Cook's Dewey. Graduate and winners dogs—1 J. H. Olcovich's Dexter.

Special—Best, Dexter.

Esquimaux—Senior puppy dogs—1, 2, Mrs. C. B. Hannum's Arctic Brother, Alaska Beauty. Graduate dogs—1 Mrs. C. B. Hannum's Brunie. Winners dogs—1 Brunie, res. Arctic Brother. Challenge and winners bitches—1 Mrs. H. B. Lister's Ursa Minor.

Special—Best, Brunie.

Pointers—Maiden dogs—1 Dr. S. Galeoto's Prince of Wales, 2 G. Borello's Duke of Lansdale. Absent, O. E. Putka's Prince K. Selling dogs—1 E. Jacopetti's Bismark. Graduate dogs (55 pounds and over)—1 H. E. Burneisher's Duke. Challenge dogs (under 55 pounds)—1 J. W. Gibb's Ch. Mike Geary, 2 F. P. Butler's Follow Me. Challenge dogs (55 pounds and over)—1 H. E. Burneisher's Duke. Winners dogs—1 Ch. Mike Geary, res. Prince of Wales. Maiden bitches—1 G. Borello's Fairfax Beauty, 2 P. K. Swan's Gyp. Absent, Dr. P. T. Botkin's Tettenhall Faskally, W. P. Taylor's Hazel Wood. Winners bitches—1 Fairfax Beauty, res. Gyp.

Specials—Best, Ch. Mike Geary. Best of opposite sex, Fairfax Beauty.

English Setters—Junior puppy dogs—1 Dr. L. W. Sprigg's Manzanita, 2 D. Weinand's Mallywd Lem. Senior puppy dogs—1 F. Giometti's Jack, 2 T. J. Blight's Silver Plate. Maiden dogs—1 F. P. Butler's Sven C, 2 Mrs. A. H. Vorrath's Pope Leo, 3 Manzanita, res. J. H. Huffman's Lucky Spot, v h c H. E. Foster's Duke, h c W. Phillips' Maggie's Bob. Selling dogs—1 D. Birnbaum's Rex Rodfield, 2 C. Luhrs' Prince L, 3 W. Phillips' Ch. Cato's Cato. American dogs—1 J. H. Huffman's Nichol Ludlow, 2 J. B. Chase's Boy Blue. Graduate dogs—1 Sven C, 2 E. Jacopetti's Fido, 2 A. Campbell's Tiverton Jr., res. Manzanita, v h c R. D. Foster's Don Lingfield, h c Boy Blue. Challenge dogs—1 V. A. Kuehn's Ch. Mallywd Beau, 2 V. A. Kuehn's Ch. Mallywd Invader. Pacific Coast Setter and Pointer Club specials—Best puppy, Invader's Rose (English setter). Best in maiden classes, Manzanita (English setter). Best in graduate classes, Manzanita. Best in challenge classes, Ch. Mallwyd Beau.

Review.

The commencement of operations in the kennel war on the Coast between the American Kennel Club and the National Dog Breeders' Association took place Saturday, July 17, at Larkspur, Marin county, Cal.

The initial bench show under the rules of the National Dog Breeders' Association was held by the Marin Kennel Association and, from all appearances, was a successful function throughout. During the day there was an attendance of over 1000 visitors and exhibitors, among these the fair sex numbered more than half.

Two hundred and fifteen dogs were chained to pegs under the shelter of trees in a beautiful grove. The general class of the exhibited canines was up to any show yet given in San Francisco. Many of the local prize dogs were shown. The general ensemble of the show was, by far, the best yet coming under our notice at an open air show in this State.

During the day a refreshing luncheon was served by the matrons and misses—a committee of the whole composed of exhibitors and fanciers.

The support and success of this show is looked upon as a significant indicator to the current of opinion and affiliation with the National Breeders' Association of not only local kennel circles, but throughout the Coast as well. Particularly so from the fact that in the numbers of entries and general ensemble, it is claimed, the Marin show outshines the Santa Cruz two-day show, almost two to one.

The general class of the dogs exhibited was, comparatively, equal to any show yet held in this city or vicinity. Among the dogs shown were eighteen A. K. C. champions. The total number of dogs entered was 241, of these 13 were absentees and 13 entered for exhibition only. The list of specials included a number of valuable cups and trophies, nearly every breed being provided for as will be noticed in the list of awards.

The list of show officials is the following: H. B. Lister, president; Mrs. Sydney St. L. Cavill, first vice-president; Mrs. Clarence Hannum, second vice-president; J. W. Threshie, secretary; Franklin P. Bull, treasurer.

Honorary promotion committee—J. H. Jones, chairman; J. L. Park, V. A. Kuehn, C. W. Riffe, D. P. Cresswell, G. W. Ellery, William Blackwell, William Ellery, J. W. Matthews, W. V. N. Bay, A. L. Stuart, Valentine J. Ruh, D. C. Brown, Fred P. Butler, Thomas Murray, Harry B. Blatchley, George B. A. Gray, Dr. J. Auburn Wiborn, W. G. McMahon, E. M. Tidd, W. E. Grump and Clarence Hannum.

This committee is composed of about one-third the membership of the N. D. B. A., and was added

to the conventional list of show officials as a direct challenge to the A. K. C., in the face of threatened discipline for their temerity, in having the manhood to move for the conduction of Coast kennel affairs on acceptable lines and in the interest of fair play and home rule as opposed to misrepresentation, program, kennel politics and double-edged interpretation of rules.

Bench Show Committee: Henry B. Lister, chairman; Mrs. Clarence Hannum, Franklin P. Bull, Sydney St. L. Cavill.

Judges: P. M. Wand, Esq.—St. Bernards, Newfoundland, Esquimaux, Great Danes, Borzois, Deerhounds, Greyhounds, Foxhounds, Chesapeake Bay Dogs, Retrievers, Irish Water Spaniels, Beagles, Whippets, Chow Chows, Dalmatians, Chihuahuas, Italian Greyhounds, Veteran, Ladies Variety, Champion Variety, Sporting Variety Classes, and Unclassified Specials.

W. E. Chute, Esq.—Mastiffs, Bloodhounds, English, Irish and Gordon Setters, Clumber, Field and Cocker Spaniels, Dachshunds, Collies, Old English and Belgian Sheepdogs, Corded and Curly Poodles, Bulldogs, Pomeranians and Miscellaneous Classes.

G. C. Haliwell, Esq.—French Bulldogs, all Terriers, English and Oriental Toy Spaniels, Pugs, Toy Poodles and Terrier Variety Classes.

Brace and team variety classes and best dog of any breed was decided by all three judges acting together.

Veterinary Surgeons—Dr. C. F. McCarthy, V. S.; Dr. L. E. Tuttle, V. S.

This first show on the Coast under N. D. B. A. rules was a three-point one, a fact that the club members and exhibitors may refer to with pride.

The awards of the judges were well received. It was a matter of comment about the show rings that there was no "kicking," something surprisingly unusual in dog show annals. All championship points won at American Kennel Club shows by winning dogs here were allowed toward a National Dog Breeders' Association championship. This recognition has elicited many encomiums as a showing of sportsmanship of the right spirit and not a dog in the manger policy.

English setters, Irish setters, Gordon setters, pointers, Irish water spaniels and collies were the largest breed entries. The German police dogs, good looking specimens they were, too, and the first shown on the Coast, were the center of interested groups. Fox terriers, Boston terriers, Airedale terriers, although not quite as numerous as usual, were an exceptionally good lot. One Scotch terrier exhibited was a fine specimen of a breed that should be encouraged here. The toy varieties were also up to the standard of past shows.

Toys were not very well represented, they seldom have been here in past years, what were shown were excellent in quality however.

The large breeds were few, the falling off in big dogs has been a gradual one for several years. Two fine bloodhounds were exhibited, the best shown in this vicinity for years. One of the best greyhounds on the Coast was in the lists.

The numbers of dogs entered (241, total of class entries 317, 144 exhibitors) by breeds were:

English Setters	37	Collies	26
Pointers	11	Airedales	12
Gordons	7	Bull Terriers	11
Irish Setters	23	Boston Terriers	11
Cockers	33	Bulldogs	5
Dachshunds	6	Fox Terriers	10
Irish Terriers	9	Scotch Terriers	2
Toy Poodles	2	Japanese Spaniels	1
Chihuahuas	2	St. Bernards	5
Italian Greyhounds	5	Great Danes	2
Greyhounds	1	Am. Foxhounds	2
German Sheep dogs	2	Bloodhounds	2
Curly Poodles	1	Dalmatians	3
Esquimaux	4	Miscellaneous	1

AT THE TRAPS.

The recent midsummer prize shoot of the Vancouver, B. C., Gun Club, at the Richmond mond trap grounds, was participated in by forty-four shooters, among them a number from Seattle and other points below the border line, all prominent northwest shooters.

Robinson of Seattle won amateur high average 161 out of 200. High professional average was shot by H. E. Poston of San Francisco 183 out of 200. He shot the only straight in the 25 target championship race. Lee Barkley broke 24, Ralph Miller was high amateur in this match, but was not eligible. Sage, a Vancouver member, won the match with 21 breaks. Shooting conditions were very unsatisfactory, at that, the visiting shooters, both amateur and professional seem to have led in the averages.

Nearly seven thousand hords were broken during the afternoon. Team honors were divided between Ladnor and Seattle shooters, each breaking sixty targets out of seventy-five shot at. The scores follow:

Targets—	10	15	20	50	15	20	25	10	15	20

Forty-five shooters took part in the West Seattle Gun Club's annual merchandise shoot. Had it not been for the strong north wind which blew right in the shooters' faces and caused the targets to go high and twist, duck and perform gymnastic feats in the air that would be impossible for a live bird, the scores would have been much better than they were.

L. H. Reed, 96 out of 100 targets, Lee Barkley, Jack Forbes and George Garrison were the professionals present. Reed made the high score and won first prize in his class. Barkley and Forbes tied for second.

Ike Fisher was the lucky amateur. He won the Selby watch event and first prize in Class A after a spirited race with Randless. They tied on 91 out of a possible 100. In the first shoot-off at 15 targets they both scored 14. In the next shoot-off at 10 targets, Ike made a straight score, while Randless lost the first one he shot at. Miller and Robb were tied for second place in this same class. Robb forfeited by not staying to shoot the tie off.

E. Cooper won third; Stewart, fourth, and Dahl fifth in this class.

In Class B, Wood won first after shooting off a tie for the place with Berger. Berger won the Ballistite cup event. J. Reid was second all alone in this class; O. Peterson was third, Nelson fourth and Smith fifth.

Babcock was high man in Class C, therefore he will have a new hunting coat to wear next fall. Blood was second, Gardner, third; "Bob," fourth and Donald fifth in this class.

Knox tied in C Class for second place, and J. Peterson for third place and they both forfeited by not staying to shoot off the ties.

The scores follow—Event 2 Ballistite cup, Event 3 Selby trophy—

[Continued from page 7.]

southern mares, Adele Ross and Dixie Lou the first trip being in 2:15.

Frank Jones, of Memphis, won the eighth event with his Ohio bred trotter, Lady Willow 2:24½, the two heats being in 2:17¼ and 2:18, the first one, however, was too close for comfort, as Mr. Devereux with Princess Floy, was hut a very few inches back. Antell scored a clean-cut victory in the last event and trotted nicely all the way.

Two trotters and two pacers were given records, also during the meeting, without calling for their full speed. Mazda, a two-year-old filly by Momaster, trotting in 2:29¾, May Leaf by Gold Leaf 2:16½ in 2:27¼, while Argot Del and Society Del both mares by Delmarch 2:11½ paced in 2:20¾ and 2:24¼, respectively.

The world's record for trotters to wagon without a pace maker in front, which was set at 2:02¾ by Uhlán 2:02¾ with his owner, C. K. G. Billings up, concluded the extremely pleasant afternoon's program.

THREE SONS OF ELECTIONEER.

Fifteen years ago, when the Electioneer boom was at its height, few breeders or students of trotting pedigrees would have predicted the three sons of the hero of Palo Alto that would retain popular favor, and certainly not two of the three most popular lines leading to Electioneer today, writes Raymond in the Horse World. There will be few to dispute the statement that the three sons of Electioneer whose families are highest in public favor just now are May King, Conductor and Expedition. The last named horse, on account of his superb inheritance through his dam, has been highly regarded from his colthood up, hut for a considerable period of time other sons of Electioneer over-shadowed him in public estimation. His advance in favor, however, has been steady, and as a sire of speed he for outranks May King and Conductor. May King, however, through his son Bingen and Conductor through his son Walnut Hall, seem to have each established a family that is destined to make each of those sons of Electioneer potent factors in the history of the trotter. And this brings the subject back to its start, for certainly neither of these horses was regarded as among the very great sons of Electioneer at the period in which the breeding world was Electioneer crazy. May King was a good-looking little horse, a mere pony, had not demonstrated himself more than ordinarily fast, and while from a record mare (one of the best in her day), she was still one that was not bred in popular or even desirable lines of blood, she being a daughter of Alexander's Norman, whose sire, the Morse Horse, was of practically unknown breeding on one side hut with some Messenger blood on the other. Conductor was a faster trotter than May King and a good racehorse, but of unfashionable color, being a gray. Like May King, he was "off color" in his maternal breeding, as his dam, Sontag Mohawk, was by Mohawk Chief, a non-standard son of Hambletonian 10, that never produced any speed, and his second dam was Sontag Nelly, by Toronto Sontag, a son of the never-fashionable Toronto Chief. Sontag Mohawk, however, was a great mare, producing a long list of fast performers, Conductor, with his record of 2:14¾, being the fastest. As a sire, however, Conductor did not shine conspicuously, but when mated with Maggie Yeaser, a daughter of Red Wilkes, whose dam was a daughter of Almont, the combination of blood lines seems to have been just right, for the resultant foal was Walnut Hall 2:08¾, one of the popular sires of the present decade and one whose family is destined to grow in greatness as the years roll by. With May King, the same magic combination seems to have been struck when a mare of Wilkes and Almont blood was mated with him. Young Miss, his dam, was by Young Jim, son of George Wilkes, dam Miss Mamhrino, by Red Wilkes, second dam Miss Clark by Alric, son of Almont. Students of pedigrees may see a coincidence in the blood combinations which produced two such sires as Bingen and Walnut Hall. Each was sired by a son of Electioneer, from a mare possessing an admixture of the blood of Red Wilkes and Almont—in Bingen's case with an additional cross of Wilkes blood through Young Jim. At any rate, this combination seems to have given us two descendants of Electioneer each of which has established a family that will take a prominent position among the great trotting families, and the coincidence attending their inheritance is worth some serious attention at least.

NUTWOOD 2:18¾.

Nutwood was bred at famous Woodburn Farm, Spring Station, Kentucky, and foaled in 1870. His sire was Belmont 64, son of Alexander's Abdallah 15. His dam was Miss Russell, dam of the noted trotting champion Maud S. 2:08¾, etc., by Pilot Jr. 12; second dam, Sally Russell, thoroughbred, by Boston, winner of a greater number of long distance races than any other horse ever produced in America; third dam, Maria Russell, by Thornton's Rattler, a son of Sir Archy; fourth dam, Miss Shepherd, by Stockholder, a son of Sir Archy, etc. Boston was by Timoleon, a son of Sir Archy, and his dam was by Ball's Florizel, a son of imported Diomed.

Miss Russell was evidently a natural trotter, hut had no record. She was trained some as a three-year-old and trotted a trial mile in 2:44. She was foaled in 1865, was mated with Belmont 64 in 1869 when

four years old, and produced Nutwood, her first foal in 1870. When he was a yearling Nutwood was sold at public sale for about \$500, if memory is not at fault. The purchaser was J. W. Knox, then a glass manufacturer of Pittsburg, Pa. Not long afterwards Mr. Knox decided to sell his interests at Pittsburg and go to California. A Western paper was authority for the statement that Mr. Knox went to a friend the night before the public sale of his horse stock was to take place and said to him that while every animal was to be sold without reserve, there were a few which he wished his friend to keep his eye on. Among them there was a certain colt and filly. The friend bought the filly for \$140 and the colt for \$170, paying his own money for them.

A day or two after the sale this friend told Mr. Knox that he would keep the filly at \$140, hut wanted Mr. Knox to give him \$170 that he paid for the colt and keep the latter. Mr. Knox tried to persuade his friend to keep the colt. He assured him that the colt was a wonder, would become a very valuable horse and that it would be the greatest mistake of his life if he did not keep him. Mr. Knox's arguments made no impression on his friend, so he paid the latter \$170 and took the colt. This colt was Nutwood.

At maturity Nutwood was a well proportioned handsome horse 15-2 hands high at the withers, about 16 hands at the hips and weighed in stud condition 1160 pounds. He was a dark chestnut in color with an elongated diamond shaped spot of white in the forehead and left hind heel white. Nutwood's first appearance in a public race was at Cleveland, O., Sept. 13, 1876, in the 2:40 class trot with six starters. It was a four-heat race. Nutwood finished third in the first heat in 2:39, won the second heat in 2:37, finished second the third heat in 2:37 and was fifth the fourth heat in 2:37¼, which gave him second money.

Three days after the above race he started in the 2:50 trot over the same track. There were five other starters in the race. Nutwood won the first and second heats in 2:38½, 2:40¼ respectively. He finished second the next two heats in 2:37, 2:35 and won the fifth heat in 2:31, which was four seconds faster than any other heat in the race. The effort evidently was rather too much for Nutwood, for the following week at St. Petersburg, Penn., Sept. 21, he was one of eight starters in the three-minute class. This was a five-heat race and Nutwood got no part of the money, as he stood fifth in the summary. The best that he did was to finish second one heat and the time of the winner of the heat was 2:40. Two days later, September 23, Nutwood started in a field of five at St. Petersburg, Pa. He won the fifth heat in 2:37, but lost the next three and got second money.

Nutwood's next start was at Barker City, Pa., Sept. 28, 1876, in the three-minute class. There were six other starters. Nutwood finished seventh in the first heat, time 2:38¾. He was in third place at the finish of the second heat; time 2:35. He then won the next three in 2:32½, 2:37, 2:39. Two days later, September 30, at the same place, Barker City, Pa., Nutwood won a race in straight heats, time, 2:39¾, 2:33, 2:33½. Nutwood's last race that season, 1876, was at Washington, D. C., October 25, in 2:30 class. There were seven horses in the race and the fastest time was 2:31½. Nutwood got no part of the money. He stood sixth in the summary at the close of the race.

In 1877, Nutwood was started in June and was trotted until December. His first race that season was at Pittsburg, Pa., June 11, in the 2:30 class. He won the third heat in 2:36¾ and got second money. His next start was at Grand Rapids, Mich., June 19, in a field of seven. He finished sixth the first heat in 2:33. The time of the second heat was 2:33¾ and Nutwood finished third. The next two heats were won by Nutwood, time, 2:29, 2:30¼. He lost the fifth heat in 2:32¼ hut won the sixth in 2:31½, which gave him the race, and also a reputation for endurance. His next start was at Detroit, Mich., July 3d. Nutwood finished second, the first two heats, each heat in 2:27¼ and drove the winner out in 2:27 in the fourth heat. This gave him second money.

The next race in which Nutwood started was at Marysville, Cal., Sept. 14, 1877, in the 2:27 class with four starters. Nutwood finished second, the first heat in 2:32, won the second heat in 2:30, was second the third heat in 2:31½, won the fourth heat in 2:30 and finished second in the fifth heat in 2:30½. He got second money. One week later, at Sacramento, Cal., Sept. 21, Nutwood was one of 10 starters in the 2:27 trot. This proved to be a five-heat race. Nutwood finished 4th the first heat in 2:26½, fifth the second in 2:26, then went on and won the next three in 2:26½, 2:27¼, 2:28. Nutwood started in six other races in California that season and won first money in five of them. His hardest race that season was at San Jose, Cal. He won a race in straight heats for the 2:27 class at San Jose, Oct. 3, 1877, time, 2:25½, 2:30½, 2:33¼. The next day, Oct. 4th, Nutwood started over the same track in the 2:25 class. He won the first heat in 2:25¾, was fourth the next heat in 2:25, finished second the third heat in 2:25¼ and won the next two, each in 2:26¾.

He won a four-heat race at Oakland, Cal., Oct. 9, taking first, third and fourth heats in 2:29½, 2:26½, 2:27¼, and losing the second in 2:28½. He beat the trotter St. James in straight heats in a match race at San Francisco, Cal., Nov. 10, 1877, time, 2:25¼, 2:25¾, 2:25½. His last race that season was at San Francisco, Cal., Dec. 15. It was a match race to wagon against Pat Hunt. The latter won in straight heats; time, 2:25, 2:25½, 2:25. Nutwood started in eleven races that season, 1877. He won first money in seven of them, and second money in the other four; a very creditable season's campaign.

Nutwood probably was used for stock purposes early in the season of 1878, and only started in five races during that season. His first was at San Francisco, Cal., Sept. 11, in a field of four in the 2:23 class. Nutwood won in straight heats; time, 2:25, 2:24, 2:23. The following week, Sept. 18, he was one of four that started in the 2:23 race at Sacramento, Cal., Nutwood won the first, second and fifth heats in 2:24, 2:24, 2:26½. He started in three other races that fall, won second money in one and third in the other two.

In 1879 Nutwood started in three races against other horses and twice against time. At Oakland, Cal., Sept. 5, 1879, he finished second every heat in 2:24½, 2:23½, 2:22½, and got second money. He won a free-for-all at Sacramento, Cal., the following week Sept. 13, where he lost the first heat in 2:23, but won the second in 2:20½, lost the third in 2:23¾, hut won the next two in 2:21½, 2:26. The following week, Sept. 20, he was started again in a free-for-all race at Stockton. He was beaten by St. Julian 2:11¼. Nutwood forced St. Julian out in 2:17 in the first heat and it was the fastest mile that Nutwood ever trotted in a race. October 25, 1879, he was started against time at Oakland, Cal., to beat the stallion record which was then 2:15¼. He made two trials, the first in 2:19 and the second in 2:19½. November 27 following Nutwood was started against time to heat 2:19 at Stockton, Cal. He made three trials. His time was 2:21¾, 2:21½, 2:18¾. This was Nutwood's last start in 1879.

In 1880 Nutwood was started twice. Sept. 18, 1880, he was beaten in straight heats by Santa Claus, at Oakland, Cal., time, 2:22, 2:24, 2:18. Two days later Sept. 20, Santa Claus and Nutwood again met in a race—Nutwood won first and third heats in 2:22, 2:24½, hut Santa Claus took second, fourth and fifth heats in 2:19¾, 2:21¾, 2:21. This ended Nutwood's racing career.—American Horse Breeder.

DISTEMPER IN HORSES.

Distemper, or strangles, is a disease principally affecting young horses. It is due to a germ belonging to the streptococcic group. The disease is accompanied by high fever, catarrhal inflammation of the mucous membranes, especially of the nasal passages, and as a result of this condition a discharge from the nose. There is a swelling of the lymph glands under the jaw, which later results in abscess formation.

A horse with distemper can communicate it to a healthy one.

The germs are found in the discharge from the nostrils and in the pus from the abscess which forms under the jaw and later breaks.

The majority of cases of distemper occur before the age of five years.

The constitutional disturbances caused by the shedding of the teeth, and cutting same, as well as impure air in poorly ventilated stables, over-worked and poorly fed animals, are factors that weaken the resistance and make infection possible to produce the disease.

The disease is more common in the spring and fall of the year, particularly the former, on account of the chill received as a result of the sudden changes at these seasons of the year.

The disease can also be transmitted from dam to offspring through the milk.

The animal usually develops the disease in from three days to three weeks after being exposed to the contagion.

Animals affected with distemper should not be sold. Young animals should not be brought in contact with those affected, nor watered out of the same hucket, nor come in contact with any other property until it has been thoroughly disinfected. An animal should not be castrated while suffering with strangles.

A vaccine made from the sepecific germ causing this disease is prepared in the laboratory of the veterinary department of the Colorado Agricultural College.

The vaccine is very useful in combating distemper, both as a preventive and as a cure, and promises to be of as great value as the anti-supporation vaccine made in the same laboratory from the germs which cause poll evil, fistula and wound infections.

Like the anti-supporation vaccine, to get the best results it must be used by one who is trained in the diseases of the lower animals and understands the use of vaccines on same. It is therefore advisable to have it used by a competent graduate veterinarian.

Mercury 2:20¾, by McKinney 2:11¼, won the tri-city race in which he was a contestant at the recent meeting at Belmont Park in 2:15¼ and 2:14, trotting the first half of the second heat in 1:03½ and the second quarter in 30¼ seconds. His dam is by Sultan 2:24 and his second dam was Belle Mason, by the thoroughbred, Williamson's Belmont.

THE FARM

INSPECTING IMPORTED

PERCHERONS.

Breeder and Sportsman.—Gentlemen: The Percheron Society of America has, since December, 1908, endeavored to induce the Federal authorities to furnish promptly a list of the names and numbers of all horses imported, so as to provide the Secretary with a check list with which to compare foreign certificates sent in for record. June 16, 1910, the Board went still further and urged that the Federal Government provide an inspector at ports of entry, to see whether the horses and foreign certificates agreed, and submit a report on same, immediately, to the Secretary of the association. The Government has indicated a willingness to do this, but has so far failed to carry out such a plan, and the situation is now such that the Society has found it necessary to make such inspection for identification at its own expense. This will be confined entirely to seeing whether the horses and pedigrees correspond, will be made at the port of entry by a competent inspector employed by the association, and will start at once. The Society regrets the necessity of undertaking work which the Federal Government might very properly do to help the breeders and importers, but until the Federal authorities will take charge of this, the Society must protect itself. In cases when the horses and foreign certificates do not agree, registration will be withheld until the importer straightens matters out. If he cannot, no American certificate will be issued, and the Federal Government will collect duty on the animal in question.

The establishment of such inspection at port of entry will preclude any possibility of mistake or fraud, and will materially increase promptness and accuracy in the work of the association. It will also, within a short time, enable the Society to clear most of the imported horses as soon as they land, to simplify application blanks and to cut out some of the "red tape" incident to all registration work.

The veterinary inspection has been misunderstood by many. It is merely provided for in the new By-laws, and has not yet been put into effect. The details of such veterinary examination are yet to be worked out. Some such provision is necessary for the protection of importers and breeders of Percheron horses. Eleven States now have stallion boards and several of these States have laws requiring veterinary inspection of all stallions standing for service. At present, however, these laws are not uniform, and a certificate from one State will not be accepted in another. A man may buy a stallion in Wisconsin, bearing a certificate of soundness showing that he has been inspected two weeks before by Dr. Alexander, or the State Veterinarian; yet, if this horse is taken to Illinois, he must be re-inspected before he can stand for service, and even then the horse may be rejected by some Illinois veterinarian who knows, or thinks he knows, more than the Wisconsin veterinarian. The present system is unreasonable and works a hardship on every breeder and importer. The Society desires to co-operate with the stallion boards and will do anything reasonable in work looking to the improvement of horses; but the Society, for the protection of its members, must endeavor to establish uniformity of inspection, make certificates granted in one State good in all States, and if possible, so arrange the

inspection as to have it done without unreasonable cost to the individual breeders. It will be the aim of the Society to use in each State practicing veterinarians who are recognized by the breeders and by State and Federal authorities, as competent, reliable men.

It must be clearly understood, however, that there are two forms of inspection. The first, for identification, begins at once. The other, or veterinary inspection, has not yet been started, and will not be begun until the details have been fully considered and settled by the Percheron breeders of America.

A few members have objected to the increase in fees, because the cost of recording has been advanced more on imported than on American bred horses. Such objection is questionable. Importers' papers are given precedence over all others in the Secretary's office, because of the importance of a prompt clearance at the custom's house. The inspection for identification increases the expenses of the Society, but has been found necessary, and will really benefit every man whose horses are inspected. It gives the buyer definite assurance that the certificate of registry and horse correspond, and that the animal is really imported. No other organization gives breeders such complete protection. Charging more for recording imported animals has long been the rule with the Jersey and Shorthorn associations. Imported Shorthorns must pay a fee of \$100 per head before they can be recorded in this country. If the rate on Percherons were made as high as on Shorthorns, in proportion to selling price, the recording fee would be from \$150 to \$200. The increase is very reasonable and has been made only because of the need of additional revenue for the work of the Society. The Board of Directors made the change after very careful consideration of the entire matter. Seven of the eleven members of the Board are active importers. The Society is broadening its work in behalf of the breed, and will in the future furnish its members and friends with all possible information that is of practical value. Until October 15, 1910, the fees for recording will remain as they are, so that all parties concerned have ample notice of the change.

I am sure that you will be interested in knowing that 2726 breeders are members of the Society and are transacting all their business with it. Since June 25, 1909, 730 more breeders of Percherons have become members of this association, and new applications for membership are coming in daily. The total number of members possessed by the other two associations amounts to but 261, according to their last published lists, so that 91 per cent of the men who are members of the Percheron record associations of America are members of this Society.

This letter will give you a more comprehensive idea of the work we are undertaking and I hope you will give the public the benefit of this information through the columns of your publication.

I shall be glad to be of service to you at any time. Yours truly,

WAYNE DINSMORE.

SOME IDEAS FOR THOSE

WHO FEED LAMBS.

The only kind of a lamb that a man wants to feed and finish on grass, is a heavy shearer of the Merino type. And the heavier the fleece, the slower the fat will go on. But at the same time they will give as large a return for feed consumed as the open wools. When a feeder crowds to the limit with grain, he is in constant danger of overfeeding and loss. So if hay and fodder, or corn stover are abundant, it is best to limit

The Most Perfect Colt Bit Made EVERY COLT

Should wear the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE** from the very beginning of its training, as it is the easiest, most comfortable and most humane bit on the market. With its use the colt will not fret, worry, pull, toss its head and get into the bad habits so often caused by the use of other bits and checking devices that inflict punishment or keep it under too much restraint, and at the same time you will have absolute control over it at all times.

The **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE** is in a class by itself. It is the only Checking Device or Bit sold on a positive Guarantee **TO REFUND YOUR MONEY IN CASE IT FAILS TO DO ALL THAT WE CLAIM FOR IT.** If the Ellis Improved Hutton Patent Checking Device is used on a colt from the very beginning of its training, we guarantee it will never get any of the following bad habits.

If, however, your colt or aged horse has acquired the following bad habits, the Ellis Improved Hutton Patent Checking Device will correct them, and if it fails we will refund your money.

GUARANTEED to stop your horse from Pulling, Tossing the Head, Tongue Lolling, Side Pulling, Bit Fighting, or any other bad habits caused by Bits or Checking Devices that inflict punishment, or keep a horse under too much restraint.

PRICE \$5 for complete Device. Mailed free to any part of the world when cash accompanies order.

BEWARE of worthless infringements and Checking Devices claimed to be as good as the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE.** Illustrations of some of these check bits and devices are made to look as near like the genuine as possible, but the article itself is very different, and will not give the same results.

ALL GENUINE are stamped **G. S. ELLIS & SON** on the supporting strap and back part of Check Rein. Any that are not so stamped are not genuine.

FREE—Our new Catalogue No. 45, with wholesale discount sheet, the largest, finest and most complete Horse Goods Catalogue ever published, is ready for distribution. It contains illustrations, descriptions, and guaranteed to be lowest prices on Harness, Horse Boots, Horse Clothing and Turt Goods of every description. Every horseman should have a copy. You can save many a dollar during the season by buying direct from us, as we are now selling direct to horsemen and allowing them from 30 to 50 per cent discount from list prices. Write us today for a copy and we will take pleasure in sending it to you at no charges paid.

somewhat the grain, and depend more on the roughage. The safest way to feed corn is to give such an amount that every lamb will come to the racks when the corn is thrown in, and in the evening come with a rush so that the feeder will have a struggle to make his way among them.

By this manner of feeding a long feed can be made, for no corn is left unshelled, or on the floor of the rack unless too much hay is fed and they can not nose down through it. When fed to the limit on grain, and as an inducement to get them to eat more, corn is kept in boxes or troughs to tempt them, about 100 days of such feeding will com-

pel shipment, whether the lambs are fat or not. But the point that interests the writer most is the matter of finishing on grass. More than once he has had excellent success in using rye to help finish. Last year we tried the blue grass in an abundant quantity, and it was a flat failure. It was used in connection with hay and grain, the lambs going out on the pasture during the day, and returning to the shed and barn at night, where they had their usual feed of grain and

PETERS FACTORY LOADS.

This is truly a remarkable piece of work considering that the weather conditions were such that some shooters refused to finish the program.

THE PETERS CARTRIDGE COMPANY, CINCINNATI, O.

New York: 98 Chambers St., T. H. Keller, Mgr.
San Francisco: 605-612 Howard St., J. S. French, Mgr.
New Orleans: 321 Magazine St., P. R. Litzke, Mgr.

hay or as much of it as they wanted. If there had been rye pasture, experience and information proves that the results would have been different. Rye will not scour and they relish it. When on rye they will drop off about one-third of their grain and hay ration, but if shut off from rye, they will in twenty-four hours come to eating their usual amount of grain and hay.

If the feeder these days wants to strike the highest market with shorn lambs, it is unsafe to wait for the June market. If lambs have been on a light grain ration all winter, it is doubtful whether they can be properly finished on grain before the last of June, especially if the grain ration is cut off when they go on to grass. If they have had a good grain ration, and only need the grass to put on the bloom, the feeder cannot afford to take the chances of a falling market. There is another point relating to a long feed as it relates to the feed problem this winter. When hay is cheap and plentiful, and corn expensive but of best quality, the long feed with a limited amount of corn can be made more cheaply than a short feed with the necessary amount of grain required to make the proper finish, for it is courting misfortune to send lambs to market in an unfinished condition. So many lose out on this last point, because they do not know when a lamb is fat.—John M. Jamison in Ohio Farmer.

POULTRY NOTES.

Gather the eggs twice each day in summer and keep them in the cellar or other cool place. They will soon spoil in the kitchen near the hot range.

Never forget to examine often for lice during the warm weather if you wish the poultry to thrive. Lice on the birds are most often found on the head, around the vent and under the wings.

Pigeons produce five or six broods during the summer, and some during the cooler seasons. Homing pigeons are the best breed for market squabs, for which there is a constant demand in all cities and many towns.

A good feed for your ducks is meat scraps chopped fine with vegetables. Chopped onion tops in the diet for either young ducks or young turkeys are good. Although ducks like water, young ducks must be carefully sheltered from rains.

All of the egg shells from the incubator and those saved from home cooking should be saved and fed to the poultry. Always crumble them before feeding. For mixing with young chick feed, place them in a pan in the hot oven till they are brown, then crumble fine and mix with the regular feed.

Coal ashes sprinkled on the droppings in the henhouse will prevent unpleasant odors and will enhance the fertilizing value of this waste product. Never use wood ashes for this purpose, as they lib-

erate the ammonia of the droppings, making the house offensive with odor and destroying the fertilizing values of the droppings.

One great profit in using incubators is in keeping the hens laying instead of setting and brooding the young. Many of the hens will become broody at this season, but they should be promptly confined in a coop till they are over the broody stage. Place more than one broody hen in a coop so that they will keep one another moving.

The old hen with chickens hunts up some worms and bugs for her chicks. For this reason brooder chicks should be furnished some animal food.

Poultry for home table use or for market should be fattened for a week or more before being used or sold. The fattened bird is not only more bulky but the fat is more evenly distributed through the fleshy tissues and the flesh is more tender and more easily digested. The fattened fowl is plumper and more attractive to the purchaser.

Young turkeys are perhaps more susceptible to lice than any other class of poultry, hence they must be examined and treated frequently. Examine the poult for lice on the top of the head, under the wings and around the vent. Use insect powders for killing the lice, or use a mixture of kerosene and lard or old grease. Apply a small amount at a time two or three times each week.

MUST CARE FOR MILK FOR FEEDING CHILDREN.

The importance of pure milk in feeding infants and the great need of arrangements for keeping it pure and cool were emphasized by Prof. Abby L. Marlatt of the department of home economics of the University of Wisconsin in an address before the Pure Food Fair held at Milwaukee recently by the university extension division. Miss Marlatt advised the use of pasteurized milk if good raw milk could not be secured.

When pasteurized milk is used, however, it should be cooled immediately after being pasteurized and kept at a low temperature, she pointed out. Home pasteurization is advisable when necessary, but the cooling should not be neglected. An inexpensive cooler can be made by placing a bottle of milk and a small amount of ice in a fireless cooker. A bottle of milk may be wrapped in a wet cloth, where it is kept cool by the evaporation of the moisture from the cloth.

Arrangements for keeping milk warm for long periods for infant feeding should not be used, she said, since germs multiply rapidly in such warm milk and render it unfit for food.

The city regulation of milk supplies was emphasized. Where good milk could be secured, Miss Marlatt urged the use of more of it, especially for children, since it is one of the cheapest foods and may be used without waste. The rate of infant mortality, she said, can only be reduced by better care of milk in the home.

SPECIAL ADVERTISING.

Wanted, For Sale, and Miscellaneous advertising under this head will be set in nonpareil type (same type below) and will be published at the rate of 2 cents per word each insertion, or 6 cents per word by the month. Count each abbreviation and initial as a word.

WANTED TO BUY.

Twenty trotting bred mares not over ten years, with or without records; ten stallions or stud colts; one stallion pacer (no mark) that can step in 2:12 or better; three mares (pacers or trotters), no marks, that can step in 2:20 or better. Don't miss a chance to sell your stock by asking fancy prices. I am a genuine buyer, but as I am buying to sell again, I must buy right. Would also purchase thoroughbred running stock of any description. State prices. "LOUIS," Breeder and Sportsman.

RUBEROID ROOFING.

Weather Proof, Acid Proof, Fire Retarding.

BONESTELL & CO.

118 to 124 First St., San Francisco, Cal.

One of the best features of the annual report of the California Development Board, which has just been issued, is the map of California, covering all railroad additions and extensions to date, together with changes in county boundaries, making the most complete and comprehensive publication of the kind in existence. The map is twenty by twenty-six inches, and in addition to railroad and steamship lines, it shows the topography of the State in colors. On the border is a comprehensive list of industrial products, together with the counties in which each is to be found. The Board makes a special feature of its maps, and in addition to a rack containing official county maps, it has a number of relief maps of the State and various districts. These show mountain and valley regions in such manner as to impress them indelibly on the minds of observers. The report, with a copy of the map, may be had free on application to the Board at its headquarters in the Ferry Building, San Francisco.

FOR SALE.

A handsome bay mare, 3 years old, sired by Nutwood Wilkes. Absolutely sound and gentle, afraid of nothing, and is sure to make a fast trotter. Must be seen to be appreciated. Can be seen at 2064 Santa Clara Ave., Alameda, Cal.

FOR SALE.

On account of illness I desire to sell my veterinary practice and horseshoeing shop at Bakersfield. Will also sell my stallion Donello 2:30 by Washington McKinney. He has a matinee record of 2:18 and should trot in 2:10 if trained. Is a grand looker and his breeding is royal. Correspondence solicited.

C. H. SEARS, V. S.,
2211 Chester Ave., Bakersfield, Cal.

TO THOROUGHbred HORSE-OWNERS.

FOR SALE AT A SACRIFICE.

First six volumes of Bruce's American Stud Book, practically unused. Cost \$10 per volume. Hard to get.

Two volumes of American Horse Breeders' Guide and Hand Book, with 100 tabulated pedigrees of leading stallions (work now out of print).

The American Thoroughbred, by Capt. Thos. B. Merry.

Two volumes Goodwin's Turf Guide for 1907. Cost \$12.

About 50 thoroughbred catalogues, including Rancho del Paso, Palo Alto, Ranococas, McGrathiana, Nursery Stud, Marcus Daly and all the great stock-farms of the country. These are handier than a studbook, because they are tabulated.

Price, \$60 for all these works.
Address F. W. KELLEY, 366 Pacific Building, San Francisco, Cal.

FOR SALE.

A fast trotting mare by Egyptian Prince 1:43 1/2, dam Hattie, the dam of Monterey 2:09 1/2 and Montana 2:18, by Commodore Belmont. Is 12 years old, sound and gentle and a lady can drive her. Has 3-months-old colt by Monte McKinney by her side, and is in foal to Chestnut Tom 2:15. Also a yearling, and a two, three and four-year-old out of this mare by Monte McKinney, Chestnut Tom and Silver Bow Jr. respectively. The four-year-old is in foal to Chestnut Tom. Will sell one or all of them, and at a bargain.

J. M. PITTS,
Avenue Market, 34th and San Pablo, Oakland.

FAST TROTTER

FOR SALE.

The Fast Trotting Gelding LONGITUDE by Meridian 2:12 1/4, dam Media by Anteo 2:16 1/2, is for sale. Longitude has no record, but has shown miles better than 2:15. He is perfectly sound, kind and gentle and anyone can drive him. He is now in good condition and can be seen at the McKinney Stables, 36th avenue and Fulton street, where he is in charge of Charles James. For further particulars, apply to W. L. MILLS, 2005 Market Street. Telephone Market 194.

A GOOD RATION FOR DAIRY COWS.

A dairyman who has studied the question of profitable rations says the greatest success he has ever had in his dairy was when he fed a ration about as follows: Once a day good alfalfa, all to be eaten up clean, and this in the morning. In the afternoon, cut corn fodder, with the ears left in, all that will be eaten up clean. This latter would be cut green, just before the first frost, shocked in medium-sized shocks in the field and left there till wanted. It would then be hauled to a cutting machine and cut as needed in about three-quarter inch lengths, and when fed properly every bit of stalk, cob and all will be eaten. Then with this was fed about 20 to 30 pounds of

mangel-wurzels, put through a root cutter, and to the heaviest milkers from four to eight pounds of wheat bran.

Now, note these feeds. Alfalfa, a cheap source of protein or flesh-forming elements; the corn fodder, carrying a good quantity of fairly well matured ears, a cheap source of carbohydrates, or starch and sugar; and the mangel-wurzel, a cheap succulent feed, that though not rich in nutriment, is a wonderful aid to the perfect digestion of the other feeds. These three feeds are the cheapest for the dairy cow that can be produced.

Although one is not in a corn growing State, a little experience only is necessary in order to produce from the same varieties a very high class

fodder corn at least, and mangel-wurzels can be made to yield thirty tons to the acre easily and sixty tons is rather below a maximum crop.

A NEW DIP FOR CATTLE.

The Oklahoma State Board of Agriculture has adopted a new dipping solution for cattle. The crude oil method has been abandoned on account of its often injurious effect on steers. All cattle shipped in from Texas must be dipped in order to keep out Texas fever by killing the ticks, which carry the disease. The new dip is an arsenical solution, much cheaper than the crude oil, just as effective and less injurious. It is made by boiling 10 pounds of commercial arsenic, 24 pounds of sal soda and one gallon of pine tar in 40 gallons of water. It is then increased to 50 gallons by adding water, and this solution is enough for 450 gallons of water when mixed with it. The cost is about a cent a gallon, or about 25 cents per steer in dipping. The only danger from the use of this dip is that a steer might accidentally swallow some of the solution, a quart of which would cause death.

Many successful poultry raisers have feeding coops for their chicks and vessels in the coops constantly filled with feed so that the young stock can eat at will. They claim that in this way the chicks grow and develop much faster than where they are fed only two or three times daily.

Fowls on the open range secure animal feed in the form of bugs and worms in summer. If for any reason poultry must be confined, supply the animal feed with skim milk, beef scraps, or green cut bone.

The healthy chicken is one that is wide awake and more or less active all the day. When a bird grows sleepy in disposition and droops around all day, it is not well and something should be done for the sick bird.

Keeping brooders and coops clean is one of the secrets of healthy and thrifty chicks. The coop for the mother turkey should be much taller than that for a hen or other poultry.

SPAVIN CURE

Fifteen Years' Success, a Signed Contract and Evidence That Is Honest to the Core Will Convince. Send for Book on All Lameness and Copy of Contract.

FAIRVIEW STOCK FARM,
R. C. McMillan, Prop.
BREEDER IMPROVED CLYDESDALE HORSES
and Aberdeen Angus Cattle.

HEBRON, Ind., June 6, 1910.

Troy Chemical Co., Binghamton, N. Y.:
Enclosed \$5.00 for one bottle Save-the-Horse. Send this to my brother, A. C. McMillan, Hebron, Ind.

A friend of mine at Washington Heights, Chicago, this spring had a \$300 horse with ringbone. He had some of the best skill tried on this horse, but failed to cure him. His son one day came across an old paper with your advertisement and my testimonial to what Save-the-Horse did for a valuable Clydesdale mare I owned. The son went to the father and showed him the paper and said it must have cured Mr. McMillan's mare or else he never would say so, and the result was they got a bottle and cured the ringbone. They told me this last May and thanked me very much for my testimonial, and to-day their stable is never without some of the medicine on hand.

I wish some more of my friends would use it: they would not have so many doctor bills to pay.

Yours truly,

R. C. McMILLAN.

WINCHESTER

.401

Caliber

Self-Load-
ing Rifle

THE TRIGGER CONTROLLED REPEATER

This new Winchester is all that the big game hunter's heart could desire. It is reloaded by recoil, and has a detachable magazine which enables it to be fired a series of shots with great ease and rapidity without the sacrifice of accuracy. Although the cartridge it handles hits a harder blow than the .30 U. S. Army, it is compact and light to carry. In the sureness, strength and simplicity of its action, and in its hitting power, no other recoil operated rifle approaches it.

Send to the Winchester Repeating Arms Company, New Haven, Conn., for circular describing this new rifle which has strength and power plus.

IT HITS LIKE THE HAMMER OF THOR.

In these purses horses must be eligible on September 15th. This fair is given by the Territory of Arizona and purses are absolutely guaranteed. Attendance or entries does not figure in settlement. The sun always shines at Phoenix. For entry blanks write

SHIRLEY CHRISTY, Secretary,
Phoenix, Arizona.

New Edition of John Splan's Book

"Life With the Trotter"

Price, \$3.00, Postpaid.

"Life With the Trotter" gives us a clear insight into the ways and means to be adopted to increase pace, and preserves it when obtained. This work is replete with interest, and should be read by all sections of society, as it inculcates the doctrines of kindness to the horse from start to finish.

ONE WEEK FROM WEDNESDAY NEXT the Pacific Coast Trotting Horse Breeders' Association will open its annual race meeting at the new San Jose Driving Park, where there is one of the best and fastest mile tracks ever built in California or anywhere else. This new driving park is located just three miles south of the business center of the thriving city of San Jose, and is reached by an electric car line, and the Southern Pacific main line to Monterey passes directly by it. The track is a regulation oval, full sixty feet wide its entire length, and on soil that makes ideal footing. All horsemen say it is one of the fastest tracks on the coast and the horses that start will go faster than they have at any former first meeting of the year. The program prepared is an excellent one. Already there are predictions that the records of the cold stakes will be lowered in both the three-year-old divisions of the Breeders' Futurity. The record of the three-year-old trotting division is 2:13½, held by the Nutwood Wilkes gelding, North Star, and the record of the three-year-old pacers is 2:08½, held by Hymettus, a son of Zombro. Both these records will be hard to beat, especially the latter, but there are many horsemen who believe they will both go by the board at San Jose week after next. At all events there will be some great racing put up in that stake by the colts and fillies, racing that will be worth a trip to San Jose to see. We expect to see the best attendance in years at this meeting of the Trotting Horse Breeders.

A SECOND COMMUNICATION from Secretary Knight of the American Trotting Register Association in regard to the interpretation of Rule 4 governing registration appears on page 4 of this issue. We recognize the authority of that association to make and interpret its own rules, but we think it an injustice to require an owner who desires to register a mare under rule 4 to pay for the recording or registration of the two of her produce whose performances have made her eligible to registration. The majority of owners will refuse to register their own stock, if to do so they must register that of strangers, and we think the five rules of the trotting standard should mean just what they say and not what is said in a long list of instructions. We are still unable to understand how the two daughters

of Petrina can be registered before she is, and would like to ask under what rule they will be registered if the application is made?

MR. FRANK H. BURKE, of this city, was stricken with partial paralysis last Tuesday, and has been removed from his apartments in the Palace Hotel to a local sanitarium hat the best of medical attendance and scientific nursing may be given him. There are strong hopes that he will recover from the attack within a short time. His devoted wife is in constant attendance at his bedside and everything possible is being done to restore him to health. Mr. Burke is a member of the well known real estate firm of Madison & Burke and is one of the wealthy men of this city. He also owns La Siesta Stock Farm, near San Jose, where for many years he has successfully bred fine trotting stock and Holstein cattle. Ever since its inception he has been a member of the Pacific Coast Trotting Horse Breeders' Association, and is now the honored treasurer of that organization. He is also a member of the board of directors of the California State Agricultural Society and occupies many other positions of trust and responsibility. He has hosts of friends all over the coast who sincerely sympathize with him in his affliction and who hope for his speedy restoration to health.

THE HARNESS RACING SEASON will soon open on this coast, and it may be opportune at this time to suggest to the associations giving meetings that there is only one way to race and that is according to rule. The rules are generally very plain and a vast majority of them can be clearly understood by any one who can read. Associations should be very particular about placing men in the stand as judges who have a fair understanding of these rules and who have backbone enough to see that they are enforced. The rules were made to govern racing and no person should be permitted to violate them without paying the penalty therefor. Begin with the first heat of the first race and see that all the rules and conditions are obeyed by everyone and there will be few protests. A fair field and no favor is all that any fair minded person will ask in horse racing, and none should receive more.

C. F. CURRY BELIEVES IN DISTRICT FAIRS.

Sacramento, Cal., July 25, 1910.

F. W. Kelly, Esq., Editor Breeder and Sportsman.
366 Pacific Building.

Dear Sir: On my return to Sacramento this morning, after an absence of two weeks, I found your favor of the 11th inst., on my desk.

I believe I can best answer your questions by quoting a paragraph from my Platform of Primary Principles, which you will find printed in full on the back of this letter, as follows:

"I believe in the re-establishment of the district fairs. These institutions, which inspired healthy rivalry and honest competition in every rural district of the State, were productive of great material benefit. They were of immense advantage to the farmer, the breeder and the producer, and I believe they should be restored to the people of the State through State aid."

I believe in the re-establishment of district fairs.

Very truly yours,

C. F. CURRY.

SOME GOOD ADVICE.

The Western Horseman, one of the leading trotting horse journals of the country, published in the center of a great horse breeding and harness horse racing country, has the following to say of pool selling:

Pool selling on the trotting turf will never again become anyways near general unless pool selling interests exercise a little common sense. The trouble with all classes of law violators is, if they are granted an inch they proceed to take a mile. People who do unlawful things—pool selling is unlawful in nearly every State in the Union—should at least be modest about it, and not voluntarily make themselves, and their operation, wantonly public and obnoxious to that part of the public which is notoriously not in sympathy with the particular kind of law infraction being indulged in. But for the publicity given it by pool sellers themselves, and the association management on whose grounds the law infraction takes place, that part of the public which is antagonistic to pool selling on the trotting turf would know but little, and, as a rule, care less. It is the "loud voice" made by pool sellers and others interested with them that really develops and bring out war on pool selling. As a rule, no sooner is a pool stand allowed to operate in a State or city in which the practice has formerly been prohibited, than a "great noise" in the way of boastfulness is made by the "participating in-

terests," and thereby open and active opposition developed. Believing the same to be to the best interest of trotting turf sport, and not being able to see real harm in it, The Western Horseman has always advocated decorous, incidental, quietly and reservedly conducted pool selling as an incidental and a secondary feature of trotting sport; but, at the same time, it has always been antagonistic to the idea, or proposition, that such speculation should be made a leading and dependent feature of trotting sport, and certainly the last few years have been sufficiently filled with object lessons" to teach all concerned that rampant and cantankerous pool speculation cannot, at this age, be a leading feature of any sport or business.

DETROIT'S LEADING FEATURES.

Original Entries in the M. & M. and C. of C. to Be Raced Next Week.

The two great features of the early part of the Grand Circuit are the Merchants' and Manufacturers' 2:24 Trot and the Chamber of Commerce 2:13 Pace, which are to be raced at Detroit next week. The Chamber of Commerce purse has a value of \$5000 and will be raced Tuesday, while the M. & M. is worth \$10,000 and is on Wednesday's program. The original entries in these two races are as follows:

C. of C. Purse, 2:13 Pace—\$5000.

Adele Ross, bl. m. by J. H. L.; E. F. Geers.
Allie Vincent (4) 2:12½, br. m. by Allertell; Nicholas Benson, Elmwood, Ill.
Alwanda 2:12½, b. g. by Alvander; James Keegan, Hartsdale, N. Y.
Ashline (4) 2:12½, b. g. by Ashland Wilkes; A. B. Cummings, Reading, Pa.
Branham Baughman (2) 2:24½, br. h. by Gambetta Wilkes; Walter E. Cox, Manchester, N. H.
Colonel Forrest (3) 2:13½, b. h. by General Forrest; Dick McMahan, Libertyville, Ill.
C. The Limit, b. h. by Searchlight; Geo. H. Estabrook, Direct Hal, Jr. (4) 2:14½, bl. h. by Direct Hal; E. F. Geers.
Evelyn W. 2:15½, b. m. by The Spy; Thistle Doune Farm.
Fred Patchen 2:19½, by b. g. by The Star of Patchen; Float Jolly, Tipton, Ind.
Hal Akin (4) 2:14½, b. h. by Brown Hal; T. W. Murphy, Ian Bar 2:13½, b. h. by Monbars; C. H. Mabey, Tilsonburg, Ont.
Joe McGregor 2:21½, b. h. by Fergus McGregor; H. H. James, Winnipeg, Man.
Lady Isle 2:12½, b. m. by Island Wilkes; Walter R. Cox.
Lady of Honor 2:14½, ch. m. by Direct Hal; W. L. Snow, Hornell, N. Y.
Little Dick 2:12½, b. g. by Coinage; J. F. Adams, Detroit, Mich.
Mary Boo 2:14½, b. m. by Dumbarton; John Waters, Baltimore, Md.
Maxie Direct 2:13½, b. m. by Direct; D. Lockhart, Orlando, Fla.
Nathan B., b. h. by Truce; Geo. R. King, Dallas, Tex.
Rena Patch (3) 2:24½, b. m. by Dan Patch; International Stock Food Farm, Minneapolis, Minn.
Sara Ann Patch (4) 2:15½, bl. m. by Joe Patchen; Walter R. Cox.
Silver Joe, g. by The Eel; F. W. Entricken, Tavistock, Ont.
Sister Florentine, b. m. by Constenaro; H. H. James, Winnipeg, Man.
The Abbe, bl. h. by Chimes; E. F. Geers.
The Philistine, b. c. (4) by Direct Hal—Pearl Onward, p. 2:06½, by Onward; W. A. Owings.
M. and M. Purse, 2:24 Trot; \$10,000.
Adele Margrave (2) 2:29½, ro. m. by Margrave; Thistle Doune Farm.
Albia, b. m. by Bingen—Narion, by Arion; Robert Proctor, Readville, Mass.
Areo 2:24½, b. g. by Arion; John Waters, Baltimore, Maryland.
Arie Leyburn, br. h. by Arion—Rose Leyburn, p. 2:15½, by Onward; W. A. Matthews & Co., Pine Bluff, Ark.
Ashland Clay, ch. h. by C. F. Clay; James Hogan, Memphis, Tenn.
Baron Penn 2:24½, br. h. by William Penn; V. L. Shuler, Indianapolis, Ind.
Beldena 2:26½, bl. m. by Abdell; E. R. Bryan, Memphis, Tenn.
Billy D. 2:29½, ch. g. by Algomah; C. W. Moore, Detroit, Mich.
Blaxtell, bl. h. by Axtell; Bascom Parker, Niles, Mich.
Captain George, b. c. (4) by Admiral Dewey—Miss Jefferson 2:25½, by Jefferson; Thos. W. Murphy, Macon, Ga.
County Jumper, b. g. by The Cascade; E. C. M. Van Brunt, Red Bank, N. J.
Creighton, b. g. by The Bondsman; Oakhurst Farm; Whitinsville, Mass.
Custer, p. 2:05½, ch. g. by Sidney Dillon—Maud, by Nutwood; J. C. Adams, Phoenix, Ariz.
Decoration 2:29½, ch. g. by Gearing; Wm. J. Keating, Bay City, Mich.
Dudie Archdale, bl. m. by Archdale—Dudie Egmont 2:13½, by Egmont Chief; E. F. Geers, Memphis, Tenn.
Electric Todd, br. h. by Todd—Chloe Wilkes, by Wilkes Boy; Joe Mooney, Toledo, O.
Henry H., br. g. by Gregory the Great; dam by Wedgewood; Chas. E. Dean, Palatine, Ill.
Henry Winters, b. h. by Ed Winter—Charming Bunker, by Mambrino King; Alonzo McDonald, Indianapolis, Ind.
Lilly W., ch. m. by Simmoneer; Geo. H. Estabrook, Denver, Colo.
Myrtle Granett (4) 2:23½, br. f. by Granett; Glenmere Stable, Goshen, N. Y.
Oakland Flobar 2:27½, br. h. by Oakland Baron; Oakhurst Farm.
O. J. (3) 2:24½, ch. g. by Sidney Prince; W. A. Owings, Lexington, Ky.
Ormonde, bl. h. by Wilkes Boy; E. F. Geers.
Parthena, b. m. by Liberty Chimes; Thistle Doune Farm.
Remorseful, bl. g. by Wiggins; S. C. Wagner; Dayton, O.
Rickey Rawson (3) 2:26, ch. m. by Onward Silver; Thos. W. Murphy.
Robert A., br. g. by Bernardotte; Glenmore Stable, Thistle Doune, b. h. by Jay McGregor—Baroness Sibyl 2:25½, by Baron Wilkes; Thistle Doune Farm.
Twilight Maiden, b. m. by Peter the Great—Miss Anorean, by Onward; Thos. W. Murphy.

Seneca Maid 2:20 (dam of Penis Maid 2:04½), now owned by T. E. Cameron of Vinton, Ia., earns her daily bread working the local track and as general purpose horse. She has been bred to The Connoisseur 2:20½, son of The Conqueror.

CUP RACES ARE INTERESTING.

Charley T. Gets Third Leg on Clark-Hoffman Cup in Amateur Contest.

With rather cool, cloudy weather, the races of the Park Amateur Driving Club at Golden Gate Park last Saturday, did not draw as large a crowd as usual, but there were four or five hundred persons present to see five races that were not only closely contested in several instances but were trotted and paced in fast time considering the wind that blew in gusts against the horses as they came through the first and last quarters of the mile.

In the opening race for class A pacers, it was expected that Little Dick would make it interesting for Dan Hoffman's Dictatum, but while Little Dick paced a fair race, Little Medium was the horse to make Dictatum extend himself in both heats at the finish, and Hoffman's horse had little to spare as he crossed the wire in front.

There was great interest in the free-for-all trot with Charley T., Modicum and Reina Directum as the starters. It was known that Reina was good and the closest kind of a race was looked for between this mare and Mr. Ottinger's gelding. In the first heat Charley T. had the pole, Modicum second and Reina Directum on the outside. They were sent away to a good start, but when an eighth of a mile had been trotted Reina made a break and dropped back seven or eight lengths. At the half Charley T. was in the lead, with Modicum second two lengths back and Reina Directum at least eight lengths behind. Christenson began to drive his mare however and she gradually gained on Charley T. until she was at his wheel as they turned into the stretch and was beaten but a half length at the finish in the good time of 2:14. Modicum was three or four lengths back.

In the second heat another excellent start was given the three trotters by Geo. Erlin and the two blacks went out in front for a duel that promised to be the best of the cup series and the fastest as well. Reina Directum had trotted the last half of the previous heat in 1:04½ and it was certain that Charley T. would have to lower the track record to defeat her unless something happened. The something happened all right, as after passing the first half in 1:07½ with Charley T. a length in the lead, Mr. Christenson spoke to his mare and started to go by the Zombro gelding and showed a burst of speed that would have certainly carried her to the front, but just as she got up almost on even terms with him Christenson was seen to suddenly pull her up, she went to a break and was then stopped and her driver alighted. The other two went on and Charley T. won, pulled up to a jog in 2:16¼. It was ascertained that a tire on Reina Directum's sulky had blown up and was partly off the wheel, making it necessary for her driver to pull her up and not attempt to finish the race. It was a most unlucky accident, and Mr. Christenson came in for many expressions of sympathy from the spectators.

There have now been five of the necessary six races trotted in this event, and of these Charley T. has won three and Modicum two. Should Modicum win the next race there will be a tie for the cup, necessitating another race.

The race for class B trotters was won by Capt. W. Matson with his big rangy roan gelding Bird Eye. The roan broke in the first heat and finished last, but got squared away after that and won the next two heats quite handily amid much applause from the grand stand.

In the fourth event, the class A trot, Mr. F. L. Matthes brought Raymond M. to the wire first in two straight heats, beating a good field of horses.

Dan Hoffman won the last race on the card with his three-year-old by Kinney Lou. The day's sport was one of the best the Park Amateur Club has given at the stadium track this year. Results:

First race, class A pacers, one mile:
D. E. Hoffman's Dictatum 1 1
J. Perry's Little Medium 2 2
L. Marisch's Little Dick 3 3
H. M. Ladd's Ringrose 4 4
Time—2:17 1-5, 2:19 1-5.

Second race, free-for-all trotters, one mile:
A. Ottinger's Charley T. 1 1
H. Boyle's Modicum 3 2
S. Christensen's Reina Directum 2 3
Time—2:14, 2:16¼.

Third race, class B trotters, one mile:
Captain W. Matson's Bird Eye 6 1 1
F. D. Matthes' Walter G. 3 3 2
R. Consani's Dividend 1 2 6
R. Nolan's Billie Burke 4 4 3
I. L. Borden's Barney Barnato 5 5 4
Time—2:28, 2:25 1-5, 2:26.

Fourth race, class A trotters, one mile:
F. L. Matthes' Raymond M. 1 1
M. W. Herzog's Lady Nell 2 3
H. C. Ahler's Sunset Belle 6 2
A. Ottinger's Mike Kelly 3 4
J. W. Smedley's Red Velvet 4 5
F. W. Thompson's Lady Washington 5 6
Time—2:22 2-5, 2:22.

Fifth race, class A pacers, one mile:
D. E. Hoffman's Balboa 1 1
H. Boyle's Zoe Dell 2 2
Time—2:26, 2:26 2-5.

The officers of the day were: Starter, George E. Erlin; Judges, A. J. Molera, J. A. McKerron and H. Rosenbaum; Timers, A. Joseph and R. Nolan; Marshal, H. M. Ladd; Secretary, F. W. Thompson.

Drink Jackson's Napa Soda.

VANCOUVER ENTRIES.

Following is a list of the entries received by the Vancouver, B. C., association for its purses which closed July 15th, and which are to be raced at the meeting to be held August 15th to 20th, 1910:

Three-Year-Olds, for horses owned in British Columbia previous to July 1st; half-mile heats, \$250—Nellie Arnold, b. m., H. D. Wright; Susie G., b. f., Jas. Moran; D. G., bl. g., Wm. Steele; Lulu Binkley, b. m., G. B. Anderson; Almah Lou, bl. f., W. H. Mason; Inn McKinney, b. g., W. Nicoll.

Two-year-olds, trot, for horses owned in British Columbia previous to July 1st; half-mile heats, \$200—Greco McKinney, bl. s., Wm. Nicoll; Alice N. McKinney, h. f., E. A. Nicoll; Lillian King, b. m., J. W. Hollinshead; Mac Bush, b. s., Lillooet Road Stock Farm; Ramona, b. m., J. V. Millington.

2:40 trot, \$400—Pauline, b. m., H. Groot; Sampson, ch. g., Wm. Steele; Great Northern King, br. s., J. W. Hollinshead; Dominion King, h. s., W. A. Blackburn; Singspiel, b. s., Dixon Bros.; Allamont, b. m., and Neeranna, ch. m., Lillooet Road Stock Farm; Wanneta Dwyer, br. m., P. O. Dwyer; Rox Seal, h. s., Jas. Madsen; Nellie Morris, b. m., W. J. Morris; Rain in Face, bl. s., G. B. Anderson.

2:17 pace, \$1000—Mable Hall, b. m., Robt. Willis; San Jose Maid, ch. m., W. M. Grant; Esther B., bl. m., R. Thompson; Billy S., b. g., Bud Guest; Harry Luft, b. g., C. H. Authier; Olga S., br. m., W. C. Marshall; Lady Patrick, b. m., Dixon Bros.; Miss Jerusha, bl. m., E. N. Jones; Subscription, gr. g., F. G. Hodgins; Capt. Jay, b. g., H. Groot; Stella A., b. m., Florence E. Vaughan; Lord Sidney Dillon, b. s., Carl Deering; Lightout, ch. g., W. Millington; Cranky Thorn, b. g., Jas. McGuire; Buck, b. g., C. D. Jeffries.

2:25 pace, \$400—Letiska, bl. m., J. O. Morse; H. M. C., ch. s., C. H. Authier; B. C. King, b. s., J. W. Hollinshead; Palestine, b. s., E. S. Knowlton; Princess Sunrise, b. m., H. Groot; Lady Patrick, b. m., Dixon Bros.; Joe Mitton, bl. g., F. G. Hodgins; Near Girl, b. m., Lillooet Road Stock Farm; Haltamont, b. s., Florence E. Vaughan; Buck, b. g., C. D. Jeffries; Renots, b. g., G. Lewis.

Pace, for Stallions in Service, having served ten mares or more in 1910; half-mile heats, \$300—Pilot McGregor, bl. s., J. O. Morse; B. C. King, b. s., J. W. Hollinshead; Burtwood, br. s., S. Flack; Zolock, br. s., N. S. Young; Lord Sidney Dillon, b. s., Carl Deering.

Free-for-all trot or pace, \$1000—Josephine, b. m., L. McDade; Lady Patrick, b. m., Dixon Bros.; Texas Rooker, h. g., J. T. Wilkinson and H. S. Rolston; Zolock, br. s., N. S. Young; Stella A., b. m., Florence E. Vaughan; Lord Sidney Dillon, b. s., Carl Deering; Capt. Derby, b. g., P. O. Dwyer.

Many additional purses to close August 10th and later are advertised in this issue.

AN OLD-FASHIONED FAIR AT NEWMAN.

Newman, July 23.—Every other section of California has had its fairs, carnivals and fiestas, but the Western San Joaquin alfalfa belt, known as the West Side, has never yet exhibited to the world its products.

It is better late than never and in September the West Side Fair is to be held at Newman, and if financial support and determined effort will make it a success, it will be a winner. The town and county have both voted assistance to the enterprise, and in all some \$3000 has been raised to finance the affair, while it is certain that the gate receipts will be large, as interest is widespread.

The fair will have the united support of the entire West Side country, the executive committee, including members from Los Banos, Gustine, Dos Palos, Crow's Landing and other points, all of whom are working in unison to make it a success.

Entry blanks for the race meet of two days are now in the hands of the horsemen of the State and many entries are already promised. The date, immediately following the State Fair, is favorable for the racing men, many of them coming here from Sacramento. The purses offered aggregate \$1500, the main events drawing \$400 each. Newman had the best race meet in the upper valley last year, but expects to have one of the best in the State this season.

There will be an amusement street, in the nature of a midway, and many other attractive features. The dates selected are September 15-17.

KENTFIELD DRIVING ASSOCIATION.

The Kentfield Driving Association were so successful in the matinee which they gave on July 4th, last, that they have decided to hold another on September 9th. There will be an attractive list of prizes at both of the meets for non-members. It is expected there will be a number of fast ones from other sections of the State.

Notice is hereby given that all entries should be made on or before August 5, 1910.

J. E. LEWIS, Secretary.

GOOD PROGRAM AT ALBUQUERQUE.

The big annual New Mexico Fair to be held at Albuquerque October 3d to 8th this year will offer a good program of racing, for which entries will close September 24th. This meeting precedes those at El Paso, Texas, and Phoenix, Arizona, and a stop at Albuquerque will break a long haul to those places from the middle west or other points east of the Sierra Nevada mountains. The conditions are very liberal and the purses range from \$500 to \$1000. Read the advertisement in this issue.

ANOTHER LETTER FROM SECRETARY KNIGHT.

Chicago, Ill., July 20, 1910.

Breeder and Sportsman, San Francisco, Cal.—Gentlemen: We have your issue of the 16th and note your editorial on page three regarding the matter of the registration of the mare "Petrina." The trotting standard, as stated, consists of the five rules which govern the admission to standard rank, but it is not deemed necessary that each of these rules should repeat the general details which are required to complete an application for registration; for instance, it is not necessary that rule one should read something like this: "The progeny of a registered standard trotting horse and a registered standard trotting mare can be registered under some name not already in use by another animal."

The five rules governing admission to the trotting standard show the necessary requirements in the way of breeding and production of performers which will entitle the animal to registration under some one of these rules. Adding to rule four the statement that the two performers produced by the mare offered for registration under that rule must be recorded would also mean that a similar statement must be added to rules two and three. You will see that all the minor details to which attention must be given before an animal can be recorded do not necessarily belong in the rules governing admission to the standard. The five rules do not state that a certificate from the breeder of an animal must be furnished nor that a certificate from the owner of sire should accompany the application.

In the registration of a mare under rule four you will note by referring to the registration of the mare "Addee" on page four hundred in volume eighteen of the Register that the names of the performers on which she depends for standard rank—Ida G. (Adda G.) and Idelia G.—are both given, and you will also find that these performers, Adda G. and Idelia G., are both recorded in volume eighteen. The Register refers to no other publication, and unless the two performers appear in the Register, a person having only a set of the Register would not know the facts regarding the age, breeder, etc., of such performers.

In case one of the performers from "Petrina" or any other mare offered under rule four was not sired by a standard horse, that would not prevent the registration of such performer, as any animal that is not standard can be recorded in the non-standard department. It has been the usage of the Register ever since it was established that all performers upon which standard rank depends must first be recorded.

Very truly yours,

W. H. KNIGHT.

Secretary American Trotting Horse Register

Association.

NEW DRIVING CLUB AT PASADENA.

Pasadena men who are fond of harness horse events and who believe good, clean sport furnished by the fast steppers will be appreciated, on July 21st met and organized the Pasadena Driving club. The project has been under way for some time. Indications are that some rattling good matinees will take place at Tournament park within a short time and that the sport will be placed on such a footing that it will be supported not alone by the members of the club but by the public.

Los Angeles men who are members of the Driving club in that city were present to assist in perfecting the local organization, among them Secretary E. J. DeLorey. The following officers were chosen: Col. W. J. Hogan, president; Dr. C. J. Tracy and Revel English, vice-presidents; Jas. H. Grant, secretary; J. B. Coulston, treasurer; D. M. Linnard, W. N. Tiffany, Frank Day, Frank Williams, H. J. Webb and J. D. Jones, directors. A committee of three consisting of Messrs. Grant, Tiffany and Williams, was appointed to draft by-laws.

It is planned to have the first matinee about the middle of September. The aim of the club will be to encourage the breeding of fine horses. No betting will be allowed at any of the matinees, and any member violating the rule will be expelled. The Los Angeles club has given the Pasadena men assurance that it will do whatever it can to assist in making the first matinee a success. Already about \$1500 has been subscribed. The track will be placed in first-class condition.—Pasadena News.

ARIZONA COPPER STAKE.

The principal purse at the Phoenix Arizona meeting, November 7th to 12th, will be the Arizona Copper Stake of \$6000, divided half for pacers and half for trotters. The stake is a contribution by public-spirited citizens of the Territory who desire to assist the fair, and, further, to advertise the fact that Arizona produces more copper than any other State or Territory in the United States.

The classes are for 2:19 trotters and 2:12 pacers. The entrance fee for these purses is three per cent, with seven per cent deduction from money winners. These purses will positively be raced for even if there are only two entries and two horses ready to start in each race.

The Arizona Copper Stake was last year a purse of \$10,000 and attracted many horsemen, all of whom were more than pleased at the treatment accorded them. Phoenix has established a reputation of always paying purses advertised, a fact made easy by reason of the Territorial Fair being owned and operated by the Territorial Government.

GREAT WESTERN CIRCUIT OPENS.

Most Successful Meeting Ever Held at Grand Rapids
Makes Beginning Auspicious.

Grand Rapids, Mich., July 19.—The Grand Rapids harness race meeting, the first of the Great Western Circuit and the most important preliminary to the opening of the Grand Circuit, and participated in by many of the leading Grand Circuit horses, started here today with perfect weather, a fast track, exciting contests and a large crowd. The absence of the famous driver, Ed Geers, due to his injury in the morning by being thrown from his sulky while working Orienta, was the only dampening influence.

Geers was working out Orienta, when the latter stumbled and fell, throwing the old reinsman heavily. He was unconscious when picked up, but beyond a bad shaking up his injuries are not believed to be serious. He will, however, be kept out of the sulky for several days.

The six-year-old stallion The Limit, son of Searchlight 2:03½ and the great brood mare Bertha by Alcantara, bred by C. L. Crellin of Pleasanton, Cal., and owned by Geo. H. Estabrook of Denver, Colorado, who paid Mr. Crellin \$10,000 for him two years ago, won the Ira M. Smith stake in straight heats, all below 2:08, and took a record of 2:06¼. This is The Limit's second race.

Willie Benton, owned by George Cornell of Chicago, was an easy winner of the 2:07 pace, which he captured in straight miles after dropping the first heat.

The 2:22 trot was announced as the first international harness race in America owing to the presence of Dora, a Hungarian bred mare, owned in London. Dora was a strong contender in three heats, but fell back in the deciding mile. Summary:

2:07 Pace, purse \$1000:

Willie Benton, b. h. by Wilton-Miss Benton (Fosnell).....	6	1	1	1
Ella Ambulator, b. m. by Ambulator-Ella Eddy (Murphy).....	1	2	2	2
Doctor M., ch. h. (Setter).....	2	3	3	4
Rock C. br. g. (Cummings).....	3	4	4	3
Spill, b. g. (Hansen).....	4	5	5	5
Richard Grattan, blk. g. (Elliott).....	5	ds		
Donax, ch. g. (McMahan).....	ds			

Time—2:05¼, 2:05¼, 2:07, 2:08.

2:09 Trot, purse \$1000:

Nancy Royce, blk. m. by Allerton-Black Alice (McCarthy).....	2	1	1	1
Teasel, ch. m. (Andrews).....	3	3	2	2
Ruby Clay, b. m. (Hogan).....	1	2	3	ds
Demarest, b. g. (Benyon).....	4	4	ds	
Aquin, b. h. (McDonald).....	ds			

Time—2:09¾, 2:09¼, 2:10, 2:10½.

2:14 Pace, Ira M. Smith stake; purse \$2000:

The Limit, b. h., by Searchlight-Bertha (Macey)..... 1 | 1 | 1 | 1 || Branham Baughman, b. h. (Cox)..... | 2 | 2 | 6 | 2 |
Direct Hal Jr., blk. h. (Benyon).....	3	4	2	
Lady of Honor, ch. m. (Snow).....	4	3	5	
Dan D., b. g. (Hogan).....	5	6	4	
Ian Bar, b. h. (Murphy).....	6	5	3	
Maxie Direct, blk. m. (Lockhart).....	7	ds		
Rena Patch, b. m. (Hersey).....	ds			
Nettie McEwen, ro. h. (Garth).....	ds			

Time—2:06¼, 2:07½, 2:07¾.

2:20 Trot, purse \$1000:

Captain George, b. c. by Admiral Dewey-Miss Jefferson (Murphy).....	1	1	5	1
Fair Maiden, b. m. (McMahan).....	1	1	5	1
Dora, ch. m. (Pennock).....	2	2	2	4
Robert A., br. g. (Andrews).....	3	5	3	3
Baron Penn, br. h. (Walker and Shuler).....	5	4	4	ds
Albia, b. m. (Proctor).....	6	6	6	5
Wickie Wick, b. g. (Fenelon).....	ds			
Sweetheart, b. m. (McClane).....	ds			

July 20.—The second day of the Grand Rapids harness race meet was a day of triumph for F. J. Jones of Memphis, Tenn., principal owner of the Geers stable. He climbed into the sulky in place of the injured veteran and drove his own entries and The Abbe besides. He won the 2:12 trot for the \$10,000 Furniture Manufacturers' stake with Dudie Archdale, for which he paid \$16,000 last week, and also took The Abbe to first money in the 2:16 class pace.

Geers, disobeying the orders of his doctor, drove to the park and saw from a carriage the winning of the horses he trained. He was given an ovation by the crowd upon his arrival and again when his carriage was triumphantly drawn upon the track after the winning of the \$10,000 stake by Dudie Archdale in straight heats. Jones took Dudie Archdale to the front in each heat and kept her there although Bisa was close after her all the time.

Because of Geers' injury, The Harvester was drawn from the 2:06 class trot. Oro won the race handily, taking both heats in succession, although Wilkes Heart and Margin were close contenders in the stretch.

Jones had to drive The Abbe hard in the stretch to take the three heats of the 2:16 class pacing, Sara Ann Patch, Andy N. J. and Nellie B. being contenders. In the final heat Jones was pocketed at the last turn, but drove The Abbe out around and came to the wire ahead.

The 2:09 pace furnished the most exciting finishes of the day, the heats being won by neck margins. Summary:

2:16 pace, purse \$1000; three in five:

The Abbe, blk. h. by Chimes-Nettie King (F. J. Jones).....	1	1	1	1
Andy N. J., b. h. (Cummings).....	2	2	3	
Nellie B., b. m. (Marvin).....	7	3	2	
Sara Ann Patch, blk. m. (Cox).....	3	4	4	

Pearl Pick, br. m. (Fenelon).....	4	5	7	
May Queen, b. m. (McLane).....	5	6	6	
Lady Athol, b. m. (Spangler).....	8	7	5	
Prince Norbells, b. g. (Stoles).....	6	8	8	
Black Loom, blk. m. (Bogash).....	ds			

Time—2:10, 2:08¼, 2:09¾.

2:06 trot, purse \$1000; two in three:				
Oro, blk. g. by Little Corporal (McCarthy).....	1	1		
Wilkes Heart, b. g. (Snow).....	2	3		
Margin, ro. m. (Andrews).....	4	4		
Stirling McKinney, b. h. (Murphy).....	3	4		
Sonoma Girl, b. m. (McMahan).....	5	ds		

Time—2:08¼, 2:08¼.

2:12 class, trotting; Furniture Manufacturers' purse, \$10,000; three in five:				
Dudie Archdale, blk. m. by Archdale-Dudie Egmont (F. G. Jones).....	1	1	1	
Bisa, b. m. (Cox).....	3	2	2	
Bervado, b. g. (Murphy).....	12	3	4	
Major Strong, b. g. (Snyder).....	9	5	3	
Safeguard, b. g. (Mchan).....	4	6		
O'Neill, br. h. (Snow).....	10	4	10	
Ario Leyburn, br. h. (Rosemire).....	7	7	5	
Telemachus, b. h. (McDonald).....	11	10	7	
Charley H., br. g. (Rash).....	5	9	8	
Jennie Constantine, b. m. (Hunt).....	8	8	9	
Don Labor, b. g. (Kimlin).....	6	ds		
Gamar, b. h. (Harrison).....	2	ds		

Time—2:09¾, 2:08¾, 2:09½.

2:09 class, pacing; purse \$1000; three in five:				
King Cole, b. h. by Bingen-Redina (Dodge).....	4	1	1	1
Waverly, b. g. by Oratorio-Pattie (Cum-mings).....	1	2	5	2
W. A., b. g. (Floyd).....	2	6	2	4
Joe Brown, br. g. (Rash).....	3	4	3	7
Hallie Direct, b. g. (Marvin).....	5	5	4	6
Shamrock, ch. h. (Bradford).....	6	7	6	5
Demonio Wilkes, b. h. (Helman).....	ds			
Shadeland Nutlear, b. h. (Snow).....	ds			

Time—2:07½, 2:07¾, 2:10¼, 2:08¾.

July 21.—There were no sure things in the third day's racing of the Grand Rapids harness meet, and extra heats and sharp finishes were the rule.

The Jones-Geers entry, Walter W., took the \$5000 Comstock stake for the 2:06 pace, but only after a hard race. Snow, who was up behind Walter W., brought him safely under the wire in the first heat, but the gelding, after leading well around in both the second and third heats, tired badly in the stretch and finished in the rear.

Walter W. came back strong in the fourth heat, making the best time of the day, 2:04¾, and won in a hard drive. Walter Hal pushed him to the wire in the fifth, but the Geers horse won under the whip.

The 2:21 pace furnished the most exciting racing of the day, the finishes of the first four heats being of the nose and nose variety. After Seal Pointer and Nathan B. had each won a heat Walton Boy showed the speed and captured the race in the next three heats.

Alice Roosevelt, favorite for the 2:11 trot, took the first heat handily, but in the second was forced to yield to Vito's great burst of speed. Vito raced her hard in the third heat, but was driven off his feet at the final turn, breaking so badly he was distanced. Alice Roosevelt then had no further trouble.

In the 2:16 trot Sable Maid had things pretty much her own way. Argot Hal broke down while warming up for the first heat and was withdrawn. Summary:

2:11 class, trotting; purse \$1000:				
Alice Roosevelt, ch. m. by The Searcher-Pap's Flaxen (Murphy).....	1	4	1	1
Justo, br. h. (McDonald).....	3	2	2	
Teatoline, ch. m. (C. Barnes).....	2	3	4	
Melva J., b. m. (Cox).....	7	5	3	
Starla, b. g. (Gahagan).....	8	5	4	6
Countess Mack, b. m. (Fenelon).....	4	8	6	5
Vito, b. c. (Benyon).....	5	1	ds	
Ed Monahan, b. g. (Bowerman).....	7	6	ds	

Time—2:09¾, 2:09¾, 2:11¾, 2:11¼.

2:21 class, pacing; purse \$1000:				
Walton Boy, br. h. by Cuckoo-Jennie Brown (Dean).....	5	2	1	1
Nathan B., br. h. (McMahan).....	2	1	4	2
Seal Pointer, b. h. (Snow).....	1	3	2	4
Nellie Temple, b. m. (Proctor).....	3	4	3	4
Cranberry, br. c. (Bowerman).....	4	ds		
Maud Baur, blk. m. (Marvin).....	6	ds		
Katherine E., b. m. (Bogash).....	ds			
Eloretta, b. m. (Fenelon).....	ds			

Time—2:09½, 2:11¼, 2:17¼, 2:09¼ 2:11¼.

2:06 class, pacing; Comstock purse, \$5000:				
Walter W., b. g. by Little Frank-Irene (Snow).....	1	6	7	1
Baron Whips, ch. g. (Murphy).....	6	2	1	2
Walter Hal, gr. h. (Garth).....	7	3	2	3
Maconda, b. m. (Albin).....	5	4	3	5
Asa Wilkes, ch. h. (Cox).....	3	7	6	5
R. F. D., blk. g. (Robinson).....	2	1	5	6
Tony Swift, blk. g. (Dean).....	4	5	4	ds

Time—2:05, 2:05, 2:09¾, 2:04¾, 2:06¾.

2:16 class, trotting; purse \$1000:				
Sable Maid, blk. m. by Ruby-Margaret Mills (Murphy).....	1	1	1	
Velzora, b. m. (Cox).....	3	2	3	
Gracious Peter, b. c. (McDonald).....	8	3	2	
Belle Colbert, b. m. (Fenelon).....	2	5	8	
Pilly C., ro. g. (McEwen).....	4	6	5	
Remorseful, bl. g. (McMahan).....	6	4	6	
Annette R., blk. m. (Pasteur).....	9	7	4	
Howard, b. g. (Colby).....	5	8	7	
Easter, b. g. (Helman).....	7	9	ds	

Time—2:13¼, 2:15¼, 2:12¾.

July 22.—The final day of the Grand Rapids har-

ness racing meet was marked by the lowering of the track records for both pacers and trotters. Giftline, who brought the pacing record down to 2:03¼, one year ago, today clipped it a full second to 2:02¼ in the first heat of the 2:03 pace.

Later on, in the fourth heat of the 2:14 trot, Hailworthy dropped the track trotting record to 2:07¾.

Giftline ruled favorite in the 2:03 pace and won in two processions that grew exciting only at the finish. The Eel was a length behind at the wire in the first heat, while Aileen Wilson was only a neck behind at the finish of the second heat.

The 2:20 trot for the Grand Rapids railway \$2000 purse furnished exciting contests.

After Henry H. had won the first heat rather easily, Rickey Rawson took the next two and seemed to have the fourth won, when Henry H. came from behind in the last 100 feet and took the heat by a nose. Henry H. led all the way in the fifth.

Turf history was made when Willy won the first heat of the 2:14 trot, as it was the first time that an European bred trotter has won here in less than 2:10. Willy made it in 2:08¼.

In the second heat Willy was nosed out at the wire by Hailworthy. The fourth heat was a repetition of the second, Hailworthy pushing ahead just at the wire and incidentally lowering the track record for trotters to 2:07¼. In the fifth heat Hailworthy let Willy lead to the final turn and then won without effort.

Colorado E. showed himself the best of the 3-year-olds, leading the others around the track by a big margin and winning each heat pulled up.

May Day had things pretty much her own way in the 2:12 pace, although she had to lower her mark from 2:14¼ to 2:06¾.

2:12 class pace; purse \$1000; three in five:				
May Day, b. m. by Commutation-July (Murphy).....	1	1	1	1
Ira Gray, b. g. (Marvin).....	3	3	2	
Ashline, b. g. (Commings).....	4	2	4	
Alwanda, b. g. (Keegan).....	2	3	5	
Peter Pan, b. g. (Chambers).....	5	4	3	
Oscar Wilds, ch. h. (Fenelon).....	6	5	6	
Gentry Pointer, b. h. (E. Benyon).....	7	7	8	
Dr. Fox, b. g. (Gahagan).....	9	8	7	
John E., b. g. (Tierney).....	8	9	ds	
Prince S., ch. h. (Hash).....	ds			

Time—2:08¾, 2:06¾, 2:07¼.

2:03 class, pace; purse \$1000; two in three:				
Giftline, b. g. by Online-Tolo (Carter).....	1	1	1	
The Eel, g. h. (McEwen).....	2	3		
Aileen Wilson, br. m. (Cox).....	5	2		
Darkey Hal, blk. m. (Snow).....	3	4		
Ross K., b. h. (McMahan).....	6	5		
George Gano, b. h. (Murphy).....	4	ds		

Time—2:02¼, 2:03¼.

2:20 class, trotting; Grand Rapids Railway purse, \$2000; three in five:				
Henry H., b. g. by Gregory the Great (Dean).....	1	2	4	1
Rickey Rawson, ch. m. (Murphy).....	3	1	1	2
Castle Dome, b. h. (Chandler).....	4	3	4	2
Henry Winter, b. h. (McDonald).....	4	5	5	4
Dr. Treg, br. g. (Rash).....	5	3	2	3
Myrtle Granette, br. m. (Andrews).....	6	6	6	ds

Time—2:15¼, 2:11¼, 2:12¼, 2:11¾, 2:12¼.

2:14 class, trotting; purse \$1000, three in five:				
Hailworthy, b. g. by Axworthy-Anselmo (Nuttingham).....	3	1	2	1
Willy, b. h. (Pennock).....	1	2	3	2
Bobbie B. McGregor, gr. g. (McDonald).....	2	4	1	3
Margate, ro. g. (Snow).....	5	3	4	4
Linemarch, br. g. (Commings).....	4	ds		
Beauty Wright, b. m. (Chandler).....	ds			
Fair Hazel, b. m. (Wood).....	ds			

Time—2:08¼, 2:09¼, 2:10¾, 2:07¾, 2:10.

Trotting, three-year-olds; purse \$1000; two in three:				
Colorado E., b. c. by The Bondsman (Macey).....	1	1		
Lulu Arion, ch. f. (J. Benyon).....	2	2		
Miss Temple Bar, b. f. (Marvin).....	3	4		
Bon Vivant, b. c. (Proctor).....	4	3		

Time—2:12¼, 2:13¾.

BIG MONEY FOR COWBOYS.

Sacramento, July 23.—The Citizens' State Fair Committee has apportioned \$5000 to be distributed among the winners of the cowboy athletic contests to be held in conjunction with the Frontier Days show during fair week at the State Agricultural Park. The list of events, with prizes, follow:

Cow pony races each day, \$75 and \$50.
Indian pony race by full-blooded Indians each day, \$20.

Free-for-all quarter-mile race for untrained horses each day, \$100.

Ladies' cow pony race each day, \$50.

Cowboys' relay race, one and one-half miles, \$175.

Indian square race, each day, \$15.

Hat race on horseback, 150 yards, \$50.

Bucking contest for world's championship, open to all, \$500.

Steer roping contest, open to world, entrance fee \$10, added purse \$400.

Wild horse race, each day, \$100.

Barrel race on horseback, \$50.

Eccentric night shirt race on horseback, \$75.

Ladies' relay race, open to the world, \$300.

Stake race, standing start, \$50.

Potato game team race on horseback, \$75.

In addition \$100 will be paid for any Pacific Coast horse produced that cannot be ridden successfully, and \$100 will be paid to any man who can ride successfully a horse designated by the management of the Frontier Days show.

NOTES AND NEWS

The \$10,000 M. & M. next week.

It looks at this writing like Dudie Archdale's race.

Henry H., brown gelding by Gregory the Great, may be a contender, however.

The C. of C. should lie between C. The Limit and The Abbe, with the Searchlight horse the favorite.

An eastern scribe has dubbed the bopples "the deck hand's delight."

At a Pittsburg matinee last week Charlie Belden was second two heats in 2:12 $\frac{1}{4}$ and 2:12 $\frac{1}{4}$.

Diabull won the 2:12 pace at the Auburn, Nebraska, meeting, best time 2:13 $\frac{1}{2}$.

The Pasadena Driving Club has about \$1500 in the treasury—a pretty fair start for a new organization.

\$4500 has been hung up in purses for the harness horses to compete for at the Albuquerque, New Mexico, fall fair.

The strings of Chas. De Ryder and Henry Helman are both entered at Galesburg, Illinois, the meeting to be held August 23d to 26th.

The Hal B. colts are getting the money this year. Hal Lou won the 2:17 pace at Kalamazoo and reduced his record to 2:07 $\frac{1}{4}$.

Dudie Archdale won the \$10,000 stake at Kalamazoo last Wednesday and reduced her record to 2:06 $\frac{1}{4}$. She should win the M. & M. next Wednesday.

Starting payments are due next Monday on the Pacific Breeders' Futurity candidates. There is \$7000 to be divided among the winners in the four contests.

W. B. Brewer and son have left Pauls Valley, Okla., with the expelled mare Mary Laidley 2:07 $\frac{1}{4}$ alias Symbol Maid, without leaving an address to which their mail could be forwarded.

Sutherland & Chadbourne will ship their string of trotters and pacers from Pleasanton to San Jose next Monday. Joe Twohig will take W. E. Detel's Futurity candidate, Bon Guy, on the same train.

Elmo Montgomery has arrived at San Jose with the string of trotters and pacers he will race at the Breeders' meeting and elsewhere. The pacer Solano Boy 2:07 $\frac{1}{4}$ and the roan trotter Bodaker are among them.

Country Jay is the fastest fourteen-year-old trotter and his winning race at Kalamazoo this week, when he won three straight heats, the fastest in 2:06 $\frac{1}{4}$, is certainly a wonderful performance, especially as it is the fastest he ever trotted.

At the matinee of the New York and Parkway driving clubs held last week, the California mare Katie Yandle by Suomi, that was taken east and sold by Mr. F. J. Kilpatrick, won a heat and second place in a race. Her time was 2:28.

"Louis," who advertised in the Breeder and Sportsman last week for a few horses is so swamped with letters from owners who have "just what he wants" that he has ordered the advertisement out rather than employ a secretary to attend to the correspondence which is already keeping him very busy answering.

The brown colt Oliver Todd which Mr. Frank J. Kilpatrick brought to California from Kentucky last year, and shipped back this spring, was given a record of 2:26 $\frac{1}{2}$ July 15th at Lexington. He is now a three-year-old, and one of the best bred young stallions in America. The record was given him simply to put him in the list.

The innovation of attiring track drivers in brilliantly colored silk and satin jackets and caps similar to the dressing of jockeys so as to make them readily distinguishable on the far side of the track has been tried at Goshen, N. Y., at a matinee. The scheme was considered a success and it is said that it will be tried at the Grand Circuit meeting at Cleveland.

Twinkling Dan, the three-year-old pacer that took a record of 2:15 $\frac{1}{2}$ at Terre Haute, has breeding that is more than ordinary. He is by Dan Patch 1:55 $\frac{1}{4}$, the fastest pacer in the world. His dam is Twinkle 2:05 $\frac{1}{4}$, by Mercury 2:21, and Mercury is by Sidney out of Juno by Buccaneer, second dam Venus, the dam of Sidney Dillon, sire of Lou Dillon 1:58, the world's fastest trotter. The second dam of Twinkling Dan is by Tom Hal Jr., the sire of Brown Hal, sire of Star Pointer 1:59 $\frac{1}{4}$, the first horse to beat two minutes. If Twinkling Dan is not bred in two minute lines, there never was a colt entitled to that rating.

The brown stallion The Laird, by Jay McGregor 2:07 $\frac{1}{4}$, dam by Baron Wilkes 2:18, who as a two-year-old, beat 2:15 in the Kentucky futurity, is being fitted for the races by Thomas Nolan at Poughkeepsie, N. Y., and will probably be turned over to Bud Murray when the trotters get to the Empire track. He has been miles in 2:15 and if he stays sound is expected to beat 2:10.

Ruby Light, the two-year-old by Aerolite (3) 2:11 $\frac{1}{4}$, dam Bertha, dam of 5 in 2:10, has already shown Dick Wilson a quarter in 33 seconds. She is very liable to add another to Bertha's already wonderful list of 2:10 performers by the time she has matured. Mrs. A. R. Shreve of Cathlamet, Washington, made no mistake when she purchased Ruby Light.

The pacing stallion Larrie Ginter 2:06 $\frac{1}{4}$, died at Iowa City, Ia., on June 30 and was buried in the orchard in which he was foaled. Larrie Ginter was foaled in 1893 and was by Medeyone, son of Alcyone, dam Alice, by Attorney, second dam Belle, by Idol, and got his record at Milwaukee, Wis., September 11, 1906. He was bred by E. W. Lucas & Son, who owned him at the time of his death.

Charley De Ryder was at Auburn, Nebraska, the week of July 12th to 16th. He drove Denervo for Smith, winning third money, was third with Diamond Mac, second with the three-year-old filly Grace Pointer, second with the other three-year-old, Roan Hal, and third with San Juan. The purses were all \$500 each, and the track a half mile one. De Ryder won \$325 net during the meeting without winning a heat.

Billie Burke, the brown horse by Silent Brook that raced last year as a three-year-old, taking a record of 2:15 in the third heat of a race in August, is a great four-year-old this year. At Kalamazoo last Tuesday he won the fourth and final heat of the 2:15 trot in 2:06 $\frac{1}{4}$, which ties Benzetta's record, and is the fastest fourth heat ever trotted by a stallion. Billy Burke is out of Crystal's Last 2:27 $\frac{1}{2}$ by Ondale, grandam by Crittenden 433, a son of Cassius M. Clay 22.

Every race meeting furnishes plenty of proof that all the winners are not trained at one track. When the actual racing begins there are horses from all points trying for the money and the winners hail from sandy tracks, hard tracks, soft tracks, half-mile tracks and once in a while a winner turns up that got his training on a country road. A good track well kept is a great help in training, but many a horse has been developed without having seen one.

Mr. W. B. Veirs, of Melbourne, Australia, will send 15 head of his trotting bred horses to the first annual sale to be held at Sidney on the 8th of next month. Among the horses to be sold is Dixie Alto, bred at Palo Alto Stock Farm. This horse has started 24 times in Australia, winning 11 firsts, 8 seconds, 3 thirds and 2 fourths, a performance that is a credit to any horse. Diana Rose, a California bred mare that started in seven races in Australia, of which she won six and was second in the other, will also be offered.

Rubicelle, a brown mare, foaled in 1893, by Prince Red and out of Inex, by Sweepstakes, was bred at the Oakwood Park Stock Farm, Danville, California, and sold to Germany when a six-year-old while in foal to Chas. Derby. This foal, as was stated in this journal at the time, won the German Trotting Derby of 1903, under the name of Rittersporn. Rubicelle has now another Derby winner to her credit, as her three-year-old filly Raute by Franko, a son of Moko, won that race on June 19th at Berlin. This race is a dash of nearly two miles and was won by Raute in 4:51 $\frac{1}{2}$, a rate of 2:26 $\frac{1}{2}$ to the mile, which is a reduction of the German derby record by a little over six seconds. Inex, the dam of Rubicelle is the dam of Our Jack 2:13 $\frac{1}{2}$, Owyne 2:22 $\frac{1}{4}$ and Alamo 2:29 $\frac{1}{4}$.

Krepesh, the champion Russian-bred trotter of purely Russian blood, whose record over dirt is 2:09 $\frac{1}{2}$ and over ice 2:08 3:5, made his debut for the season over dirt tracks at the summer meeting of the Imperial Russian Trotting Club, at Moscow, June 15, when he added another to his numerous record-breaking performances. Starting at three versts, which is not quite two miles, being equal to 3198 meters, he covered the distance in 4:25 7-10, which is at the rate of 1:23.03 per kilometer, or 2:13 $\frac{1}{2}$ per mile, establishing a new Russian record for the distance. For this feat he received the "record-premium" of 21,000 rubles, or about \$4200. Among those who were present and witnessed the performance was Prince Fushima, the noted Japanese statesman, who was so much impressed by it that he is said to have offered \$50,000 for Krepesh, which was refused.

Lady Dexter, the sorrel mare by Dexter Prince, dam Kitty Thorne 2:31 by Whipple's Hambletonian, that was driven for many years by Father Power of Livermore, is the dam of the new standard performer Directum Lady 2:30 by Directum that is owned in Kentucky. Directum Lady was owned by Father Power, who presented her to Ed Corrigan, who took her to England for use on the road and afterwards brought her back and sold her to Dr. Hagyard of Lexington. Mr. Salisbury trained this mare for a while when she was young and she could step very fast.

The 2:12 class trot on the opening day of the Breeders' meeting at San Jose is very likely to be one of the closest contests of the year. The time should be a shade faster than the record of the race, with split heats and close contests in every one of them.

Trainer Hewitt, who raced and marked that fast pacing mare Inferlotta 2:04 $\frac{1}{4}$ has a bay mare by Highland C. that he is racing over the half mile tracks in Nebraska. Her name is Miss Weyman and she won the 2:25 trot at the Auburn, Nebraska, meeting taking a record of 2:25. Diamond Mac got third money in this race.

The Vermont Black Hawk strain so lightly valued forty years ago by some of the leading horsemen is found today in such trotters as Major Delmar 1:59 $\frac{1}{4}$, Hamburg Belle 2:01 $\frac{1}{4}$, Sweet Marie 2:02, Uhlan 2:02 $\frac{1}{4}$, also the world's three-year-old champion trotter General Watts (3) 2:06 $\frac{1}{4}$, and the world's champion two-year-old trotter Native Belle (2) 2:07 $\frac{1}{4}$.

THIS WEEK'S SAN JOSE TRACK NOTES.

Sam Hoy's good three-year-old, Babe Verne (2) 2:25 $\frac{1}{4}$, worked a nice mile in 2:16.

Last Wednesday Ted Hayes drove the pacer, Jean Val Jean (3) 2:18 by Bon Voyage, a mile in 2:09 $\frac{1}{4}$.

The Demon, two-year-old by Nearest McKinney 2:20 $\frac{1}{2}$, trotted a mile in 2:27 and a half in 1:10 $\frac{1}{2}$.

Happy Dentist 2:11 $\frac{1}{2}$, paced a mile in 2:07 $\frac{1}{2}$, last half in 1:02.

A carload of horses from Los Angeles, comprising the stables of Fred Ward, Walter Maben, and others, arrived here last Tuesday, and the same day Schuyler Walton reached here from Fresno with three head, and William Ivey arrived on Wednesday from Sacramento with Lijero (mat. 2:13 $\frac{1}{2}$). Elmo Montgomery came in the same day with six head from Pleasanton.

The track is good and everybody busy getting ready for the races.

WOODLAND WORK-OUTS LAST WEEK.

Prince Lot trotted fourth and fifth heats in 2:11 $\frac{1}{2}$ and 2:12 $\frac{1}{2}$, last half in 1:03 $\frac{1}{2}$, last quarter in 31 $\frac{1}{2}$ seconds.

Dorothy Ansel, two-year-old, trotted two heats in 2:21, 2:21 $\frac{1}{2}$. Nada, M. C. Keefer's black mare, stepped the third mile in 2:13 $\frac{1}{4}$.

Yady Sutter, owned by Mr. Arvedson of College City, trotted a mile in 2:13 $\frac{1}{4}$.

St. Patrick, by Dan Logan, paced a mile in 2:21 and a part of the way at a two-minute gait. He is a pacer.

Laura Rogers is another fast two-year-old pacer, having paced in 2:22.

Chas. Johnson's Airlie Demonia stepped a quarter in 36 seconds and has the making of a good pacer.

RICH PURSES AT PHOENIX.

The Arizona Territorial Fair (they will change its name to Arizona State Fair next year) announces an even dozen purses of \$1000 each, two of \$1500 each, and two of \$3000 each for its fair to be held in November. Horsemen who are racing north, south, east or west this season will find a chance to race for good big purses at Phoenix after all other circuits are over. The November climate of Arizona is the best in the world, and the Phoenix Fair is growing to be one of the biggest and best fairs in the country. There is not a place on the Grand Circuit that offers more liberal purses than does the Arizona Territorial Fair. Look over the list in the Breeder and Sportsman's advertising pages this week. Entries close September 15th.

JEAN VAL JEAN IN THE STAKE.

One of those awkward mistakes that has little excuse was made in writing up the San Jose Driving Park horses in training last week. In referring to the three-year-old pacer Jean Val Jean, owned by W. A. Clark and trained by Ted Hayes, the statement was made that he was not in the Breeders' Futurity, when the reverse is true. The error occurred by the writer mistaking the last list of payments on the two-year-olds as those of the three-year-olds. Jean Val Jean is in the stake all right and will be a starter unless something unforeseen happens.

ANSWERS TO CORRESPONDENTS.

William Mead, Santa Maria.—We do not find any stallion by the name Unique registered as standard.

X. Y. Z., San Francisco.—It has been the custom at the California State Fair to trot the Occident Stake on Monday and the Stanford Stake on the following Saturday and we understand the program will be followed this year.

J. B. I., Salinas.—Woolma is a bay horse, foaled 1904, by imported Woolsthorpe, first dam Volma by Volante, second dam the imported mare Maori by Poulet, third dam Queen of Cyprus by King Tom. Woolma was bred by Col. Milton Young of Kentucky.

Drink Jackson's Napa Soda.

OUR LOS ANGELES LETTER.

Los Angeles, July 26, 1910.

This week about winds up the horse interest here till next fall or winter when the new track at Agricultural Park will be ready for the matinee brigade. The different stables will all move from Arcadia by Saturday, some to campaign, some to other tracks and some to their home. These latter, like Jos. H. Williams, will give their horses road work entirely till they get to work on the new track, and the let up will undoubtedly do their horses a world of good. The constant drilling and the monotony of mile after mile day after day, round and round the same old ring is enough to make the sweetest dispositioned horse "sour" and stale.

Walter Maben ships to San Jose today with A. B. Miller's Chiquita, a green pacer, and Zomell 2:14½ trotting. Mrs. C. G. Hasting's stallion Judge Dillon entered in the slow trots, C. A. Canfield's stud Walter Barker, a green pacer, and Joseph H. Bohon's good race mare Rapidan Dillon 2:11¼. He also takes E. A. Montgomery's two-year-old Victor Mc. by Red McK. for the Canfield-Clark stake at Woodland. Mr. Canfield's three-year-old colt Donasham will join his string at San Jose where he is entered in the stake for three-year-old trotters.

It has finally been arranged to have all the California Breeders' Association stakes decided at Woodland. The offer of the State Agricultural Association for these stakes was accepted, but it has been found that it would necessitate some of the three-year-olds starting three times in one week which was of course out of the question. Then Woodland offered to take that race or all of them at the same price that Sacramento offered and as several of the stables that had entries in the two-year-old stakes would be in Portland, Ore., the week of September 5th to 10th, and would not be able to race their colts in California that week, the secretary of the California Breeders' Association appreciating the fact that it was hard lines on some of the nominators to have to forfeit their payments because they could not be in two places at once and having had a right to expect when they made their entries and payments that the races would be decided at Los Angeles late in the fall, when they were through with their other engagements, asked the State Fair Committee to cancel the arrangement for all the stakes which request was most courteously granted by Mr. Filcher, the secretary, and the speed committee, so now it is hoped that everyone will be pleased as the dates do not conflict with any other meeting in this part of the country. With five more races to add to his program it is possible that Mr. H. P. Aronson, secretary at Woodland, may see his way to having an extra day's racing, say beginning Tuesday, August 23d, instead of Wednesday, and carding one of the two-year-old trots, say the Canfield stake, for that day, and the Canfield-Clark Stake No. 1 for two-year-old trotters, to wind up the meeting on Saturday, thus giving the babies Tuesday, Wednesday and Friday to rest up before starting a second time.

The California Breeders' stake for three-year-old trotters should make a great race, for there are some high class youngsters entered and over as good a track as Woodland is said to be fast time should be recorded.

The last payment of \$25 in the Canfield-Clark Stake No. 1 is due August 14th, 1910, as the conditions call for the starting payment ten days before the meeting at which the stake is to be trotted.

W. G. Durfee is getting ready to remove to Santa Ana with most of his string and though he will still live in Los Angeles will go down four or five times a week to work his horses and look after things in general.

Frank Williams will take the Wm. Morgan string to the Pasadena half-mile track and finish their work there till he goes out on the circuit next month.

James S. Stewart will probably take his horses to Hemet though he has not made up his mind definitely as yet, but it will be there or to Santa Ana, the home of Geo. W. Ford and Goldenut.

J. H. Jones of Bisbee, Ariz., was in town last week and went out to Arcadia, where he was so impressed by the looks, speed and breeding of J. S. Stewart's three-year-old pacer Buster by Zolock, dam Miss Hascom that he took him back to Bisbee with him and left a thousand dollar bill in his place.

Miss Weyman owned by Harry Messmore of this city and campaigning through Nebraska in C. T. Hewitt's stable won a good race in the 2:25 trot, at Auburn, Neb., last week after losing the first heat, owing to getting away badly. Hewitt has two other Los Angeles horses with him, a pacer belonging to Mr. Messmore and the trotter Rancho Del Paso, owned by L. J. Christopher, vice-president of the Los Angeles Driving Club. Miss Weyman has now a mark of 2:18¼ which is no more than a road gait for her.

JAMES.

RUBY LIGHT A GOOD ONE.

Editor Breeder and Sportsman, Dear Sir:—You will be pleased to know that Ruby Light, Mrs. A. R. Shreve's two-year-old filly by Aerolite is training like a real top liner for Dick Wilson. I saw her do a quarter in 33 seconds, a half in 1:09 and a mile in 2:25½, and all easy and nice. She don't wear a hoot nor a frown—she is all sunshine. Dick Wilson says for the work she has had she is the highest class two-year-old in the world, and that a mile in 2:12 will be play for her in the fall.

Yours,

C. A. HARRISON.

Portland, July 27, 1910.

STATE FAIR FUTURITY NO. 2.

Entries on Which Second Payments of \$5.00 Each Were Made on July 1st, 1910.

R. E. Allen's Baroness Bonnie by Baron Wilkes, foal by Zombro.

Geo. L. Warlow's Narcola by Athadon, foal by Stanford McKinney.
Geo. L. Warlow's Soisette by Guy McKinney, foal by Stamboulette.
Geo. L. Warlow's Donnagene by Athadon, foal by Athadon.
G. W. Whitman's Violet by Abbottsford Jr., foal by Star Pointer.
M. L. Woy's Cora Dell by Junio, foal by Tom Smith.
Wright & Donnelly's Big Siss by Stanton W., foal by Lijero.
Wright & Donnelly's Iadora by Jas. Madison, foal by Teddy Bear.
J. W. Zibell's Kate Lumry by Shadeland Onward, foal by Tom Smith.

Thoroughbreds are commanding high prices in England. At one of Tattersall's sales recently one three-year-old filly by Jeddah brought \$1100, and another \$2000. At another sale five youngsters from the Brownstown stud sold for an average of \$4300, one filly bringing \$7600. The next day five colts and fillies brought prices ranging from \$3100 to \$4100, and a colt by St. Frusquin, from Glare, brought \$20,400.

MATINEE AT PORTLAND.

The Riverside Driving Club of Portland, Oregon, held its fortnightly matinee Saturday afternoon, July 16, at the Portland track. Good time was made. C. A. Harrison did the starting in good shape. In the second event, trotting, T. W. Murphy's Sis Meridian, own sister to the great but unfortunate Perfection, that Chas. De Ryder sold for \$10,000, took the honors in straight heats, the last in 2:27. The mare went steady and acts like a good prospect. O. J. Brown's Georgia Rose, own sister to Oleta 2:12½, defeated Alexandra Queen and Blue Jacket and T. R. Howitt's good little Del Norte mare Dottie Dimple took the measure of Redskin in the remarkably good time for the class of 2:19½ with one dead heat. Next matinee is held for the 30th inst. The summaries:

Event No. 1, pacing:
Chico (D. C. Anderson)1 1
Brownale (I. T. Merrill)2 2
Time—2:35, 2:33.

Event No. 2, Trotting:
Sis Meridian (T. W. Murphy)1 1
Planter (C. T. Atkinson)2 2
Sargo (E. Aylsworth)3 3
Time—2:28½, 2:27.

Event No. 3, Pacing:
Georgia Rose (O. J. Brown)1 3 1
Alexandra Queen (Dr. T. Jones)3 1 3
Blue Jacket (L. W. Watts)2 2 2
Time—2:24½, 2:21½, 2:21½.

Event No. 4, Trotting:
Dottie Dimple (T. R. Howitt)3 1 dh 1
Redskin (A. C. Lohmire)1 2 dh 2
Deputy (G. W. Todd)2 dr
Time—2:19½, 2:19½, 2:21½, 2:22½.

DICK WILSON'S STRING.

Dick Wilson's last speed card shows a mile in 2:14½ for Mr. Linn's trotter, Mrs. Herbert. Rothaldi, a mile in 2:12, Lord Lovelace a mile in 2:12, half in 1:03, quarter in 31 seconds. The Arlight has paced a mile in 2:17½, Alex Williams son of The Patchen Boy has been round in 2:16½, half in 1:06. Mr. Porter's handsome mare Ora May has worked in 2:18¼. Zohona has gone the route in 2:17½. Oregon Patch and Dick Hal have worked together in 2:17, the big horse working an easy quarter in 33 seconds. W. L. Whitmore's two-year-old filly by Bonnie McK. is showing a good gait and doing quarters in 36 seconds. Nique, by Joe Patchen, has been the mile in 2:17, quarters in 30¼. North Star Pointer is showing about a 2:20 gait. One of the late additions to Mr. Wilson's stable is Kingki by King Alki, Mr. Maxwell's good young stallion. After hut a short prep Kingki stepped a mile in 2:29, a quarter in :35 and as C. A. Harrison observed, he came through as Altao used to do. Dottie Dimple, winner of the trio in the last matinee, has been receiving some instruction from Mr. Wilson of late, and her improvement in gait is very marked.—Rural Spirit.

DEATH OF GEO. H. FOX.

Just before going to press we learned of the death Thursday night, July 28th, at the Lane Hospital in this city, of Geo. H. Fox, of Clements, Cal. Mr. Fox was operated on a few days previous to his demise, for ulceration of the stomach, but the operation was not successful. Geo. H. Fox had a wide acquaintance among the horsemen of this coast. He established the Mokelumne Stock Farm at Clements many years ago, placing at its head the stallion Silver Bow 2:16 for which he paid a long price. His breeding ventures were fairly successful for a while but in recent years were almost entirely abandoned and the farm devoted to other uses. He was a native of New York, aged 64 years, and leaves a devoted wife, but no children to mourn his loss. Mr. Fox was a whole-souled man, generous to a fault, and leaves a host of friends who will deeply regret his death.

MATCH RACES AT PARK TRACK.

A match race came off at the stadium track last Wednesday morning between Luke Marisch's Little Dick by Dictatus and John Kramer's Celia K. by Searchlight. The match was for a purse of \$100 a side. Frank Burton drove Celia K. and Victor Verilhac held the reins behind Little Dick. The race was won by Celia K. After going to the three-quarters rather slowly, with Little Dick trailing, the horses raced through the stretch in a little less than 31 seconds, the mare winning in 2:15-25. The second heat Little Dick's driver pursued different tactics and went away fast, but broke his check before the first quarter pole was reached and the mare jogged home a winner in 2:22.

After this race a match was made between the trotter Walter Wilkes and Little Dick, three-quarter mile heats. The pacer won in 1:36½ and 1:38¼.

*Get off now.
I have used the Little Dick
on many, all my horses
and consider it the best
I have ever used.
J. W. Mendenhall*

ROD, GUN AND KENNEL

CONDUCTED BY J. X. DeWITT.

GOSSIP FOR SPORTSMEN.

Activities in sportsmen's circles throughout California are in full swing. The gossip and bustle of enthusiastic hunters and anglers are particularly noticeable about the sporting goods headquarters in this city, and for that matter, the same rule applies in every large city, as well as smaller points throughout the State.

The army of deer hunters out after bucks this season, is in numbers, far in excess of any past year. Good hunting territory within easy reach of any of our larger cities, particularly San Francisco, is practically so well gone over, and also posted by owners and ranchers, that hunters who wish to enjoy a week or two deer hunting now must go to far distant and isolated sections in this State.

Reports from Humboldt, Mendocino, Shasta, Siskiyou, Trinity, Lake, Nevada and Placer county hunting resorts state that hucks are numerous enough to make limits comparatively easy.

Hundreds of local nimrods have essayed their skill with the rifle since July 15th in an effort to bag an antlered buck. That many deer were killed is evident from the number sent into this city by express. Juicy venison steaks and toothsome haunches have been sampled by many of the hunters' friends.

Some hunters, generally the novices, have had their labor for a reward. Others, again, had bucks almost fall into their arms. A local restaurateur, while out dove shooting in Marin county recently, killed a buck with a shotgun.

At numerous hunting camps where bucks were proudly hung and admired as trophies of the chase, the happy hunters have discovered that the fleas, which bucks are a wholesale host for, have biting jaws that sting like the rod of affliction. In fact, some camping parties had to change their location to avoid pulex irritans and his hungry horde of relatives.

During the recent full of the moon deer hunting was not so productive of venison. The animals feed during the moonlight, hiding and sleeping in the daylight hours. They are wiser in their habits than they are given credit for.

A hunting party composed of Dr. Henry Abrahams, Dr. G. H. Taubles, Joel H. Hecht, E. M. Hecht and Pete Sloan hunted on the opening day in the vicinity of Ornbau valley, Mendocino county, between Booneville and the coast. Dr. Abrahams dropped a three-point buck. Pete Sloan brought a "spike" buck into camp late that evening. E. M. Hecht bagged a fine forked horn the second day. Deer hunters were numerous in that section. Fishing in the headwaters of the Garcia river was excellent. The party made the trip from this city and back by automobile. In the vicinity of Fort Ross, Ben Baum and Henry Kahn got two bucks on the 15th instant. Automobile parties bent on deer hunting in distant country are much in vogue.

On the Maillard holding in Marin county Sydney St. L. Cavill, John Barr, Dr. Fletcher, Harry Fletcher and H. Hooper rounded up between them one buck. Cavill's two dachshunds, Nordica and Minka, demonstrated their sporting blood by locating the deer in thick brush where it fell.

Jim W. Bonney shot his buck near Novato. Frank Dolliver will not tell just how near Point Reyes his buck was knocked over. Near Inverness bucks were shot by I. Freeman, Ti mlrvng and James Irving. Over a dozen bucks have been shot on the Bolinas ridge since the season opened.

On the Bolinas ridge about 15 bucks have been bagged since the opening day. Many does and fawns have been noticed in that district. As for that, does and fawns have been much in evidence in many hunting sections.

It has lately been advocated that a closed season on deer, in Marin county particularly, would be beneficial, giving the hucks a chance to increase for a year or two. This argument is advanced by sportsmen of short experience or of observation confined to a somewhat limited area. The better plan would be to thin out the barren does. This practice is found beneficial in the deer forests and parks of Great Britain and on the Continent. The custom is one evolved from practical conservation of the deer and the keeping up of hunting territory to a standard of certain results.

Dr. J. Auburn Wiborn has the honor of bagging the first buck this season, a two-pointer, on the preserve of the Lagunitas Rod and Gun Club in Marin county.

Late reports from the Truckee river fishing resorts are that the stream, owing to the work of the irrigation officials, is still higher than is conducive to the best fly-fishing. At Truckee and Boca fair fishing has been the luck of local anglers. At Reno, however, the fishing is said to be excellent. This may not appeal to many California anglers, for a \$10 non-resident license is a requisite for undisturbed enjoyment of the sport in Nevada.

At the preserve of the San Francisco Fly-Casting Club recently several members were at the cluh cottage. Governor Gillett caught a fair basket of trout in the part of the river running past the cluh hold-

ing. James Watt landed a nice catch of fine fish with a spoon lure below the bridge. Carlos G. Young, Ed Everett and several other members caught enough trout to make a good basket showing.

Lake Tahoe fishing for big Mackinaw trout still holds its own. Appellate Judge Cooper and Mrs. Cooper recently had fine sport at the lake. Mrs. Cooper's largest fish, about eight pounds in weight, was lost through the carelessness of her boatman.

Independence lake is reported to be prime for the angler. The Webber lake trout seem to be taking a brief respite from lures of the anglers. The Little Truckee nearby, however, is still of good attraction for fly-casting.

Fishing at the Webber lake resort will not pick up to any great extent until about September when a colder temperature prevails. When the lake water goes over 60 degrees the trout seek the bottom depths of the lake and stay there. Independence lake is fed by ice-cold streams, hence the angler can enjoy a longer innings at the sport.

Below Boca, Juniper creek is said to be reliable for a daily limit of Eastern brook trout of nice size. Edwin C. Graff and J. Boyden caught several limits of these trout from nine to fifteen inches in length a week ago. Fish of six inches or under size were thrown back in the water, conditions for stream fishing that must appeal strongly to the angling enthusiast.

F. H. Smith located most satisfactory fishing waters in the vicinity of Rubicon Springs, Placer county, during a recent outing.

Upper Sacramento angling resorts were recently under a most unusual handicap—the river surface and banks was covered with black, sticky crude oil, the result of a train wreck in which the contents of several oil tank cars were spilled into the river.

Reports from the Williamson river, at Klamath lake, Oregon, recently were that there is a lull in the operations of a number of local anglers at that resort. The river is deep and clear, and teeming with large trout. Plenty of natural food abounds. The trout caught were found to be gorged to distension with caddis larvae. Grasshoppers and spoons for the present seem to be the best lures. The fishing is best when the day is overcast; evening fishing is more productive than other hours of the day.

The headwaters of the Garcia river, reached via Bonville, offer pleasing chances for limit baskets. The killing flies used were the royal coachman, professor, gray and brown hackles tied on No. 12 hooks—the reliable lures for Coast streams.

Another good stream up that way is the Gualalla. Stage by way of Skaggs Springs or Cazadero to Point Arena is the route to take.

The Paper Mill creek pools are not yet depleted of speckled beauties. A few fish are taken every week by anglers, despite the presence of numerous campers along the banks of the stream.

The Purissima and San Gregorio creeks in San Mateo county hold weekly receptions for quite a number of Waltonians, who generally return to town with enough nice trout to make a good showing. Among recent visitors at Purissima were Walter R. Day, Bob Caldwell, G. M. Coffee, Fred Sarcander, John Bettencourt and brothers, Charles F. Breidenstein and others.

Santa Cruz streams are now low and clear and good for nice fly-fishing, but the trout run small in size. For a week past there has been a big run of steelhead in the bay at the mouth of the San Lorenzo and at Capitola. These trout run about eight to ten inches in size.

There is but little abatement in the sport of black bass angling at many resorts. Up above Rio Vista these fine, game fish are being caught with the fly and light tackle as well as with live minnows, spoon lures and dowagiac baits. Some good catches have recently been made in Prospect slough.

"Black Jack" Lemmer a week ago caught a limit basket of fifty black bass in the Merced river, near Merced. The upper waters and tributaries of the San Joaquin, Kings and Kern rivers have proven a most prolific habitat for black bass.

The irrigation ditches near Stockton and Tracy are reported to be full of black bass. Fishing near Tracy, however, is apt to be badly handicapped by windy weather.

Salmon anglers are ready for the anticipated run of salmon due now and overdue. It is reported that three salmon were caught outside within a week—pioneers, possibly, of the big run—or perhaps there was a lively run of fish overlooked by the trolling anglers. Reports from Sacramento river points—Oroville, for instance—state that numbers of salmon were speared and pitchforked out of the river a week ago. A thirty-five-pound salmon was caught by Frank Malpus in Petaluma creek this week.

The trolling sport on the Santa Cruz side of Monterey bay, so far this season, has been exceptionally dull, but seven fish have been recorded to date. There are myriads of sardines and anchovies in the bay, but the salmon appear to have overlooked entirely their favorite food.

Striped bass anglers are alert these days. Several good catches have been reported, and strag-

glers have put in an appearance at temporarily deserted resorts, thus giving rise to piscatorial hope in the breasts of the legion of "clam-tossers."

Many of the striped fish have been recently taken between Crockett and Vallejo Junction. A favorite fishing ground is the railroad cut-off. The new track laid now incloses an area of about thirty acres of water, which has developed into a favorite feeding ground for the fish. The bass run from 3 to 12 pounds in weight. The wharves along the straits also are good fishing places on an ebbing tide.

During the week a large number of striped bass were taken by parties fishing from the Shelby wharves, Eckley station and Port Costa anglers have also had a "cut in" on the fish. Glen Cove, on the opposite shore, is also a good fishing spot. Boats are plentiful along the water front of Carquinez straits, and can be hired for a small amount.

Wingo slough anglers caught two bass within the week. This resort will soon be on the striped bass map again.

Petaluma anglers caught several striped bass recently in San Antone slough. Tom Casey, Pete Walsh, Frank Malpus and other Black Point sportsmen have recently caught bass at the railroad bridge.

San Pablo frequenters have dotted the shallow waters with numerous boats for the past two weeks, with encouraging results. Tide and weather conditions have been rather favorable. Stingrays are becoming more sociable than is liked by the salt-water anglers. Quite a few small fish were caught last Sunday, a six-pounder being about the largest. Roddeo has not shown any evidence of striped bass for some time past.

Tiburon lagoon anglers caught several bass last Sunday; a seven-pounder was the most ambitious trophy gathered. During the week, 30 fish were caught one day and 20 more the following day, these fish were of hut medium weight, however.

Bay fishing last Sunday was indulged in under most favorable conditions; there was a fall of but six inches only in the tide. Large numbers of rock cod and other fish were caught. A party of Dolphin Boat Club members. Jack Phillips, Bob Belcher, James Cronin and Hugh McKeivitt, caught 100 pounds of rock cod off Lime Point. Sixteen boats were fishing at the point. All returned with big catches. A launch party of Ariel Club members took a big toll of rock cods from the Arch rock reef.

Along the San Mateo shores many fishermen have been catching all kinds of sea fish. A large crowd of anglers were at Charles Nyes' Moss Beach headquarters. Everybody had a varied assortment of fish, abalones and mussels.

From time to time our salt water anglers are given a surprise, greater or less in degree or in intensity, by the appearance in local waters of strange fish. Whales are not unknown in the bay waters, large sharks, blackfish and threshers are at times seen outside.

The latest freak appearance is that of a leaping tuna. These big game fish are supposed to be a fishing monopoly available only in the Catalina island waters. A few have been taken by anglers in the Santa Barbara channel, and specimens of a smaller variety are not infrequent in the Monterey bay nets.

That the leaping tuna is here was "strongly" in evidence—at least one specimen of the brand was. If one, there may be more. The fact that the pioneer of his kind is dead cuts but little figure, or mayhap he was a straggler, a wanderer from a submarine hearth far down the coast.

Lying extended on the bright sands of a rocky cove, between the Point Pedro tunnel and Coon hollow lies a stranded, leaping tuna, at least eight or ten feet long, weighing possibly over 400 or 500 pounds, a leviathan of the Coast species. The big fish was noticed Monday afternoon by passengers on the Ocean Shore train, and was positively identified as a tuna—the head, dorsal fins and crescent shaped mackerel tail easily proclaiming the identity of the beached fish. The fish was lying in state Tuesday morning, and is probably yet holding down the job.

Whether this tuna is one of a school visiting our shores or only a sea hermit is therefore the subject of much cogitation among the rodsters.

Value of the Muskrat.—On account of the increasing scarcity of fur-bearing animals considerable interest is being manifested in the muskrat. Both the fur and the meat are staple articles in some of the markets of the east and middle west during the winter months. The furs are used largely by fur dressers and dyers and are made to closely imitate the more costly furs, thus creating a continuous demand for the pelts.

Owners of marsh lands have already made the trapping of muskrats profitable, converting otherwise useless lands into income producing investments. Many lease the trapping privilege to those who make a business of trapping.

Farmers' Bulletin No. 396, "The Muskrat," gives a description of its general habits, methods of trapping, and the value of its fur and flesh. It will be sent free by Senators, Members of Congress, and the Secretary of Agriculture, Washington, D. C.

AT THE TRAPS.

Setting a new amateur record for trap shooters west of the Rocky Mountains, E. J. Chingren of the Spokane Gun Club, broke 196 out of 200 targets at the first day's shooting of the Washington State Sportsmen's Association July 20, at the traps of the Spokane Rod and Gun Club on Moran prairie. He also set a new Coast amateur record of 130 straight.

The only shooter that excelled Chingren was H. E. Poston of San Francisco, a professional, who broke 197 out of possible 200 and set a new ground record of 146 straight. He also made another run of 124 in the day's shooting. Of the other professionals that were high are L. H. Reed with 193, Tom Barclay of Spokane with 192 and Lee Barkley of Seattle with 191.

Tom Ware, another Spokane shooter, carried off the banner event of the day for the Howard gold watch with 50 breaks straight. There were several 49s, but Ware was the only one that went through without a miss in the closing event of the day.

In the special match, after the regular program, the contestants shooting at 12 double rises, Ware was victorious with 23, Wood, second, 19. The other scores were: Converse 18, Forbes 17 and Fulton 15.

Forty-six men were on the firing line the first day and some good scores were made. However, many were unfamiliar with the traps. Chingren was in no danger at any time, and he was confident that he can excel the mark he set Wednesday. John Mocine, at one time well known in Spokane sportsmen's circles, came down from Juneau, Alaska, to participate in the shoot and visit old-time friends.

A large delegation was present from Nelson, B. C., all boosting for the Pacific Indian shoot to be held in Nelson this week. A special car was to leave Spokane at 9:55 o'clock Friday morning over the Great Northern, reaching Nelson in the evening, and it is expected that all of the shooters at Spokane will make the trip.

Seattle, Tacoma and Walla Walla probably had the largest representation while there were a number from other small towns and a large number from Spokane taking part.

The program for the second day comprised six events of 20 targets each, \$20 added, and three events of 25 targets each for the state championship, P.-I. gold medal; Smith gun trophy; Spokesman-Review medal. Following the medal shoot was a three-man team shoot at 25 targets.

Tied on Thursday with Converse of Portland at 113 out of 120, but with a big lead from the first day's shooting, E. J. Chingren defeated all comers, professional and amateur, breaking 314 out of a possible 320. In the total targets of 395, Chingren broke 381, while E. G. Farmin of Sandpoint, Idaho, but a member of the Spokane club, was second, breaking 375, with H. W. McElroy and F. K. McBroom of Spokane tied for third position with 366 breaks.

In the shoot for The Spokesman-Review medal, previously held by R. H. Miller of Seattle, M. W. Pennington of North Yakima, "Dad" Beck and Farmin were tied with 25 straight breaks at 20 yards. In the shoot-off, Pennington secured the trophy with two straight of 25 each. The P.-I. medal went to R. H. Miller of Seattle with 25 straight at 20 yards, while George C. Beck secured the Smith gun trophy with 25 straight at 17 yards. These were the only three handicap matches of the shoot and the keenest competition was experienced, Pennington breaking 75 straight to secure The Spokesman-Review trophy.

In the team shoot for championship the three Spokane teams finished one, two, three. Farmin, Hugh McElroy and "Dad" Beck composed the winning trio, breaking 58 out of a possible 60 targets. R. L. Dalke, J. S. Malloy and R. T. Steinke were second with 56 breaks and Ware, F. K. McBroom and Chingren third with 55. The Walla Walla team was fourth with 54. In this shoot the crack Spokane team had to give way before one of the lesser teams of the local club.

Chingren took nearly every thing in the amateur class with an average of 98 1-3 per cent for the two days' shoot. The first day, Tuesday, he captured the Post Falls Irrigation trophy with 96 out of 100, including 74 out of 75 on the shoot-off. The Shea and Davis trophy of a cut glass set, the high average medal and the Du Pont gold bar for 130 straight.

McBroom broke 106 straight Thursday, securing the Du Pont medal, as well as being third in the team shoot and tied for third in the two days' shooting with McElroy with a total score of 366.

Lee Barkley high average at all targets with a total of 384 out of a possible 395. Of the professionals at all targets during the two days, Poston was second with 380; Barclay third, 374, and Reid tied with Barclay at 374. In the amateurs Chingren led with 381, Farmin second with 375 and McElroy and McBroom tied for third with 366.

At a meeting of the Washington State Sportsmen's Association held in the hunter's room at the Hotel Spokane July 19, Tom Ware was elected president, John S. Malloy, vice president, and F. K. McBroom, secretary-treasurer. All three of the officers are from Spokane.

The directors for the ensuing year are: E. D. Ellis, Seattle; R. N. Miller, Seattle; J. A. Cooper, Tacoma; F. A. Dryden, Walla Walla; George Stacy, North Yakima; Maurice Smith, Spokane. The following will serve on the handicap committee: E. J. Chingren, Spokane; E. G. Farmin, Sandpoint, and C. Wood, Tacoma. J. F. Smalls acted as chairman.

At a recent regular shoot of the Salt Lake Gun Club, considering a strong wind blowing across the traps, the scores were high.

Broken out of a possible fifty targets: Mills 45, Burgess 43, Ryan 41, Sharp 41, Kingsley 41, Cummings 40, Dr. Dart 37, Morgan 36.

Five-pair doubles—Cummings 8, Kingsley 8, Morgan 6, Sharp 6, Mills 6, Burgess 5, Ryan 4.

Twenty-five members of the Tacoma Gun Club competed in the annual merchandise shoot at the Mountain View traps July 17, and seventeen of them won. A stiff wind was blowing across the traps, making good scores impossible. Jack Forbes was the high man among the professionals with a score of 93, while J. Cooper was high amateur shot with the same score. Campbell was second with 90.

The West Seattle Club sent over eight shotgun

artists who shot against the locals in a practice shoot following the merchandise contest.

The scores in the merchandise event follow:

Events—	15	15	20	15	15	20	100

Steadfeldt	2	4	7	4	2	1	20
Forbes	13	14	17	13	13	20	93

Following are scores made in the practice shoot, 100 targets, in 25 sections, at unknown angles:

Barr, 20, 21, 24, —; Wood, 19, 23, 21, 20; Reed, 23, 25, —, —; Forbes 24, 22, —, —; J. Cooper 25, 21, 24, —; H. D. Miles 18, 17, 19, —; Dague 20, 24, 23, 22; Jensen 24, 20, 23, 21; Peterson 21, 21, —, —; E. W. Cooper 24, 23, —, —; C. Wright 23, —, —, —; C. I. Miles 14, 14, —, —; H. Delin 19; Freeman 20; Bean 21; Hall 21; King 19.

The Idaho-Utah Sportsmen's Association tournament took place, this year, at Ogden, July 11, 12 and 13, on the grounds of the Wasatch Gun Club. About thirty shooters, including the leading trap shots of the intermountain country were present. Clarence A. Haight and D. W. King of San Francisco were among the visiting sportsmen on the firing line.

The program for the preliminary day consisted of a 100-bird practice series. A. P. Bigelow and Morris Skeen, of Ogden, were high with 98 each; Dave Holohan, Salt Lake and Sam Browning, Ogden, 96 each; G. L. Becker, Ogden; J. S. Cowan, and H. C. McCanney, Salt Lake, 93 each.

The leading features of the tourney were the Idaho Falls medal, Browning diamond medal, Becker trophy and the Salt Lake Gun Club handicap. The program called for 20 events, 485 targets, a summary of general results follows:

Events—	1	2	3	4	5	6	7	8	9	10	11
Targets—	15	15	20	20	20	20	20	20	50	25	23

forged to first place, displacing Dr. C. A. Schrader, and is considered to stand the best chance of winning the leading trophies.

The day was uncomfortably hot for trap shooting, but otherwise the contestants considered conditions nearly ideal, and very creditable scores were made.

Only five members of the club were entered and are entitled to a trophy rating. All the others have back scores still to be shot, and three, Dick Rons-tadt, Phil Brannen and Brad Brannen, are out of the running altogether.

The scores for the last shoot and the total rating up to the present time are as follows: D. C. Williamson, 92, 226; Dr. C. A. Schrader, 84, 221; Fred Steward 81, 217; John Steigler, 80, 211; and W. A. Julian, 77, 210.

Phoenix Gun Club members are not relaxing their interest in trap shooting. At a recent club shoot the scores made in the various events were good for the most part and the club as a whole is encouraged from the showing made to have greater faith than ever in the success of some of its members in the forthcoming tournament of the Arizona State Sportsmen's Association, which takes place in Phoenix September 21, 22 and 23.

The scores and events were as follows:

Ballistite trophy, 50 targets, T. L. Eden, winner, 45.

Merchandise handicap, 25 targets, nine prizes, won as follows: First prize, silver cup, A. W. Galpin, 23 birds at 20 yards; second prize, setter pup, C. Yaple, 21 birds at 18 yards; third prize, C. H. Valentine, 20 birds at 16 yards; fourth prize, W. R. Price, 17 birds at 16 yards; fifth prize, Russ Warner, 16 birds at 20 yards; sixth prize, J. V. Scrivner, 15 birds at 17 yards; seventh prize, G. I. Carr, 14 birds at 16 yards; eighth prize, H. L. Worden; ninth prize, for lowest score, Sterling Price, 12 birds at 16 yards.

Ties were shot off miss and out. Eden and Valentine tied for third, on the shoot-off Valentine won with three straight breaks. A. A. Jones and W. R. Price tied for the fourth prize, the latter won with only two. Charles Slankard, J. V. Scrivner and B. Richards tied for the sixth prize, with Scrivner the victor in the shoot-off with four breaks.

Event No. 3 for Du Pont trophy, at 50 birds, won by T. L. Eden, score 49.

Following are the scores made by the entrants in the Ballistite and Du Pont events.

Ballistite—T. L. Eden 45, A. W. Galpin 43, J. V. Scrivner 39, H. L. Worden 36, C. Yaple 40, A. A. Jones 33, W. B. Twitchell 37.

Du Pont—T. L. Eden 49, A. W. Galpin 40, C. Yaple 40, W. B. Twitchell 42.

Three Phoenix Gun Club members, who have had an enviable record at the blue rock traps were recently worsted in a match at live targets.

H. P. DeMund, W. R. Price and J. L. Irvin won out over A. W. Galpin, W. B. Twitchell and T. L. Eden—a trio of club trap shots, in a unique shooting race.

The conditions of the match were that each man would provide himself with 100 shells—the team showing the most "white wings," as one variety of the Arizona dove is called, would be the winner.

The party proceeded to a point about six miles south of Tempe and turned loose on the birds.

"White wings" were not overly plentiful, the result of the shoot, however, was that the gun club shooters used 162 shells and grased 86 birds. The other side fired 160 shots and accounted for 102 "white wings."

After the smoke of battle had passed and irrigation proceedings were concluded, most of the birds were distributed among Phoenix charitable institutions.

A second match took place a short time afterward. The results were: Price 63, DeMund 61, Irvin 54, total 178. Galpin 58, Eden 53, Twitchell 37, total 148. Each shooter again took out 100 shells.

The Pigeon Shooting Championship of New Zealand was decided on the Wanganui Gun Club's ground, May 28. There were twenty-four competitors, and the winner turned up in Mr. Donald Allan Fraser, the sixteen-year-old son of Mr. Duncan Fraser, of Hororata, Canterbury, who killed 20 birds out of 21. This was the lad's first attempt at the New Zealand championship, and he had to compete against the best shots in the Dominion. All shot from the same mark (28 yards), and it was unquestionably a fine performance, and by far the best ever recorded by a boy in New Zealand. By his victory Fraser carried off the £25 gold and diamond medal, a 65 guinea gun presented by the Colonial Ammunition Company, and £35 in cash, presented by the club.

Messrs. Stead, Fraser (sen), Price and King divided the second and third prizes with 18 kills each.

Young Fraser started shooting only about twelve months ago, and his performance is therefore a remarkable one. Last Easter he shot for the Colonial Ammunition Company's Cup, and got a leg in, killing 40 out of 43 birds. He will shortly visit Dunedin to compete for the first Sparrow Championship of New Zealand, and as he is reported to be an even better shot at sparrows than pigeons, he should give a good account of himself.

The Pacific Coast Handicap at Seattle next week promises to draw a large attendance of shooters. Among the delegation from California, our local shooters, C. J. Ashlin, John F. Connelly, Ed Schultz and possibly Tony Prior will participate. C. A.

Haight, D. W. King, Hugh Poston and several other "pros" from this city are already in the north.

The Pacific Indians shoot of Nelson, B. C., three days, concluded on Thursday. A big crowd was present and everybody had a grand time. The B. C. sportsmen were congenial hosts. The Indians can inscribe on Coast trap shooting tablets another successful annual shoot—all credit to Frank C. Riehl and his warriors.

The storm center of trap shooting activity among Coast shooters is located in the northwest at present.

Tom Ware is an exception to the rule for athletes—"time must be served." He "came back last week in great fettle.

A trap shooting club is on the books for Oroville. Possibly there will be a re-organization of the old club, which was a popular one several years ago.

A SPORTSMAN'S BEREAVEMENT.

Throughout sportsmen's circles in this State there is no better known nor more popular devotee of outdoor sports than W. W. Richards—a wholesouled, thorough sportsman.

As with all humanity in time, so with our friend, the rod of affliction was laid upon him a fortnight and a day ago in the passing away of his respected aged mother, a gentlewoman of loving disposition. The friend and mentor to many during her busy and active life, and one who was recognized in a brilliant literary circle as being endowed with a gifted pen.

Mrs. Annie M. Richards passed away in Santa Cruz, after a lingering illness, at her home, where she had resided for over half a century.

Richards' Manse, the family place, was a combination of museum, library and gallery of art, within the walls of which were gathered many rare and valued treasures of art and literature, souvenirs of travel and curios from all parts of the world. Many of these treasures were collected by Mrs. Richards, who had travelled extensively and with wisdom.

We extend to Will Richards our sympathy in his affliction and which sentiment we are positive is keenly felt by his many sportsmen and business friends and associates.

DOINGS IN DOGDOM.

The National Dog Breeders' Association are in a decidedly flourishing condition, so far as support and encouragement from Coast fanciers cuts any figure.

Not only are individual requests for associate membership frequent (accompanied with the requisite fee), but also applications for show holding licenses are cropping up. San Jose, as is now well known, will be under National rules. Five other shows are also on the list, but of these, later on.

The latest is the application for a license from the Humboldt County Kennel Club, of Eureka, Cal., for a bench show in September. Mayor Louis R. Chester, Chas. E. Sharp and associates are a guarantee for a meritorious show.

At a recent meeting of the N. D. B. A. forty fanciers' names were up for membership, a number of additional applications have been received since.

Under the recent incorporation the officers now at the helm are: J. Hervey Jones, president; Phil M. Wand, first vice-president; George B. M. Gray, second vice-president; Wm. Blackwell, third vice-president; George W. Ellery, treasurer; J. Leo Park, secretary. Executive Committee—J. Hervey Jones, J. Leo Park, Geo. W. Ellery, Phil M. Wand, Geo. B. M. Gray, Wm. Blackwell, Wm. Ellery, Wm. V. N. Bay, Henry B. Lister.

Board of Review—H. Lister, chairman; C. W. Riffe, Dr. J. A. Wiborn, D. P. Cresswell, Wm. Blackwell.

Membership Committee—Wm. V. N. Bay, chairman; Dr. L. W. Spriggs, Sydney St. L. Cavill, Wm. G. McMahon, W. E. Chute.

Stud Book Committee—Wm. Ellery, chairman; J. W. Matthews, Henry Berran, V. A. Kuehn, Fred P. Butler.

The recently organized National Airedale Club—composed of fanciers of Missouri, Kansas, Nebraska, Iowa, Colorado, Montana and New Mexico has applied for N. D. B. A. membership.

The Ladies' Kennel Association of Southern California was organized two weeks ago in Los Angeles. The officers are: Mrs. Ella F. Morgan, president (unanimously elected), Mrs. F. M. Connor, first vice-president; Mrs. S. G. Gouscher, second vice-president; Mrs. H. McClure, treasurer; Mrs. Harry B. Kirk, secretary.

The association club room is in the Hamhurger building. A roof garden show is contemplated in the near future.

The Vancouver premium list for the Vancouver Exhibition Association Show, August 18-25, provides for a total of 133 classes. Money prizes \$5 to \$3 for firsts, \$2 and \$3 for seconds, ribbons for a few seconds and all thirds. Entrance \$2 and \$1 for each additional class. Entries close Monday, August 1, positively. C. K. C. rules will govern.

Harry W. Lacy will judge all classes—unless the same trick is turned again this year which prevented him from judging at Tacoma and Vancouver.

Secretary E. C. Powell, 319 Pender street, Vancouver, B. C., will be pleased to forward premium lists or further information.

ECHOES FROM THE NORTHWEST.

[By August Wolf.]

Two drawn-up blackened bodies in the bunks and a few notations in a diary tell the fate that befell George C. Dorman and Clayton Shoecraft, trappers and hunters, in a lone cabin in the heart of the Bitter Root mountain wilds, in northern Idaho, about 150 miles southeast of Spokane.

The two men went into the Black Lead district on Cayuse creek last fall with traps, equipment and provisions for a stay of nine months. When they failed to come out early this summer a rescue party was organized recently at Lewiston, Idaho, and after a long search the relief crew, headed by L. F. Williams, found the bodies of the men, who succumbed to rheumatism and scurvy.

Dorman's diary, found by his side in the rude bunk, tells its own story in these words, inscribed with a stubby lead pencil:

"February 21—Do not feel well at all.

February 28—Both of us badly troubled with rheumatism.

March 6—Can hardly get around for rheumatism.

March 11—I walked some on the bar next to the river, then back to the cabin. My ankles hurt so I could hardly get back. This pain is fierce all over me. Clay (Shoecraft) thinks we have the scurvy.

March 13—Clay in bed most all day with cramps in his legs and cold chills all over him.

March 15—Cut some wood. Walked to the river and back. Clay in bed again and I am worse. Can hardly get around. We are certainly it.

March 17—Clay had to crawl on his hands and knees to table and back again.

March 18—Pains in my back and legs are fierce. Clay has to crawl. It's fierce.

March 20—Clay is still crawling. We are both getting worse.

March 22—We can scarcely move.

March 23—Clay cannot move.

March 24—Clay can't get out of bed. I feed him in bed, but it is little he eats. He is worse than I am. Oh, this is awful!

March 26—I can hardly move.

March 27—It's awful!

March 28—I can scarcely move at all.

March 29—"Worse!"

The final entry is believed to have been the closing chapter of the suffering of the two men isolated in the heart of the Bitter Roots.

Dorman wrote in the diary that his parents, Mr. and Mrs. William Dorman, live at Richmond, Kan. Little is known of Shoecraft, though miners in the Black Lead district recall having heard him say he owned a homestead near Sandpoint, Idaho.

Mr. Williams and the officials of Lewiston are making efforts to locate the relatives of the two men and as soon as instructions are received the bodies will be brought out and buried in the little cemetery near Lewiston.

Alex C. Ware of Spokane, veteran fisherman and all-around sportsman, who has whipped most of the streams in eastern Washington and Oregon, north and central Idaho, western Montana and southeastern British Columbia during the last 20 years, speaking of our available fishing waters states:

"The best bass grounds are Newman Lake, which is reported very good. Many fine catches were made there last season and even better are expected.

Liberty lake is good for bass, perch and trout. It was stocked several years ago with trout and a few were caught last year, so it should be much better this year. The perch are small, but the bass are of good size and plentiful. Williams lake, north of Spokane, is productive of good bass fishing. Boats have been provided so the difficulty which existed in former years will be eliminated this season.

Fish Trap lake, west of here, is reported as being good for bass this year. Many large catches of bass and large perch were taken out of the lake last season. Silver lake also is good for bass and sunfish, with which it was stocked some time ago. Of the other lakes which the Spokane fishermen frequent there is Coeur d'Alene, Hayden, Fernan, Chatcolet and Sucker, all of which are good bass grounds.

For trout Hayden lake, Newman lake, Liberty lake, the Little Spokane, Chamokane creek, Deep creek and Deadman creek are probably the best grounds near Spokane. The north fork of the Coeur d'Alene river is easy of access for the trout seekers. The best way to reach the trout haunts on the Coeur d'Alene river in northern Idaho is by way of Pritchard creek on the Swift Water. There is accommodation for anglers. Cabins have been built on the little North Fork, where horses or canoes can be secured for penetrating deeper into the swift water and securing larger fish. This is practically virgin ground.

A Reliable Product.

High amateur average, 381 out of 395 on all targets. Washington State shoot, Spokane, July 20, 21, by E. J. Chingren. Tom Ware, 12 double rises, 23 x 24, special match; 50 straight for the Howard trophy; M. W. Pennington, 25 straight, 25 straight twice on the shoot-off—75 straight to win the Spokesman-Review cup. Geo. C. Beck 25 straight, 20 yards rise for the Smith Gun trophy. H. H. Miller 25 straight, 20 yards rise for the Post-Intelligencer medal. Lee R. Barkley, high professional average, 384 out of 395. All these wins were a clean sweep for Selby Factory Loads.

THE FARM

HOG BRISTLES FROM CHINA.

One of the largest exports from China, in which America merchants are heavily interested, is black hog bristles. The bulk of these bristles coming from the northern China and Manchurian ports, and from there generally find their way to Shanghai, where they are collected by large dealers, assorted into lengths of from 2½ to 6 inches, if they have not been previously assorted, and then exported, to be made into paint brushes and other articles. The assorted bristles are made up into little round bundles, averaging from 2 to 3 inches in diameter.

While the bristles business, on the whole, is increasing, it is, like many other trade, tending to centralization in the large ports, and the smaller coast places figure less and less in the exportation, the main reason being that the facilities for assorting are not sufficient in the small ports. A dealer in an outpost who can collect several hundred pounds of bristles a month finds it more to his benefit to send his lots to a large Shanghai wholesaler than to go to the trouble and expense of having them sorted and bundled, and then waiting to get together a large enough lot to make it worth his while to export.

The China hog, on the whole, is not a large producer of bristles, all his body, except a strip down the back and a large spot on the neck, being covered with hair only, while the more northern hog of Manchuria and Siberia has a larger part of his skin covered with bristles.

One of the greatest worriments to which the average poultry fancier is subjected is the problem of color in the plumage of his birds. If he would expend one-half as much thought and energy in the development of the utility of his flocks the world would see different results. For instance much dissatisfaction is expressed by many Rhode Island Red breeders because the birds become lighter colored unless great care is taken to mate them properly. The best layers usually fade the most, yet the breeders do not dare discard them, for a flock would lose its prolificacy. These faded looking hens are kept for next year's pens and the richest, darkest red males, regardless of under color are selected to mate with them. Unless this is done the reds will become buff in a few generations.

One of the earliest lessons which should be forcibly impressed upon every boy and girl is that under no circumstances should they undertake to lead an animal of any kind by tying the lead strap around the wrist or around the body, or fastening it to themselves in any way. Nearly every week the papers contain a report of some ranch boy, man or girl being dragged to death by a frightened angry animal. The child should be taught how to lead an animal and repeatedly warned against tying the lead strap to himself in any way. The weight of the body can be thrown against the lead strap without fastening it. Catch the strap well up with the right hand, then reach the left hand back of the body and catch the strap farther down. By leaning backward the full weight of the body can thus be thrown on the strap.

Grain for chicks or other poultry, which is at all musty, should be scorched in the stove oven before feeding it. Must and mold in feed are fungus growth, liable to cause serious trouble when eaten by any animals.

BEAUTY AND UTILITY.

A large number of prominent men in all four of the dairy breeds, are very fond of saying something like this:

"In our efforts to promote the dairy quality in our cows we must not lose sight of beauty."

It is the candid opinion of Hoard's Dairyman that no one thing has hindered so much the progress of making large producing cows as this vain struggle after so-called beauty. We say "so-called" for the reason that no two men will agree on what they mean by "beauty."

Some think delicacy of form, a certain refinement of head, body and legs, constitute "beauty." Others look for impressiveness, that something that goes with size, amplitude of form, making what they would call a "grand looking cow."

But the majority consider beauty to be a certain refined femininity of form, which we see more in the island bred type of Jerseys and Guernseys.

Fortunately for the Holstein breed, and considerably so among the Ayrshires, these notions of attenuated refinement do not exist to any great degree. Consequently the breeders of these cattle, especially the Holsteins, have followed the teachings of nature, with only one dominating idea,—since they got rid of the dual-purpose notion,—that of breeding for large producing animals alone.

But among the Jerseys and Guernseys serious danger exists today of being led away from the final goal, in a vain pursuit after beauty of form. Hence the show ring and its attendant ideas of outline keep crowding in upon us in every effort to breed large producing animals with strong, enduring constitution.

We hear a great deal said about the "straight back" when if we look at the great cows in any breed, that have given name and fame to their breed, the straight back rarely prevails. Why is it that breeders and judges are so unwilling to be guided by nature in her effort to fashion a cow that shall be a large producer?

Delicacy of outline means too often lack of ability to endure the strain of large production. In seventy-five per cent of the great producers in any breed, we find a certain rugged, angularity of form. The large paunch—a big bread basket—almost always accompanies the power to produce heavily. And yet the large paunch and the rugged outline do not suit the prevailing notions of beauty.

We believe breeders should look after two things in their breeding: a constantly increasing power to produce well, and strong, enduring constitution. Now, the latter too frequently, does not accompany the refined beauty type.

We must study more the physiology of dairy breeding. That will teach us that certain things do not harmonize well, such, for instance, as beauty of form and constitution; beauty of form and large capacity for production.

Let the chief aim and end of breeding be the production of bulls of strong constitution and prepotency and cows of a vigorous, ample type of body. To this end we must study well the limitations of form as nature prescribes them in the best specimens of the breed. We must remember always that we cannot go beyond the nature of anything. All there is to breeding improved animals of any kind, is to amplify, or increase the function we so much desire. To do that we must look for the natural form of such function. If we inject artificial notions of outline, of beauty or of fancy of any kind, we will do so at the sacrifice of the main purpose we are after. Consider, first, that the animal body is a mechanical contrivance. Everywhere in mechanics the machine must have a form suited to its function. The great ruling idea of nature is function. With the sewing machine it is sewing, with the mowing machine it is mowing. Each machine must have a form suited to its purpose, its function.

Here is the bed rock idea in nature. In animal machinery the law is the same. We are after the production of milk making machines that shall work

The Most Perfect Colt Bit Made

EVERY COLT

Should wear the ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE from the very beginning of its training, as it is the easiest, most comfortable and most humane bit on the market. With its use the colt will not fret, worry, pull, toss its head and get into the bad habits so often caused by the use of other bits and checking devices that inflict punishment or keep it under too much restraint, and at the same time you will have absolute control over it at all times.

Patented Aug. 11, 1896. Patent No. 565,681

BWARE of worthless imitations and Checking Devices claimed to be as good as the ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE. Illustrations of some of these check bits and devices are made to look as near like the genuine as possible, but the article itself is very different, and will not give the same results.

ALL GENUINE are stamped G. S. ELLIS & SON on the supporting strap and back part of Check Rein. Any that are not so stamped are not genuine.

FREE—Our new Catalogue No. 45, with wholesale discount sheet, the largest, finest and most complete Horse Goods Catalogue ever published, is ready for distribution. It contains illustrations, descriptions, and guaranteed to be lowest prices on Harness, Horse Boots, Horse Clothing and Turf Goods of every description. Every horseman should have a copy. You can save many a dollar during the season by buying direct from us, as we are now selling direct to horsemen and allowing them from 30 to 50 per cent discount from list prices. Write us today for a copy and we will take pleasure in sending it to you all charges paid.

most harmoniously and enduringly to the end of milk production. Keep breeding to the best milk producers, the most ample motherhood, and nature will take care of the form. She will give us the form best suited to that purpose if we keep our false, artificial notions of beauty out of the way. But we must be obedient first of all to the physiological laws nature establishes for the accomplishment of her purposes. Beyond nature we cannot go.—Hoard's Dairyman.

A NEW WORLD RECORD.

It remained for the Missouri College of Agriculture at Columbia, Missouri, to raise and develop the Champion Dairy Cow of all the world. Missouri Chief Josephine, a Holstein-Friesian cow finished her six months' test on July 18th, producing 17,008.8 pounds, an average of 93.4 pounds of milk daily for 182 days. This is equivalent to 46.7 quarts, or 11.6 gallons every day. Her highest record for one day was 110.2 pounds. This record is the more remarkable because no special preparation had been made for this test and Josephine has done her full duty in the regular dairy herd of the University, having had five calves in five and one-half years.

Not only has this record smashed all previous world's records for milk production, but the per cent of butter fat is increasing daily, so that, barring accidents this cow will undoubtedly produce more butter during a period of twelve months than any other cow that has ever been tested in the world.

This cow is but one of a number of remarkable cows owned by the University of Missouri and maintained solely for the instruction of its students in Agriculture and for investigational purposes. Only twenty Jersey cows in the history of the world have produced more than 700 pounds of butter in one year. Five of these cows, or 25 per cent of the total number are owned and were bred by this Missouri institution. The College owns more than 300 pure bred and reg-

istered animals, belonging to 17 distinct breeds.

Josephine's record exceeds the present world's record for six months by 1458 pounds.

And now comes the report that milk that has been skimmed has a much higher value as human food than most people realize. The fat or cream in milk makes it more palatable to most people and of course fat in foods has a value in producing heat energy and also other fat. By counting out the water, whole milk is the same as fat and lean meat, while the milk that has been skimmed is the same as lean meat alone. It is a well known fact that lean meat is better than fat meat.

Warranted to give satisfaction.

GOMBAULT'S CAUSTIC BALSAM

A safe, speedy and positive cure for

Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a **HUMAN REMEDY** for Rheumatism, Sprains, Sore Throat, etc., it is invaluable.

Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price **\$1.50** per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio

THE SEPARATOR PAYS.

It pays to buy a good separator and one that is not too small, and do not be misled into buying a so-called "water separator" which is nothing but a tin can sold at a fancy price. Set your separator on a level foundation, and keep it clean and well oiled. If at any time it needs to be rebalanced, do not hesitate to have it done, because a trembling separator will lose five or six times as much fat in the skim-milk as the same machine balanced and running smoothly. A good centrifugal separator should leave less than 1-10 per cent fat in the skim-milk. The old style of "deep setting" hand-skimming (milk to be set in water for twelve hours) will leave about one-fourth to one-half per cent. The shallow pan system of hand-skimming, about one-half to three-fourths per cent. And the so-called "water separator," (diluting the milk with warm water) about three-fourths to 1 per cent. The total loss in the skim-milk with a herd of 25 cows in a year's time would amount to about \$20 if a centrifugal separator is used, over \$50 with the deep setting system, over \$100 with the shallow pan system and over \$150 with the water system, showing that a good separator soon pays for itself.

Every farmer who owns a separator and sells cream should also have a testing outfit. There is nothing complicated about testing cream, and one who can run a separator can run a tester, and a complete testing outfit can be bought for about \$4. With such an outfit a farmer is able to test the milk from each of his cows, weeding out the poor ones and grading up his herd. And he is also able to adjust his separator so as to get the proper per cent of cream, and in a position to know what test he is entitled to from the creamery or cream buyer. This question of testing causes a great deal of friction between creameries and patrons and also between the different cream buyers.

The most profitable cream for both the farmer and creamery is from 30 to 40 per cent, provided the separator does good work. There are some separators which will not skim milk, taking a richer cream than 20 to 25 per cent, but most separators will do good work up to 40 per cent. And remember that at the present prices of corn, skim-milk is worth at least 25c per hundred pounds, and it does not pay you to leave too much cream. Some farmers imagine that creameries secure a better over-run on rich cream than on thin cream, but that is false. The only reason most creameries prefer a rich cream is because it costs less to transport and handle, and keeps better.

MILK DETERMINES VALUE.

Whether a dairy cow will be a money maker or a money loser can soon be determined after she comes to her first milk and if it develops that she belongs to the last named class the best thing to do is to sell her for meat as soon as she is fat enough.

The paying production of milk is what determines the value of a dairy cow, and in order to obtain good paying results proper care and attention must be given the cow which supplies the milk. Cleanliness is perhaps the first important factor to be considered and should be considered from all standpoints. The stable wherein the animal is housed should be well taken care of, in fact so well cared for that the attendant who enters at milking time will find no disagreeable odor, no damp floor, no dusty feed, as all feed having a tendency to give rise to dust, should be sprinkled before feeding the animal; allowing the animal plenty of fresh air and sunlight.

The cleanliness should not be limited to any one source but should be an important factor from all standpoints. The milker should use utmost care, seeing that the garments as well as the hands are in nice, clean condition, and exercise judgment in the care of the cow to be milked, seeing that all milking utensils are well taken care of and the milk placed where it will have access to proper cooling conditions and in this way add to the profit of the product.

The dairy cow is either a money maker or a money loser. If she is in a good, healthy condition and her milk supply profits counteract her actual expense of keeping, but on the other hand should she consume more feed than her profits warrant, get rid of her as there are too many profit producers to be obtained to waste time experimenting, nevertheless it should be remembered that when an animal supplies products beyond the necessary amount for sustaining life, it should be fed accordingly, thus preparing the animal to create vitality in order that it may give in return profits due the owner.

CURING BLOAT.

If an animal is in immediate danger of death from suffocation on account of bloat, the knife may be used, but it is best to insert a tube of some sort in the wound. Such a tube has, in an emergency, been made from an elder stem by removal of the pith, or the spout of a coffee pot has been used, or a large quill does fairly well. It is wise, however, for every stockman to keep a trocar and canula on hand that he may properly

VANCOUVER EXHIBITION

AUGUST 15-20, 1910.

Speed Program for Late Closing Events.

Entrance fees for open purse events 5%. 5% additional for money winners. Purses to be cleared as follows: 50% first; 25% second; 15% third; 10% fourth.

The Vancouver Exhibition Association have, during the last few months expended over \$20,000 in improving the race track on the Grounds, and have now in their possession one of the finest half-mile tracks in the whole of Western America. New stabling, good water, ideal training, splendid shipping facilities.

SPEED PROGRAMME.

3. GENTLEMEN'S ROAD RACE TO FOUR-WHEELED BUGGY. Owner to drive. 1/2-mile heats. Entries close August 10th. 5 to enter, 3 to start. For horses not starting in this meet. Cup value, \$50.00.
4. RUNNING HALF-MILE DASH. Weight for age. No entry fee. Entries close day before race. Purse value, \$150.00.
5. 2:14 TROT. Entries close August 10th. 10 to enter, 5 to start. Purse value, \$150.00.
6. FARMERS' RACE, TROT OR PACE. Entries close August 10th. Horses must be the property of bona fide farmers. Owners or owner's son to drive. 5 to enter, 3 to start. Purse value, \$250.00.
7. RUNNING FIVE-EIGHTHS MILE DASH. Weight for age. No entry fee. Entries close day before race. 5 to enter, 3 to start. Purse, \$150.00.
8. TROT, STALLIONS IN SERVICE having served 10 mares or more in 1910. 1/2-mile heats. Entries close August 10th. 5 to enter, 3 to start. Purse value, \$300.00.
12. RUNNING THREE-QUARTERS MILE DASH. Weight for age. No entry fee. Entries close day before race. Purse value, \$150.00.
13. "HOTELMEN'S PURSE." 2:35 Pace or 2:30 Trot. Entries close August 10th. 10 to enter, 5 to start. Purse value, \$1200.00.
14. FLAT RACE, 6 FURLONGS. For horses the property of members of any recognized Hunt Club, to be ridden by members. Catch weights, minimum 150 pounds. Thoroughbreds barred. Cup or trophy. Value, \$50.00.
15. FLAT RACE, 8 FURLONGS. For horses the property of members of any recognized Hunt Club, to be ridden by members. Weights for 3-year-olds, 140 pounds; 4-year-olds, 150 pounds; 5-year-olds, 158 pounds; 6-year-olds, and aged, 165 pounds. Half-breds allowed 10 pounds; mares, 5 pounds; geldings, 3 pounds. Cup or trophy. Value, \$50.
16. CHAMPIONSHIP HURDLE RACE, 2 miles over 11 flights of hurdles. For horses the property of members of any recognized Hunt Club, to be ridden by members. Weights for 3 and 4-year-olds, 150 pounds; 5-year-olds, 165 pounds; 6-year-olds, and aged, 175 pounds. Half-breds allowed 10 pounds; mares, 5 pounds; geldings, 3 pounds. Cup value, \$100.00. Cup presented by W. J. Tulk, Esq., Vancouver.
17. HURDLE RACE, one and one-quarter miles, over 7 flights of hurdles. For horses the property of any recognized Hunt Club, to be ridden by members. Weights for 3 and 4-year-olds, 140 pounds; 5-year-olds, 155 pounds; 6-year-olds, and aged, 165 pounds. Half-breds allowed 10 pounds; mares, 5 pounds; geldings, 3 pounds. Cup or trophy. Value, \$50.
18. 2:05 TROT OR PACE. Entries close August 10th. 10 to enter, 5 to start. Purse value, \$2,000.00.
21. RUNNING ONE-MILE DASH. Weight for age. No entry fee. Entries close day before race. Purse value, \$200.00.
22. RUNNING. Team running race to harness. Half-mile heats. Purse value, \$500.00. Tuesday evening, first heat. Wednesday evening, second heat. Thursday evening, third heat.

CONDITIONS.

Horses eligible July 15th. (Records made that day no bar.) Horses disqualifying the field on any part thereof, entitled to first money only. All mile heats, unless otherwise stated. Two in three. Right is reserved by the Vancouver Exhibition Association to change the order of the programme and to postpone or declare off any event not filling satisfactorily. American Trotting Association (of which the Vancouver Exhibition Association is a member) to govern, unless otherwise stated. All entries must be accompanied with the entrance fees. No conditional entries will be accepted, and no exception will be made to the rule. Racing to start each day at 2 o'clock sharp. Customs entries will be arranged by the Vancouver Exhibition Association. Directors in charge of racing—H. S. ROLSTON and J. B. TIFFIN. For entry blanks and all information apply to

tap a bloated animal and so save its life. The knife blade used as suggested often leaves an infected wound, or food passes out of the stomach and infects the tissues so that peritonitis or an abscess may ensue. When a cow is found to be bloated and no tapping instrument is at hand place her in a stall with the fore feet much higher than the hind ones and put a loop of seven-eighths inch rope in her mouth like a bit and tie the free ends up around her horns or pole to keep the rope in place in her mouth. Or use a piece of fork or broom handle bitwise in the mouth, strings being run from the ends of the stick to the horns or poll to keep it in place. This will cause the cow to break wind by way of the mouth and prevent suffocation. Dashing cold water on the body also helps in such emergency cases.—Dr. A. S. Alexander.

KEEPING FOODS FRESH.

The following hints regarding the keeping of different kinds of food may be found useful.

Potatoes are kept without difficulty in a cool, dry and dark place. Sprouts should not be allowed to grow in the spring.

Such roots as carrots, parsnips and turnips remain plump and fresh if placed in earth or sand filled boxes on the cellar floor.

Sweet potatoes may be kept until January if cleaned, dried and packed in chaff so that they will not touch each other.

Pumpkins and squash must be thoroughly ripe and mature to keep well. They should be dried from time to time with a cloth and kept, not on the cellar floor, but on a shelf, and well separated from each other.

Cabbages are to be placed in barrels, with the roots uppermost.

Celery should be neither trimmed or washed, but packed, heads up, in long, deep boxes, which should then be filled with dry earth.

Tomatoes may be kept until January, if gathered just before frost, wiped dry, and placed on straw-covered racks in the cellar. They should be firm and well-grown specimens, not yet beginning to turn. As they ripen they may be taken out for table use, and any soft or decaying ones must be removed.

Apples, if for use during the autumn, may be stored in barrels without further precaution than to look them over now and then to remove decaying ones; but if they are to be kept until late winter or spring they must be of a variety known to keep well and they must be hand-picked without blemish or bruise. They should be wiped dry and placed with little crowding on shelves in the cellar. As a further precaution they may be wrapped separately in soft paper.

Pears may be kept for a limited time in the same way, or packed in sawdust

or chaff, which absorbs the moisture which might otherwise favor molding.

Oranges and lemons are kept in the same way. Wrapping in soft paper is here essential, as the uncovered skins if bruised offer good feeding ground for mold. Oranges may be kept for a long time in good condition if stored where it is very cold, but where freezing is not possible. Lemons and limes are often kept in brine, an old-fashioned household method.

Cranberries, after careful looking over to remove soft ones, are placed in a crock or firkin and covered with water. A plate or round board placed on top and weighted serves to keep the berries under water. The water should be changed once a month.

ROADWAYS.

Governor B. F. Carroll of Iowa proposes to add 8,500,000 bushels of corn to the annual crop of his State, simply by lopping ten feet off each side of the average country road.

He believes that a highway forty feet wide, instead of sixty, would be ample for all requirements, could be more easily and more cheaply kept in good condition and argues that the unnecessary twenty feet of land if returned to cultivation would mean \$4,750,000 added to the wealth of the State each year, \$3 for every man, woman and child within its borders.

The Governor says that the average country road is sixty feet wide, whereas forty feet is sufficient. The result is that the middle and sides of the road grow up in weeds and make unsightly highways, the two channels of traffic being separated and bordered by unused and unsightly weed rows and ditches.

"This twenty feet of land might far better be tilled and be producing wheat and corn," says the Governor.

A little investigation discloses the possibilities of Governor Carroll's plan, not only for Iowa, but for all agricultural States. There are 100,000 miles of country roads in Iowa. This equals 800,000 acres of land. Some of these roads are main arteries of communication and transportation, others are little more than lanes, weed choked and rutty.

Governor Carroll's plan would result in cutting down the number of acres devoted to roadway by one-third, a total of 266,667 acres. Assuming \$100 to be a fair average price for Iowa farm land—hundreds of farms are being sold at \$150 to \$200 an acre—the land thus restored to farming would be worth \$26,666,670. Assuming the annual net revenue per acre in Iowa to be \$15—another conservative figure—and the yearly income from the restored land would be \$4,000,000.—Journal of Agricultural.

SPECIAL ADVERTISING.

Wanted. For Sale, and Miscellaneous advertising under this head will be set in nonpareil type (same type below) and will be published at the rate of 2 cents per word each insertion, or 6 cents per word by the month. Count each abbreviation and initial as a word.

FOR SALE.

A fast trotting mare by Egyptian Prince 14.431, dam Hattie, the dam of Monterey 2:09½ and Montana 2:16, by Commodore Belmont. Is 12 years old, sound and gentle and a lady can drive her. Has 3-months-old colt by Monte McKinney by her side, and is in foal to Chestnut Tom 2:15. Also a yearling, and a two, three and four-year-old out of this mare by Monte McKinney, Chestnut Tom and Silver Bow Jr. respectively. The four-year-old is in foal to Chestnut Tom. Will sell one or all of them, and at a bargain.
J. M. PITTS,
Avenue Market, 34th and San Pablo,
Oakland.

FOR SALE—Two standard-bred and registered stallions, sired by McKinney 2:11½. One mare sired by Zombro 2:11. Pedigrees and photos furnished on application. Address Box 38, Hill P. O., Cal.

FOR SALE.

On account of illness I desire to sell my veterinary practice and horseshoeing shop at Bakersfield. Will also sell my stallion Donello 2:30 by Washington McKinney. He has a matinee record of 2:18 and should trot in 2:10 if trained. Is a grand looker and his breeding is royal. Correspondence solicited.

DAIRY NOTES.

Where a water tank is used for cooling milk, have a bottom outlet so that the tank can be cleaned of sediment and scalded out with little effort.

When tin milk vessels begin to rust they are no longer fit for dairy use. Discard them for some other purpose, and use only the smoothest and brightest vessels for the milk.

If the calf seems very hungry, do not feed it all the milk it will drink at one time. Feed often and in small amounts at first. Neglect of feeding and then over-feeding any young animals are the causes of many disorders of the digestive organs.

When summer calves are old enough to eat, give them dry feeds at first as supplementary to the milk diet. Shelled corn, oats, clover hay, or fine timothy hay are good. Shelled corn is the best grain that can be fed young calves on skim milk. They may eat grass after they are eight or ten weeks old.

The dairyman loses money every time he breeds a good cow to a scrub bull. Good dairy animals are at a premium. Money spent for the service of a good dairy bull is money well invested.

Cottonseed meal is good for produc-

ing cows, but it is not a safe feed for calves and pigs. Feed both cottonseed meal and all other concentrated feeds sparingly till the cows become used to them. They must never be used as a full ration, but always with a large amount of roughage, such as clover, alfalfa, or silage.

The dairy stable should be kept clean and well filled with bedding in summer for milking on wet and rainy times. It may be more pleasant to milk outside on nice days in summer, but it is very unpleasant to milk in the rain and mud.

Do not allow shade trees to shut sunlight out of the dairy stable. The sunlight is necessary for purifying the stables, and they will be cool in summer if properly constructed. Let the light in.

Milk will sour more easily in warm than in cold weather. However, as summer comes on there is more sunshine, and hence the milk vessels can be sterilized with sunshine. There is no better disinfectant than direct, warm sun for killing troublesome dairy germs.

Manure should be spread evenly and a light dressing applied, rather than in excessive quantities. While there is little danger of getting too much when it is in a good mechanical condition, it is economy to dress the land lightly and let it extend over as wide area as possible.

Every man who owns a dairy farm but who does not have a silo is out of luck and should resolve to have one before another dry season rolls around. With the silo, a vast amount of food can be stored in small space and if it is just in touch with the stable so that its doors open inside or better still if it should have an underground tunnel like the one at the Windsor farm, it places the feed where it is most easily handled. The cost of building a silo is more than offset by the value of succulent feed in the winter time. The silo will cheapen the cost of dairy production more perhaps than any other one factor.

Better results will be had if the young chicks are separated from the older ones at night. Make divisions in your chicken house and keep the older chickens from disturbing the younger ones. The same precaution should be taken in feeding. Little chicks should not be frightened while at their meals, nor be required to force their way to the drinking receptacle.

The object of caponizing is to improve the quality and quantity of flesh of fowls. A capon is a castrated male chicken. As a result of his more peaceful disposition, he continues to grow and his body develops more uniformly and to a somewhat greater size than a cockerel of the same age. A capon also brings a better price per pound.

The Texas and New Orleans railway has started a hog demonstration train over its lines for the purpose of encouraging and fostering hog raising in East Texas. Tom Frazier, a recognized authority on hogs, will accompany the train and lecture at each stopping point along the itinerary. The train will have farrowing pens, in which will be exhibited families of different breeds of registered hogs.

The Reducine Co., 90 West Broadway, N. Y.

Gentlemen: Reducine has given good satisfaction; in fact, it is the best absorbent I have ever used. I have cured two bog spavins with it and one curb, both completely. I have begun using it on a very bad tendon and it has helped very much, so I shall continue the treatment and think it will make a permanent cure. I am a great friend of Reducine and will always keep it on hand. I have recommended it to a great many, and I think it has given good satisfaction to all. Yours truly,

E. B. CRARY, Trainer for H. P. Dymont.

Write to-day for new illustrated booklet. Just issued. It is FREE

BOOKS FOR STALLION OWNERS

1. Hoover's Stallion Service Record.

The most complete book for recording stallion service ever placed before breeders. Not a pocket edition. No more disputing of sires. No more mixing of dams where this book is used. There is space for entering 100 mares, giving their full breeding, description, dates of service, dates of foaling, etc., with index, complete, size 10x7 $\frac{1}{2}$. Each book is handsomely and substantially bound. \$2.00

2. The Standard Stallion Service Book.

The nearest Service Book published, containing space for entering 100 mares, giving space for full description, pedigree, date of services and refusals, date of foaling, etc., with index complete, neatly bound in leatherette, suitable for pocket use. \$1.00

3. Breeder's Note and Certificate Book and Stallion Service Book Combined.

This book contains 75 blank certificates to be given to owners of mares, certifying that said mare has been bred to a certain stallion. Also 75 notes suitable for owner of mare giving to owner of stallion on account of stallion service fee. This book is well bound, and makes a book like No. 2, after certificates and notes have been removed. \$1.00

The "OLD RELIABLE" Parker Gun

Wins for the **Eighth** Time

THE GRAND AMERICAN HANDICAP

Score of 100 Straight from 19 yards.

At Chicago, Ill., June 23, 1910.

Mr. Riley Thompson of Cainsville, Mo., made this record, which has never before been equaled in this classic event.

The PARKER GUN in the hands of Mr. Guy V. Deering, also won the Amateur Championship at Chicago, June 24, scoring 189 x 200, shooting at 160 singles and 20 doubles.

The Prize Winners and Champions shoot the PARKER GUN!

SMITH GUNS

HUNTER ONE-TRIGGER

WEATHER conditions aren't always at their best in the "blind" or in the skiff. That's when you don't want your gun to balk or double.

YOU CAN easily wear gloves if you shoot with a Hunter One-Trigger. And without "noddling." It won't balk—because there is no friction to make it balk. And it won't double—because there is no second trigger to get tangled up in your glove.

The very newest Hammerless Smith Gun is the 20-Gauge Hunter One-Trigger. Weighs only 5½ to 7 lbs. Just the finest gun that can be made at the low price.

Isn't He Worth Saving?

Why trade off or sell at a beggarly price a good horse just because he "goes lame," "throws a curb" or develops some other blemish? There is nothing in the way of Spavins, Curbs, Splints, Windpuffs or Bunches which will not yield readily and permanently to treatment with

QUINN'S OINTMENT.

Dr. E. H. Davenport, a prominent physician of Sheridan, Ind., writes: "I have used a number of remedies for the removal of curbs, splints, thickened tendons and tissues generally, but for the last two years I have not been without Quinn's Ointment. I have tested it thoroughly at different times, and pay without hesitation that it is the only reliable remedy of the kind I have ever tried." Price \$1.00 per bottle. Sold by all druggists or sent by mail. Write us for literature, testimonials etc.

WINCHESTER

.401

Caliber

Self-Load-
ing Rifle

THE TRIGGER CONTROLLED REPEATER

This new Winchester is all that the big game hunter's heart could desire. It is reloaded by recoil, and has a detachable magazine which enables it to be fired a series of shots with great ease and rapidity without the sacrifice of accuracy. Although the cartridge it handles hits a harder blow than the .30 U. S. Army, it is compact and light to carry. In the sureness, strength and simplicity of its action, and in its hitting power, no other recoil operated rifle approaches it.

Send to the Winchester Repeating Arms Company, New Haven, Conn., for circular describing this new rifle which has strength and power plus.

IT HITS LIKE THE HAMMER OF THOR.

WHEN FRANK G. JONES, the owner of Dudie Archdale, got up behind his mare and piloted her to victory at Grand Rapids and Kalamazoo, he received the plaudits of the vast crowds at both places and the congratulations of his friends and admirers from all over the country. Writing of the incident Hawley says: "There have been very few instances in the history of racing or, in fact, in any form of sport that aroused greater enthusiasm than this act of the Memphis horseman. In a comparatively recent running of the English Derby, a son of Sir John Thurstby rode his father's entry, John A'Gaunt, into third place. Mr. Foxhall P. Keene weighed out to ride Domino in the Futurity in the latter's two-year-old form, and would doubtless have borne the blue and white spots to victory had it not been deemed advisable for a professional jockey to take the mount. There is something refreshing about the idea of an owner in a crisis like this, taking his seat in the sulky and driving the horses in the place of their injured master, and it required a greater amount of sporting blood than is found in the veins of the average man for him to do this. His victory made the feat all the more spectacular. Mr. Jones is one of the most accomplished amateur reinsmen in the world, and has won many brilliant victories at Memphis, Cleveland, New York and elsewhere. He is a member of several of the most prominent driving clubs, and has shown more than once that in a hotly contested race he can take care of himself as well as the best. Although this was his first experience in a race against professionals, he needed no instruction. It is true that his horses were the best of their field, yet a novice, even had he possessed the temerity to have undertaken such a daring feat, could easily have spoiled the whole affair. Every horseman with a drop of sporting blood in his veins will wish for the continued success of Frank G. Jones of Memphis, a generous patron of the sport of racing, an accomplished amateur, and as daring a man as ever took his life in his hands, for it must be conceded that in a large field accidents are more than probable, and when it is considered that a large sum of money was at stake and possibly some of the drivers would have been willing to have intimidated one who was making his first start in such a race as this, the exploit was all the more remarkable. Whatever may transpire this season in the way of sensations, whatever records may be lowered or battles fought and won, the crowning achievement of the

whole year must be considered Mr. Jones' spectacular entry into the field of active racing. He will long be remembered as a man who had nerve enough to drive his own horses when their regular trainer was forced to relinquish the reins as the result of a serious accident."

A NEW YORK WRITER has the following to say about harness racing in that State in a recent number of the Breeders' Gazette: "Since the repeal of the 5 per cent tax on racing associations the sport of light harness racing seems to have taken on a new life in this State. There have been but few meetings held so far this season, but they have been attended by more spectators than ever visited them when the voices of the bookmaker and poolseller were the dominant factors of the entertainment. At a recent matinee held at the old half-mile track at Goshen there were fully 5,000 spectators present, and among the assembly were many church and society people who would not go near a racetrack when the gamblers were the principal actors in this class of sport. This feature of the meetings plainly foreshadows the restoration of trotting races to the plane they occupied before gambling was made the principal and racing the incident of this delightful class of sport. The Grand Circuit meeting scheduled for the Empire City track next month promises to be the most successful trotting race meeting held in this vicinity in many years. There are more men prominent in the social and business life of this city promoting this meeting than have ever taken an interest in affairs of this character in the present generation. The elimination of bookmaking and pool-selling has had the effect of enlisting the enthusiastic support of many prominent society people, who have heretofore confined their sporting activities to the horse show and the hunting fields."

THE NEW MILE TRACK at San Jose is where the Pacific Coast Trotting Horse Breeders will open its 22d annual meeting next Wednesday. Everything points to a great meeting with good fields and the fastest trotters and pacers that have ever appeared at the first meeting on the circuit. The track is in splendid condition, the weather promises to be "just what was ordered," and the horsemen are all there and ready to start and race their horses for the generous purses and stakes that have been hung up. Those who enjoy high class harness racing conducted in an up-to-date manner strictly according to rule, will have an opportunity to see races at San Jose next week that would be a credit to any Grand Circuit track. The meeting opens Wednesday, August 10th, and continues four days. Racing will begin each day at 1:30 p. m.

A NEW RULE, which persons racing under National and American rules must be governed by this year, is the following:

RULE 107. In all races of mile heats, best two in three, the race must not be continued after the end of the third heat; and in all races of mile heats, best three in five, the race must not be continued after the end of the fifth heat. In such case the premiums shall be awarded in accordance with the positions in the summary at the close of the last heat; except in the event of a tie for first money or where two horses have won an equal number of heats, in which event the race must continue for the heat winners or horses tied until one horse has won two heats in a "best two in three" race, or three heats in a "best three in five" race."

DUDIE ARCHDALE, the biggest money winning trotter of the year, is by a son of Expedition. There is a son of Expedition in this State that is rapidly getting a reputation as a sire of money winners, and his oldest colts are only three years old.

PARK AMATEUR RACES TODAY.

One of the regular meetings of the summer cup series of races will be held at the stadium in Golden Gate Park this afternoon by the Park Amateur Driving Club. The program is as follows:

Free-for-all pace—Dioden, Dictatum, Ringrose, Little Medium.

Class C. Trot—Dividend, Billie Burke, Bird Eye, Charles 2d.

Free-for-all trot—Modicum, Charley T.

Three-year-old pace—Zoe Dell, Balboa.

Class A trot—Sunset Belle, Mike Kelly, Raymond M., Lady Nell, Lady Washington.

Class B trot—Red Velvet, Ceta Dillon, Walter G. Officers of the day—Starter, G. E. Erlin; Judges, J. A. McKerron, I. L. Borden, A. J. Molera; Timers, T. F. Bannan, Geo. R. Gay, A. Joseph; Marshal, H. M. Ladd; Secretary, F. W. Thompson.

Drink Jackson's Napa Soda.

GOOD FIELDS IN COLT STAKES.

Starting Payments Made on Two and Three-Year-Olds in Breeders' Futurity.

The colts and fillies on which starting payments were made this week in Pacific Breeders' Futurities Nos. 7 and 8, assure good fields for the four races to be decided at San Jose during the meeting of the Pacific Coast Trotting Horse Breeders' Association August 10th to 13th, inclusive. Those eligible to start in these races are the following:

Three-Year-Old Trotting Division Futurity Stake No. 7. Voyageur, b. c. by Bon Voyage, dam Lucie May by Oakland Baron; W. A. Clark, Jr.

Pal, b. c. by Palite, dam Lorna Doone by Bayswater Wilkes; E. D. Dudley.

Babe Verne, br. c. by Jules Verne, dam Little Babe by Bradtmore; Henry Peters.

Pegasus, b. c. by Zombro, dam La Belle by Sidney; Valencia Stock Farm.

Sweet Bow, b. f. by Bon Voyage, dam The Silver Bell by Silver Bow; L. H. Todhunter.

Olmutz, b. g. by Zombro, dam Floretta by Prince of Norfolk; L. B. Daniels.

Ateka, b. f. by Athasham, dam Bessie by Son of Yosemite; D. L. Bachant.

Strathboule, bl. c. by Stamboulet, dam Strathalie by Strathway; Geo. L. Warlow.

Bon Guy, b. c. by Bon Voyage, dam La Moscovita by Guy Wilkes; W. E. Detels.

Three-Year-Old Pacing Division Futurity Stake No. 7. Normono, b. f. by Demonio, dam Louisa by Welcome; J. N. Blair, Jr.

Jean Val Jean, br. c. by Bon Voyage, dam She by Abbottsford; W. A. Clark, Jr.

Ben Rush, b. c. by Demonio, dam Minerva by Guy Wilkes; J. E. Montgomery.

Sirius Pointer, b. c. by Star Pointer, dam Trix by Nutwood Wilkes; J. W. Marshall.

Sir John W., b. c. by Diablo, dam Alta by Prince Altamont; H. Lee West.

Two-Year-Old Trotting Division Futurity Stake No. 8. Valentine Girl, b. f. by Nutwood Wilkes, dam Madge by Silver Bow, Jr.; L. E. Barber.

Dorothy Ansel, b. f. by Prince Ansel, dam Lucy B. by Alex. Button; C. B. Bigelow.

Nat Higgins, b. c. by Palite, dam Bee Sterling by Sterling; E. D. Dudley.

Lady Maren, b. f. by Highland C., dam Queen Karen by Nutwood Wilkes; E. P. Iverson.

Zorankin, b. c. by Zombro, dam Dimantes by Diablo; M. C. Keefer.

Luna M., bl. f. by Direcho, dam Grace McK. by McKinney; Wm. Morgan.

The Bulletin, ch. c. by Palo King, dam Diawalda by Diablo; H. S. Hogoboom.

Natawan, b. c. by Athadon, dam Cora Wickersham by Junio; Geo. L. Warlow.

Merry Mac, ch. c. by Albert Mac, dam Bell by Diablo; W. Parsons.

Three-Year-Old Pacing Division Futurity Stake No. 8. Laura Rodgers, ch. f. by Prince Ansel, dam Lauress by Mendocino; Alex. Brown.

Joseph D., ch. c. by Prince Ansel, dam Josie D. by Nutwood Wilkes; G. F. Parks.

Noemie, s. f. by Jules Verne, dam Fannie G. by Nutwood Wilkes; Glide Bros.

Pointer Belle, b. f. by Star Pointer, dam Dictatus Belle by Dictatus; J. B. Iverson.

Victor Pointer, b. c. by Star Pointer, dam Gertie A. by Diablo; Victor Verilhac.

Sweet Princess, b. f. by Prince McKinney, dam Arawana B. by Sidney Dillon; F. Gomme.

"Marque" describes the speed of C. The Limit in the race he won at Grand Rapids, as follows in last week's Horse Review: "One of the biggest surprises of the meeting was the victory of C. The Limit, George H. Estabrook's Chamber of Commerce candidate. He easily defeated Lady of Honor, Brannam Baughman (another C. of C. horse), and while the race may not be strictly regarded as a true bill against the pair named, still The Limit was not strung out or asked for anything like his full measure of speed. It was on the back stretch in the first heat that he showed me something that made me change my mind about him. Brannam and the Lady were leading him four length but suddenly Macey turned on his speed, and before you could snap your fingers the Searchlight horse had stepped on past the leaders. They did the quarter in 30½ seconds, but C. The Limit had so much lick that he could play with them."

Barney Simpson, owner of the stallion Arner 2:17½, has taken his horse to Pleasanton for the summer. Arner is by Chas. Derby and is out of Bertha, the only mare in the world that has produced five 2:10 performers. The mare Celia K. 2:16, owned by Mr. Kramer of this city, is by Arner, dam by Direct, second dam by Mambrino Wilkes. Mr. Simpson worked this mare at Chico two years ago and drove her a mile in 2:16. She was bred by Mr. A. L. Vagar of San Leandro who owned her at that time and who sold her to Mr. Kramer.

Ed. A. Tipton, president of the Fasig-Tipton Company, estimates that 80 per cent of all the thoroughbred mares used for breeding race horses in the United States have been withdrawn from this field within the last two years. These mares have been sold without pedigrees and their identity has been lost. Thousands of them are now being used for breeding mules or for farm work in the South. It is said that 1,200 of them were shipped from Lexington, Ky., to points in the South and West over one railroad in one year.

PACIFIC BREEDERS' FUTURITY.

Summaries of All the Races That Have Been Trotted and Paced in This Stake.

The Pacific Breeders' Futurity was inaugurated by the Pacific Coast Trotting Horse Breeders' Association ten years ago, the first stake having a value of \$6000 and being for the produce of mares covered in 1900. It has been a success ever since the inaugural races were trotted and paced by the two-year-olds at Petaluma in 1902. The value of the stake is now \$7250 and it is one of the leading features of coast racing each year. Knowing that breeders and trainers are greatly interested in this stake we present herewith the complete summaries of all the races that have been trotted and paced in the stake up to the end of 1909:

STAKE NO. 1—FOALS OF 1901.

Seymour M., b. c. by Diawood (Spencer).....	1	1
Friskarina, br. f. by Bayswater Wilkes (Hoy).....	2	2
My Way, gr. f. by Stoneway (Walton).....	3	3
Time—2:27½, 2:23.		

Almaden, bl. c. by Direct (Zibbell).....	1	1
Marvin Wilkes, b. c. by Don Marvin (Mastin).....	2	2
Time—2:25½, 2:22½.		

Friskarina, br. f. by Bayswater Wilkes (Hoy).....	1	1
My Way, gr. f. by Stoneway (Brolliar).....	2	2
Seymour M., b. c. by Diawood (Spencer).....	3	3
Time—2:15¾, 2:13¾, 2:18¾.		

Murray M., b. c. by Hamb, Wilkes (W. Durfee).....	1	1
Geradine, f. by Zombro (Ream).....	2	2
Carlokin, b. c. by McKinney (Hogoboom).....	3	3
Marvin Wilkes, b. c. by Don Marvin (Mastin).....	4	4
Calamania, b. c. by McKinney (Quinn).....	5	5
True Heart, b. f. by Nearest (Barstow).....	d	d
Time—2:19½, 2:20½, 2:20.		

STAKE NO. 2—FOALS OF 1902.

Delilah, b. f. by Zolock (S. Donahue).....	1	1
Mona Wilkes, b. f. by Demonio (F. Chadbourne).....	2	2
Roberta, bl. f. by Robert I. (J. Creason).....	3	3
Time—2:22½, 2:16¾.		

Bellemont, b. f. by Zombro (W. Durfee).....	1	1
North Star, b. c. by Nutwood Wilkes (Parker).....	2	2
R. Ambush, br. c. by Zolock (Sanford).....	3	3
Athasham, b. c. by Athadon (Walton).....	4	4
Gluck, b. f. by Zombro (Mosher).....	5	5
El Rey, b. c. by Nushagak (Spencer).....	6	6
Memoria, b. f. by Demonio (Hoy).....	7	7
Elma S., b. f. by Nutwood Wilkes (Cecil).....	8	8
Time—2:24, 2:22½, 2:21¾.		

Mona Wilkes, b. f. by Demonio (Chadbourne).....	1	3	3	1
Memoria, b. f. by Demonio (Hoy).....	2	2	1	2
Just It, b. f. by Nearest (Barstow).....	3	3	2	3
Roberta, b. f. by Robert I. (Albertson).....	d	d	d	d
Deviletta, b. f. by Robert I. (Wright).....	d	d	d	d
Time—2:11¾, 2:13, 2:14½, 2:17, 2:15¾.				

North Star, b. c. by Nutwood Wilkes (Whitehead).....	1	1
Athasham, b. f. by Demonio (Ream).....	2	2
Bellemont, b. f. by Zombro (Durfee).....	3	3
R. Ambush, br. c. by Zolock (Bonnell).....	4	4
Elma S., b. f. by Nutwood Wilkes (Chadbourne).....	5	5
Kenneth C., br. c. by McKinney (Trefry).....	6	6
Time—2:13¾, 2:13¾, 2:16.		

STAKE NO. 3—FOALS OF 1903

McFadyen, ch. c. by Diablo (Hoy).....	1	1
Magladi, b. f. by Del Norte (Delaney).....	2	2
Time—2:15¾, 2:16¾.		

Prince McKinney, br. c. by McKinney (McDonald).....	1	1
Della Derby, br. f. by Chas. Derby (Whitehead).....	2	2
Time—2:40½, 2:33¾.		

Magladi, b. f. by Del Norte (Ward).....	1	1
McFadyen, ch. c. by Diablo (Hoy).....	2	2
Salva, b. f. by Dictatus Medium (Whitehead).....	3	3
Renown, s. c. by Diablo (Charvo).....	4	4
Time—2:11¾, 2:10¾, 2:12¾.		

Della Derby, br. f. by Chas. Derby (Whitehead).....	3	1	1	3	1
Lida Carter, br. f. by Stam B. (Rucker).....	1	2	1	3	1
Prince McKinney, br. c. by McKinney (Zibbell and Durfee).....	4	3	3	2	2
Silver Hunter, b. c. by Zombro (Beckers).....	2	4	d		
Time—2:20, 2:17½, 2:17, 2:22, 2:22.					

STAKE NO. 4—FOALS OF 1904.

Aerolite, b. c. by Searchlight (Chadbourne).....	1	1
Hymettus, b. c. by Zombro (Freeman).....	2	2
Search George, b. f. by Searchlight (Rucker).....	3	3
Time—2:13¾, 2:18¾.		

Zolahka, b. f. by Zolock (Mosher).....	1	1
Nogi, b. c. by Athabla (Walton).....	2	2
Prince Lot, br. c. by Prince Ansel (Spencer).....	3	3
Reina del Norte, b. f. by Del Norte (Ward).....	4	4
Time—2:25¾, 2:23¾.		

Hymettus, b. c. by Zombro (Quinn).....	1	1
Aerolite, b. c. by Searchlight (Chadbourne).....	2	2
Time—2:08¾, 2:14, 2:13.		

Nogi, b. c. by Athabla (Walton).....	1	1
Zolahka, b. f. by Zolock (Mosher).....	2	2
Prince Lot, br. c. by Prince Ansel (Spencer).....	4	3
Carmela, b. f. by Alta Vela (Erown).....	3	4
Reina del Norte, b. f. by Del Norte (Ward).....	d	d
Time—2:22, 2:18¾, 2:17¾.		

STAKE NO. 5—FOALS OF 1905.

Ray o' Light, br. c. by Searchlight (Whitehead).....	1	1
Conqueror, br. c. by Direct Heir (Rutherford).....	1	3
Moortrix, b. f. by Zombro (Chadbourne).....	3	2
On Bly, bl. f. by On Stanley (Durfee).....	d	d
Capt. Gorgas, br. c. by Marvin Wilkes (Quinn).....	5	d
Time—2:16, 2:13¾, 2:18.		

Katalina, b. f. by Tom Smith (Zibbell).....	1	1
Idolway, bl. f. by Stoneway (Mosher).....	2	2
Bessie T., b. f. by Zombro (Chadbourne).....	3	2
Debutante, b. f. by Kinney Lou (Phippen).....	5	5
Nusado, br. c. by Nushagak (Spencer).....	4	4
Miss Dividend, b. f. by Athabla (Walton).....	6	d
Time—2:25½, 2:22½.		

Ray o' Light, bl. c. by Searchlight (Whitehead).....	1	1
Moortrix, b. f. by Zombro (Chadbourne).....	2	2
Conqueror, br. c. by Direct Heir (Walker).....	3	3
Capt. Gorgas, br. c. by Marvin Wilkes (Quinn).....	4	d
On Bly, b. c. by On Stanley (Thornquest).....	5	4
Time—2:11, 2:09, 2:09.		

Three-Year-Old Trotting Division.			
Cleo Dillon, b. f. by Sidney Dillon (Walton).....	5	1	1
Don Reginaldo, br. c. by On Stanley (Ward).....	1	2	2
Katalina, b. m. by Tom Smith (Zibbell).....	2	1	2
Dr. Lecco, blk. c. by Lecco (Walker).....	6	5	3
Helen Stiles, b. f. by Sidney Dillon (Phippen).....	4	4	4
Idolway, blk. m. by Stoneway (Mosher).....	3	6	d
Siesta, b. c. by Iran Alto (Davey).....	d		
Debutante, b. f. by Kinney Lou (Chadbourne).....	d		
Impetuoso, br. f. by Petigru (Walker).....	d		
Bessie F., b. f. by Zombro (Whitehead).....	d		
Time—2:15¾, 2:13¾, 2:14¾, 2:15¾.			

STAKE NO. 6—FOALS OF 1906.

Two-Year-Old Trotting Division.			
Prince Lock, ch. c. by Zolock (Pounder).....	2	1	1
Elma R., b. f. by Lord Alvin (Towhig).....	1	1	1
All Style, b. c. by Stam B. (Quinn).....	3	3	2
Easter, br. c. by Monicrat (Rutherford).....	2	3	3
Eddie G., b. c. by Tom Smith (Zibbell).....	5	5	5
Time—2:16¾, 2:21, 2:18.			

Two-Year-Old Pacing Division.			
Easter D., b. f. by Diablo (Stewart).....	1	1	1
Jim Logan, b. c. by Chas. Derby (Montgomery).....	2	4	4
Teddy Bear, b. c. by Del Coronado (Ivey).....	4	4	4
Godollo, br. c. by Zombro (Mitchell).....	3	3	3
Time—2:15¾, 2:13¾.			

Three-Year-Old Pacing Division.			
Jim Logan, b. c. by Chas. Derby (E. Montgomery).....	1	1	1
Teddy Bear, br. c. by Del Coronado (Ivey).....	2	2	2
Time—2:15¾, 2:16¾, 2:13¾.			

Three-Year-Old Trotting Division.			
Zulu Belle blk. f. by Petigru (C. A. Durfee).....	1	2	1
Volante, b. c. by Zombro (Maben).....	4	1	6
All Style, br. c. by Stam B. (Quinn).....	6	5	2
Easter, br. c. by Monicrat (Rutherford).....	2	3	3
Complete, ch. f. by Palite (Hoy).....	7	7	3
Virginia Lee, b. f. by Iran Alto (Hogoboom).....	5	4	5
Levenette, b. f. by Zombro (Montgomery).....	7	6	5
Time—2:17¾, 2:15¾, 2:17¾, 2:16¾.			

STAKE NO. 7—FOALS OF 1907.

Two-Year-Old Pacing Division.			
Normona, b. f. by Demonio (De Ryder).....	4	1	1
Sirius Pointer, b. c. by Star Pointer (Chadbourne).....	1	2	2
Airlie D., b. f. by Demonio (Helman).....	2	4	4
Roan Hal. rn. c. by Athabla (Ward).....	3	3	3
Time—2:18, 2:14¾, 2:17¾.			

Two-Year-Old Trotting Division.			
Sweet Bow, b. f. by Bon Voyage (Quinn).....	4	1	1
Babe Verne, blk. c. by Jules Verne (Hoy).....	1	2	7
Alto Express, b. c. by Iran Alto (Hogoboom).....	2	2	2
Agnes Carter, b. f. by Nutwood Wilkes (De Ryder).....	3	8	3
Yu Tu, br. f. by R. Ambush (Rutherford).....	6	4	4
Pal. b. c. by Palite (Chadbourne).....	8	5	5
Ellelen, ch. f. by Walter Barker (Maben).....	5	6	6
Bon Guy, b. c. by Bon Voyage (Best).....	7	7	8
Time—2:25¾, 2:17¾, 2:22¾.			

THE MONEY WINNING SIRES.

Following is a list of the stallions that sired the money winning colts and fillies in the Pacific Breeders' Futurity Stakes raced since the inauguration of the stake to the year 1909. In the table the name of the sire his record and gait are first given, then the number of first, second, third and fourth moneys won by his trotting foals, followed by the number of moneys won by the pacing foals, with the total moneys won at both gaits. Of the 39 stallions in this list, 26 are trotters and 13 pacers, and all but six have records.

SIRE.	MONEYS WON BY TROTTERS		MONEYS WON BY PACERS		TOTAL
	1st-2d-3d-4th	1st-2d-3d-4th	1st-2d-3d-4th	1st-2d-3d-4th	
Alta Vela, 2:11¼, trotter.....	1	1	1	1	4
Athabla, 2:24½, pacer.....	1	1	1	1	4
Athadon (1), 2:27, trotter.....	1	1	1	1	4
Azmoor, 2:20½, trotter.....	1	1	1	1	4
Bayswater Wilkes, 2:25½, tr.	1	1	1	1	4
Bon Voyage (3), 2:12¾, trot.	1	1	1	1	4
Chas. Derby, 2:20, trotter.....	1	1	1	1	4
Demonio, 2:11¼, pacer.....	2	2	1	5	10
Diablo, 2:09¾, pacer.....	2	1	1	4	8
Direct, 2:05½, pacer.....	1	1	1	1	4
Direct Heir, trotter.....	1	1	1	1	4
Diawood, 2:11, pacer.....	1	1	1	1	4
Dictatus Medium, pacer.....	1	1	1	1	4
Del Coronado, 2:09½, trotter.....	1	1	1	1	4
Del Norte, 2:08, pacer.....	1	1	1	1	4
Don Marvin, 2:22½, trotter.....	1	1	1	1	4
Hambletonian Wilkes, trot.....	1	1	1	1	4
Iran Alto, 2:12¾, trotter.....	1	1	1	1	4
Jules Verne, trotter.....	1	1	1	1	4
Kinney Lou, 2:07¾, trotter.....	1	1	1	1	4
Lecco, 2:09¾, trotter.....	1	1	1	1	4
Lord Alvin, pacer.....	1	1	1	1	4
McKinney, 2:11¼, trotter.....	1	2	1	3	6
Marvin Wilkes, 2:12¾, trot.	1	1	1	1	4
Monicrat, 2:13¾, trotter.....	2	2	1	5	10
Nearest, 2:22½, trotter.....	1	1	1	1	4
Nutwood Wilkes, 2:16¾, tro.	1	1	1	1	4
On Stanley, 2:17½, trotter.....	1	1	1	1	4
Petigru, 2:10¾, trotter.....	1	1	1	1	4
Prince Ansel (2), 2:20, trot.	2	2	1	5	10
Robert I., 2:08¾, pacer.....	3	1	1	5	10
Searchlight, 2:03¾, pacer.....	3	1	1	5	10
Sidney Dillon, trotter.....	1	1	1	1	4
Stam B., 2:11¼, trotter.....	1	2	1	3	6
Star Pointer, 1:59¾, pacer.....	1	1	1	1	4
Stoneway, 2:23¾, pacer.....	1	1	1	1	4
Tom Smith, 2:13¾, trotter.....	1	1	1	1	4
Zolock, 2:05¾, pacer.....	2	1	1	1	5
Zombro, 2:11, trotter.....	1	2	1	1	5

Drivers of Winners.

Among the drivers of the stake winners, Chas. Whitehead of Salinas leads with four first moneys to his credit, while S. H. Hoy, W. G. Durfee, J. W. Zibbell, F. A. Chadbourne, S. C. Walton and John Quinn have each driven two winners. C. A. Spencer, S. Donahue, A. L. McDonald, Fred Ward, I. Mosher, G. A. Pounder, Jas. Stewart, Elmo Montgomery, C. A. Durfee and Chas. De Ryder have each driven one winner of first money.

Owners of Winners.

J. W. Marshall of Dixon is the breeder and owner

of two stake winners, Mona Wilkes and Aerolite; E. D. Dudley, also of Dixon, has also sent two stake winners of his own breeding to the races—Friskarina and McFadyen; L. H. Todhunter, of Sacramento, bred and owned the winners Hymettus and Sweet Bow, while E. S. Train, of Santa Cruz, is the owner of the only colt that has won both a two and three-year-old stake—Ray o' Light, winner of both pacing divisions of Stake No. 5. Ray o' Light was bred by Ray Mead, proprietor of the San Jose Driving Park.

Those who have bred one winner of a Pacific Breeders' Futurity are: J. E. Montgomery, C. A. Durfee, J. M. Moorhead, Ben Davies, James Stewart, J. B. Iverson, F. Gomet, Judge T. H. Brents, J. N. Anderson, I. Mosher, G. L. Warlow, J. W. Zibbell, E. A. Gammon, G. A. Pounder, W. G. Durfee and J. N. Blair.

SUNDAY RACING DRAWS BIG CROWD.

San Francisco Driving Club Gives Program of Six Excellent Races

It would have taken two or three grand stands the size of the one in Golden Gate Park to accommodate the crowd that turned out to see the races there last Sunday. The fact that three of the fastest matinee horses of San Francisco were to meet in the free for all pace, no doubt accounted for much of the attendance, but there is a keen interest manifested in Sunday racing hereabouts, and with the aid of a free gait it is no trouble to draw a crowd to see the sport. The entire program of six races was concluded in twelve heats, not one split heat race being held during the afternoon. The feature pacing event was won by the old time favorite Geo. Perry by Waldstein in 2:09½ and 2:10½, a rattling good race for the day as there was a strong wind to face in the stretch. Little Dick and Celia K. were the other starters, the mare winning second place in the first heat by out pacing the gelding through the stretch, but in the second heat these two collided and Celia K. finished third pulling a sulky with a badly damaged wheel.

During the afternoon Chas. James drove S. Christenson's black trotting mare Reina Directum an exhibition mile paced by a runner. The handsome mare covered the distance in 2:11 flat, a reduction of the track record for a trotter by one second.

The time made in all the races was good for the class, and the events followed one another in quick succession, President Kenney making excellent starts and permitting no delays. The summaries:

First race—2:20 trot:			
A. Ottinger's Mike Kelly (Ottinger).....	1	1	1
Charles Buckley's Walter G. (Buckley).....	2	2	2
H. C. Ahler's Sunset Belle (Ahler).....	3	3	3
J. W. McTigue's Darby Mc (McTigue).....	4	4	4
Time—2:20, 2:26.			

GRAND CIRCUIT OPENS AT KALAMAZOO.

Old Country Jay Wins Two Races and Is Leading Feature of the Meeting.

Kalamazoo, Mich., July 25.—The initial meeting of the 1910 grand circuit was favored with track and weather conditions that were nearly perfect. There was a large attendance of well known horsemen from all parts of the United States.

The only disappointing feature of the day was the announcement that "Pop" Geers would not drive and that his entry for the 2:07 trot, The Harvester, would be withdrawn. Geers announced he would drive later in the week.

Country Jay featured by trotting the fastest mile of the year against a field of good ones. Willy, the British horse, about which there has been so much spoken, proven his mettle by winning the first race easily.

The favorites had a good day of it. Spanish Queen, the choice of the 2:07 trot, after it was announced that The Harvester had been drawn, was the exception. Country Jay proving the best.

Willy, a horse bred in England of American parents, was favorite in the 2:16 trot, and had no difficulty in winning, but Walter W., in the 2:06 pace and Country Jay, in the 2:07 trot, had to be driven hard to win. The last beat of the 2:06 pace was particularly close, Walter W., the winner, and Walter Hal coming under the wire neck and neck in a whipping finish.

Much interest was added to the 2:07 trot by the fact that Gus Macey and Ramey Macey, father and son, were pitted against each other. The son was up behind the favorite, Spanish Queen, but the elder reinsman landed the race in straight heats, while third money was the best the favorite could get.

The Abbe was a topheavy favorite in the 2:16 pace, and he had an easy time of it, as the finishes were not even close.

Country Jay's mile in 2:06½, in addition to being the fastest trotted this year, established a new mark for 14-year-old trotters. The former record, 2:09½, was held by Van Sant. Country Jay also holds the record for 13-year-old trotters—2:07½.

2:16 trot; purse, \$1,000; three in five.
Willy, b. h. by Wilburn, dam by Sidney (Pennock).....1 1 1
Gracious Peter, b. h. (McDonald).....2 2 2
Rickle Rawson, ch. m. (Murphy).....3 3 3
Howard, b. g. (Colby).....4 4 4

Time—2:09½, 2:09½, 2:11½.
2:06 pace; purse, \$2,000; two in three.
Walter W., b. g. by Little Frank (Snow).....6 1 1
Maconda, b. m. (Albion).....5 2 2
Walter Hal, gr. h. (Garth).....4 3 3
Asa Wilkes, ch. h. (Cox).....2 3 4
Baron Whips, ch. g. (Murphy).....3 5 3
Tony Swift, blk. h. (Dean).....4 6 5
Willie Benton, b. h. (Gossnell).....d.

Time—2:05½, 2:05½, 2:05½.
2:07 trot; purse, \$1,000; three in four.
Country Jay, ch. g. by Jay Hawker (Gus Macey).....1 1 1
Bob Douglas, g. h. (McDonald).....2 2 4
Spanish Queen, b. m. (Ramey Macey).....5 4 2
Teasel, ch. m. (Andrews).....6 3 3
Wilkes Heart, b. g. (Snow).....3 6 6
Sterling McKinney, b. h. (Murphy).....4 5 5

Time—2:07½, 2:07½, 2:07½.
2:16 pace; purse, \$2,000; three in five.
The Abbe, blk. h. by Chimes (Jones).....1 1 1
Sarah Ann Patch, br. m. (Cox).....2 2 4

Time—2:08½, 2:08½, 2:08½.
July 26.—The second day of Grand Circuit racing at Recreation Park showed up the sensational trotter of the year in the 4-year-old colt Billy Burke, who won the feature event, the \$3000 stake for 2:15 trotters trotting the fourth heat in 2:06½, which ties the world's record for a fourth heat, held jointly by Beuzetta and Bob Douglass.

The gray gelding Robbie B. McGregor beat Billy Burke in the first heat, but after that the son of Silent Brook had things his own way.

The M. & M. candidate, Henry H. was the one to put up the fight in the final heat. He looked to have a chance to win, but broke while in the lead in the home stretch.

The 2:08 pacers had a great battle, and the race was finally won by the favorite, King Cole, Waverly winning the first beat in 2:04½, the fastest time of the race.

The judges did not think Driver Owings was trying to win with The Philistine in the first heat of the 2:1 pace, which Hallie Lou took with little difficulty. With Walker up in the next heat, The Philistine finished in front, but May Queen was hest in the third, after which the race was postponed on account of darkness.

Track and weather conditions were again ideal for good racing. Every favorite won in the contests which were finished.

2:08 Class—Pacing; purse, \$1,000 (three in five).

July 27.—Dudie Archdale, the favorite, had comparatively little trouble in winning the \$10,000 Paper Mills stake for 2:11 class trotters, the classic of the Kalamazoo Grand Circuit race meet, in which a field of fourteen horses contested this afternoon.

Ed Geers, the veteran, who was unable to drive in Kalamazoo this week, because of the injuries he received at Grand Rapids, sat in the timers' stand and watched his entry win the rich prize. F. G. Jones, Geers' hacker, who drove Dudie Archdale to victory, was enthusiastically cheered at the finish. He was carried in a floral horseshoe to a spot in front of the timers' stand, where he was given the D. D. Streeter cup, a handsome silver trophy, valued at \$500. This cup is given to the winner of the event as a memorial by the heirs of the late D. D. Streeter of Kalamazoo, noted horse breeder, who died within the year.

A feature of another kind was the conclusion of the 2:17 pace, left over from Tuesday. Owings, driver of The Philistine, who had been taken down after the first heat Tuesday afternoon, was allowed to resume his place. Then Snow drove Hallie Lou to victory. The judges declared all bets off and Owings promptly drew Jordan, his entry, for the first race of today.

In the first race, the 2:21 trot, interest attached to the fact that Dora, who won without much difficulty, is a Hungarian bred horse, owned by Louis Winans of Brighton, England, whose Willy won the first race Monday, the 2:16 trot, thus proving the success of the British invasion. Dora was never in danger except in the third heat, when she broke badly.

Although Dan D. won the first heat in the 2:14 pace, Sunny Jim had little trouble in taking the next three.

In the first heat of the Paper Mills stake, Gamar worked into an advantageous position and kept it down the stretch. Dudie Archdale tried to nose Gamar out, but failed, though it was a tight finish.

After that Dudie took the necessary three straight heats. The horses were well bunched, but there were only three or four real contenders against the victor. Alice Roosevelt, in the second and third heats, raced Dudie Archdale under the wire to a finish of less than a length's difference, and Bida did the same in the last heat, while the horses finishing third, fourth and fifth in every heat were close. Summaries:

Time—2:15½, 2:18½, 2:17½.

July 28.—May Day, no better than third choice in the pools, today won the \$5000 Rickman Hotel purse, the feature of the fourth day's racing in the Grand circuit meet here.

May Day is the Indiana mare which William Ryan, a blacksmith of Covington, Ky., last winter sold to Thomas Bodine of the same place for \$500. Her winnings at Grand Rapids last week added to her share of the Rickman purse, make a total of nearly six times the amount Bodine paid for her.

An event of much interest today was the presentation to the Recreation Park association, by the Thackeray family of Kalamazoo of an old triangle, which was used at the Old National park in 1859, when Flora Temple in October of that year startled the racing world by trotting a mile in the then unapproached time of 2:19½. The triangle was used in all of today's races.

The big event of the day, the 2:13 pace, attracted a field of nine starters. Brenham Baughman was made favorite after the Estahrooke entry, C. The Limit, was withdrawn before the race on account of lameness.

In the first heat Lady of Honor led to the home

stretch and then May Day came down and drove in a winner in a whipping finish, Brenham Baughman finishing third. In the second heat Oscar Wild led to the half then lost by breaking. It was a neck and neck finish between May Day and Brenham Baughman, while Lady of Honor was a close third. The last heat was again a fight at the wire, but May Day had a shade the best of the end.

Hailworthy, favorite in the 2:12 trot, did not even get into the money, while the winner, Major Strong, was a rank outsider. Vito twice pushed Major Strong rather hard, but the result was never in doubt.

Captain George, the only favorite of the day to win, had an easy thing of it in the 2:30 trot. Summaries:

Time—2:10½, 2:09½, 2:09½.

July 29.—Country Jay, grand 14-year-old trotter, proved the wonder of the Grand Circuit opening, if not of all harness history, when, in the second heat of the 2:05 trot to-day, he made a new record for himself in the time of 2:05½. Country Jay won this race, which broke the world's record for the three fastest heats ever consecutively trotted, the time being 2:04½, 2:05½ and 2:05½.

This announcement from the judges' stand was loudly cheered, and Gus Macey, who drove Country Jay to victory, was given an ovation a few minutes later, when he went up into the press box and the crowd caught sight of him.

In the 2:00 pace Giftline, the Kansas horse who made a good showing on the Kansas and Oklahoma circuits last season, was made favorite over such famous contenders as The Eel, Darkey Hal and Aileen Wilson. Giftline was distanced in the first heat through breaking at the half. A bandage around one of his hind legs loosened and tangled his feet so that he could not pace.

The first heat was a beautiful race from the half between Darkey Hal and The Eel. The two fought it out neck and neck, but The Eel won the heat.

Aileen Wilson closed up to the two leaders in the second heat, but broke before the last quarter, and Darkey Hal won by a neck in a hard drive. In the third heat The Eel was always close up, but the best he could get was another close finish.

In the 2:05 trot, which proved the sensation of the day, Oro, the pole horse, broke at the start, but quickly recovered and the horses were well hunched at the quarter. From the half to the finish it was a great race between Sonoma Girl and Country Jay. The Girl was finally driven under the wire a length ahead of Country Jay, in spite of the efforts of Macey to lift his horse across. Sonoma Girl reduced her record a full second in this heat.

In the second heat, destined to break the winner's own record, the horses all kept their positions until past the quarter. At the half Country Jay was driven into a lead, then Sonoma Girl closed up and they were together at the last quarter. Country Jay again drew ahead and the pace was so hot that Sonoma Girl dropped back into third place just before crossing the line.

In the last heat Country Jay led all the way, finishing a couple of lengths in the lead, with the rest of the bunch fighting for the place.

The 2:09 trot proved to be a disappointment. There were only three starters and Nancy Royce, the favorite, was never in danger. Earl, Jr., was the favorite in the 2:11 pace, with Peter Pan a strong second choice. For four heats it was a seesaw between these two, but finally in the fifth Earl, Jr., crossed the line first and won the race. Summaries:

NOTES AND NEWS

Breeders' Meeting next Wednesday.

The new San Jose track is the place.

Records will be broken because the horses are good and the track fast.

Trains run from San Francisco to San Jose at all hours of the day and night. See time card in the advertisement.

Geers has won both of Detroit's big stakes, the C. of C. and the M. & M. on two different years—in 1904 and 1910.

The San Jose track will be one of the fastest tracks in America on Wednesday next, when the Breeders' meeting opens.

Seal Pointer 2:09½, is a new 2:10 performer for Star Pointer 1:59¾, and is also a brother to Alice Pointer 2:05½.

Neither Colorado E. nor Native Belle was entered in the Horseman Stake at Detroit which was won by Emily Ellen.

C. The Limit 2:06¼ was drawn on account of lameness at Kalamazoo and was too lame to start in the C. of C. at Detroit last Tuesday.

Dudie Archdale has now won first money in three \$10,000 purses. She is one of the best behaved trotters ever seen on the Grand Circuit.

Don't forget that the Barstow sale will take place at the new San Jose track on Saturday next at 10 a. m., the final day of the Breeders' meeting.

Will North Star's three-year-old stake record of 2:13½ be lowered in the Breeders' Futurity at San Jose next Friday, and if so what colt will do the trick?

There will be some great colt racing at San Jose in the different divisions of the Pacific Breeders' Futurity. Those who fail to see these races will be sorry.

The list of colts on which starting payments have been made in the Los Angeles stakes to be decided at Woodland, is given in our Los Angeles letter this week.

Walter Dillon, which won the 2:24 trot at Herrington, Kan., in straight heats, trotting the first heat in 2:16, looks like another 2:10 performer for his sire, Sidney Dillon.

Alice Roosevelt, who entered the 2:10 list at Terre Haute, taking a record of 2:08¾, is making her ninth campaign. She has started in sixty-nine races, winning thirty-three of them.

\$3000 was offered and refused this week for Bon Guy, the three-year-old by Bon Voyage. Bon Guy is entered in the Pacific Breeders' Futurity, the Occident and the Sanford stakes.

Katie Yandle now heads the list of the horses competing for prizes at the matinees of the Parkway and New York Driving clubs. She had five heats and ten points to her credit up to last week.

We are pleased to state that the condition of Mr. Frank H. Burke, whose illness was reported in this journal last week, is much improved and strong hopes are entertained for his complete recovery.

The last payment on two-year-old trotters in the Clark-Canfield Stake to be trotted at Woodland, will be due and payable August 14th, ten days before the Woodland meeting opens. There are fourteen colts and fillies still eligible to this stake.

O. A. Martin has sold to Mr. I. L. Borden of this city a three-year-old dark bay trotting colt by Major Dillon, dam by Director H., son of Director, second dam by Brigadier, son of Happy Medium, third dam by thoroughbred Norfolk. This colt is a nice going trotter and a good prospect.

L. B. Daniels reached San Jose from Chico this week with five head, including the trotters Katalina 2:11¼ and All Style, the pacer Chiquita and the colts Olmitz by Zombro and Joe D. by Prince Ansel. A. Jackson shipped The Ice Man in the same car. All the horses left Chico in good shape.

The car from Woodland loaded with horses for the San Jose races next week contained five head. Det Bigelow's two-year-old trotter Dorothy Ansel was among them, also Woodland Stock Farm's good trotter Prince Lot, and a couple of stake candidates belonging to H. S. Hogoboom and M. C. Keefer.

Mr. J. L. McCarthy has asked the Breeders' Association to release him from his contract of starting the horse at the San Jose meeting. Pressing and important business elsewhere will prevent Mr. McCarthy from being at San Jose next week, and the association therefore reluctantly released him.

Sonoma Girl is as fast and as badly behaved as ever. Sterling McKinney ditto.

Fernloc is used on the matinee pacer W. J. K., and he is always ready to race.

Ross K. 2:02¼, the fastest pacer of the year thus far, is by Constanaro, sire of Paderewski 2:05¼, last year's big winner in the trotting races. Constanaro is a son of Constantine 2:12¼.

The only record of the Pacific Breeders' Futurity that is not in actual danger next week is the 2:08½ made by the three-year-old Hymettus at Santa Rosa in 1907, and there are several horsemen who think even this record will go.

About ten thousand people were in attendance last Wednesday at Detroit to see the \$10,000 M. & M. decided. A full account of the Detroit meeting, which ended yesterday, will appear in next Saturday's Breeder and Sportsman.

A consignment of the new model long-shaft McMurrays is expected to arrive at W. J. Kenney's, 531 Valencia street, in a day or two, and if they reach here in time they will be on exhibition at the Breeders' meeting next week in San Jose.

May Day 2:04¾ seems to be a pretty fair pacer and has now won two races on the Grand Circuit. She is by Commutation, a son of Sidney, and her dam is by Charley Wilkes, sire of the great broodmare Carlotta Wilkes, dam of Inferlotta 2:04¾, Carloklin 2:08¾, and Mary Dillon 2:06¾.

Sir Valentine, by Athasham 2:09¼, dam Beauty N. by Nashagak, owned by Dr. Bruce of Hanford, is now 15 months old and measures 14 hands and 3 inches. He is just being broken and gives indications of being very fast. He is entered in the Breeders' Futurity and other rich stakes.

Ed Geers was able to climb into the sulky last Tuesday for the first time since his accident at Grand Rapids, and celebrated the occasion by winning the Chamher of Commerce \$5000 stake with The Abbe, and the \$1000 2:07 trot with The Harvester. Pretty good record for a crippled old man.

Miss Stokes 2:10¼, record made last year as a yearling was third in The Horseman Futurity for two-year-olds. Azoff, a Peter the Great colt, took the first beat in 2:14¼, and Necia, a filly by Bellini won the next two in 2:13¼ and 2:14¾. Miss Stokes was 3-2-3, which was a good showing in so fast a race.

The Harvester's two heats at Detroit last Tuesday, both in 2:04¼, make the fastest two-heat race ever trotted by a stallion. Cresceus 2:02¼ trotted a two-heat race in 2:03¼ and 2:06¼ which was the previous fastest race by a stallion. Hamburg Belle's heats in 2:01¼ and 2:01½ are the fastest two heats ever trotted in a race.

The fastest miles made by the two and three-year-old trotters and pacers in Breeders' Futurity races are as follows: Two-year-old trotters, Ella M. R. 2:16¼ at Chico in 1908. Two-year-old pacers, Friskarina 2:13¼ at San Jose in 1904. Three-year-old trotters north Star 2:13½ at Santa Rosa in 1905. Three-year-old pacers, Hymettus 2:08½ at Santa Rosa in 1907.

Charles Tanner drove Mr. Billings' gelding Uhlan 2:02¼ a mile in 2:00¼ at the North Randall track week before last. The horse trotted without a pace maker, and the first quarter was covered in 30¼ seconds and all the others in 30 seconds each. He was hitched to a sulky. Uhlan will start against the world's gelding record at the Cleveland meeting next week.

W. T. Ellis Sr., of Marysville, Cal., has just received two photographs from Quincy, Mass., of which he is very proud, and which he was showing to his friends in this city today, says the Marysville Democrat. They are of Billy Ellis, the large dapple gray horse that Mr. Ellis sold to the Sells Bros. circus when they visited this city last year. Billy is now a full-fledged ring horse, and is ridden by Miss Carrie Rooney, now with the Forepaugh circus.

Sunny Jim is the name of a horse owned by W. F. Bernstein of Hanford, that has been trained to give the horse laugh at the word of command. Lloyd Trehitt is the horse's trainer, and at his command Sunny Jim will throw up his head, open his mouth and look as if he were laughing heartily. Sunny Jim is a trotting bred horse, very intelligent and goes all five of the saddle gaits, as well as being an adept at doing a number of clever stunts besides. A photograph of this horse with a broad smile on his face, has been sent us by Dr. L. Bruce of Hanford.

Fifty thousand dollars in premiums is the offering of the Inter-State Fair and Exposition at Denver this fall, when the usual events will be enlarged to cover a period of two weeks and include track features which are calculated to collect a big aggregation of the ponies and show horses. Edwin Gaylord, director of the track events, has announced the following for harness classes: Free-for-all pace, \$500, 2:18 pace, \$500; 2:25 pace, \$500; free-for-all trot, \$500; 2:14 trot, \$500; 2:14 trot, \$500; 2:30 trot, \$500.

PROGRAM FOR BREEDERS' MEETING.

Horses Eligible to Start in the Races to Be Given at San Jose, August 10th to 13th.

Wednesday, Aug. 10.

California Stakes, 2:20 class trot, \$1000—Diedrich, Little Branch, Dr. Wayo, Lijero, Helen Stiles, Prof. Heald, Mike Kelly, Bodaker, Harold K., Prince Lot, Bobby H., All Style.

Trotting, 2:12 class, \$800—Lady Inez, Katalina, North Star, Wenja, Dr. Lecco, Goldennut, Zombronut, Escobado, Rapidan Dillon, Zomell.

Pacing, 2:14 class, \$600—Chiquita, Alto Genoa, Jr., David St. Clair, T. D. W., Joe Athby, Little Dick, Sister Bess, Patery, Ice Man, Choro Prince.

Thursday, Aug. 11.

Pacific Breeders' Futurity, Two-year-old Trotting Division, \$1250—Valentine Girl, Dorothy Ansel, Nat Higgins, Lady Maren, Zorankin, Luna M., The Bulletin, Matawan, Merry Mac.

Pacific Breeders' Futurity, Three-year-old Pacing Division, \$1000—Normono, Jean Val Jean, Ben Rush, Sirius Pointer, Sir John W.

Driving Club Race—Prize, silver cup—A. Ottinger's Charlie T, S. Christenson's Reina Directum, D. E. Hoffman's Walter Wilke, H. Boyle's Modicum.

Friday, Aug. 12.

Pacific Breeders' Futurity, Two-year-old Pacing Division, \$750—Laura Rodgers, Joseph D., Noemie, Pointer Belle, Victor Pointer, Sweet Princess.

Pacific Breeders' Futurity, Three-year-old Trotting Division, \$3000—Voyageur, Pal, Babe Verne, Pegasus, Sweet Bow, Olmutz, Ateka, Strathboule, Bon Guy.

Trotting, 2:15 class, \$600—Zomell, Tell Tale, Little Branch, Paul W., Conquerer, Almaden, Donello, Wenja, Prof. Heald, Mike Kelly, Harold K., Prince Lot.

Saturday, Nov. 13.

Driving Club Race, to close later.
Pacific Slope Stakes, 2:20 class pacing, \$1000—Ice Man, Patery, Joe Athby, George Woodard, T. D. W., Alto Genoa Jr., Beauty Dick, Chiquita.
Special race to close later.

NEBRASKA CITY RACES.

The summaries of the races at Nebraska City from July 19th to 23d, in which any alifornia horses started, are as follows:

2:25 trot, purse \$500:
Miss Wyman, b. m. by Highland C. (Hewitt) 8 7 1 1 1
Diamond Mc, br. h. by Kinney Lou (De-
Ryder) 1 5 6 3 2
The Delegate, b. h. by Infact (Wilson) 4 3 3 2 3
Exchange L, hr. m. by Potential (Mercer) 3 2 4 6 4
Hulda Strong, h. m. by Governor Strong (Ervin).
2-1-2-5-dis.; Grace Redlander, 6-6-7-4-dr.; Miss Ham-
ilton, 5-4-5-dr.; Emma Z., 7-8-dis.; Maybelle, 9-9-dis.
Time—2:20, 2:20½, 2:18½, 2:19¼, 2:17¼.

2:12 pace, purse \$500:
Carter G., ch. h. by Carter H. (Hill) 1 1
Silver H., ro. g. by Silver Heir (Hamilton) 2 3 2
Diabull, ch. g. by Diahlo (Griswold) 4 2 5
Gotell, ch. g. by Alltell (Eaton) 3 4 3
Ottawa Boy, 6-5-4; Pacy D., 5-6-dr.
Time—2:10¼, 2:11½, 2:12.

2:20 pace, purse \$500:
Young Adalia, b. m. by Seven Plumes (Friend) 1 1 1
Brother Will, b. g. by Yewwood (Wilson) 3 2 2
Gracie Pointer, gr. f. (3) by Star Pointer (De-
Ryder) 2 3 5
Ditto Electricite, b. h. by Electricite (Mercer) 7 7 3
Montreal, 4-4-6; Prince L., 5-5-4; Minnie Oneida, 6-6-
dis.; Dividend, dis.
Time—2:14¼, 2:15¼, 2:12¼.

2:30 pace, purse \$500:
Loucyone, b. m. by Allercyone (Brown) 1 1 1
Billy Link, br. g. by Vendor (Terhush) 2 5 2
Gracie R., b. m. by Demonio (DeRyder) 1 2 4
Teddy Roosevelt, b. g. by Raymond (Judd) 4 4 3
Red Gopher, 5-7-6; Silkio, 8-6-5; Gambetta, 3-3-dis.;
Montenet, 6-8-dr.; Little Star, Beautiful Rest, Col.
Davis and Big Squaw, dis.
Time—2:13¼, 2:13¼, 2:15.

July 21—2:16 pace, purse \$600:
Lady Jeanette, b. m. by Lewis Wilkes (Dally) 1 1 1
Harry Gray, gr. c. (4) by Lockheir (Friend) 3 2 2
Denervo, b. g. by Demonio (DeRyder) 2 3 3
Symhol Seal, bl. m. by Symholeer (Mercer) 4 4 5
Bauty H., 5-5-4; Manager S. and May Dillon, dis.
Time—2:11¼, 2:12¼, 2:11¼.

Three-year-old pace, purse \$300:
Columbia Fire, b. c. by Pactulus (Stantz) 1
Roan Hal, ro. g. by Athahlo (Perry) 2
Lady Jean Ette, ch. f. by Shade On (Montgomery) 3 3
Alice Hunter, b. f. by Iowa Sentinel (Wilson) 4 4
Par On, 5-5; Gamhrule, dis.

2:22 trot, purse \$500:
Johnny G., ch. h. by Alcantarus (C Brown) 1 1 1
Ante Russell, br. m. by Anteros (Brown) 2 2 5
The Judge, br. h. by Spottswood (Carber) 5 4 2
Mark On, b. h. by Shade On (Montgomery) 5 3 3
Josephine D., 4-5-4; Diamond Mc and Interest, dis.
Time—2:15¼, 2:16¼, 2:17¼.

2:30 trot, purse \$50:
Prince Waverly, ch. g. by Waverly Prince
(Mercer) 1 1 1
Checkheart, b. h. by Lockheart (Thomas) 3 2 2
Glenwood T., gr. g. (Terhush) 3 3 7
Watt Leyburn, b. g. by Alto Leyburn (Cannon) 5 6 3
Early Storm, 4-5-4; Dandywood, 8-4-5; Willis Strong, 7-8-6; San Juan, 6-7-dis.; Rancho del Paso, 9-dis.;
Tommy Horn, 10-dis.
Time—2:21, 2:19¼, 2:21.

News was received last week that Chas. DeRyder the well known trainer had met with a serious accident in one of the races in which he was driving, being thrown from his sulky and one ankle very badly hurt. It was first announced that his leg was broken, but later advices were that it was only a severe sprain, although it would put him on crutches for a while. Mrs. DeRyder started east from Pleasanton immediately on hearing of the accident. It is to be hoped that Mr. DeRyder's injuries are such as will heal promptly and not keep him out of the sulky long.

OUR LOS ANGELES LETTER.

Arcadia track is deserted, Vance held the fort as long as he could but finally followed Durfee and J. S. Stewart to Santa Ana. Durfee is enthusiastic over the track there. He says it by far the best and safest training track in California and requires infinitely less work to keep in shape than any other. A slight sprinkling at night and jogging the horses next morning over it gets it in order for the workouts. The stalls are much larger than those at Arcadia and though not in as good condition still comfortable and convenient. It is not quite as handy to the city as the Baldwin track, as it takes twenty minutes longer on the trolley and then a mile and a quarter walk or drive. Still, the "glad hand" extended to all visitors by the owner, George Washington Ford, goes a long way toward making one forget the little drawback, and that reminds me: Ford has some mighty good looking young Neeruts, one a four-year-old, that looks as if he would be heard from some of these days.

Copa de Ora 2:01¼ and Carlokini 2:08¼ celebrated their arrival at Santa Ana by stepping in 2:21¼ and 2:22¼ respectively. This is the fastest work they have been asked for so far this year.

The Pasadena Driving Club, organized last week, fills a long felt want in this neighborhood and should be a success from the start. The Tournament Park track was made a full half mile last year and stabling built, and with a little money now expended on it to put it in really first class order matinee racing over it should not only draw from the home town but from this city as well. There are enough horse lovers in the crown city, including such owners as Wm. Morgan, and L. V. Harkness, whose stock farm in Kentucky has a world-wide reputation, and with the means to own the highest class of matinee material and enough of them to fill the classes for an afternoon's sport. Then next spring when the track here is completed and the matinee brigade get to work, inter-city matinees can be given and a friendly rivalry will add much to the interest not only of the horse owners and members of the two clubs but of the general public as well.

The last payment in the California Breeders' stake for foals of 1907 and in the Canfield stake for foals of 1908 has been made, and the trotting division of the former bids fair to be a cracker jack of a race. Two of the entries have, I understand, beaten 2:15 in their work, but a little thing like that has not deterred six others from stacking up against them, so it looks as if they all must be pretty fair propositions. A field of eight makes a nice bunch, plenty to lend excitement to a race, and yet not enough to make an unwieldy number for a starter to handle and get away promptly and insures each "a run for his money."

There are four good two-year-olds in the Canfield trotting division, but only one pacer in the other division, and only two in the pacing division of the California Breeders' stake. This is unfortunate from a racing standpoint but speaks well for the trotting prepotency of the sires.

The last payment in the Canfield-Clark stake for two-year-old trotters will be due August 14th, ten days before the Woodland meeting and there are still fourteen "live" entries so that a field of six or seven may be counted on to face the starter in that event. The following are the entries in the first two stakes mentioned.

California Breeders' Stake, Foals of 1907, Entrance and \$400 Added

Trotting Division, 60 Per Cent:

L. B. Daniels, Chico, Cal., Omultz, h. c. by Zombro. Geo. L. Warlow, Fresno, Cal., Strathboule, blk. c. by Stamhoulette.

D. L. Bachant, Fresno, Cal., Ateka, h. f. by Athasham.

Wm. E. Detels, Pleasanton, Cal., Bon Guy, b. c. by Bon Voyage.

Wm. A. Clark Jr., Los Angeles, Cal., Voyageur, hr. c. by Bon Voyage.

L. H. Todhunter, Sacramento, Cal., ———, by Bon Voyage.

Valencia Stock Farm, San Bernardino, Cal., Pegagus, b. c. by Zombro.

E. D. Dudley, Dixon, Cal., Pal, b. c. by Palite.

Pacing Division, 40 Per Cent:

Wm. A. Clark Jr., Los Angeles, Cal., Jean Valjean, b. c. by Bon Voyage.

J.W. Marshall, Dixon, Cal., Sirius Pointer, h. c. by Star Pointer.

Canfield Stake Foals of 1908, Entrance and \$400 Added.

Trotting Division, 60 Per Cent:

Wm. Morgan, Pasadena, Cal., Luna M., blk. f. by Direcho.

M. C. Keefer, Woodland, Cal., Zorankin, b. c. by Zombro.

C. B. Bigelow, Woodland, Cal., Dorothy Ansel, h. f. by Prince Ansel.

Geo. L. Warlow, Fresno, Cal., Matawan, h. c. by Athadon.

Pacing Division, 40 Per Cent:

Alex. Brown, Walnut Grove, Laura Rodgers, by Prince Ansel.

Wm. A. Clark Jr.'s three-year-old colt Bon Vivant, by Bon Voyage, in Boh Proctor's string at Detroit, divided fourth money in the Horseman and Spirit of the Times Futurity, with Bergen last Monday.

C. A. Holcomb, who left here in May with Phyllis C., Lohengrin and others to go through the Maryland and Virginia circuit, has quit it, and is racing through the Oil circuit, where he was fifth last week with Phyllis C. in 2:23¼.

THE BARSTOW SALE.

As per advertisement in this journal Mrs. S. V. Barstow will sell at auction at the San Jose Driving Park next Saturday nine head of choicely bred trotting stock. These horses are being sold for no other reason than that the owner is overstocked and of necessity must sell to make room for the produce of a few highly bred mares that with the promising young sire Nearest McKinney 2:20½ is all the small space of the consignor has the capacity to carry. The breeder, whether large or small, must sell or become overstocked, and as all know to become overstocked is unprofitable and prevents justice being done to all the stock. This offering is headed by the grandly bred and successful sire Nearest 2:22½ by the great Nutwood Wilkes, dam the great brood mare Ingar, dam of six in the list, by the great race horse sire of racehorses, Director 2:17. Nearest is a full brother to John A. McKerron 2:04½, the fastest trotting stallion in America, and a great sire of speed as well. Nearest was the first eight-year-old stallion to become a 2:10 sire; at that age his four-year-old daughter Alone obtained a race record of 2:09¼ and the following year a half mile record of :59¼ and trialed a mile in 2:06. He is also the sire of Highly 2:04¼, that has been a mile in 2:03¼ and there are others of his sons and daughters that will enter the 2:10 list and a likely candidate for that exclusive list is the beautiful chestnut mare Nearer, also offered in this sale. Nearest is 16 years old, strong and vigorous, in the prime of his life as a sire, with many years of usefulness before him and a sure foal getter. His get besides being fast are universally large, handsome and prompt, fearless roadsters. He can more than earn himself out in one season in any locality where light harness horses are bred.

The second number to be sold is Lucky Star, a large handsome three-year-old bay colt by the old champion Star Pointer 1:59½, out of Maud J. C., dam of Nearest McKinney 2:20½, trial 2:13½, by Nearest 2:22½, second dam Fanny Menlo, dam of Claudius 2:13½, by Menlo 2:21¼, son of the great Nutwood 2:13½, third dam by Anteeo 2:16¼, sire of dam of Sonoma Girl 2:04¼, etc., and fourth dam of Nutwood 600.

This colt is a square trotter, and although never trained, shows a nice way of going and a lot of natural speed.

Number three is a handsome bay two-year-old colt by The Angelus 2:15¼ (son of Zombro 2:11 and Hazel Kinney 2:09¼), dam Maud J. C. This colt is entered in the Breeders' Futurity, is well broken but has never been worked for speed, can trot a 2:40 gait on the road.

Number four is One Better (2) 2:24¼ by Nearest McKinney, dam Much Better 2:07¼, ex-champion four-year-old pacing mare by Chas. Derby 2:20, a sire of champions, second dam None Better 2:23, by Allendorf 2:19¼ (son of the mighty Onward 2:25¼, and the famous broodmare Alma Mater, dam of eight in 2:30), next dam Bashaw Belle, dam of Strong Boy 2:12 and five others, by Bashaw 50. Here is one of the best bred colts on the coast as well as one of the fastest for the amount of work he has had. With just two months' track work he paced a mile in 2:21, last quarter in :32, and an eighth in :15½. He is a strong, rugged colt that will surely make a high class pacing race horse.

Number five is Nearer, a very handsome six-year-old chestnut mare by Nearest 2:22½, dam Mormon Girl, by Brigadier 2:21. With only 60 days' training this mare trotted a mile to cart in 2:21¼, last half in 1:08, and without a doubt will make a very fast trotter if given an opportunity. She is good-gaited and good headed and can hrush better than a 2:10 gait.

Number six is Just Mc. 2:24¼, a four-year-old bay gelding, the first foal got by Nearest McKinney 2:29½. He obtained his record just three months from the time he was broken to harness and stepped the last quarter in :33. His dam is Just It (3) 2:19¼ by Nearest 2:22½. He is a free-legged pacer and a 2:10 prospect.

A very highly bred three-year-old filly is Nearheart by Nearest McKinney 2:20½, dam Trueheart 2:19¼, by Nearest 2:22½, second dam Camma, dam of Jasper Paulsen 2:16¼, Rolla (3) 2:23, European record 2:08¼, and Trueheart 2:19¼, by Norway, third dam Camilla, full sister to Eloise 2:15, Stevie 2:19½ by Kentucky Prince. Fourth dam Camille, by Hambletonian 10, fifth dam Emma Mills, dam of four producing sons by American Star 14. This filly was worked but two months last spring, trotted a full mile in 2:32½ and could hrush a 2:20 gait. She will trot fast if trained and should make an excellent broodmare.

Perhaps the best bred one in the lot is Little Light, a two-year-old bay filly by Nutwood Wilkes 2:16½, a 2:10 sire, dam Bonnie Light by Bonnie Direct 2:05½, a 2:10 sire; second dam Record Searcher, by Searchlight 2:03¼, a 2:10 sire; third dam Leta Carter by Director 2:17, a 2:10 sire; fourth dam Lydia W., dam of Nutwood Wilkes 2:16¼, by Nutwood 2:18¼, a 2:10 sire; fifth dam by Geo. M. Patchen Jr. 2:27; sixth dam by Williamson's Belmont, etc. This filly was bred by the late Martin Carter, was broken as a yearling, but has not been driven since.

Number nine is a yearling black colt by Nearest McKinney 2:20; first dam by Hambletonian Wilkes, sire of four in 2:10; second dam, Azrose, dam of Happy Dentist 2:11¼, Little Louise 2:17, and Azmorie 2:20¼, etc.; third dam Arodi, by Piedmont 2:17; fourth dam Aurora 2:27, by John Nelson; not broken to harness, is a natural pacer.

Number ten is a bay yearling colt by Nearest

2:22½, dam Bahe, dam of Just It 2:19¼, by Danton Moultrie (son of Guy Wilkes and the great brood mare Carrie Malone); second dam by Soudan 2:27½; third dam by Nutwood 600. This colt is a natural trotter, unbroken to harness and paid up in the Occident Stake. A good prospect.

This stock will be sold without reserve to the highest bidder; all are well bred and worth more money than they will bring. Remember the day, next Saturday, at 10 a. m., last day of the Breeders' meeting at San Jose.

STOCKTON MATINEE LAST SUNDAY.

A fine crowd was out to witness the harness racing last Sunday at the Stockton mile track by the San Joaquin Valley Driving Club. There were six races on te card, one running and five harness events, and the only race in which the heats were split was the last one, won finally by old Newport, the hero of many a stretch battle. The fastest heats of the day were paced by Alto Genoa Jr. and T. D. W. Both circled the track in 2:15, the former doing two heats in that time, and the latter coming very close to it by winning the fifth race in 2:15 and 2:15½. Boh Ingersoll, the old trotter by Nutwood Wilkes that has been pulling a business wagon about the streets for some time won a race in slow time, hut could have gone faster had it been necessary.

The officers of the day were: Judges—F. Lieginger, A. W. Cowell and W. J. Miller. Timers—J. N. Jones, Charles Fagan and Dave Chalmers. Starter—Frank Lieginger. Marshal—Farmer Bunch. Results:

Running, half mile dash—Samar won, Butterfly second, Wine Bell third. Time 0:53.

Second race, 2:50 class, mixed:
McRey (F. A. Murray)1 1
Black Beauty (Friedherger)2 3
Laura D. (Carroll & Lavin)3 2
Time—2:48, 2:58.

Third race, 2:15 pace:
Alto Genoa Jr. (Peirano)1 1
Nohle (Helm)2 2
Time—2:15, 2:15.

Fourth race, 2:30 trot:
Bob Ingersoll (Marengo)1 1
Blair (Lieginger)2 2
Doc McKinney (Nance)3 dr
Time—2:35, 2:34.

Fifth race, free for all pace:
T. D. W. (Kemp)1 1
Beauty Dick (Peirano)2 2
Time—2:15, 2:15½.

Sixth race, 2:20 class pace:
Newport (Morris)1 2 1
Modesto Mac (Helm)2 1 2
Chappo (Donothan)3 3 2
Time—2:20, 2:18, 2:23½.

JACOB BROLIAR WANTS A RACE.

Visalia, Aug. 1, 1910.

Breeder and Sportsman:—I have been wondering if we could create a little friendly rivalry by suggesting to the Kings County Fair Association that it give a \$100 stake for two-year-old trotters sired by Tulare and Kings county horses. If such a race were given at half mile heats, 3 in 5, with all retiring that had not won a heat in three, and charging \$25 entrance to be added to the stakes and divided into three moneys, it would bring out quite a bunch as all would have an equal chance as none are being worked now that I know of. There are about thirty stallions standing in Tulare and Kings counties and any one of their owners would be greatly offended at any intimation that his horse could not sire just as fast a colt as any other horse could. I am willing to make an entry if they will give us the race and make the entire amount of entrance payable in one payment not earlier than the 20th of August or later than the 1st of September. Would he pleased to hear from them and others interested through the Breeder and Sportsman.

JACOB BROLIAR.

ANSWERS TO CORRESPONDENTS.

To settle a wager will you please state whether a two-year-old can start in any of the races this year if he wears hoppers, and can a pacer wearing hoppers next year as a three-year-old get a race record?—Enquirer.

Ans.—Section 2 of rule 29 of the National Trotting Association reads as follows: "Hoppers shall not be used in races or performances against time on two-year-olds in 1910, on three-year-olds or under in 1911, on four-year-olds or under in 1912, on five-year-olds or under in 1913, on six-year-olds or under in 1914, after which date hoppers are barred."

The above rule is mandatory, the only exception being in stakes which closed before the rule was passed, wherein hoppers were not barred.

C. K. Bird, San Jose.—Electioneer was a standard bred horse. He is registered and his number is 125. Thoroughbred horses are runners; standard bred may be trotters or pacers. Electioneer was a trotter.

J. S. Manchester, Sierraville.—Bolivar 2:00¾, won approximately \$10,000 in 1905, and \$3000 in 1906, making \$13,000 during the two years.

Dr. Wayo (3) 2:24¼, the five-year-old stallion in Fred Ward's string is by Wilkhurst 2:17¼, dam Treville, dam of two, by Trevillian 2:03¼. Dr. Wayo has trotted around 2:12 several times this spring.

ROD, GUN AND KENNEL

CONDUCTED BY J. X. DeWITT.

A DAY'S PHEASANT SHOOTING IN THE OLD STYLE.

Of all the red-letter dates in the British sportsman's calendar the 1st of October is today the least important. It was not always so, for a generation or two ago the shooting-man's idea of haggling pheasants was to go after them at the earliest possible moment if he wished to secure a 'walking-up' birds, either by oneself or, as was more often the case with the aid of a steady old spaniel whose keen nose could be trusted to detect the presence of those wily old birds which so often lie low in the undergrowth, and outwit the sportsman who shoots without a dog. The weight of the hag at the end of a hard day was never very great, but our ancestors were far more easily satisfied in the matter of sport than ourselves. It was enough for them and doubtless they enjoyed themselves quite as much as any of us do today if they killed just three or four brace of pheasant, with a partridge or two, and a couple of rabbits, or possibly a hare, to add variety to the day's spoils.

We, on the other hand, live in an age when most men who shoot do not feel satisfied unless the number of head in the bag runs into three figures, or something like it. And so it is that early October shooting is held of little account with the majority of the present generation, for until the leaves have fallen and heating has become possible big hags are quite out of the question. But there still lingers in the minds of those of us who cling to old customs and regret to see them supplemented by more modern methods a feeling that it would be nice sometimes to try a day after pheasants as far as possible in the old-fashioned style. Such a chance never arises so opportunely as in the bright, crisp days of October, when the sun still retains some of its summer warmth, and the country-side is to be seen in one of its most charming aspects.

But to our business of the day. Here is George, handy-man about the place and gamekeeper for the nonce, and with him Gipsy, coal-black and panting, her tail oscillating at the rate of a hundred wags per minute, and her moist, shiny nose sniffing the air in keen anticipation. George takes charge of the dog and the game-hag, and you yourself, with gun thrown jauntily over the shoulder and your pockets bulging with a sufficiency of cartridges, step out across the lawn, with your companions alongside, to try the cabbages in the kitchen garden on the chances of an early cock. But it is a little too soon, although as you come hack it is ten to one that you may find a bird here after the sun has dried up the dew that makes this favorite retreat for birds rather too wet at present. The laurel hedge at the bottom of the garden yields no better fortune, but a big patch of brambles out in the meadow seems a more likely spot for what you seek. But, no! another hank, and the next thing is a bed of thistles, all gone to seed, with their down heads nodding in the gentle breeze—a capital hit of cover for partridges or pheasants, and a sorry example of had farming to boot.

On this occasion George must be pressed into service, for his stout leather leggings reaching to the thigh are quite impenetrable to any thorn that ever grew. Right and left he slashes with his stick, laying low the proud thistle heads in Tarquinian fashion, and with an energy that is quite uncalled for.

All of a sudden there is a tremendous huhhuh and clattering of wings as from the further side of a thorn hush a score of yards ahead a brave cock pheasant, accompanied by a hen bird which may, or may not, be one of his lawful wives of the past season, rises in the air. You pause a moment to let them get a little further away before you fire, and then, selecting the cock-hird for your first harrel, press the trigger and down he comes. It is a clean, though by no means a difficult, shot, and your heart beats a little faster with the excitement of satisfaction as you pull your other harrel on to the hen-hird. This time you are not quite so lucky for the shot passes behind her as she makes a quick turn over the hedge and gets away unscathed into the spinney on the other side of the next field, whither you may presently follow her. The cock-hird is gathered, and you make a move for a patch or gorse which Gipsy works capitolly, sending out a couple of rabbits, both of which, with a quick right and left, are added to the hag.

Now comes a little variety in the hag, for George has marked down a covey of partridges in a piece of short coppice at the top of the hill, and thither you go in search of them. They rise rather wild, and only one is gathered, but an old hare, which Gipsy has marked in a hed of rushes, provides an easy shot, and adds some seven pounds to the weight of George's growing hurden. And so you go on from hedge to hedge and thicket to thicket, until the sun is high in the heavens, and the time comes when a glass of beer with a hunk of bread and cheese at the invitation of Farmer Jones, who has come out to see how you are getting on, are not to be despised. A brace of birds for the farmer, and just a few words with his good lady about the ducks and geese and the old fox "what

took fourteen of my Christmas turkeys," and on again.

The afternoon is very much like the morning, except that birds are not quite so plentiful, because most of them are out on the wheat stubbles for their afternoon feed. Gipsy is not so keen as she was, and her broad, pink tongue lolls out at the side of her mouth, while she pants a good deal faster than she can wag her now less excited tail. George, whose stick is plied with decreasing vigor, mops the perspiration from his forehead with a large red handkerchief, and looks furtively at his watch, and you, observing that it is past four o'clock, suggest a move for home. Ten pheasants, a hare, four rabbits, and a partridge are not a bad early October hag to a single gun, and you turn your face homeward with a feeling of satisfaction with your day, which has provided you with a little good old-fashioned sport, and a pleasant stroll in the fresh sweetness of the autumn air.

ECHOES FROM THE NORTHWEST.

[By August Wolf.]

Charles H. Anderson, a mining man of Spokane, Wash., who has just returned from a trip of a hundred miles through the forest wilderness in Bonner county, Idaho, tells the following story of a lively fight with a big black bear, in which four men and two dogs participated:

"Bruin was waiting and watching in an open space. He was standing on all fours, expectantly, indifferently. He made no motion on sight of the dogs, but the moment he caught sight of the men he wheeled, as if on a pivot and halted. In the party were John and Jake Hensen, Fred Franklin and 'Slivers' Thompson.

"The race led straight for a granite pile 60 yards away—a wall of 40 feet high by 100 feet long, that appeared like a harrier to a novice, but that was recognized as an avenue of escape by bear, dogs and hunters.

"A jerk of the leash freed the dogs and a race began that was sharp and stirring, the bear galloping clumsily, but rapidly, the dogs advancing in one moving body, it seemed, as it shot from a gun—hears and dogs going straight for the wall as if they would penetrate it.

"Bruin's small lead was shortened to a length at the finish, but it was sufficient for him to hook into the crevices and draw himself out of reach from the dogs. He went to the wall like a monkey up a rope, a monster caterpillar in clumsiness, an athlete in achievement. Where friendly crevices failed vegetation gave him a hold.

"Once he clung by his teeth solely to a clump of mountain mahogany, rooted deep in a fissure, while he clawed wildly with all fours for an irregularity on which his claws might fasten, the dogs meanwhile harking in fierce rage, sliding hack abruptly from the little height they had gained on the wall. Only a sidelong glance was given his pursuers by bruin as he drew himself over the top and out of reach.

"The rock that appeared to be a hundred feet wide proved to be a granite plateau, nearly two miles in length and higher toward its distant extremity. The dogs were hoisted up it with difficulty, but the hunters could scale but half the distance and spent an hour and ten minutes in going round to a place that was easier of ascent. When they reached the top the bear was not in sight. The little red terrier climbed another ledge and could not get down. 'Slivers' shinned the precipitous wall and lowered the animal with a rope.

"The next scent led to two tall pines, at the foot of which the dogs chorused fiercely. A bear was there, but so skillfully had she secreted herself in the foliage that no part of her was discernable. A detour brought the hunters face to face with a big black muzzle and a pair of monster shoulders protruding from the foliage of a lofty limb and two little black muzzles from limbs of a nearby tree.

"In that position bears and dogs were in no danger of each other, nor were hunters promised sport, or polished floors a furry covering.

"There was but one way to induce bruin's descent—to shoot off her toes so that she could retain no hold on the bark. It was a difficult feat as the bear was seventy feet above the ground and the hunters a hundred feet from the base of the tree.

"Jake Jensen's shot was responded to by a growl from the tree-top and the slapping of a paw. 'Slivers' shot elicited the same demonstration from another foot. Before Franklin or John Jensen raised a gun bruin began a gingerly descent of the trunk. She was coming down to fight.

"One of the cubs followed nimbly and a third, slipping, crashed through branches and thumped the earth. The dogs were pulled off the youngsters to await the greater battle, and two little black backs slipped away to a safe hut commanding distance.

"Bruin had no chance to strike an attitude. When an ear had descended to a reaching distance it was taken hungrily into the jaws of the nearest dog. A slap from bruin was ducked and the ear released—it showed the marks of chewing.

"Out in the open, into which she came, bruin was attacked fore and aft. While the Irish terrier nipped at the nose the 'shepherd' snapped at the hams. The bear wheeled hut to experience the same attack, at head and hams, hut by a different dog at each end. The terrier brought blood from the ham. Wheeling, the bear slapped at him to sustain another laceration from Buster, the 'shepherd'.

"Weary of this kind of fighting bruin sat down and refused to strike. Familiar with tactics of this kind, Buster began an attack to draw out a lead. He feinted to bring the bear to her feet. Repetition of these feints bred indifference to them, as Buster calculated, and when indifference was succeeded by carelessness the feint was followed by a rush in which the 'shepherd' got an ear hold.

"The bear raised a ponderous paw to strike but Buster, trained to the act, pushed hard against the side of his antagonist and was raised out of danger by the lifted shoulder and paw, the paw that was to have delivered the crushing blow.

"The dog appeared determined to worry the bear. Seeming to realize his purpose, bruin laid down and rolled over, hut the dog hounded out of danger. While the bear rolled the Irish terrier served some apprenticeship by sinking his fangs into her nose and shaking it.

"Fight was the only alternative for the forest ranger, and from that moment on the bear engaged in it desperately, blindly, furiously, hounding about as of rubber, slapping with the activity of a pugilist in the early rounds, roaring, snapping its jaws, glaring fiercely. Blood flowed freely from lacerations of the head and hams.

"Once the black form of Buster got under, hut it emerged unscathed, although covered with blood. The Irish terrier took his place while Buster dropped into a creek. He lay there, immersed and when cooled he rebounded to the battle. The terrier then took to the pool and heightened its crimson coloring, partly by the flow of his own blood, for he had failed to rise with the uplifted paw and had been torn in the side in the descent of a shot-sharpened nail.

"The battle lasted about an hour, until bruin, her black sides turned red, her paws cut and bleeding, and crazed by pain and exhausted, turned a weak eye on her tormenters and laid down vanquished.

"Buster snapped the hamstrings and a rifle humanely ended the battle. A rustle in the brush told where two orphaned spectators were slipping from the scene."

Tom Hopper, who has killed more than 2000 bears in California, Washington, Oregon, Idaho, Montana and the province of British Columbia in the last 35 years, has returned to his home in Spokane from Kingston, Idaho, with the pelts of four bears, including the largest cinnamon bear ever killed in Idaho, and two cougars, the result of three days' work with a pack of hounds. The big bear was killed on Pine creek, south of Kingston, after a lively battle, in which several of the dogs were severely pawed. Hounds were game, however, and stood their ground till Hopper reached the scene and dispatched the big fellow with a head shot. The other three bears and the cougars were bagged without much difficulty, though Hopper admits that one of the black bears showed a lot of fight. The veteran has killed several thousand cougars in the Pacific Northwestern States since 1890, his largest hag in one year being 739, killed in eastern Washington and Oregon and northern Idaho and southeastern British Columbia. Hopper confines his work to predatory animals, upon which the various States have placed a head bounty.

A meeting of the Board of Governors of the United Association of Field Trial Clubs was held in New York City, July 15th, pursuant to the call of the President, R. J. Davant. The Governors present were Mr. Udo M. Fleischmann, (chairman), Hon. John H. Wallace Jr., Mr. Ansell H. Ball and Prof. Edw. H. Osthaus. Mr. W. C. Root, secretary of the Pointer Club of America, was present. Mr. B. Waters was elected Secretary of the Board.

It was carried "that owing to a misunderstanding of the place of organization meeting, that the Virginia-Carolina Field Trial Club and the Connecticut Field Trial Club failed to be represented, therefore that they be admitted to charter membership as originally contemplated, and that the Secretary of the Board notify the Secretaries of the Virginia-Carolina and Connecticut Club of this action by the Board of Governors of this Association."

After a full consideration of the matter of conflicting dates, it was carried "that the secretary be requested to communicate with the secretaries of the different clubs, members and non-members, to adjust the dates in a way suggested by the following schedule:

Independent, Nov. 7; Kentucky, Nov. 14; Continental, Nov. 22; Pointer, Nov. 28, Georgia, Dec. 5; Southern, Dec. 12; to make it possible for all clubs to run their trials before Christmas.

In respect to an incident of the organization meeting it was carried that "the Board of Governors of the United Association of Field Trial Clubs deplore the fact that the temporary Secretary of the organization meeting, held in January last, at Rogers Springs, Tenn., saw proper to publish the minutes of the meeting exclusively in the sportsman's journal he represented, which act was a grave injustice to the other sportsman's journals of America; and the Board of Governors hereby register their disapproval of the reprehensible conduct of said temporary secretary."

NATIONAL SHOOT AT CAMP PERRY.

Beginning August 8, Camp Perry, Ohio, will be the center of interest for all American riflemen. Commencing that day and for eighteen days thereafter there will be shot the greatest series of rifle and revolver matches ever held in this country. Three organizations combine their matches to make the meeting of Rifle Practice, the National Rifle Association of America and the Ohio State Rifle Association. The State of Ohio supplies the range and the government gives a large sum of money for prizes in the national match, and a large number of gold, silver and bronze medals and also furnishes the officers and men to run off the National Board and National Rifle Association matches. The National Guard of each State and Territory is entitled to send a team whose expenses are charged up to the money appropriated by Congress for rifle practice in that State or Territory and almost every State and Territory which has a National Guard is represented at the matches. In addition there are a large number of individual shots who attend at their own expense and compete for the rich prizes in the individual matches. Among the leading events of the tournament are the National Team, the National Individual and the National Pistol Matches, which are the distinctly governmental matches, the first being confined to teams of twelve men and the second and third being open to any rifle or revolver shot who wishes to compete. Other great matches are the Herrick Cup, Catrow Cup, Adjutants General Cup, Governor's Wimbeldon and Leach Cups, Marine Corps, Presidents, Evans Skirmish, Hall, Peters Individual Skirmish, Du Pont Individual Tyro and the Team and Individual Matches for the police forces of the various cities.

Competitors are supplied with their tents and cots and mattresses free of charge but are expected to furnish their own blankets. Meals are supplied to the members of the State teams without cost and to other individuals at fifty cents each.

Camp Perry is located on the south shore of Lake Erie 25 miles east of Toledo and 18 miles west of Sandusky, being thus within reach of such popular resorts as Cedar Point and Put-in-Bay. It is an ideal camp ground thoroughly drained and supplied with filtered water. The shooting being toward the north the light could not be better and the 236 rifle and revolver targets all arranged so that a common firing point can be used gives it an equipment unequalled and scarcely approached by any other range in the United States.

BIRDS OF CALIFORNIA IN RELATION TO THE FRUIT INDUSTRY.

The Department, having concluded its investigations as to the harmful or beneficial effect of California birds upon the fruit industry of that State, has issued the second and final part of its report in Bulletin No. 34 of the Biological Survey. Seventy species of the feathered denizens, among them some of the most important birds of the State from the farmers' and fruit growers' standpoint, were systematically investigated. It is true that many of them have not been charged with the destruction or injury of fruit or any other farm product, but as almost all destroy great numbers of harmful insects, or devour seeds of noxious weeds, they are important as a factor in farm economics, and the aim has been to collect all data possible on the food of the several species, so that a just verdict might be rendered as to the birds' economic relations.

Few birds are always and everywhere so destructive that their extermination can be urged on sound economic principles; some, like the swallows, swifts, wrens, and chickadees are so strictly insectivorous that they are exceedingly beneficial, while others may injure crops at certain times of the year, but the loss is exceedingly small, and if by its insectivorous habits the bird prevents much greater destruction than it inflicts, the farmer should be willing to bear the lesser loss.

A reasonable way of viewing the relation of birds to the farmer is to consider them as servants, employed to destroy weeds and insects, for whom sufficient food and needed protection is generously provided. In the long run, no part of the capital invested in the farm or orchard is more certain to pay big interest than the small sum collected as toll by the birds that harbor near the premises. Deductions from the extensive investigations undertaken in response to numerous complaints concerning depredations by birds in orchards and vineyards on the Pacific Coast, show that the food habits of the seventy species, whose stomach contents were under examination, indicate that but four species common in California can be regarded as of doubtful utility. These are the linnet, California jay, stellar jay, and red-breasted sapsucker. Therefore, when all the known methods of protecting fruit have been exhausted, or can not be profitably employed, a reasonable reduction of the numbers of these offending birds is permissible; but the more the food habits of birds are studied, the more evident is the fact with a normal distribution of species and a fair supply of natural food, the damage to agricultural products by birds is small as compared with the benefit.

San Gregorio and Purissima creeks yield plenty of sport to many anglers. These creeks are full of small fish, a satisfactory evidence of the foresighted policy of the California Anglers' Association in supervising the liberation of several hundred thousand trout fry in those creeks last year.

AT THE TRAPS.

The Pacific Indians' annual tournament at Nelson, B. C., was one great time looked at from every angle. The shoot took place on the new grounds of the Nelson Gun Club, the members of which organization proved to be genial hosts.

The grounds are excellent for both shooters and spectators and pleasantly located, shade trees being comfortably numerous. The light was a bit puzzling until the visiting shooters became accustomed to this condition.

Luncheon and refreshments were served daily by the ladies of St. Saviour's Church during the three days' shooting.

Practice day, July 25th, had twenty-eight shooters in line. Four events were on the card—15, 20, 15 and 100 targets each. Chingren was high amateur with 141 out of 150 targets. J. A. Forbes of Seattle with 145 and Frank C. Riehl with 143 were high "pros." The scores follow:

Targets.	15	20	15	100	150
T. D. Barclay	14	18	15	92	139
A. Bishop	14	20	14	92	140
G. P. Wells	13	18	14	87	132
C. H. Ink	15	18	13	88	134
H. Cramer	13	17	14	90	134
J. A. Forbes	14	20	14	97	145
F. C. Riehl	14	19	15	96	143
D. W. King	14	20	13	88	135
C. A. Haight	13	17	14	87	131
R. Miller	11	20	11	90	132
H. E. Posten	15	20	13	88	136
F. Woodey	13	17	13	90	133
L. R. Barclay	14	15	11	95	135
R. W. Clancy	15	16	15	91	137
L. H. Reid	15	19	15	95	144
R. G. Robinson	12	17	13	91	133
G. W. Beck	14	16	13	89	132
A. Blair	11	16	14	85	126
C. B. Green	14	20	12	90	136
E. J. Chingren	15	17	13	96	141
D. McDougal	7	12	9	55	83
W. A. Ward	10	15	11	68	104
H. W. Maynard	11	13	10	86	120
R. Grubb	10	15	12	59	96
C. Larson	13	16	12	75	116
George Tierney				68	68
C. D. Blackwood				82	82
G. W. Steele	15	18	13		46

For the first day of the shoot, Tuesday, July 26th, weather conditions were not favorable for high scores. A strong wind was blowing which made the good averages of the previous practice day impossible, but some remarkably good shooting came off nevertheless.

In the special fifty bird event for the cup given by a Portland Indian, E. J. Chingren, of Spokane, broke fifty birds straight, winning the event. Cramer of Nelson and McDonnell of Revelstoke were tied for second place with 47 birds each. Archie Bishop broke 46.

For the first day of the regular shoot the program included: Eight events, 15, 20, 20, 20, 20, 20, 15; total 150 targets, \$25 added to each event.

In the regular events good scores were also made considering the weather conditions. Ben McLaren of Calgary was high amateur with 141 out of 150 to his credit. Cooper of Tacoma and Miller of Seattle tied for second place, with 136 each. H. Reid of Seattle was high professional with 141. The scores were:

Targets	15	20	20	20	20	15	150
Beck	12	18	17	16	14	16	124
Woody	13	15	16	18	16	18	123
Green	13	19	17	16	19	17	131
Chingren	14	18	18	18	17	19	134
Cooper	13	18	18	18	18	19	136
Bishop	13	16	17	17	14	18	125
Barclay	14	17	19	18	18	20	140
Wells	10	17	16	15	17	17	123
Ink	13	17	16	17	16	18	121
Cramer	12	19	19	15	17	16	125
Forbes	14	18	15	20	18	19	135
Riehl	14	19	16	16	20	20	140
King	12	17	19	17	17	18	132
Haight	14	17	19	18	11	18	128
Miller	14	16	18	19	20	18	136
Posten	15	19	18	19	19	15	137
Maynard	13	20	16	14	14	18	122
Barkley	12	20	18	20	18	19	138
Clancy	12	17	20	18	19	17	132
Reid	15	20	20	19	18	19	144
Blackwood	9	17	16	15	16	13	106
Tierney	12	14	16	13	14	12	107
Larsen	10	16	15	19	17	15	118
Johnson	8	18	16	10	12	10	105
Steel	12	16	14	16	17	17	117
Robinson	13	18	19	19	14	18	131
McLaren	15	20	20	19	17	18	141
McDonnell	11	17	13	16	19	16	119
Blair	13	20	20	16	18	18	134
Saunders	11	13	17	12	16	14	112
Ford	15	19	17	16	18	17	134
Ward	11	13	15	15	16	16	116
Grubb	12	14	15	18	14	18	110
McDougall	7	12	14	19	10	13	87
Patrick	9	18	16	16	10	12	91

Special event of 50 targets the following scores were made: Ink, 37; Bishop, 46; Cramer, 47; Wells, 41; McDougall, 38; Beck, 34; Woody, 45; Green, 44; Chingren, 50; Ford, 46; Robinson, 43; McDonnell, 47; Ward, 35; Forbes, 46; King, 44; Maynard, 34; Clancy, 44; Haight, 42; Barclay, 43; Riehl, 42; Miller, 36; Reid, 45; Barclay, 39; Posten, 44.

Weather conditions for the second day, Wednesday, July 26th, were almost perfect. The high wind of the previous day had dropped and the light was good. In consequence some fine scores were shot and the numerous spectators, who again included many of the gentler sex, were treated to a splendid exhibition of skill with the shotgun.

The program started with a 15 target event, followed with six 20's and a 15 target race, 150 targets in all.

On the regular program high average honors fell to a local gun, George Wells, with 141 breaks. Blair of Vancouver and N. Ford tied for second place, with 138 birds each. In third position came Archie Bishop of Nelson and E. J. Chingren of Spokane, with 137 each. McLaren of Calgary broke 136 birds and Cramer of Nelson 135.

The high professional was Lee Barkley of Seattle with the splendid score of 147, Reid being second with one bird less. Barkley made a ground and probably a provincial record with an unfinished straight run of 115 birds at the close of the day's shooting.

A special 50 bird match was shot for a sweepstake and gold medal valued at \$100 presented by E. J. Chingren of Spokane. A most interesting match was witnessed, C. H. Ink, the Nelson amateur, and four professionals, White, Riehl, Barkley and Forbes tying for first place with 47 birds each. The tie was shot off at 25 birds, Ink and White shooting at 16 yards, the others at 19 yards. Victory fell to Riehl, who broke the 25 birds straight in well centered style. Barkley and Forbes tied for second place with 24, Ink breaking 23 and White 22. The scores for the day follow:

Targets—	15	20	20	20	20	20	15	150
Beck	11	18	14	14	19	14	15	127
Woody	12	12	12	16	14	15	14	120
Green	14	18	17	18	16	19	17	143
Chingren	13	19	19	19	19	19	19	147
Cooper	13	18	20	18	16	17	16	133
Barclay	13	16	17	19	18	20	18	136
Bishop	13	20	15	17	18	19	20	137
Wells	15	20	17	19	19	19	18	141
Ink	14	15	17	18	19	17	20	133
Cramer	13	16	19	17	18	17	20	135
Forbes	14	20	19	18	17	20	19	141
Riehl	15	19	19	18	20	19	14	143
King	14	19	17	20	17	18	19	135
Height	15	17	17	18	17	19	13	134
Miller	13	19	18	17	15	18	15	133
Posten	14	19	20	19	16	20	14	141
Maynard	12	15	17	16	16	17	18	124
Barkley	14	18	20	20	20	20	15	147
Clancy	13	18	19	19	20	19	18	129
Reid	15	18	20	20	20	20	13	146
Robinson	14	18	19	16	19	19	19	137
McLaren	14	17	18	19	18	18	19	136
McDonnell	15	17	14	16	17	17	15	126
Blair	13	17	18	19	18	20	13	138
Saunders	13	17	17	19	15	19	19	132
Ford	14	19	18	17	19	19	14	138
Larsen	14	17	14	16	16	16	12	124
Johnson	10	14	13	13	14	13	14	104
Steel	12	17	19	14	16			78
White	15	20	16	17	17	20	15	133
Ward	9	16	16	17	18	15	14	123
Grubb	10	15	16	15	13	11	12	120
Patrick	10	14	17	13	12	15	14	105
Choate	10	14	13	19	14	13	11	120

Special event of 50 birds the scores were: Woody, 41; Green, 40; Chingren, 45; Barclay, 43; Bishop, 46; Wells, 38; Ink, 47; Cramer, 46; Forbes, 47; Riehl, 47; King, 42; Haight, 42; Miller, 44; Posten, 43; Maynard, 42; L. Barclay, 47; Clancy, 43; Reid, 46; Robinson, 41; McDonnell, 41; Blair, 44; Saunders, 43; Larson, 42; White, 47; Ward, 36.

Ties, 25 birds, the scores were: Ink, 16 yards, 23; White, 16 yards, 22; Riehl, 19 yards, 25; L. Barclay, 19 yards, 24; Forbes, 19 yards, 24.

The final day of the Pacific Indians' shoot Thursday, July 28, was held under ideal weather conditions and good scores were made. Reid, of Seattle, was high professional with 146 birds out of 150. Green of Boise, Idaho, led the amateurs with 143.

Lee Barkley of Seattle, completed his unfinished run of 115 birds by breaking 33 birds, which makes his total 148. This is the highest run ever made in British Columbia.

The medal shoots were divided into three classes. Barkley won in the first class, breaking 49 birds out of 50. In the second class Bishop tied with Cooper of Tacoma, each with 50 straight. In the shoot off Bishop got 25 straight and Cooper 24, missing his last bird. In the third class, Cramer of Nelson was high with 47 birds.

The Ink and Ward cup which represents the championship of British Columbia was won by A. Bishop of Nelson. Bishop has now won the championship of Alberta and British Columbia.

A. M. Johnson, of Nelson, won the gold trophy pigeon presented by E. E. Phair. The scores of this closing day were the following:

Targets	20	20	20	20	20	100
Beck						
Woody	15	16	18	16		83
Green	14	18	16	16		77
Chingren	19	19	20	20		98
Cooper	17	20	18	19		92
Barclay, T.	18	17	18	16		87
Bishop	19	18	19	19		93
Wells	14	15	17	16		82
Ink	17	20	17	20		93
Cramer	18	18	17	18		88
Forbes	19	20	20	18		95
Riehl						94

King	18	19	20	17	18	92
Haight	18	17	17	16	17	85
Miller	19	18	18	18	18	91
Poston	20	20	19	20	18	97
Maynard	14	17	16	20	16	83
Barkley, Lee	20	19	19	19	19	96
Clancy	16	19	20	18	19	92
Reid	20	20	19	20	19	98
Robinson	16	19	20	18	19	93
McLaren	18	19	19	18	20	94
McDonnell	20	15	17	19	18	89
Blair	18	16	17	11	18	80
Saunders	16	16	15	12	14	73
Ford	18	18	19	19	19	94
Grubb	19	11	14	16	14	74
White	19	20	19	19	18	95
Johnson	8	9	8	5	5	45
Steel	16	16	15	20	16	83
Ward	12	18	12	18	14	74
Larsen	18	15	17	15	14	79
McDougall	10	8	14	13	15	60
Tierney	16	14	17	17	14	78

In the medal events, at 50 birds, the following scores were made: Beck, 43; Woody, 39; Green, 47; hingen, 46; Cooper, 50; T. Barclay, 48; Bishop, 50; Wells, 44; Ink, 45; ramer, 47; Forbes, 47; Reihl, 46; King, 44; Haight, 41; Miller, 45; Poston, 47; Maynard, 37; Lee Barkley, 49; Clancy, 45; Reid, 48; Robinson, 44; McLaren, 47; McDonnell, 41; Blair, 40; Saunders, 43; Ford, 46; Grubb, 46; White, 44; Steel, 42; Ward, 42; Larsen, 37; McDougall, 32; Tierney, 36.

The fifth Eastern Handicap of the Interstate Association was held at Edge Hill, Philadelphia, under the auspices of the Highland Shooting Association, July 19, 20 and 21.

Fifty-two shooters took part in the practice day events, 100 targets in 20 target sections, including one at doubles. Walter Huff was high gun with 98.

Eighty-six contestants participated in the first day's regular program—200 targets, ten 20 target sections, including one at doubles, event 8. J. A. R. Elliott led the procession with 195 out of 200, beating out Chan Powers, the Illinois amateur and G. L. Lyon, the Durham, N. C., professional by one target each. On singles, Elliott lost but two out of 180. Three of his five misses were at double rises. Powers led the amateur contingent, breaking straight scores in the first four events, two of his six misses were at doubles. There was but little wind the first day, and with a skyline for a background conditions were favorable for good shooting. Elliott broke straight in seven events. No shooter scored straight on doubles. F. G. Bills and C. E. Mink broke 19 each, the best scores in the event. The entrance in each event was \$2.00, \$25 added money.

Geo. E. Dimock Jr., a Yale student and a member of the Yale Gun Club, won the Preliminary Handicap, on the second day, shooting against one of the strongest gatherings of shooters ever lined up in an Eastern Handicap tournament. Standing at 16 yards he broke 97 out of 100 shot at. Dimock was not considered as a strong contender until his last section of 20. He shot consistently throughout the tournament and won the amateur high average trophy. Young, Huff and Sihley, professionals, also scored 97. Skelly, Vanderveer and Graham were close up with 96. The 90 per cent men were fairly numerous.

The conditions were 100 single targets, \$7 entrance, handicaps 16 to 22 yards, high guns, \$100 added.

There were 40 entries at \$5, 8 penalty entries at \$8, 8 penalty entries, targets only \$2, 42 entries for targets only. Ninety-eight entries. Total purse \$380. Fifty men shot for targets only.

The winners' scores and purses were:

G. E. Dimock	.97	\$83.60	H. P. Herman	.94	\$19.00
J. H. Vanderveer	.96	60.80	F. D. Kelsey	.94	19.00
J. R. Graham	.96	60.80	Harry Kahler	.93	6.65
A. E. Conley	.95	36.70	L. F. Townner	.93	6.65
F. S. Bender	.95	36.70	Thos. Tansey	.93	6.65
W. F. Clarke	.95	36.70	W. Welnski	.93	6.65

The forenoon program called for five 20 target events (the third race was at doubles). Entrance was \$2.00 in each event \$30 added, Rose system 8, 5, 3, 2. In pairs, 19 breaks was the best score. Huff, Elliott and G. S. McCarty, amateur, each broke 19. Huff broke 99 out of his 100. H. P. Herman and Chan Powers connected with 98 each.

The feature event of the third day was the Eastern Handicap, 100 targets, \$10 entrance, handicaps 16 to 23 yards (22 yards was the heaviest impost, however), \$200 added.

The contest was close throughout. A Philadelphia shooter, C. N. Newcomb, and D. D. Engle of New York emerged from the race with a score of 97 each. On the shoot-off at 25 targets the score stood Newcomb 19 to Engles 15. J. M. Hawkins, professional, broke 98, the high score for the event, but he was ineligible for the purse or trophy. There were 108 entries, 55 shooting for targets only, this left 53 men in the lists for trophy and money, a rather small competition for this feature event.

There were 53 entries at \$8, 5 penalty entries for targets only at \$2, 50 entries for targets only, added money \$200. Total purse \$634.

The winners' scores and purses were:

C. H. Newcomb	.97	\$126.80	G. S. McCarthy	.93	\$7.15
C. J. Biddle	.96	91.90	J. R. Graham	.93	7.15
C. G. Westcott	.96	91.90	C. E. Mink	.93	7.15
H. H. Sloan	.95	60.20	F. D. Kelsey	.93	7.15
J. Williams	.95	60.20	F. S. Tomlin	.93	7.15
J. D. McKean	.94	36.45	A. E. Conley	.93	7.15
D. T. Leahy	.94	36.45	W. E. Lockwood Jr.	.93	7.15
F. W. Matthews	.94	36.45	H. S. Appleton	.93	7.15
Harry Kahler	.94	36.45			

The forenoon shooting comprised five 20 target events, \$2 entrance, \$30 added, Rose system, 8, 5, 3, 2. Bills, Spencer, Squire, Stevens and Kelsey, an ama-

teur, each broke 99 out of the 100. There were 101 contestants, 66 of which shot a 90 per cent or better clip.

Preliminary Handicap, Fifth Eastern Handicap of the Interstate Association, Philadelphia, July 20, 1910, 100 singles—

FOUNDERS OF TROTTING FAMILIES.

[American Horse Breeder.]

A majority of the great brood mares that have founded noted trotting families have inherited considerable of the thoroughbred element either through their sire or dam or both. This to some, may be an unwelcome fact, but it is a significant one and one that careful unprejudiced students of the breeding problem will not ignore or overlook, for the fastest trotters of the future will very probably be produced by uniting blood elements that are similar in character to those that have produced the highest rate of light harness speed with the greatest uniformity in the past.

The brood mare that stands at the head of the list judged by the number of descendants in the first and second generations that have made records in standard time, is Beautiful Bells 2:29½. She was a black mare 15-2 hands high, foaled in 1872, got by The Moor 870, a son of Clay Pilot 93. The latter was by Neave's Cassius M. Clay Jr. 20. His dam was Lady Pilot who old pacing Pilot; second dam by the thoroughbred Grey Eagle, a son of Woodpecker, and third dam by Bertrand, a thoroughbred son of Sir Archy.

This is the breeding that was given by Col. James Morgan, the man who owned the dam of Clay Pilot 93 and who bred the latter. The dam of The Moor 870 was Belle of Kahash, a registered thoroughbred got by Young Bassinger, a son of Lieutenant Bassinger, hy imported Fyde. The dam of Lieut. Bassinger was by Randolph's Roanoke, a son of Sir Archy. The dam of Young Bassinger was by American Eclipse, a noted four mile race winner; second dam by Sir Harry Hotspur, a son of Sir Archy, and third dam by Davis Hamiltonian, a son of Taylor's Hamiltonian hy imported Diomed. The dam of Belle of Wahash was William the IV mare hy imported William IV.

The dam of Beautiful Bells was Minnehaha (dam of eight trotters with standard records), hy Steven's Bald Chief, a son of Bay Chief, hy Mambrino Chief II; second dam, Nettie Clay, hy Strader's Cassius M. Clay Jr. 22, a son of Cassius M. Clay 18, hy Henry Clay 8, founder of the Clay trotting family. The dam of Strader's Cassius M. Clay Jr. was hy Abdallah 1, second dam hy Lawrence's Eclipse, a son of the famous four-mile race winner American Eclipse, and third dam hy imported Messenger. The third dam of Beautiful Bells was hy Abdallah 1, and fourth dam by Engineer 2d.

Steven's Bald Chief, that got the great brood mare Minnehaha, the dam of Beautiful Bells 2:29½ was hy Bay Chief. The dam of Steven's Bald Chief was hy Hunt's Commodore, whose sire was Mambrino, the thoroughbred son of imported Messenger that got Abdallah 1, the second dam of Steven's Bald Chief was hy Potomac, a running bred son of imported Diomed. Bay Chief the sire of Steven's Bald Chief was hy Mambrino Chief 11. His dam is given in Wallace's Register, Vol. 1, as hy Keokuk, a son of imported Truffle; second dam claimed to be a thoroughbred by the Arabian horse Stamhoul. Bay Chief was a fast natural trotter. He was stolen hy guerillas with Alexander's Abdallah 15, and died from gunshot wounds. It is claimed that he trotted a half in 1:08 which was very fast for that time.

Beautiful Bells 2:29½ produced 18 foals in all and 11 of them made trotting records of 2:30 or better. Nine of her foals were colts, and every one of the nine has sired standard record speed. The whole number of standard record performers sired hy these 9 sons is 259 trotters and 90 pacers, making the total sires hy sons 349 standard performers. Beautiful Bells 2:29½ is credited with six daughters that have produced 10 trotters and one pacer that have made records in standard time. This number 11, added to the 349 standard performers sired hy sons and the 11 trotters produced by herself makes the whole number of standard performers produced by Beautiful Bells 2:29½ together with the number of her sons and daughters 351.

Alma Mater.

The mare that ranks second in the class of greatest of great brood mares is Alma Mater, a chestnut in color of compact conformation 15¼ hands high, foaled in 1872 and got by the noted brood mare sire Mambrino Patchen 58, whose sire was Mambrino Chief 11. The dam of Mambrino Patchen 58, as most of our readers will remember, was the Rodes mare (dam of Lady Thorn 2:18¼, and also dam of Kentucky Clay 194), hy the thoroughbred Gano, whose sire was American Eclipse, and whose dam was Betsy Richards, hy Sir Archy.

The second dam of Mambrino Patchen 58 was hy a son of Sir William of Transport. The latter was hy Sir Archy and his dam was by Transport, a son of Virginus, hy imported Diomed. As Mambrino Chief 11 was hy Mambrino Paymaster whose sire was Mambrino a thoroughbred son of imported Messenger and whose dam was hy imported Paymaster, it will be seen that Mambrino Patchen derived pretty nearly all his inheritance from thoroughbred sources.

The dam of Alma Mater was Estella, a thoroughbred daughter of imported Australian hy West Australian. Australian was imported when a suckling along with his dam and proved to be a fine race horse. His sire, West Australian won the three great events—the 2000 guineas, Derby and St. Leger in 1853. Emilius his grandsire through his dam, won the Derby in 1823 and Whisker his great-grand-sire, the Derby in 1815 and his sire Waxy won it in 1793.

The second dam of Alma Mater was Fanny G. by imported Margrave, winner of the St. Leger in 1832. Fanny G. was the third dam of the noted stallion

Palo Alto 2:08¼. The third dam of Alma Mater was Miss Lancress, hy Lance, a thoroughbred son of American Eclipse. Alma Mater's fourth dam was Aurora hy Aratus, a thoroughbred son of Director, hy Sir Archy, and so on through animals that are strictly thoroughbred to the famous old Slammerkin that was her ninth dam.

Alma Mater is the dam of eight trotters that have made records in standard time. Seven of her sons have sired 221 trotters and 71 pacers with standard records, and her daughters have produced one trotter and two pacers with standard records making a total of her descendants in the first and second generations that have made records in standard time 303.

Dolly.

Third in rank among the great brood mares judged by the number of their descendants in the first and second generations that have made records in standard time is Dolly, foaled in 1861 and got by Mambrino Chief 11. The dam of Dolly was Fanny. Her sire was Ben Franklin, a horse that racked (not paced) and trotted. Ben Franklin was hy Hazrack, a famous saddle horse, a son of Golden Farmer (also called Fearnought), a horse that originated in Virginia and was believed to be thoroughbred or nearly so. The second dam of Dolly was Nance, hy Saxe Weimer, a thoroughbred son of Sir Archy; third dam Kate, a good-looking saddle mare that both paced and trotted, breeding unknown.

The dam of Ben Franklin, sire of the second dam of Dolly, was hy Johnson's Copperbottom, and his second dam was hy Saxe Weimer, sire of the second dam of Dolly. The dam of Hazrack, sire of Ben Franklin, was hy Johnson's Copperbottom, that got the dam of Ben Franklin. It will be seen from the above that Dolly was inbred both to Johnson's Copperbottom and the thoroughbred Saxe Weimer, hy Sir Archy. The second dam of Hamlin's Almont Jr. 2:26 was hy Bonner's Saxe Weimer, a thoroughbred son of the above mentioned Saxe Weimer. Hamlin's Almont Jr. 2:26 was the most successful son of Almont 33 as a sire of standard speed.

Johnson's Copperbottom, whose name appears twice in the pedigree of Dolly, was hy Brutus, a son of the original Copperbottom. The dam of Johnson's Copperbottom was hy Pitt's Ball, a son of the thoroughbred imported Royalist, and his second dam was by the thoroughbred Celer. The dam of Brutus, sire of Johnson's Copperbottom, was hy the thoroughbred Robin Grey, a son of imported Royalist. This gave Dolly a very strong inheritance of the thoroughbred element through her dam.

Dolly is the dam of four trotters that made records in standard time. She is credited with three sons that have sired 213 trotters and 70 pacers with standard records, and her daughters have produced two standard record trotters. This makes the total number of standard performers produced by herself, and her daughters and sired by her sons 289.

Miss Russell.

Another great brood mare whose name has appeared more frequently than any of the others during the past few seasons in the new additions to the 2:10 trotting list, is Miss Russell, a 16-hand well proportioned gray mare bred hy R. A. Alexander, proprietor of Woodburn Farm, Spring Station, Ky., and foaled in 1865. Her sire was Pilot Jr. 12, a son of the pacer Pilot that originated in Canada. The dam of Pilot Jr. 12 was Nancy Pope, hy Funk's Havoc, a son of the thoroughbred Sir Charles, hy Sir Archy; second dam Nancy Taylor hy Craig's Alfred, a son of imported Medley. The dam of Funk's Havoc was by Chanticleer; second dam Camilla, hy Symmes' Wildair, etc.

The dam of Miss Russell was Sally Russell, a thoroughbred daughter of the famous long distance race horse Boston, the most successful race winner at three and four mile heats that lived in his day. Boston was hy Timoleon, himself, a successful race horse, and a son of Sir Archy, the best son of imported Diomed.

The dam of Boston was hy Ball's Florizel, a horse that was raced but never lost a heat and was never touched with whip or spur. His sire was imported Diomed. His dam was hy imported Shark, a son of Marske, the sire of English Eclipse. Boston also traced to English Eclipse through his third dam, whose sire was imported Alderman, a son of Pot-8os, one of the very best sons of English Eclipse.

The second dam of Miss Russell was Maria Russell, hy Thornton's Rattler, a son of Sir Archy; third dam, Miss Shepherd, hy Stockholder, a son of Sir Archy; fourth dam, Miranda, hy Topgallant, a son of imported Diomed; fifth dam of imported Diomed; sixth dam by imported Medley; and seventh dam hy imported Juniper. It is doubtful if another animal can be found in the Stud Book that is more intensely inbred to imported Diomed than was Miss Russell, and she was also quite closely inbred to Sir Archy, the best son of imported Diomed. It is generally acknowledged hy all unprejudiced horsemen who are familiar with the equine history of this country, that no other horse of his day had so great an influence in improving the most valuable qualities of the horse stock of America as did Sir Archy.

Betty Brown.

Betty Brown is another of the great brood mares that has established a family whose worth and popularity will increase as time passes, and the merits of her descendants become better recognized as they surely will be. She does not rank nearly as high as many others based upon the number of descendants in the first and second generations, as she had only one producing son, but there are others of her descendants just outside that group whose descendants will keep her memory green, and one of those is Con-

stantine 2:12½ that is inbred to Betty Brown. He was hy Wilkes Boy 2:24½ whose sire was George Wilkes 2:22 and whose dam was Betty Brown. The third dam of Constantine was also the dam of Wilkes Boy.

Betty Brown was a brown mare bred hy R. D. Mahone, Lexington, Ky., and foaled in 1866. Her sire was Mambrino Patchen 58, whose breeding was given in connection with Alma Mater described above. The dam of Betty Brown was Pickles hy Mambrino Chief 11; second dam hy Brown's Bell-founder, whose sire was the Norfolk trotter, imported Bellfounder, and whose dam was Lady Allport. The sire of Lady Allport was Mambrino, the thoroughbred son of Messenger that got Abdallah 1. The dam of Lady Allport was hy Tippe Sahi, a thoroughbred son of imported Messenger, second dam hy imported Messenger.

The third dam of Betty Brown was hy the thoroughbred Grey Eagle whose sire was Woodpecker, a son of Bertrand, hy Sir Archy. The dam of Grey Eagle was Ophelia, hy Wild Medley; second dam hy Sir Archy and third dam, Lady Chesterfield hy imported Diomed. Betty Brown was quite strongly fortified with race winning thoroughbred blood. Her grandsons Constantine 2:12½ and Grattan 2:13 are proving quite successful as sires of race winning light-harness speed and both of them are from highly bred dams.

Mamie.

Another mare that has gained high rank as the founder of a family, noted for uniform and extreme speed, is Mamie. Mr. W. H. Gocher, secretary The National Trotting Association, who compiled the catalogue of Light Harness Horses of Hamburg Place, the property of Edward and Joseph Madden, Lexington, Ky., pays Mamie the following compliment:

"Mamie stands at the head of a female family of light harness horses in which the percentage of performers and speed producers is higher than can be found in any other in the American Trotting Register, and it would no doubt have been even higher than it is if a number of her descendants had not been sold and exported to Europe where her grandson Wilburn M. reduced his record to 2:13½ and is now one of the leading sires of trotters on the Austrian and Russian tracks.

"Mamie had but six foals, all fillies. All of them made records of 2:30 or better. Four of them are speed producers and of this number Catherine Leyburn had but one foal, while a fifth had a daughter that is a speed producer, and the sixth, Helen Leyburn, was sold for export and had no foals in America. Eight of Rose Leyburn's foals have records and a ninth a trial of 2:12 to his credit, and ten of Criterion's foals have records while her son, Alto Leyburn, and her granddaughter, Elsie Leyburn, are respectively the sire and dam of the celebrated trotter Jack Leyburn 2:04¼."

Mamie, like the other great brood mares named above, inherited a good share of race winning running blood from several of her ancestors. Her sire was Star Almont 6673, hy Almont 33. The dam of Star Almont 6673 was Maggie Gaines hy Blood's Black Hawk, a son of Vermont Black Hawk 5. Star Almont's second dam was hy Bonner's Saxe Weimer, a son of the thoroughbred Saxe Weimer hy Sir Archy.

The dam of Mamie was hy Long's American Boy, a son of the thoroughbred American Boy, whose sire was Sea Gull, hy imported Expedition, and whose dam was Expedition Mare, a thoroughbred daughter of Expedition. American Boy that got Long's American Boy sire of the dam of Mamie got the noted thoroughbred Williamson's Belmont whose name is found in the dams of many fast trotters raised in California, including the champion four-year-old Directum 2:05¼ and the world's champion trotter of any age, Lou Dillon 1:58¾.

The trotter Willy that was foaled on foreign soil hut has recently been winning in Grand Circuit company, taking a record of 2:08¼ and second money at Grand Rapids, Mich., July 22d, and won in straight heats at Kalamazoo, Mich., on the 25th inst., time 2:09½, 2:09¼, 2:11¼, is a member of the Mamie family. His sire is Wilburn M. that took a three-year-old trotting record of 2:27 under the name of Wilburn in 1895. His sire was Wilton 2:19¼ and his dam was Rose Leyburn (p) 2:15¼, hy Onward 2:25¼.

JACKS AND DRAFTERS POPULAR.

Grand Island, Aug. 1, 1910.

Breeder and Sportsman—Please send my paper to Woodland instead of Grand Island, as the stud season is over and I am going home and out to the races. This was a very good year in this county. I had a fine jack, a draft colt and a full brother to Diablo Jr. 2:21¼ called El Paso. Diablo Jr. did not make a season this year hut was at Woodland in charge of C. B. Bigelow. He went a little wrong and will not be raced this year but will be heard from next season. The jack I had charge of served 128 mares this year, the draft colt, a three-year-old, served 18, and El Paso was bred to two mares. El Paso is not gaited like his brother hut is a trotter, and as Hi Hogboom says, "You bet, he is a dandy."

This is a jack country; Mr. Logan Cecil imported five nice ones from the "show me" State and they are as fine a lot as a man ever saw. He paid \$2000 for one five-year-old. Mr. Cecil's jacks have served over 100 mares. He will take these jacks to the California State Fair and should bring home some prizes.

Hoping you all enjoy the races this year as much as I enjoy the B. and S. on Saturday evening, I remain,

WM. J. FITZGERALD.

THE FARM

HERD MANAGEMENT.

By F. L. Kent, O. A. C.

(Notes from the address of Professor Boeggild at Caldwell, Idaho).

"Twenty-five years ago the dual-purpose type of cow was most common in Denmark, but at the present time she is rarely found. Our cows are mostly black and white, similar to the Holstein-Friesian, but rather smaller, the average weight being about 1000 pounds. On the islands of our country there is a red cow that is very common, but on the mainland there is little else besides the black and whites.

"The cow-testing associations have been of great benefit to the small farmer. Before the days of the test associations the big farmers were able to buy the best cows from the small farmers at a price of not more than one or two dollars more than would be paid for the inferior ones. Now the small farmer knows when he has a good cow and she is not for sale, the practice being to keep the best cows as long as practicable, which is frequently to the age of 15 to 17 years. On account of the overproduction of young stock one can buy most excellent young heifers, and that is what the large farmer has to do. In many of the large barns where there were formerly one hundred cows there are now not more than sixty, the remainder of the barn being filled with promising young heifers. Practically all of our farmers are applying the fat test and disposing of their least profitable cows. The wisdom of this policy is shown by the fact that our present average production per cow is 6200 pounds of milk and 250 pounds of butter annually, where twenty-five years ago we had an annual production per cow of 3000 pounds of milk and 90 pounds of butter.

"The male calves are vealed for the most part, some as early as four weeks, but mostly at two to three months, although some are not marketed until the age of four or five months. The heifers are raised mostly on skim-milk, and are found to be better than those formerly raised on whole milk. Whole milk is fed the heifer calves for one to three weeks from birth, usually about two weeks. They are then gradually brought onto a skim-milk diet, which is continued until they are five or six months old, feeding them at that age as much as thirty to forty pounds per day. The skim-milk being universally pasteurized at the creameries, and returned to the farmer in first-class feeding condition, makes it a most wholesome food material.

"The cows are quite generally milked three times daily, from 5 to 6 a. m., 11 to 12 noon, and 6 to 7 p. m. On most of the large farms the milking is done but twice daily, beginning about 4 o'clock, both morning and evening. On the small farms the milking is mostly done by the wives and daughters. Women also milk on some of the larger farms, frequently milking as many cows as the men milkers, which number is usually twenty. The price paid women milkers is usually about 28 cents per day. An unmarried man is paid from \$100 to \$150 per year, in addition to his room and board. Married men are usually furnished a house, and receive about \$300 per year, the wife usually helping with the work of the farm, often the milking. The price now paid milkers is about twice that paid thirty years ago.

"Formerly it was the practice to have the cows freshen in the spring and go

dry during the winter months, but with the better prices realized for butter under the co-operative system our farmers began to study the matter of root production for winter feed, and now great quantities of mangels, carrots, rutabagas, and white turnips are grown for winter feed. It is not uncommon to find a cow consuming as much as eighty to one hundred pounds of roots daily during the winter time, and this amount can be fed without injury to the milk if fed at the proper time and the roots are in proper condition. The feeding of roots usually takes place about 7 to 9 a. m., and 2 to 4 p. m. All roots are always fed raw, and must be free from mold or decayed parts.

"For a concentrated feeding stuff we use mostly some of the various oil cakes. Cottonseed oil cake from the United States is one of the most popular. We also use large quantities of the linseed oil cakes. We prefer to use a variety rather than one kind only. Through our co-operative associations it is possible for the small farmer to purchase these oil cakes at a price which enables him to feed them profitably. Oil cakes are very generally fed in connection with roots, and our farmers have learned that the feeding of the oil cake increases the value of the resulting manure, and therefore the fertility of their lands. Of course, we have hay to feed in connection with the roots, and the quality of the roots has been greatly improved by selecting the seed of the best strains for the next planting.

"We like to put our cows in the stable early in October, and they are usually kept there until the latter part of May.

"Heifers are usually so bred as to drop their first calf at 21 to 23 months old.

"Land values average about \$200 per acre for the better lands, the more sandy ones selling for considerably less according to their producing ability.

"Our average butter price is about 27 cents; that is, during very recent years, the price having advanced considerably in the past few years.

"Skim-milk for feeding purposes we usually value at about 28 cents per hundred pounds.

"The value of the oil cakes, largely United States cottonseed, imported annually, amounts to about \$25,000,000."—Pacific Homestead.

WHY MEAT IS HIGH.

Discussing the high price of meats the Drovers Journal says that there is a local reason for everything under the sun, even the cause of the abnormally high prices of meat. A misapprehension induced many consumers to boycott meat from the daily menu as a protest against distributors of meat products, who were supposed to represent a monopoly to maintain current sensational prices. The congressional investigating committee and research from other statistical sources reveal the fact that the present price of meat is largely predicated on the increased cost of production.

There has been no sudden advance in values, but a steady increase based on the higher price of the food-stuffs that enter into the cost of production. There is no monopoly in the meat industry. The producer is anxious to sell his products and the manufacturer wishes to dispose of the dressed carcasses to wholesalers, who in turn sell to the distributors who conduct the retail markets. There is no conspiracy among producers, manufacturers, wholesale dealers and distributors to establish and perpetuate current prices of meat. The consumer has appealed to Congress for relief from the present burden of exorbitant living expenses, but Congress cannot by fiat legislation compel lower prices. The

The Most Perfect Colt Bit Made

EVERY COLT

Should wear the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE** from the very beginning of its training, as it is the easiest, most comfortable and most humane bit on the market. With its use the colt will not fret, worry, pull, toss its head and get into the bad habits so often caused by the use of other bits and checking devices that inflict punishment or keep it under too much restraint, and at the same time you will have absolute control over it at all times.

Patented Aug. 11, 1896. Patent No. 565,681

BEWARE of worthless infringements and Checking Devices claimed to be as good as the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE**. Illustrations of some of these check bits and devices are made to look as near like the genuine as possible, but the article itself is very different, and will not give the same results.

ALL GENUINE are stamped **G. S. ELLIS & SON** on the supporting strap and back part of Check Rein. Any that are not so stamped are not genuine.

FREE—Our new Catalogue No. 45, with wholesale discount sheet, the largest, finest and most complete Horse Goods Catalogue ever published, is ready for distribution. It contains illustrations, descriptions, and guaranteed to be lowest prices on Harness, Horse Boots, Horse Clothing and Tack Goods of every description. Every horseman should have a copy. You can save many a dollar during the season by buying direct from us, as we are now selling direct to horsemen, allowing them from 30 to 50 per cent discount from retail prices. Write us today for a copy and we will take pleasure in sending it to you all charges paid.

consumer is forced to reduce the quantity of meat in his household expenses until natural causes regulate present abnormal conditions.

Conditions are accentuated by production not maintaining an equitable increase with the growth of population. In 1880 the population was around 50,000,000, while in 1910 it approximates 90,000,000, an increase of 90 per cent in consumptive ability without a corresponding expansion in meat production. Normal conditions can only be restored by a general movement among all classes of farmers to more largely exploit the live stock industry. If every farmer would raise two or more additional calves annually for five years the supply would be greatly augmented and prices would be on a basis to encourage consumption. The increase of soil fertility, as well as larger returns from the farms makes such a movement desirable, both for the husbandman and the general welfare.—Texas Farmer.

The United States Civil Service Commission announces an examination on August 24th, to secure eligibles from which to make certification to fill four vacancies in the position of farm superintendent, Bureau of Plant Industry, Department of Agriculture, for service outside of the District of Columbia, at salaries ranging from \$1,200 to \$1,800 per annum, and vacancies requiring similar qualifications as they may occur, unless it shall be decided in the interest of the service to fill any or all of the vacancies by reinstatement, transfer or promotion. The salary paid will depend upon the experience and qualifications of the appointee. Men only will be admitted to this examination. Applicants should at once apply to the United States Civil Service Commission, Washington, D. C., for application and examination Form 304 and special form.

SOME POINTS TO REMEMBER.

A requisite for the production of good eggs and marketing them in good condition the following may be mentioned:

1. Hens that produce not only a goodly number of eggs, but eggs of moderately large size (weighing two ounces each on an average), Plymouth Rocks, Wyandottes, Rhode Island Reds, Orpingtons and Leghorns or Minorcas that are used on egg farms, are varieties that may be expected to do this.
2. Good housing, regular feeding and watering, and, above all, clean, dry nests.
3. Daily gathering of eggs and, when the temperature is above 80 degrees, gathering twice a day.
4. The confining of all broody hens as soon as discovered.
5. The rejection as doubtful of all eggs found in a nest that was not visited the previous day. Such eggs should be used at home where each may be broken separately.
6. The placing of all summer eggs, as soon as gathered, in the coolest place available.
7. The prevention at all times of moisture in any form coming in contact with the egg shells.
8. The disposal of young cockerels before they begin to annoy the hens. Also the selling or confining of old male birds from the time hatching is over until cool weather in the fall.
9. The using of cracked and dirty as well as small eggs at home. Such eggs, if consumed with fresh, are perfectly wholesome, but when marketed are discriminated against and are likely to become an entire loss.
10. The marketing of all eggs at least once a week, and oftener when convenience allows.
11. Kepping eggs as cool and dry as

possible while on the way to town and while in country stores.

12. Keeping eggs away from musty cellars or bad odors.

13. The use of strong, clean cases and good fillers.

14. The shipping of eggs to the final market at least once a week and as much oftener as possible.

COUNTY AND STATE FAIRS.

E. A. Trowbridge, University of Missouri.

The American county fair is an institution which has passed through varying stages of success and failure. Some have grown to enormous proportions, while others have dwindled to failure and have been discontinued. Many factors have been influential in determining the success or failure of these institutions and not the least of these has been the attitude and ideals of the board of directors and the patronizing public.

That many county fairs have been successful and see yet before them new fields of opportunity, forcibly tells that there is a duty and a prominent place for the county fair, properly managed and supported. It may be said here that the managing board, in most cases, labors long and incessantly to build up a creditable exhibit of a county, its ideals, resources, wealth and prosperity. In far too many cases the support which they receive from citizens of the county is half-hearted and lacks enthusiasm.

What, then, are the objects of a county fair? Why does it exist? What should be its ideals? What should be the attitude of the public toward it? What good can it do the individual?

The first object of a county fair is education. It furnishes a place for exploitation of public and individual achievement and public resources. It exists because of a public demand for such an institution. Its ideals should be to set high moral and industrial standards. Its attitude toward the public should be: to educate; to raise ideals and standards to a higher level; to point out natural wealth; to emphasize opportunities for increased prosperity. It can do the public good just in proportion to the support which it receives from the public. The good which it can do the individual depends largely upon his support. The county fair cannot benefit and is better off, without the presence or participation of the individual or set of individuals who have, in their own opinion, nothing to learn and only boisterous and ungentlemanly criticism to give. To the individual who attends or exhibits in a public-spirited way, the county fair furnishes an opportunity to study the best results of production and skill and thereby set new standards toward which he may work; gives new ideas for development of his special line of work; points out new fields of opportunity for profit and pleasure; furnishes a means of good, healthy and friendly competition. Lastly, it should furnish much enthusiasm to future attainment.

Many have watched the new exhibitor take defeat and have seen him come back the next year and win the prizes of competition. This type of man is a living example of the great benefits derived from county fairs.

A state fair is to a state as a county fair is to a county. It is bigger, more inspiring and broader in the scope. With its mammoth crowds, its expensive exhibits and its magnificent livestock "fitted to the minute," it represents the skill and handiwork of man. To most of us it furnishes lasting ideals and permanent enthusiasm from year to year.

These public institutions are put before every citizen of the great commonwealth and we are not living up to our opportunities or duties to civilization and to the public, to our families and to ourselves, if we do not avail ourselves of some of these great opportunities.

As they Sometimes Are.

As "Save-the-Horse" Can Make Them.

Let Us Prove It

Puts Money in Your Pocket.

Puts the Horse on His Feet.

"Save-the-Horse" is the safest, surest and most humane as well as the most wonderful remedy known to Veterinary science and practice.

Eldorado, Ill., June 19, 1910.

Troy Chemical Co., Binghamton, N. Y.

Dear Sirs:—Send at once a bottle of "Save-the-Horse." I can't recommend your medicine too high, for I advised several of my friends to try it. Some have a complete cure, while others are still improving. One that I know of is Ralph Bourland. He had a half-brother to my horse and he slipped on a bridge and strained himself. A thoroughpin resulted. He asked me what to do, so I had him use this medicine. Cure resulted and he sold him the other day for \$185.00. I am satisfied that he saved \$75.00 after medicine was paid for. I will give your "Save-the-Horse" credit for what it has done for me, for I know there is no other made will equal it. Yours respectfully,

W. W. BLANKINSHIP.

Pawnee City, Nebr., May 30, 1910.

Troy Chemical Co., Binghamton, N. Y.

Gentlemen:—I enclose acknowledgment for a bottle of "Save-the-Horse" to use on a ringbone.

I will say that I purchased a bottle of "Save-the-Horse" last summer to treat a mare that was quite lame from a bruised knee and had been that way for six months, and now she has fully recovered from her lameness and is a valuable animal. Yours resp.,

F. H. ANDERSON.

"Save-the-Horse" permanently cures bone and bog spavin, ringbone (except low ringbone), curb, thoroughpin, splint, shoe holl, windpuff, injured tendons, and all lameness, without scar or loss of hair. Horse may work as usual. \$5.00 per bottle, with a written guarantee as binding to protect you as the best legal talent could make it. Send for copy and booklet.

At all druggists and dealers, or express paid.

TROY CHEMICAL COMPANY,
Binghamton, N. Y.

D. E. Newell,
56 Bay Vista Avenue, Oakland, Cal.
1105 Market Street, San Francisco, Cal.

SPECIAL ADVERTISING.

Wanted, For Sale, and Miscellaneous advertising under this head will be set in nonpareil type (same type below) and will be published at the rate of 2 cents per word each insertion, or 6 cents per word by the month. Count each abbreviation and initial as a word.

FOR SALE—Black French poodle puppies, pedigrees contain blood of noted poodles in England. Miss Alice Harrison, Menlo Park, Calif.

FOR SALE—Light bay colt, two years old, will weigh 1050 lbs., has been driven a few times and is gentle. Sired by Monterey; dam by McKinney; 2d dam by Antevolo; 3d dam by Johnathan; 4th dam a Patchen mare. The dam of this colt is also for sale. Louis Bergelin, 1112 Market St., Oakland, Cal.

FOR SALE.

A fast trotting mare by Egyptian Prince 14,431, dam Hattie, the dam of Monterey 2:09 1/4 and Montana 2:16, by Commodore Belmont. Is 12 years old, sound and gentle and a lady can drive her. Has 3-months-old colt by Monte McKinney by her side, and is in foal to Chestnut Tom 2:15. Also a yearling, and a two, three and four-year-old out of this mare by Monte McKinney, Chestnut Tom and Silver Bow Jr., respectively. The four-year-old is in foal to Chestnut Tom. Will sell one or all of them, and at a bargain.

KENDALL'S SPAVIN CURE

"Cannot Be Beaten"
Hempstead, L. I., Apr. 23, 1909.
R. F. D. 1, Box 98,
Dr. B. J. Kendall Co.
Gentlemen: Kindly send me your book. I have used your medicine for about 20 years and find it cannot be beaten.
Yours truly, Daniel K. Stenson.
Kendall's "cannot be beaten" for Spavin, Ringbone, Curb, Splint, Swellings, Sprains, Any Lameness. The standby for 40 years. \$1.00 a bottle, 6 for \$5.00, at drug stores. Be sure it's Kendall's you get and ask for free book, "A Treatise on the Horse," or write to Dr. B. J. Kendall Co., Enesburg Falls, Vt.

When heifer calves are to be reared for milk cows a dairyman can not be too particular about breeding the cows to dairy sires. While occasionally a good dairy animal has been produced from a sire belonging to either the beef or general purpose breeds, this is the exception. The only safe plan is to give each heifer calf the strongest possible inherited tendency toward milk production and then use all reasonable means to develop this tendency by proper feed and care. It is by such a system that a good dairy herd may be built up. Cull all the poor animals and keep only the best. From these secure the best heifer calves.

Eggs uniform in size, shape and color always bring better prices when sold to thinking people. It will not be a difficult matter to build up a good trade with extra price by selecting eggs for market.

Bone meal furnishes lime to diet and is effective in helping to grind the food of fowls. Laying hens will be especially benefitted if given bone meal occasionally.

FOR SALE—Two standard-bred and registered stallions, sired by McKinney 2:11 1/4. One mare sired by Zombro 2:11. Pedigrees and photos furnished on application. Address Box 38, Hill P. O., Cal.

FOR SALE.

On account of illness I desire to sell my veterinary practice and horseshoeing shop at Bakersfield. Will also sell my stallion Donello 2:30 by Washington McKinney. He has a matinee record of 2:18 and should trot in 2:10 if trained. Is a grand looker and his breeding is royal. Correspondence solicited.

C. H. SEARS, V. S.,
2211 Chester Ave., Bakersfield, Cal.

TO THOROUGHBRED HORSE-OWNERS.

FOR SALE AT A SACRIFICE.

First six volumes of Bruce's American Stud Book, practically unused. Cost \$10 per volume. Hard to get.

Two volumes of American Horse Breeders' Guide and Hand Book, with 100 tabulated pedigrees of leading stallions (work now out of print).

The American Thoroughbred, by Capt. Thos. B. Merry.

Two volumes Goodwin's Turf Guide for 1907. Cost \$12.

About 50 thoroughbred catalogues, including Rancho del Paso, Palo Alto, Ranocas, McGrathiana, Nursery Stud, Marcus Daly and all the great stock-farms of the country. These are handier than a studbook, because they are tabulated.

Price, \$60 for all these works.

U.S. & CANADA. CLEVELAND, O.

NOTHING BUT GOOD RESULTS.

Have used GOMBALTS CAUSTIC BALSAM for more than 30 years. It is the best blister I have ever tried. I have used it in hundreds of cases with best results. It is perfectly safe for the most inexperienced person to use. This is the largest breeding establishment of trotting horses in the world, and use your blister often.—T. H. FAYARD, Prop., Belmont Park Stock Farm, Belmont Park, Mont.

USED 10 YEARS SUCCESSFULLY.

I have used GOMBALTS CAUSTIC BALSAM for ten years; have been very successful in curing carbuncles, capped hock and knee, bad ankles, rheumatism, and almost every cause of lameness in horses. Have a stable of forty head, mostly track and speedway horses, and certainly can recommend it.—C. CRANER, Training Stables, 390 Jennings Street, New York City.

**Sole Agents for the United States and Canada.
The Lawrence-Williams Co.
TORONTO, ONT. CLEVELAND, OHIO.**

Range sheep are going onto the Eastern markets by the trainload and find much the same kind of demoralization as a year ago. Fat western wethers are selling around \$4.50 and the price is not attractive to our shippers as the running cost is actually higher than it has been for years. Ranges are so dry that some masters are forced to ship stuff out of the country or suffer heavy losses later on. Many of them also have started to flee as a bird to the mountains in the hopes of finding a little grass but just as soon as they do this they will run up against a forest reserve and then a new disaster confronts them. Between the drouth and the government our folks are having rather poor sledding.

No other branch of agriculture presents more advantages than dairying—disposing of the products of the farm as milk and butter-fat. When the latter may be sold to creamery stations and the skim milk fed to calves and pigs along with alfalfa the profits are greater than from almost any other form of agriculture. No other business tends so rapidly to build up the fertility of the farm, and no branch of farming yields more satisfactory financial returns. Raising and feeding alfalfa will add from 15 to 30 per cent to the profits of dairying over the use of any other feedstuff that may be raised or bought. The profit problem for the dairyman is constantly to find the feed that will decrease the cost of his production.—From Coburn's "The Book of Alfalfa."

GROWING POTATOES.

In Ireland, in the best potato growing localities, a yield of 400 bushels to the acre is nothing unusual. It is obtained by the use of about thirty loads of barnyard manure to the acre, supplemented by 500 pounds of commercial fertilizers, proportioned as follows: One hundred pounds of muriate of potash and 400 pounds of superphosphate. In England the best results are obtained by the use of twenty to twenty-five loads of barnyard manure to the acre, supplemented with 100 pounds of sulphate of ammonia, 350 pounds of superphosphate and 50 pounds of sulphate of potash. The popular fertilizer for growing potatoes in Maine, when planted where a two-year-old crop of clover or grass has been grown, is made up on the farm of 135 pounds of nitrate of soda, 600 pounds of tankage, 200 pounds of acid phosphate and 400 pounds of sulphate of potash, making in all 1,335 pounds. One-half this amount is used in the planter or mixed in the furrow and the other half at the first harrowing, when the plants begin to appear.

Place an egg in a glass of water. If it is fresh it will rest on the bottom, the egg lying on its side. If not quite fresh, it will rest with the big end raised higher than the small end and the higher the big end is raised, the older, says the Spatula, the water contained in the white of an egg evaporates, and this causes the empty space at the end of every egg to become enlarged. The larger that empty space becomes the more the egg rises in the water, till in course of time it floats.

The chicken house will require more attention in hot weather than in winter or fall. Lice and mites breed very quickly in the summer and if allowed to get a start are very hard to control. Clean and disinfect the premises often.

Auction Sale

—OF—

Highly Bred Trotting Stock

To be Held at

San Jose Driving Park

During Breeders Meeting,
August 10-13, 1910.

NEAREST 2:22 1/2

Full brother to the great

John A. McKerron 2:04 1/2

and sire of Higbly 2:04 1/4, Alone 2:09 1/4, etc.

ONE BETTER, p. (2) 2:24 3/4 (trial 2:21), bay colt by Nearest McKinney 2:20 1/2 (trial 2:13 1/4); dam Much Better 2:07 1/4, by Chas. Derby 2:20.

JUST Mc. (p.) 2:24 1/2, bay gelding, 4 years old, by Nearest McKinney 2:20 1/4; dam Just It (3) 2:19 1/4 by Nearest 2:22 1/2.

NEARHEART, blk. filly, 3 years old, by Nearest McKinney 2:20 1/4; dam Trueheart 2:19 1/4 by Nearest 2:22 1/2. Can beat 2:30 trotting.

BAY COLT (2) by The Angelus 2:15 1/2 (son of Zombro 2:11 and Hazel Kinney 2:09 1/4); dam Maud J. C., dam of Nearest McKinney 2:20 1/4 by Nearest 2:22 1/2. Trotter entered in Breeders' Futurity.

LUCKY STAR (3), bay colt by Star Pointer 1:59 1/4; dam Maud J. C. This colt is large, handsome and a square trotter.

NEARER, ch. m. (trial trotting 2:20 1/2, with 60 days' work), by Nearest 2:22 1/2; dam Mormon Girl by Brigadier 2:21.

Isn't He Worth Saving?

Why trade off or sell at a beggarly price a good horse just because he "goes lame," "throws a curb" or develops some other blemish? There is nothing in the way of Spavins, Curbs, Splints, Windpuffs or Bunches which will not yield readily and permanently to treatment with

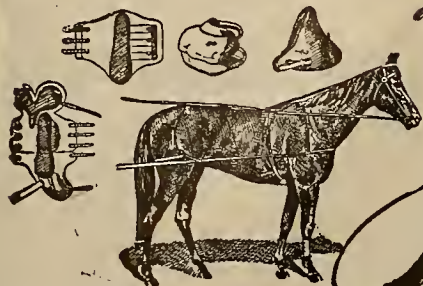

QUINN'S OINTMENT.

Dr. E. H. Davenport, a prominent physician of Sheridan, Ind., writes: I have used a number of remedies for the removal of curbs, splints, thickened tendons and tissues generally, but for the last two years I have not been without Quinn's Ointment. I have tested it thoroughly at different times, and say without hesitancy that it is the only reliable remedy of the kind I have ever tried. Price \$1.00 per bottle. Sold by all druggists or sent by mail. Write us for literature, testimonials etc.

WINCHESTER

.401
Caliber

Self-Load-
ing Rifle

THE TRIGGER CONTROLLED REPEATER

This new Winchester is all that the big game hunter's heart could desire. It is reloaded by recoil, and has a detachable magazine which enables it to be fired a series of shots with great ease and rapidity without the sacrifice of accuracy. Although the cartridge it handles hits a harder blow than the .30 U. S. Army, it is compact and light to carry. In the sureness, strength and simplicity of its action, and in its hitting power, no other recoil operated rifle approaches it.

Send to the Winchester Repeating Arms Company, New Haven, Conn., for circular describing this new rifle which has strength and power plus.

"THE GAIT of the American Trotter and Pacer" is the title of a new book just issued from the press of the William R. Jenkins Co., of 851-853 Sixth avenue, New York. It is a work of 324 pages, with 11 full page illustrations, besides 217 cuts illustrating the text. The book is from the pen of Mr. Rudolf Jordan, Jr., of San Francisco, who has devoted years to a study of the gaits of the trotter and pacer. We believe this work is the most remarkable one ever written on this subject and is unique in its manner of handling the questions of gait and balance. It is not a book to be picked up and read casually, but one that must be studied seriously. The author reasons from cause to effect in every instance, giving his reasons and the illustrations explaining them in hundreds of cases. Mr. Jordan shows how to make a systematic analysis of gait by means of measurements and by averages and variations, so as to plot the peculiarities of each horse's mode of locomotion. Having directed how to secure this knowledge of the horse's gait, the author then shows how to shoe the animal to correct its faults, and make it a better and squarer trotter or pacer. The book cannot be justly described or reviewed in a newspaper article. It must be read and studied. Any man of intelligence who will read it thoughtfully and carefully will learn much from its pages, and we do not doubt but it will be a guide book to farriers, owners and trainers in gaiting horses for the road or track and lead to a systematic and reasonable shoeing instead of the haphazard manner now so prevalent on training tracks. The book is for sale by the publishers at \$3.50.

DID YOU EVER NOTICE how much special legislation there is for the fruit industry, the dairy industry, the wool industry, the leather industry and many other industries that have organization and ask the law makers to protect or encourage them? And, then, did you ever stop to consider for one moment that horses comprise nearly 45 per cent of the total live stock values of the country, the assessed value of horses in the United States being \$2,276,633,000, while all the cattle, milk cows, sheep, swine and mules are assessed for less than three billion dollars? Isn't it time the horse breeders and owners got together, organized and asked for the legislation due them?

Hedgewood Boy must be in fine shape as he turned the half mile track at Grand Forks, North Dakota, in 2:05½ two weeks ago.

GREAT RACING AT SAN JOSE'S NEW TRACK.

Breeders' Meeting Opened With Good Fields, Fast Time and Fair Attendance.

Probably a thousand persons paid to enter the new San Jose Driving Park last Wednesday, the opening day of the Pacific Coast Trotting Horse Breeders' annual meeting, and they were repaid for the long tiresome trip on a slow street car, and having to sit on rather crude seats under a temporary canvas canopy, by seeing some of the best racing ever put up by Coast horses on the opening day of the season.

The San Jose Driving Park has "the makings" of a great race course and fair grounds but is now without any good appointments beyond a fine fast track and good box stalls. Mr. Ray Mead, who conceived the idea of building a track at San Jose has accomplished much more than most men could under the circumstances, and if he receives the proper support may yet make this park one of the best on the coast. The track and the stalls are first class, and the other appointments will come in time.

When the time set for the opening of the Breeders' Meeting of 1910 arrived on Wednesday of this week, President E. P. Heald and Secretary F. W. Kelley had everything in readiness for the first harness meeting of the year. In the stand as judges were Directors John A. McKerron, I. L. Borden and Robert S. Brown. In the timers' stands Budd Doble, John Thoms and T. J. Crowley held their watches. Geo. B. Kelley was clerk of the course, and W. J. Kenney occupied the starters' box. At the distance stood Robt. I. Orr with the red flag to drop in the face of the unfortunate and sluggish. A brass band discoursed music between heats.

The first race called was the California Stake of \$1000 for 2:20 class trotters, and seven horses came out for the word. Frank E. Wright's big brown stallion Lijero by James Madison, drew the pole and was driven by Wm. Ivey. Fred Ward with the eastern bred trotter, Dr. Wayo, was next, Charles Durfee next with the beautiful mare Helen Stiles by Sidney Dillon, and Bodaker, All Style, Prince Lot and Harold K. next in order.

Starter Kenney called them back three times and on the fourth score sent them away all trotting but strung out a little. Helen Stiles was galloping when they turned for the word in this score, but was trotting squarely when she crossed the mark though a few lengths back and not in a position to get through. Durfee did not make an effort to push Helen Stiles into the lead until rounding the far turn, when he called on the daughter of Sidney Dillon and she was seen to gain on the leaders. She went a long mile, and when the stretch was reached the race was seen to be a duel between the mare and Lijero. It was one of the closest finishes ever seen on a track and the crowd was about evenly divided as to which won. The judges caught the mare's nose first at the wire however, giving Helen Stiles a record of 2:11 in her first race since her only start as a three-year-old. Prince Lot was a close third and Bodaker a good fourth, with Dr. Wayo fifth. All Style and Harold K. were outside the flag.

While it looked as if it took a hard drive on Durfee's part to win the first heat of this race, he won the next two with comparative ease in 2:11 and 2:10½, and it looked as though 2:09 wouldn't have stopped Helen had it been necessary for her to have stepped the third heat that fast. Lijero was a close back, and having second money won was permitted second again the second heat, being less than a length to step the last heat slower and he finished last. There was quite a race for third money between Bodaker and Prince Lot, but Elmo Montgomery out-drove Spencer at the finish of the third heat and landed second. Bodaker was a lame horse with a bad curb that had been sprung ten days previous, but he was game. Helen Stiles, the winner of this race is a five-year-old bay mare, smoothly gaited, by Sidney Dillon, dam Silver Haw by Silver Bow 2:16, second dam by Hawthorne, son of Nutwood. She was trained as a three-year-old and made one start, being lame at the time, in the Breeders' Futurity. She finished fourth in every heat. After this race, Mr. C. A. Durfee, who had watched her closely during the contest (purchased a half interest in her from her breeder and owner S. S. Stiles, of Oakland, for \$2000. Mr. Durfee has had charge of her ever since. Her lameness as a three-year-old was due to a splint and nothing was done with the filly as a four-year-old. She is now sound as a new dollar, one of the best gaited and best acting trotters ever seen on a track, and has trialed a mile in 2:08½.

Lijero, winner of second money, is a large horse a beautiful brown in color and will beat 2:10 this year. He is by James Madison and out of the mare Hilda by Nutwood. He is owned by Mr. F. E. Wright of Sacramento and was bred by J. B. Haggin. Bodaker, winner of third money, was bred and is owned by Thos. Roman, of Pleasanton. This horse is a roan, his dam being by Jay Bird. His sire is Antrim, the sire of Anzella 2:06¾. Bodaker worked in 2:10 last year, but went lame in one front leg. This spring Elmo Montgomery took him to train and certainly deserves credit for the showing he made in the first race. About ten days ago Bodaker threw out a curb, but he trotted a good game race and will trot faster later on.

Prince Lot, winner of fourth money, is by Prince Ansel 2:20 out of Lottie 2:15 by San Diego. He trotted an excellent race and was game throughout the race. Prince Lot was bred and is owned by Alex. Brown of the Woodland Stock Farm. All four of the money winners in this race beat 2:12 in the

race, so closely were they bunched in the first two heats.

The 2:12 trot, second race of the first day's program went to five heats and was finally won by Dr. Lecco, owned by C. H. ("Doc") Durfee and trained and driven by that gentleman's sire, C. A. Durfee. This race was a duel between the handsome mare Lady Inez by Nutwood Wilkes, owned by Mr. A. L. Scott, and the Durfee horse. Lady Inez won the first heat in 2:12½, but Dr. Lecco beat her in a drive the second heat in 2:11¼, and won the third eat by fast trotting after a break, in 2:12¾ with Lady Inez fourth. In the fourth heat Dr. Lecco made a break and Lady Inez won in 2:14 with the Doctor fourth. The fifth heat went to the medical gentleman after a break on the far turn that put him back a long way, but his gameness and speed took him to the front and won him the race in 2:15.

The last race of the day also went to five heats and sundown without being finished. There were ten pacers in this race and they started in two tiers. The first heat ended in the hottest sort of a close finish between Conqueror and Chiquita, the former winning in 2:10½. The same horse won the second heat in 2:11, but as the starter had given the word when Chiquita was on a tangled break, Maben was told that he could start again although he had finished behind the flag. He thanked the judges and in the next heat was fifth, Little Dick and Conqueror making a great race through the stretch, with the former the winner in 2:10½, a new record for this much raced pacer. The next two heats went to Chiquita who was now settled and able to outstep the others at the finish. Under the rule all but four horses were out after the third heat and the only horse in besides the heat winners being the Ice Man, a son of William Harold that was right up close at every finish.

The race after the fifth heat went over to Thursday and as the new rule does not provide for non-heat-winners going to the stable after five heats, Ice Man was a starter for the sixth heat. This heat went to Conqueror in 2:12, with Chiquita second, Little Dick third and Ice Man unfortunately distanced, which lost him fourth money, which under the old rule he would have been awarded, although sent to the stable.

Summaries:

California Stakes, \$1000, 2:20 class trotting:
Helen Stiles, b. m. by Sidney Dillon-Siler
Haw by Silver Bow (C. A. Durfee)1 1 1
Lijero, br. s. by Jas. Madison (Ivey).....2 2 5
Bodaker, rn. s. by Antrim (Montgomery)....4 3 2
Prince Lot, br. g. by Prince Ansel (Spencer).....3 4 2
Dr. Wayo, b. s. by Wilkhurst (Ward)5 5 4
All Style, b. s. by Stam B. (Daniels)dis.
Harold K., b. g. by Wm. Harold (Galindo).....dis.
Time—2:11, 2:11, 2:10¾.

Trotting, 2:12 class, \$800.

FAST TIME FOR A THREE-YEAR-OLD.

LEXINGTON, Ky., Aug. 8.—In the 2:17 trotting event given by the Blue Grass Fair Association here today, J. R. McGowan's 3-year-old stallion, J. Malcolma Forbes, half-brother to Peter the Great, created a sensation by trotting the two heats in a winning race in the fast time of 2:09¼, 2:10¾, breaking the world's record for a 3-year-old this early in the season and making the fastest mile of the season for a 3-year-old. Malcolm Forbes is by Bingen out of Santos and was purchased by McGowan at Old Glory sale last spring for \$3,750.

Chas. W. Winter, of Alhambra, California, has taken his colt by Redlac 2:07½ home from the Arcadia track where Mr. C. C. Sanford had him in training until the track was closed. He had the colt ten weeks and in its last workout the youngster trotted a half in 1:22, the last eighth in 18 seconds. He has repeatedly trotted quarters in 38 seconds, and as he is big and strong Mr. Winters believes he will make a fast horse when he matures.

DETROIT'S BLUE RIBBON MEETING.

"Pop" Geers Wins C. of C. and M. & M. With The Abbe and Dudie Archdale.

Detroit, Mich., Aug. 1.—The opening of the Detroit Driving Club's twenty-sixth annual "blue ribbon" meet, which covers the second week of the Grand Circuit season, was favored with racing conditions little short of ideal. Fast time was made in all the events and the last race of the day, the 2:05 pace, brought out the two fastest heats of the year.

All races were won in straight heats and the feature of the day, the Horseman and Spirit of the Times Futurity for three-year-olds, proved something of a disappointment in both the trotting and pacing divisions. The fields were small in both groups, only three accepting the issue in the pacing end of the stake.

Alice Roosevelt was favorite in the 2:11 trot, but Major Strong, second choice, had the speed and took the race in straight heats.

Emily Ellen was the big winner of the day, taking the large end of the rich futurity for three-year-old trotters, in which Eva Bellini was favorite. She led from start to finish in every heat and was never in danger.

The third heat in this event developed the closest finish of the day. Behind the winner, Chatty Direct, Eva Bellini and Bergen came to the wire under the whip and finished so close together that the spectators could not pick their positions.

The \$11,000 stake was divided as follows:

Emily Ellen, \$7500; Chatty Direct, \$1200; Eva Bellini, \$900; Bergen and Bon Vivant, \$300 each. In addition, David M. Look of New York, nominator of the dam of Emily Ellen, received \$300 and a handsome silver cup valued at \$500.

In the futurity pace, Twinkling Dan was an easy winner in all three heats.

In the 2:05 pace, Walter W. met defeat for the first time since he was taken in hand by Ed Geers. In the first heat, with Snow driving, Walter W. in the lead went into the air at the head of the stretch, when Ross K. pushed him, and the Geers horse barely escaped the distance flag.

In the second heat Ross K. went right to the front and led all the way. The time on this race was the fastest so far this year. Summaries:

Three-year-old Pace—Horseman and Spirit of the Times Futurity; guaranteed value, \$4000; three heats:

Twinkling Dan, br. c. by Dan Patch (Murphy) 1 1
Joe H., b. c. (McAllister) 2 3 2
Nell Gentry, b. f. (Cameron) 3 2 3
Time—2:10½, 2:13½, 2:11½.

2:05 Pace; purse \$1000; two-in-three:

Ross K., b. h. by Constendro (McMahon) 1 1
Jennie W., b. m. (Sunderlin) 2 3
Walter W., b. g. (Snow) 2 8
Major Mallow, b. g. (Mallow) 3 7
Baron Whips, ch. g. (Murphy) 4 4
Maconda, b. m. (Albin) 4 5
Blacklock, blk. s. (Shank) 5 8
The Friend, blk. s. (Bramley) 7 6
Time—2:02½, 2:03.

2:11 Trot; purse \$3000; three in five:

Major Strong, b. g. by Strong Boy (Snyder) 1 1
Alice Roosevelt, ch. m. (Murphy) 2 3 3
Melva J., b. m. (Cox) 3 4 2
Stattie, b. g. (Gahagan) 4 2 4
Stroler, ch. h. (Keating) 6 5 5
Don Labor, br. g. (Kilim) 5 6 6
Telemachus, b. s. (McCarty) 7 dis
Jenny Constantine, br. m. (Dodge) dis
Time—2:08¾, 2:09¾, 2:08¾.

Three-year-old Trot; Horseman and Spirit of the Times Futurity; guaranteed value, \$11,000; three heats:

Emily Ellen, blk. f. by Todd (McDonald) 1 1
Chatty Direct, blk. f. (Tallman) 6 2 2
Eva Bellini, b. f. (Dickerson) 2 6 3
Bergen, b. c. (Chandler) 4 3 4
Bon Vivant, b. c. (Proctor) 3 4 5
Sue D., br. f. (Willis) 5 5 ds
Woodford Todd, blk. c. (Macey) dis
Time—2:12½, 2:12½, 2:10½.

Aug. 2.—Two new speed records and some excellent sport marked the second day of the Grand Circuit racing at the state fair grounds. Driving for the first time since his injury at Grand Rapids, two weeks ago, E. F. Geers, the veteran reinsman, celebrated his return to the sulky by sending The Harvester the two fastest miles ever trotted by a stallion, each mile being negotiated in 2:04¼.

The Harvester's time also is the best ever made by a five-year-old stallion. Cresceus held the former two-heat record for stallions, and Bob Douglas, who twice finished second to The Harvester today, held the five-year-old stallion record of 2:06¼.

Geers also drove The Abbe to victory in the Chamber of Commerce \$5000 stake, winning three straight heats after being beaten at the wire by Evelyn W. in the first heat. This race for 2:12 pacers is one of the classics of the meeting.

In the 2:07 trot, which developed the new champion, The Harvester won the two heats practically as he pleased. At no time was he extended to the limit.

Country Jay, by reason of his recent record-breaking performance, was popular with the crowd, but the best he could get in the fast going was a division of third and fourth places with Spanish Queen. Bob Douglas was the only near contender in the race, and The Harvester left him behind in both heats when approaching the wire.

The big field had a bad time getting away in the first heat of the Chamber of Commerce stake. Scoring in the sixth attempt, Lady of Honor got her feet tangled in her hobbles and fell to her knees. Snow kept his seat, but the start was delayed while the harness was mended. Then Colonel Forrest, who had been acting badly, cast a shoe. They were at the post nearly an hour before getting away to a good start.

The leaders were well bunched all the way and 100 yards from the finish five horses raced heads apart. As they finished under the wire the crowd cheered for Geers and The Abbe and there was much surprise when the judges announced that Evelyn W. had won by a scant nose.

The next three heats were easy for The Abbe, who led all the way with a good margin to spare at the end. This is the fifth time Geers has driven a winner in the C. of C. stake.

Clover Patch took the 2:34 pace in three straight heats, the event being something of a procession.

Miss Stokes, the champion trotter as a yearling, was picked to win the Horseman and Spirit of the Times \$3000 futurity for two-year-old trotters, but she broke badly when crowded, and third place was the best she could get. Azoff got the first heat, but Necia, who finished last in the first attempt, led the speed of the youngsters and took the next two in impressive style.

2:24 class, pacing; purse \$1000; three in five:

Clover Patch, br. m. by Dan Patch (Snow) 1 1 1
Jerry Directly, b. s. (McMahon) 2 2 2
Nellie Temple, b. m. (Proctor) 3 3 3
Ruth Bond, b. m. (Caree) dis
Time—2:09½, 2:09¾, 2:12¾.

Chamber of Commerce stake; \$5000; for 2:13 class pacing; three in five:

The Abbe, blk. h. by Chimes-Nettie King (Geers) 2 1 1 1
Evelyn W., b. m. by The Spy (Shank) 1 3 5 2
Branham Baughman, br. g. (Cox) 3 2 2 3
Lady of Honor, ch. m. (Snow) 10 6 3 4
Alwanda, b. g. (Keegan) 11 7 4 8
The Philistine, b. s. (Owings) 9 4 7 9
Lady Isle, b. m. (Monaghan) 7 9 9 5
Mary Boo, b. m. (Merrifield) 6 8 10 7
Nathan B., b. s. (Walker) 12 12 11 ds
Direct Hal, Jr., blk. s. (Dickerson) 4 10 8 ds
Col. Forrest, b. h. (McMahon) 5 5 6 ds
Ian Bar, b. h. (Rombough) 8 11 ds
Ashline, b. g. (Cummings) ds
Time—2:05½, 2:04½, 2:05½, 2:07½.

2:07 class; trotting; purse \$1000; two in three:

The Harvester, br. s. by Walnut Hall (Geers) 1 1
Bob Douglas, g. s. (McDonald) 2 2
Spanish Queen, b. m. (R. Macey) 3 4
Country Jay, ch. g. (G. Macey) 4 3
Wilkes Heart, b. g. (Snow) 5 5
Time—2:04½, 2:04½.

Horseman and Spirit of the Times Futurity; for two-year-olds; trotting; purse \$3000; two in three:

Necia, blk. f. by Bellini (Dickerson) 6 1 1
Azoff, b. c. by Peter the Great (McMahon) 1 6 2
Miss Stokes, b. f. (Willis) 3 2 3
Mainleaf, blk. e. (Van Evers) 2 3 4
Sister Ella, ch. f. (Chandler) 4 4 5
Vesper Rose, br. f. (Andrews) 5 5 ds
Time—2:14½, 2:13½, 2:14½.

Aug. 3.—The Merchants' and Manufacturers' \$10,000 stake was won easily in straight heats at the fair grounds today by the little black mare Dudie Archdale, with the veteran Ed. Geers in the sulky. The race was too one-sided to be to any great degree exciting, and the odds of 3 to 1 on Dudie Archdale over the entire field minimized the interest taken in the betting.

Today's feature race was the third \$10,000 event that the black trotter has won in as many weeks, the other two having been the Furniture Manufacturers' stake at Grand Rapids and the Paper Mills \$10,000 event at Kalamazoo.

Ario Leyburn, who finished second in all three heats, appeared to good advantage, but the remainder of the field was disappointing. It took more than a dozen attempts to start the first heat and there was much breaking all through the event.

Dudie Archdale went to the front promptly in all three heats and never made a false move. She was in no danger at any time and could have lowered the time of each heat if she had been pressed.

Geers was applauded from the crowded grand stand each time he hobbled out on a crutch to take his sulky, not having recovered entirely from his accident at Grand Rapids. This week's meeting is the second "Blue Ribbon" Detroit meeting at which Driver Geers won both the Merchants' and Manufacturers' and Chamber of Commerce stakes, two of the biggest annual events of the trotting turf.

The 2:20 trot went to Joan, after Sable Maid had captured the first heat. Wataga led in the first heat to the half mile, but then dropped back. Sable Maid won her heat in a close finish, but in the remaining heats the time was faster, and Joan had the speed.

May Day took the first heat of the 2:12 pace in 2:05½. In the second heat she led into the stretch, but broke badly and fell back to ninth position. Peter Pan winning the heat. May Day won the next two heats from Peter Pan in slower time, the third heat affording one of the most exciting finishes of the afternoon.

Alcyfrass and Walter Hal each took a heat in the 2:07 pace, which was not finished, Alcyfrass capturing the first heat in a driving finish, with Walter Hal close up, but dropping back to fourth place in the next heat. Summary:

2:20 trot; three in five; purse \$1000.

Joan, br. f. by Directum Spier-Sarah W., by Hal Braden (McDermott) 2 1 1 1
Sable Maid, blk. m. by Rudy-Margaret Mills, by Waltz (Murphy) 1 2 2 2

Pickles, b. m. (Owings) 3 dr
Dan D., b. g. (Hogan) ds
Time—2:05½, 2:07½, 2:09½.

Aug. 7.—The free-for-all race at the Grand Circuit meetings marked an easy win for Giftline. Aileen Wilson lost second place to Darkey Hal in the first heat by breaking when almost under the wire. The second heat was a procession, with Giftline leading all the way and winning in a walk. Darkey Hal had an equally easy time in holding second place in the heat.

The time of the free-for-all was disappointing, as the track was fast and all three contestants had records under 2:03. The first heat today was paced in 2:03½ and the second in 2:04¾.

Walter Hal and Alcyfrass each had won a heat yesterday in the 2:07 pace. In the third heat of that event today, however, Ella Ambulator took the lead from Walter Hal in the stretch and in a driving finish won the heat by a neck, with Alcyfrass back in sixth position.

The final heat for heat winners only was Walter Hal's all the way, though Ella Ambulator was coming up fast at the finish.

Alfonso, the favorite before the 2:16 trot, which had fourteen entries, drew the pole for the first heat, but was back in fourth place at the finish and was then withdrawn on account of lameness, all bets being declared off.

Annette R. won the race by taking three heats after Dora had captured the first two. Dora won the first heat by a great burst of speed in the stretch, Dovell being hard pressed in second place by Rickey Rawson and Alfonso. Dora led in the second heat all the way, but in the third heat broke in the stretch and was practically out of the race.

Annette R. won the third and fifth heats by coming from behind in the stretch and led in the fourth heat all around the circle.

In the 2:15 pace the judges put Hogan up behind Nellie G., after the second heat, in place of Minnie, but the change made no difference in the result. Nellie G. led to the quarter post in the first two heats, but Hallie Loo led all the way in the third.

The 2:09 trot was easy for Nancy Royce after the first heat, which ended in a driving finish. Hallworthy wrested second position from General H. almost under the wire.

2:07 pace; two in three; purse \$1000; two heats Wednesday:

Walter Hal, g. h. Walter Direct-Duck, by Brown Hal (Garth) 2 1 2 1
Ella Ambulator, b. m. Ambulator-Ella Eddy, by Jerome Eddy (Murphy) 3 2 1 2
Alcyfrass, ro. m., Alcyron-Sassafras, by Almont Boy (Jones) 1 4 6 3
Earl, Jr., g. g. (Cox) 4 3 3
Greatest Line, br. m. (Clark) 7 5 4
Willie Benton, br. s. (Gosnell) 5 9 5

Alfonso, b. g. (McDonald)	4	dr

Time—2:13¾, 2:12¾, 2:13½, 2:12½, 2:16¾.

August 5.—Sonoma Girl, after causing some anxiety by breaking and misbehaving while the trotters were scoring for the first heat, settled down and won the free-for-all trot in straight heats today at the fair grounds. It was the closing day of the Grand Circuit meeting at Detroit, and there was a good card, but no record breaking time.

Sonoma Girl got a bad start in the first heat, but took the lead from Margin at the three-quarters pole by going up on the outside and won the heat, with Oro and Jack Leyburn close up in second and third position respectively and Margin many lengths behind. The second and deciding heat was largely a repetition, Margin leading much of the way and Sonoma Girl taking the lead in the stretch. Margin and Jack Leyburn divided third and fourth money.

King Cole, a hot favorite in the 2:09 pace, finished in fourth position in both heats, but was set back to ninth in the final for interference at the first turn. In both heats Merry Widow won in the stretch after letting Asa Wilkes lead to the three-quarters pole.

In the 2:13 trot Gamar led all the way in the second heat and in the first and third heats had little difficulty in taking the lead from Willy in the last quarter. Pennock had to whip Willy at the finish to save second place, as both Tearolaine and Margaret were coming up fast.

In the 2:18 pace, which May Queen won in straight heats, Halgen took the lead in the first heat with Clover Patch second. Then Halgen broke and Clover Patch led to the three-quarters poles, May Queen going to the front in the stretch and winning by two lengths. The summaries:

2:18 pace (three in five); purse \$1,000.		
May Queen, b. m., Peterslick-Stafford Girl,		
by Clay Thorne (McClane)	1	1
Clover Patch, b. m. (Snow)	2	2
Halgen, ro. s. (Brady)	3	3

Time—2:10¾, 2:11¼, 2:13¾.

2:13 trot (three in five); purse \$1000.		
Gamar, b. h., Tekmar-Gavatta, by Milroi,		
(Harrison)	1	1
Willy, b. s. (Penock)	2	4
Mangate, ro. g. (Snow)	6	2
Vito, b. s. (J. Benyon)	5	3
Robbie B. McGregor, g. g. (McDonald)	3	5
Tearolaine, ch. m. (Burnes)	7	6
Bervaldo, b. g. (Murphy)	4	7

Time—2:08¾, 2:08¾, 2:08¾.

Free-for-all trot (two in three); purse \$1000.		
Sonoma Girl, b. m., Lynwood W-Maud Fowler,		
by Anteeo (McMahon)	1	1
Oro, blk. g. (McCarthy)	2	2
Margin, ro. m. (Andrews)	4	3
Jack Leyburn, ch. g. (Grady)	3	4

Time—2:05¾, 2:08¾.

2:09 pace (two in three); purse \$1000.		
Merry Widow, b. m., Red Pac-Bonnie, by Sam		
Wilkes Jr. (James)	1	1
Asa Wilkes, ch. s. (Cox)	2	2
Hallie Direct, ch. m. (Jones)	3	7
Waverly, b. g. (Gossnell)	9	3
The Prince, br. g. (Stevens)	6	4
King Cole, b. h. (Dodge)	4	9
W. A., br. g. (Floyd)	7	5
Beauty Wilkes, b. m. (Gahagan)	5	8
W. D. S., ch. g. (Saunders)	8	6

Time—2:05¾, 2:05¾.

EASTERN HORSE NOTES.

Sonoma Girl's heat in 2:04¼ equals the world's record for a trotting mare in a regular class race against a field of horses, previously established by Penisa Maid, in the Transylvania, last fall.

Bert Shank drove Evlyn W. a mile in 2:03¾ before starting in the C. of C. at Detroit. This mile was over the Cleveland track, and the mare is owned by Gen. Chisholm, proprietor of the Thistle Doune Farm.

Sam Blampied, for many years a representative of the American Horse Breeder, has gone to New York as the statistician for the Fasig-Tipton Company.

Mary P., the four-year-old daughter of Walnut Hall, in Walter Cox's stable, worked in 2:08¾ and 2:08¾

at Kalamazoo. She will not be started again this year, but will be liberally staked next season.

Hedgewood Boy 2:02¼, at Fargo, N. D., paced a mile in 2:05, establishing a new record for that State. The performance over a half-mile track was a remarkable record for this time of the year and shows that Hedgewood Boy is in splendid condition, and will make good in his exhibitions. The double team trial by Hedgewood Boy and Lady Maud C. was a failure, as after going to the half in 1:05, Hedgewood Boy's harness broke and the team was stopped. On a second attempt Hedgewood Boy broke twice, but the last half was made in 1:05¼, the last quarter in 30¾ seconds, and the mile in 2:16. Driver Harry Hersey believes that Hedgewood Boy is now in condition to pace a mile over a good mile track in two minutes flat.

Emily Ellen (3) 2:10¼, is out of an own sister of Boreal (3) 2:15¾, Beauseant (p) 2:06½, Matin Bells p, 2:06½, etc.

Albuquerque, N. M., El Paso, Tex., and Pboenix, Ariz., are three southwest meetings that will certainly attract attention of owners having horses which they wish to race late in the season. The money offered is very tempting and good treatment is assured all visiting horsemen.

The Huguenot (3) 2:27¼, brother to The Abbot 2:03¼ and The Abbe p, 2:07¼, by Chimes, out of Nettie King 2:20¼, by Mambrino King, now owned by Arthur H. Parker of Bedford, Mass., is working miles in 2:20 for his owner over the Readville track, and is said to be able to trot close to a 2:00 gait. He is a five-year-old bay stallion, and was foaled at Hillaudale Farm, Mamaroneck, N. Y.

"Marque" says: In my opinion Colorado E. will trot in 2:04 this fall, if he remains in form. Now, you may regard this as a somewhat visionary prediction—but I will "got it one better," say that it would not surprise me if he beat 2:04. In the event that he lives up to my prediction, it will mean that the time is not far distant when a three-year-old trotter will step in 2:00. Not only do I hope to live to see a two-minute three-year-old; I firmly believe that the pleasure will be mine within the next ten years. But for needing shoes for protection, Colorado really has no use for them. He wears four-ounce ones in front, with three-ounce toe weights behind, just plates. His only front protection consists of hinge quarter-hoots; behind he wears combined speedy-cut and ankle boots. He trots with wonderful ease and few horses have such rapid, perfect use of their legs. Individually he is plain, particularly so about his head, which is large, the frontal bone being curved outwardly, giving the impression that he is Roman nosed.

Dora 2:15¾, the European bred trotter, is racing under a severe handicap, having injured one of her hoofs recently in some unaccountable manner.

Waverly 2:04¾, a new member of the 2:05 list, is the largest pacer racing on the Grand Circuit. He wears absolutely nothing but the necessary harness, being a perfectly clean going wiggler.

The Abbe 2:04¼, winner of the C. and C. has been victorious in all of his starts. He won at Terre Haute, Grand Rapids, Kalamazoo, Detroit and Cleveland.

The mile in 2:07¼ made by Greatest Line 2:06¼ at Lima, last week not only broke the local track record for mares, but also proved the fastest performance this season for her sex over a half mile track.

Beaut McKinney 2:13¼ is one of the fastest four-year-old pacers of the year. Her third, fourth and fifth mile in 2:13¼, 2:13½ and 2:13¾, surely indicates that she can go the route. She is by a son of the great McKinney 2:11¾.

One of the greatest exhibitions of extreme speed, displayed in a long time, was shown at Kalamazoo in a workout by the great three-year-old trotting colt, Colorado E. (3) 2:12¾, owned by George Estabrook, of Denver, Colorado. Ramey Macey, the clever young driver who is looking after this crack youngster, gave him a little preliminary work, then stepped him over to the half in 1:05 and finished the other part of the distance in 1:01¼, a total of 2:06¾ for a mile, which is a half second faster than the world's record for three-year-olds now held by General Watts (3) 2:06¾. Colorado E. clearly demonstrated his right today to be numbered among the truly great and if he meets with no misfortunes he will prove the most sensational colt trotter of the age.

During the recent meeting at Mt. Sterling, Ky., the track record for trotters of 2:18¾ was broken the second day in the three-year-old race by the brown colt, J. Malcolm Forbes, who placed it at 2:14¾. This colt is one of the most attractively bred ones in the land, being by Bingen 2:06¼, and out of the great matron Santos (dam of Peter the Great 2:07¼, and six other trotters). When one stops to consider that this colt was but 13 days over three years old and that he had previously been given but five miles better than 2:30, and the fastest of these in 2:21½, the real character of the colt is recognized.

Drink Jackson's Napa Soda.

MR. OTTINGER GETS THE CUP.

His Good Gelding Charley T. 2:10¼ by Zombro Wins Four Out of Six Races.

The beautiful cup donated by Mr. W. A. Clark Jr. of Los Angeles to the Park Amateur Driving Club of this city, was won last Saturday by Mr. Adolf Ottinger with his black gelding Charley T. by Zombro. The cup has been raced for during two matinee seasons. Last year the gray horse Dr. O'Brien was the winner. He was driven in the races at the time by Mr. D. E. Hoffmann, but was owned during the early part of the season by Mr. Ottinger, and a protest was made against the cup being awarded to Dr. O'Brien as he was not driven in his races by his owner. Mr. Hoffman relinquished all claim on the cup and it was put up for competition and called the Clark-Hoffman cup. The conditions of the contest were that the horse winning it must start in not less than six races and win three of them. The cup was offered for the free-for-all trotting class, and to be awarded to the horse winning the greatest number of races in this class between the 30th of May and the 15th of August, 1910.

On May 30th the first race was trotted and the last was on August 6th. The races resulted as follows:

May 30th—Modicum 1-2-1, Charley T. 3-1-2, Reina Directum 2-3-3. Time—2:15, 2:15½, 2:19.

June 11—Charley T. 1-2-1, Reina Directum 2-1-3, Modicum 3-3-2, Dr. O'Brien 4-4-4. Time—2:13, 2:12¾, 2:18¾.

June 25—Modicum 3-3-1-1, Reina Directum 2-1-2-2, Charley T. 1-2-drawn (bled in second heat), Dr. O'Brien 4-drawn. Time—2:14, 2:15¾, 2:16¾, 2:15¼.

July 9—Charley T. 1-1, Reina Directum 2-2, Modicum 3-3. Time—2:15½, 2:15½.

July 23—Charley T. 1-1, Modicum 3-2, Reina Directum 2-3. Time—2:14, 2:16½.

August 6—Charley T. 1-1, Modicum 2-2. Time—2:20, 2:17.

Of the six races trotted, Charley T. won 4, and Modicum 2.

Owing to an oversight it was not announced from the judges stand last Saturday that Charley T. was the winner of the Clark-Hoffman cup, but this should have been done.

Charley T. is a black gelding by Zombro 2:11, dam Sarah Benton, dam also of Ella Madison 2:12¾, by Albion 5514, grandam Bessie by Inca 557. He was foaled at Colton, California, and bred by Mr. W. A. Murphy, now of San Francisco. Charley T. took his record of 2:10¼ in a race at Fresno in July last year in the second heat of the 2:12 trot. He won the first and second heats of the race in 2:11 and 2:10¼, but was beaten the next three heats by the Zombro mare Era 2:10.

The other races held last Saturday afternoon were very interesting, Mr. Ottinger's driving two winners during the day and Mr. Hoffman two. The other races went to Capt. Matson and F. L. Matthes. Results:

First race; free-for-all pace, one mile:		
D. E. Hoffman's Dictatum	1	1
J. Perry's Little Medium	2	2
H. M. Ladd's Ringrose	4	3
H. Boyle's Dioden	3	4

Time—2:14¾, 2:15.

Second race; class C trot; one mile:		
Captain H. Matson's Bird Eye	2	1
R. Conson's Dividend	1	2
A. P. Clayburg's Charles II.	3	3
R. Nolan's Billie Burke	4	4

Time—2:24, 2:24½, 2:24.

Third race; free-for-all trot; one mile:		
A. Ottinger's Charley T.	1	1
H. Boyle's Modicum	2	2

Time—2:20, 2:17.

Fourth race; three-year-old pacers; one mile:		
D. E. Hoffman's Balboa	1	1
H. Boyle's Zoe Dell	2	2

Time—2:28, 2:22½.

Fifth race; class A trot; one mile:		
A. Ottinger's Mike Kelly	2	1
F. L. Matthes' Raymond M.	1	3
F. W. Thompson's Lady Washington	3	2

Time—2:22¾, 2:21, 2:20¾.

Sixth race; class B trot; one mile:		
F. L. Matthes' Walter G.	1	1
F. von Issendorf's Cita Dillon	2	2

Time—2:28, 2:23¼.

ABSORBINE AMONG THE TRAINERS.

ABSORBINE is a great favorite among the trainers and is in constant use by them. Whenever they need a remedy for getting the horse in condition for the race, relieving inflammation of any kind, or treating bruised, swollen tendons, they apply ABSORBINE and the horse goes to the race sound. Harry Benedict of East Aurora, N. Y., reported under date of June 5, 1910, as follows: "I have used ABSORBINE for a long time, in fact ever since it has been on the market, and I think it is one of the very best remedies known to veterinary service. It does all it claims to do. I use quite a little of it." A splendid preparation to use in case of Bog Spavin, Big Knee, Bruised and Swollen Tendons, Capped Hock, etc. On sale at druggists, \$2.00 per bottle, or sent direct upon receipt of price. Write for descriptive pamphlet, sent free. W. F. YOUNG, P. O. F., 54 Temple Street, Springfield, Mass.

PROOFS FAR AND NEAR.

JUDKINS, Texas, July 16, 1910.

Troy Chemical Co., Binghamton, N. Y.: Gentlemen: Please find enclosed check for five dollars for a bottle of your "Save-the-Horse." I used one bottle of your liniment on a good young horse which had spavin; he was not fit for use for two years and one bottle cured him, nearly two years ago, and he has never shown any sign of lameness since. Yours truly, T. M. WADDELL.

NOTES AND NEWS

Uhlman's mile in 2:01 to wagon is the world's record for a mile at that hitch without a windshield.

Sonoma Girl's new record 2:04½, is the world's record for a trotter eleven years old.

Colorado E. worked a mile in 2:06½ at Kalamazoo and they are predicting 2:04 for him this year as a three-year-old.

The Woodland Fair and Race meeting will open Wednesday, August 24th, and will continue during the rest of that week.

Thirteen heats and the slowest in 2:15 is a pretty good showing for the opening day of the Breeders' meeting.

There were never so many lame horses at the first meeting of the year as showed up at San Jose this week.

The three-year-old daughter of John A. McKerron and Lou Dillon recently worked a mile in 2:15, with the last quarter in 30 seconds.

It is thought that The Eel 2:02¼ reached the limit of his speed last year, but he may knock a fraction off it some day when least expected.

Rain prevented racing at the North Randall track, Cleveland, on Wednesday of this week, consequently the meeting will not end until this afternoon.

The Barstow trotters and pacers will be sold at the San Jose track this forenoon. There are some high class young horses to go under the hammer.

Horses that do not figure to be in the money at the end of the third heat, must go to the barn according to the new rules of the National Association.

\$20,000 worth of auction pools were sold on the Chamber of Commerce stake this year during the hour before the race was called. The pools averaged \$300.

While Starter Kenney made a few starts that were criticised on the opening day of the Breeders' meeting he did not permit long delays in scoring and sent the horses away generally when all were on their strides.

The five colt stakes offered by the Los Angeles associations are to be raced this year at Woodland, but next year they will be held at Los Angeles which will then have the best appointed track on the Pacific Coast.

The world's record two heats held by a pacing stallion, made by Joe Patchen in 1899, when he won in 2:03, 2:02½, was lowered for the first time when Ross K. paced two heats in 2:02¼ and 2:03 at Detroit last week.

Conqueror 2:10½ is by Direct Heir 30445, out of La Belle 2:16 as a two-year-old. Conqueror took a record of 2:13½ at Fresno in 1908. He is a full brother to Amado 2:16 and was bred by Mrs. A. C. Severance who also bred his sire.

There is plenty of material for a good story from "Trotwoods" pen in the fact that Correctly, the handsome brown stallion by Directly that took a record of 2:11 at Columbiana, Tenn., recently, was bred by Plummer Webster, the colored man that Trotwood has made famous in his Tennessee stories as "Old Wash."

Necia 2:13¾, winner of the two-year-old division of the Horseman and Spirit of the Times stake at Detroit last week, is out of Nettie King, the daughter of Mambrino King that produced The Abbot 2:03¼ trotting, The Abbe 2:04½ pacing, and several others. Necia won the colt stake on the same afternoon that The Abbe won the Chamber of Commerce stake.

The San Jose track was in very fair condition the day the Breeders' meeting opened. This track is undoubtedly one of the best and fastest in the country when properly worked. A great racing and training plant could be made out of the San Jose Driving Park, but at present there are few appointments except track and stalls.

Prince Lot trotted a good race in the 2:20 class trot at San Jose. He must have beaten 2:12 in every heat, and it was only because Elmo Montgomery drove a little better finish than Spencer that prevented Prince Lot from getting third money.

Dr. Lecco is one of the best prospects for a 2:06 trotter there is in California. He is a large, handsome horse, game as a pebble, a bull dog trotter and his breeding is about as good as any in the books, as he is by Lecco 2:09¾, first dam by McKinney 2:11¼, second dam Stemwinder, dam of Directum 2:05¾, etc., by Venture 2:27. He is owned by C. H. Durfee of Oakland, son of C. A. Durfee who trained and drove the horse.

The heat winners on the opening day of the Breeders' meeting were sired by Sidney Dillon, Lecco 2:09¾, Nutwood Wilkes 2:16½, Direct Heir, Highland C. 2:19½ and Dictatus 2:17.

Helen Stiles 2:10¾ and Dr. Lecco 2:11½ are two pretty good records for unmarked trotters to take in their first race this year. C. A. Durfee trained and drove both and we doubt if any other trainer ever marked two green trotters below 2:12 the same day on this coast.

Lady Inez 2:12½ trotted a mighty good race at San Jose Wednesday even though she was beaten. The handsome little mare lowered her record in the first heat of the race and came back in the same notch almost in the third heat. She should improve later on and under favorable conditions will trot a mile in 2:10.

Rapidan Dillon looked to be dead lame and sore when warming up for the 2:12 trot at San Jose on Wednesday, but after finishing fifth in the first heat and fourth in the second, warmed out of her lameness and was a good second in each of the three heats that followed, earning third money. Walter Maben gave her a splendid drive.

Zombronut 2:11¼ is the same handsome horse and bold going trotter he was last year. He looks a little high in flesh yet and impresses one as a horse that will be very hard to beat in his class a little later on. He is one of the best looking trotting stallions ever seen on the circuit, and but for the "feather boa" he wears would make a very handsome picture in harness.

J. P. Patery, the Oakland horseshoer, has invented an adjustable stirrup for sulkies that can be put on or taken off in a few minutes. Any sulky can be made to fit long legs or short ones in a jiffy. Mr. Patery fitted them to several sulkies at the Breeders' meeting and they promise to become very popular.

Little Dick's mile in 2:10½ in the third heat of the 2:14 class pace at San Jose last Wednesday was a surprise to many. This "iron horse" has been raced, matineed and driven over the roads for several years without a let up and this heat is the fastest he has ever gone. It was all the more commendable for his finishing a close second in the previous heat which was in 2:11.

LIHERO, br. s., by Jas. Madison.

Just beaten an eyelash by Helen Stiles in 2:11 at San Jose last Wednesday.

A number of important changes in state stallion laws have been made during the last few years, and the business of standing stallions for public service is now surrounded by considerable restrictions in several states. Even pure-bred stallions offered for sale as well as for service in Colorado, Idaho, Utah, Nebraska and Iowa must now have state license certificates. The other states requiring stallions to be licensed for service are: Illinois, Kansas, Kentucky, Maryland, Minnesota, Montana, New Jersey, New York, North Dakota, Vermont and Wisconsin. Jacks are included in Idaho, Kentucky, Maryland, Montana, New Jersey and Wisconsin. Provisions for excluding unsound stallions from lawfully standing for public service are made in the laws of Idaho, Illinois, Kansas, Minnesota, Montana, New Jersey, North Dakota, Oregon, Utah and Wisconsin. A stallion which does not have a license to stand as a pure-bred must be posted and advertised in conspicuous type as a grade, or some other specified term descriptive of his inferior breeding, in Colorado, Iowa, Kansas, Montana, Nebraska, New Jersey, North Dakota and Wisconsin. A lien on both mare and foal for the service fee is provided by law in Alabama, Arkansas, California, Idaho, Maryland, Michigan, New York, Oregon, South Dakota, Utah, Washington and Wyoming; and a lien on the offspring alone is provided in all of the other states except Arizona, Connecticut, Maine, Massachusetts, Montana, Nevada, New Jersey, New Mexico, Ohio, Oklahoma, Pennsylvania and Rhode Island and the District of Columbia. Both jacks and bulls are also provided with a lien in the same way as stallions in Alabama, Arkansas, California, Indiana, Kansas, Kentucky, Florida, Georgia, Louisiana, Mississippi, Minnesota, Missouri, Nebraska, North Carolina, South Carolina, Tennessee, Texas, Virginia and West Virginia.—Breeders' Gazette.

HIRAM JOHNSON ALSO FAVORS FAIRS.

A. L. Scott, Esq., President California Harness Horse and Breeders' Association, San Francisco, Cal.

My Dear Sir:—I am just in receipt of your letter inquiring my attitude toward State and district fairs. I have gone directly to the people in this campaign and without equivocation have stated the issues upon which I am making this fight, and I have always welcomed any legitimate questions with reference to any matter of public interest. That there may be no doubt as to my stand in the matters involved in your letter, I take pleasure in stating my views upon them.

I favor a properly conducted State Fair and a limited number of District Agricultural Fairs and believe in the proper encouragement and support thereof by the State.

I believe that competitive exhibitions for premiums of agricultural and horticultural products and live stock, and the desire to excel excited by such exhibitions among the farmers and breeders tend toward better productions along these lines.

If elected Governor, I would favor and sign a bill appropriating money for District Fairs, but would insist that they be conducted in such manner as to make them of educational value in bringing out for exhibition the best products of the State. Realizing that the value and success of these undertakings depend upon the character and purpose of the members of the board of directors charged with conducting them, none but public spirited men of known integrity, uncontrolled but by a desire to secure the best results for the farmer and breeder would receive consideration at my hands.

Very truly yours,

HIRAM W. JOHNSON.

August 10, 1910.

OUR LOS ANGELES LETTER.

It is beginning to look as if the new track at Agricultural Park might be completed by Thanksgiving Day, or at any rate in time for the Xmas matinee. The surveys have been made and the profile drawings finished; the track is all staked out and bids for the work advertised for; the authorities are in touch with Mr. Allen, the track builder, and plans for the stables are being discussed. The stalls will be built in sections in case of fire and will be about the same size as the old ones, 12x12 feet, but with at least an 8-foot hood extending over each to keep the sun and rain from beating in on the horses and to give a shady place at any hour to do a horse up. It most fortunately has been found possible to save the majority of the handsome old pepper trees that stood in front of the old line of stalls and formed one of the beauty spots of the park. Several members of the Los Angeles Driving Club, among them C. A. Canfield and Clarence Berry, and possibly one or two others, will build their own training barns according to their own ideas of convenience and comfort.

Wm. G. Durfee and J. S. Stewart are the only two Los Angeles trainers at Santa Ana; the others have either taken their "doll babies and gone home" or are out on circuit. Geo. W. Ford will ship Goldenut to Portland probably next week, where he will start in the \$10,000 2:12 class.

Copa de Oro and Carlok in each worked a mile in 2:17 last week, the pacer traveling the last eighth in :14½ and Carlok in stepping the same half a second slower. Durfee tells me Carlok in has not offered to leave his feet this season and does not touch a hair anywhere; so far quarter boots and ankle boots are the only protection he has had on, and those only on the principle that an ounce of prevention is worth a pound of cure. The horse is certainly going absolutely sound and is taking his work as if he enjoyed it.

Carlok in has a yearling colt out of Lady H. by Del Coronado that is a sure enough trotter. He has had very little work, but can already show a thirty gait at any time Durfee chirps to him.

Leonardo McKinney is working nicely after her let-up, and Kid Dillon will begin his work to-day after a three weeks' let-up.

Durfee's fast two-year-old pacer Del Oeste has been turned out for the balance of the season, as he has no engagements to fill till next year.

Clarence Berry's three-year-old pacer Aviator worked a mile in 2:20 with the last eighth in 14½ seconds. This, with the eighths of Copa de Oro and Carlok in goes to show that the stretch at Arcadia has nothing on the same piece of "road" at Santa Ana. A. E. Heller of Sauer has a two-year-old side-wheeler by Young Hæ, dam by Nutford, that promises to be as fast as his Hal McKinney, who was reported last season as a three-year-old to have worked a mile in 2:04¾. This youngster has the advantage of going without the "straps" and last week worked a half in 1:04, with the last quarter in 30¾ seconds.

Hal McKinney has not been worked at all so far this year, Heller just giving him road work to keep him in condition for the stud. Now, however, that his season, which was a good one, is over, he will begin to step him along.

E. A. Montgomerly has decided not to send his colt Victor Mc by Red McK. to Woodland, where he was entered in the Canfield-Clark Stake No. 1, as Walter Maben, his trainer, has decided to ship from San Jose to Portland and could not go to Woodland to drive him. It's a pity, as he has shown his ability to trot in 2:20, and that ought to get him a piece of the money. He would have been the first of the "get" of Red McK. to have faced a starter.

JAMES.

JOHN NELSON BLOOD IN AUSTRALASIA.

[By Wm. G. Layng]

The rejuvenation of that remarkable fourteen-year-old trotter Country Jay 2:04½ demonstrates most clearly that "blood will tell," for, besides inheriting the good game strains which have made his sire Jay Hawker so famous, there is, in the breeding of his dam, a strain of blood that means "gameness" wherever it exists. I refer to the blood of old John Nelson, that chestnut stallion which was brought to California in 1859 and became so noted for his untiring gameness, energy and courage, as well as excellent trotting action. To the horsemen who lived in California in the early sixties and seventies the characteristics of the John Nelson family were very familiar and any trotter that traced either on the paternal or maternal side to this stallion was always spoken of as being a "John Nelson, and you know what that means." He could trot the last mile of a fifteen mile journey as fast as the first and it took a strong armed man to drive him. All readers of your esteemed journal are familiar with the names of John Nelson's descendants, such as Sister V. 2:18½, Albert W. 2:20, a splendid sire; Valensin 2:23, Blanche 2:25½, Controller, holder of the 10-mile record in harness, 27:23¼; Arol 2:24, Hazel 2:28, Waldstein 2:22½, late holder of the five-mile trotting record; Tags 2:11½, Kentucky Todd 2:08¾, Happy Dentist 2:11½, Little Albert 2:10, the gamest trotter that ever left California to compete with the best in the United States on the Grand Circuit; Neernut 2:12½, Neereta 2:09½, Icon 2:10, now in Europe; Judge Parker 2:10¼, Nogi (3) 2:17½, Goldenhut 2:11½, Robin 2:22¾, Charley D. 2:06¾, and many others, besides Lou Dillon 1:58¾, the fastest trotter on earth, that it is claimed by some traces to John Nelson through her dam Fly. To tell what the John Nelson blood has accomplished in California and, in fact throughout the whole of the United States and Europe, would occupy considerable space but what it has done for the trotting horse industry of Australasia is almost as incomprehensible to horsemen there as it is unknown here. Four sons of Albert W. 2:20 (he by Electioneer out of Sister by John Nelson) were exported to New Zealand, viz: Albert Victor, dam Victoria by Echo; Del Paso dam Augusta by Gus 2:26¾; Mangan's Electioneer, ram Silica by Algona, and Sacramento, dam Promptness by Prompter. All of these have been sires of excellent performers, one of the latter being Albertorious, holder of the two-mile record 4:41, jointly with Blackchild, a son of Rothschild. This sire Rothschild was out of Belle Briggs by Jim Lick, out of a mare by John Nelson, and, in my opinion he is the greatest sire (considering his opportunities) that was ever foaled in America or anywhere else. His full brother, Osterley, was the first trotter to make a record as fast as 2:25½ in Australasia. He also holds the three-mile record, 7:30¾, made in Victoria, 1903. He sired Emulator 2:17 1-5, holder of a mile record championship, and Lightfoot 2:18¾, and many more that have made his name a household word wherever trotters are spoken of in Australia. But Rothschild was, as I stated above, one of the most wonderful sires known. He was only trained a little by Alexander White but never showed that he possessed much speed; but he had as much action all around as McKinney 2:11¾, a trait which I consider one of the very best in any level headed sire. His fastest performer is the "Australian Whirlwind" Dan Patch 2:09 1-5, whose mile over that rough grass three-quarter mile track in Auckland, June 20, 1910, is still the leading topic of conversation among horsemen everywhere in the Antipodes. Revenue 2:11 4-5, a grand going trotter, the champion of 1910. Almont, another champion 2:12½, two miles in 4:40; Jessie Palm 2:18, two miles 4:43 2-5, Lord Elmo 2:20, Blackchild two miles 4:41 and at least 100 other good game and consistent performers. His sons and daughters are proving invaluable as sires and broodmares, and every stock farm owner feels proud of the honor of owning his descendants even unto the second generation. Scarcely a race takes place in New Zealand that does not include at least one or two Rothschilds. Their gameness and stoutness is unquestioned, even though they come on the maternal side from most ordinary mares. Invariably, they are made favorites in the betting because when it comes to a close or driving finish the old John Nelson blood through these Rothschilds asserts itself and the race is never ended with them until they pass the wire. Rothschild is twenty-one years old and as potent as when he was five. He is owned by Messrs. Nicoll and Pringle, two prominent horsebreeders of Ashburton, New Zealand, where he will remain until it is time to place him beneath the sod, every year adding fresh laurels to his fame and lustre to his name.

LOU DILLON'S FIRST DOES WELL.

Lou Billings, three-year-old filly by John A. McKerron 2:04½, dam Lou Dillon 1:58½ was driven a mile in 2:12½ by John Dickerson at Cleveland last Tuesday. She trotted the mile handily accompanied by a runner. This is the first foal of Lou Dillon and she was worked a very little as a two-year-old. She is very handsome and a good-gaited trotter.

ANSWERS TO CORRESPONDENTS.

W. J. C. Ramsay, Watsonville.—The record for one-fourth mile, running, is held by the horse Boh Wade, that ran that distance in 21¼ seconds at Butte, Mont., August 20, 1890, when a four-year-old.

HARNESS RACING AT KENTFIELD.

Kentfield, Marin Co., Cal., Aug. 8, 1910.

At a meeting of the Kentfield Driving Association held at the office of the secretary, it was not fully determined just what the extent of the prizes would be for the different events to be pulled off on the 5th and 9th of September, but it was the feeling of those present to hang up pretty good prizes if the entries would warrant it when they are all in. Several of the members sent word to enter their horses but it was decided to allow another week for the completion of the entries.

The following entries were made subject to revision at the meeting to be held on Aug. 15, 1910.

2:20 class, two in three; half mile—Frank Paratia names Eden Vale, McCurdy names General Smith, George McDermott names Lou Dillon, C. W. Rice names Billy B., Dr. A. J. Rydburg names Bird Catcher, Emil Blumhinat names Black Bess, Tom Doffenbach names Cock Robin.

2:30 class, two in three; half mile—Bonfilla names Dandy, California names Black Wilkes, C. M. Jones names Ross Dale.

2:35 class, two in three; half mile—Henry Mariens names San Rafael Wilkes, C. W. Rice names Skidoo, O. Emerald names Don, Frank Paratia names Soup Bone.

Three-minute class, two in three; half mile—Ben Tomkins names Betty, F. P. Grady names Lady, Jack Meechi names Starlight, Frank Paratia names Little Sid.

The entries for the 5th of September, will be closed Aug. 15th, and those for the 9th of September will remain open until Sept. 6th, at 6 p. m.

There is promised some very speedy stepping on the Speedway at both of these matinees.

UHLAN TROTS TO WAGON IN 2:01.

Cleveland, August 9.—What will probably be considered the greatest mile ever trotted was reeled off yesterday afternoon over the North Randall track by Uhlán in 2:01 to wagon, driven by his owner, C. K. G. Billings. He started to beat his world's record for geldings to wagon, made over this track last month, when Billings drove him in 2:02¾.

Had it been a windless day and a shade warmer, it is the unanimous opinion of horsemen present that Uhlán would have finished in 2:00.

The performance of Uhlán not only lowered the mark aimed at, but exalted the world's trotting record to sulky made without a runner in front. Uhlán was accompanied by a running pacemaker.

Billings drove wide around the lower turn, but the quarter was reached in :30¾. Uhlán trotted the second quarter in :29½, the half being done in :59¾. Through the third quarter the gelding had the wind in his teeth, and it stopped his rush somewhat, yet he covered it in :30½, reaching the three-quarters in 1:30½. Through the home-stretch the trotter and runner raced head and head, but the long fight at a killing clip began to tell on Uhlán inside seven-eighths, and he tired visibly, but Billings lifted him along with a piece of consummate reinmanship, and he flashed under the wire in 2:01.

ITALY TO THE FRONT.

When the American continent was unknown, and England an obscure province of the mighty Roman Empire, over two thousand years ago, there were horse races in Italy. The Romans were the first of the great nations to appreciate the value of the horse and the knights of the equestrian order were the elite of the army. In times of peace the chariot races were favorite amusements of the vast crowds at the coliseums.

To-day the trotter is decidedly to the fore in that classic land and though they have imported a few Russian Orloffs, the tendency is to the American trotter. They have in a few years imported quite a few good sires, such as Elwood Medium 2:24¾, by Happy Medium, Atlantic 2:21. Later on Onward Silver 2:05¾, Colonel Kuser 2:11¾ and Codero 2:09½, and others followed. These have been bred in many instances to native mares, Orloff or American mares, and a trotting breed is being gradually developed. The champion three-year-old trotter in Italy last season was Gilsner Kuser, who took a record of 2:15. She was by Colonel Kuser 2:11¾, out of a mare by Joktan 2:19¾. This young champion started in thirty races, winning twenty-four, was second in one, fourth in two and unplaced in three.

The races in Italy are from a mile to a mile and a half. This is a market which should be cultivated.

Breeders should adopt an aggressive policy and they should not be content with the home market. The manufacturers of all classes of machinery invade all parts of the globe and sell their goods. The American sewing machine is on every continent and our agricultural implements are a close second.—Horseman..

There was a lot of discussion in the grand stand at San Jose over the decision in the first heat of the 2:20 trot. The spectators seemed pretty evenly divided as to whether Helen Stiles or Lijero finished in front. Budd Doble who was one of the timers and who watched the finish very closely from a position right over the wire, stated that Helen Stiles got her nose in front by about six inches at the finish.

Fred Ward, the Los Angeles reinsman, had a strenuous day on Wednesday, the opening day of the Breeders' meeting. He had a horse in every race and drove eleven heats.

WINNER OF CHICAGO HORSEMAN'S FUTURITY.

When Emily Ellen trotted her three sensational miles of 2:12¾, 2:12¾ and 2:10¾ at Detroit and secured for her owner the rich reward of \$7800, and a magnificent silver cup, she within a very few moments of time, rose from practical obscurity to the point of being one of the real sensations of the present remarkable racing season.

Emily Ellen is a very attractive, nicely gaited black filly by Todd 2:13¾, the great sire of early and extreme speed, and is out of Morning Bells by Bow Bells 2:19¾, therefore being a re-enforced descendant of Electioneer, a stallion whose get at one time held practically all of the records for one, two and three-year-olds, consequently she can truthfully be said to inherit her race qualifications from natural sources.

Emily Ellen was bred and is still the property of David M. Look, of New York, a gentleman who is quite an enthusiastic lover of the light harness horse and a member of the road driving brigade of the metropolis.

As a two-year-old, this filly showed evidence of developing into a very fast trotter, but went wrong to such an extent, that Lon McDonald considered it advisable to carry her over. Practically no mention has been made of her all spring, and as a result but a very limited number of people had any idea of her real capacity.

For that reason she showed at the post an entirely unknown quantity and attracted very little consideration, as she was opposed to Eva Bellini, second to Native Belle (2) in 2:07¾, one of the real cracks of 1909, Sue D. (2) 2:15¾, a Todd filly that was a stake winner last season, Chatty Direct the highly touted Eastern juvenile, that was known to have been close to 2:10, the Proctor pupils, Bergen (2) 2:26¾ and Bon Vivant (2) 2:16¾, that showed around 2:12 at Kalamazoo, last week, in front of at least fifty horsemen and also Woodford Todd (2) 2:24¾, whose praises have been sung all spring in the Blue Grass State.

Such a sextette was indeed sufficient to cause an unheard of filly to be slighted in summing up the possible ending of the event, but Emily Ellen demonstrated within a short space of time, that she, though new to the public, was the superior of each and every one of her competitors in all angles of the game and concluded the ceremonies by trotting the third heat in 2:10¾, and the final quarter in 30¾ seconds—a 2:03 gait.

This filly at the present time ranks as the star three-year-old of the racing season, and in her next engagement she is sure to be strongly considered by everyone, as she has performed in a manner never before equaled at this time of the year.—American Sportsman.

COLORADO E., A GREAT THREE-YEAR-OLD.

When Gen. Watts trotted to a record of 2:06¾ in 1907 it was freely predicted that it would be many years before another three-year-old would appear that would be equal to heating his great performance. At Kalamazoo, recently, however, the three-year-old colt Colorado E. worked a mile publicly in 2:06¾, with the last half in 1:01¼, leaving no doubt in the minds of those who saw the performance that he was capable of trotting a mile in 2:05. Colorado E. is the result of combining the blood of two of the greatest of the younger sires of this period. His sire is The Bondsman, he by Baron Wilkes 2:18, out of the great mare Sorrento (dam of Jay Hawker and The Tramp), by Grand Sentinel. The dam of Colorado E. is Flossie McGregor, by Jay McGregor 2:07¾, he by Jay Hawker 2:14¾, out of Notre Dame 2:22¾, by Robert McGregor 2:17½. The second dam of this remarkable colt is Black Bess 2:22¾ (a double producer), by Wellington, a son of Kentucky Prince, whose dam was Meg Merrilies, by Ethan Allen; third dam Strathliene 2d, by Strathmore; fourth dam Patchiene, by Mambrino Patchen. An analysis of the blood lines of Colorado E will show that he has an inheritance that accounts for his greatness, and if, as seems likely, he captures the honor now held by Gen. Watts, the record will go to a colt most worthy to hold it on breeding. Colorado E.'s mile at Kalamazoo shows that Native Belle, no matter how good may be her form, will not be able to win the futurities for the three-year-olds this year without making as sensational a record this year as she did last in her two-year-old form.—Horse World.

THE PHOENIX FAIR.

Although the greater part of the work of preparation for the 1910 territorial fair to be held at Phoenix November 7th to 14th has been directed by the fair commission looking to the improvement of the livestock and the industrial department exhibits, the speed department has by no means been neglected. This is apparent from the program of racing events issued by the fair secretary.

More than \$20,000 will be hung up in purses for the early closing events participated in generally by the eastern horse owners and their stables. For Arizona horses \$5600 will be hung up and about \$3000 for runners. As usual there will be the famous Arizona Copper stake races one for trotters and one for pacers. Entries received so far indicate that more horses will compete for honors at the coming territorial fair than have ever before been on one track west of the Mississippi. Entries close Sept. 15th.

ROD, GUN AND KENNEL

CONDUCTED BY J. X. DOWITT.

GOSSIP FOR SPORTSMEN.

From very recent developments it will appear that the famous Suisun marsh will remain a duck hunters' domain for an indefinite period.

Many sportsmen have been much interested in the progress of a reclamation scheme, which report and current rumor claimed would result in the reclamation and colonization of large tracts of the marsh land southwest of Suisun and west of the railroad track. Several thousand acres were bound up and elaborate plans were formulated to turn the whole district into a cabbage patch.

Options were recently forfeited upon lands owned by E. J. Okell, G. E. Tomassini, William Goosen, E. B. and A. L. Stone, F. Peter Smith, John Cook, D. Cereda, the Freehorn tract and others.

The consummation of the project would have entailed the expenditure of a large amount of capital, but just why it fell through is not yet given out.

The interests behind the reclamation of this vast tract were, for the time being, energetic and expended considerable money securing options and working out the plan of putting the rich marsh land to believed profitable commercial uses.

The Seymour Gun Club has recently completed the purchase of 250 odd acres of marsh land, a portion of the Chamberlain tract, from Frank Maskey, Frank Daroux, Mrs. Louise Harvey of San Francisco and Edward Dinkelspiel of Suisun. Captain J. C. Moore, Captain John Seymour and other San Francisco sportsmen are the purchasers. A commodious clubhouse will be erected before the fall shooting season opens. The club has already made substantial improvements on the property.

James Irvine, Charles S. Wheeler, Guy C. Earle of San Francisco, and Arthur Breed of Oakland are associated in the purchase or the Hermann Oelrichs tract of 1,100 acres located on the southwest end of the marsh, west of the railroad tract principally. Deeds were placed on record in Suisun last week. James Irvine being named as the purchaser. This tract will be used, as before, as a duck hunting preserve.

Godfrey Eacret, Frank P. Roop and Harry B. Smith of this city returned last week after a three weeks' trip in the Coast Range mountains, some fifty miles west of Corning, Tehama county, in which deer hunting and fishing were the chief amusements. They were accompanied from Corning by W. Herbert Samson, one of the Supervisors of Tehama county, and George Hoag, who constituted the hosts of the occasion; Chester and Vernon Flournoy and Arthur Henderson, who did the packing.

The twenty-five-mile trip from Corning to Paskenta was made by automobile and at that point the party took to horseback, with a pack train to carry the provisions and blankets. From the outset of the long pull up the mountains, there were evidences of deer, and bright and early on the morning of July 15th members of the party were out for their first hunt, which resulted favorably, three bucks falling before their rifles.

The first permanent camp was located at Haynes' Delight on the north fork of the Eel river, where the hunting proved the best. Later, camp was moved to the north side of the south Yalo Bally, but the fact that the deer were feeding at night in the light of the moon somewhat interfered with results.

It was a most enjoyable outing, however, and with the limit the party broke camp the middle of last week. Trout fishing proved to be excellent in the various streams in the vicinity of the different camps, particularly in Thomas creek, and there was a sufficiency of venison and fish for the table.

Although a rough section of the mountains, the country abounds in game and fish, as those who have been so fortunate as to make the trip can testify. Henry Hatch, one of the forest rangers, and Bruce Henderson were among the visitors at the Samson-Hoag camp the last week of the stay in the mountains.

After the return from the Trinity and Tehama county mountains the San Francisco members of the party, together with George Hoag, Bert Beaumont and Leo Hoag of Corning, had a dove hunt in the valley in which there was no trouble in getting the limit.

Arthur Henderson, who packed in the party, is thoroughly acquainted with the mountains. He is located at Paskenta, Tehama county, California.

The automobile is coming to the front as a ready and comfortable factor in conveying parties of deer hunters or dove shooters to distant resorts. Numerous hunting trips have recently been made by auto conveyance.

In many hunting districts the statutory prohibition against the use of dogs in "jumping" bucks is keenly felt as a great handicap in getting a glimpse of a deer or coming within range for a shot.

As it is, the statute makes this exception—that a wounded deer may be followed and located by the hunter's dog. This exception has, it is claimed, often been given a very elastic construction. There is no objection, in the law, to a deer hunter taking

his dogs with him in leash on a hunt, and who shall say that the temptation, in likely territory, to slip the dogs and send them through a bunch of heavy cover, can always be put aside. Deer hunters may not be any more gifted with the quality of non-indulgence than are ordinary citizens, particularly so in the heat of the chase. At all events, dogs are said to be more numerous in some camps and preserves than ordinary uses would require.

Hill stalking has been aptly described as probably the most exhilarating sport known. It constitutes a test of physical and mental capacity which few other sports afford in a like degree. The keen air, the spacious surroundings, the weird voices of the wilderness, the immense solitude seem in themselves to stir the blood and nerve the frame for exceptional achievement; and much of the fascination of the sport lies in its direct appeal to the personal qualities of the hunter, coupled with its ability to put those qualities to the test.

Primitive instincts—a quick eye to find the quarry, a feline cunning in approach, a sure aim and steady hand to kill play a principal part. But for a winning chance the hunter must be sound in mind and limb, a good mover, supple in constrained positions, swift in calculation, capable of sustained effort, and absolutely self-reliant throughout. He must know the habits of his game and be able to shift about handily to humor the wind.

All this is in the play, heroic as it may be, and many bucks are bagged under these conditions. Some hucks, however, materialize after a quiet game of pedro and a comfortable lunch on a shady hillside; silver bullets are magical in laying low the antlered monarch. But what's the difference? The venison haunch tastes as good, and the story of the hunt told at the club is the permissible and expected duty of the host. Surely the deer hunter can not be accused of usurping the angler's prerogative. He is entitled to the same indulgence, the field is open.

Not for years have deer been so plentiful in Marin county as they are this season. San Rafael sportsmen have bagged many hucks. The Victor Club has five bucks tallied, shot by Messrs. Hersog, Pearson, Reide, Collins and Cochrane. The Big Rock Club members have brought in four deer, the Lucas Valley Club count is two, shot by Barr brothers. The Country Club and Tamalpais Club members accounted for seven bucks early in the season.

Bolinas ridge has furnished nearly twenty bucks since the season opened. Last Sunday four deer were shot in that section by Messrs. Longley, Genassi, Martinez and Beach of San Rafael.

ANGLING NOTES.

"The boy I love is up in the gallery," says the pretty lady on the stage, and no doubt he was a very nice boy indeed, but I never met him, and I think he must have grown up worse, for my own occasional gallery has sometimes contrived to worry me exceedingly. On various days I have been assisted by a ring of watches, and seven pebbles shied into a pet pool; have been bathed at, and had my fish borrowed for breakfast; or in particularly annoying instances, kindly pity has been taken for my seeming inability, and impossible advice given which in weak moments I have tried to carry out. "No." At cricket when one has just placed the ball beautifully to the leg boundary, or at football when one has kicked a goal, even I imagine in the brief display of a neat shoe in getting on vehicles of sorts; a sympathetic gallery is a joyful circumstance, but out fishing spectators must possess an unusual store of discretion or personal attraction if they are not frequently quite the reverse.

The day on which I received a welcome invitation to lunch, with an aftercourse of unfished creek, will not soon be forgotten. Lunch finished, the flyrod was made ready and next as pleasant information I heard, "We are all coming to see you fish," and turned hastily to count heads. One, two, three, yea, verily, eight precious souls, and a cadet who was eventually more precious to me than all, for when my flies erred among the cabbage trees and bushes by the creek side he was ever there to release them. It was a horrible place to fish, with flag-grown pools and overhanging grass, and I will not dwell on misfortune, writes Iron Blue in a New Zealand exchange. I did obtain a brace of trout, also a firm connection with a directing arm belonging to one of the eight, and then it was time for us to go.

All things considered one of the surest guards against a bag of fish is the apparently simple remark "If you will wait a moment I will catch a trout for you." Once it was made to a farmer, on whose land I happened to have trespassed and like a good fellow he instantly resolved to assist me as a scout, forthwith he went ahead and began peering into the pools in search of possible prey, returning hot-foot with tidings of two-pounders, and becoming more and more disappointed as time went on. At length his opinion of fishing in general, and of me in particular, had decreased so much that it allowed him to follow instead of going in front, and afterwards his trout was soon captured. He accepted it thankfully, chiefly, I fancy, because he could now go

away without seeming rude; for he mentioned casually that he could have caught a dozen with his hands in the hour we had spent in catching one, and I went onwards, wishing somehow that I hadn't met him.

On a recent afternoon a sundowner was an interested spectator, and having an hour to spare before he could reasonably broach the question of board and lodging at the neighboring station, he decided to devote it to criticism of the gentle art. Having begged some baccy he sat down to smoke and advise, and though sport had been good up to the moment of his arrival, it waned under the influence of his presence until I could not get a rise. In turn he insulted my highest principles by suggestions of a worm, a beetle, or a bit of dry bread; and when I named dry-fly as more sporting, he grinned cheerfully and averred that he "liked a bait as would catch a fish." Consider the word "bait" even in remote connection with dry-fly, and you will understand at once that though the ford in front was long and deep, I waded through and thus shook off my follower.

If angling operations are taking place near to a bridge, a gallery is the natural consequence. Speaking of myself, I could no more cross a bridge without stopping to watch anyone fishing in its proximity than I could fly without wings, and I suppose it is the same with others. With elbows resting on the bridge-rail, they can look down on the much-enduring fisherman in amused comfort, and at fitting—or rather unfitting—moments ask aggravating questions about his sport. Sometimes they may do more, and the angler's faith in humanity may receive a shock such as was dealt to mine by four young ladies, presumably on their way from school. They wore half-way skirts and pigtails, and ought to have known better, but their program on the bridge consisted of giggle, drop a stone in the pool I was fishing, and giggle many times, until I retired discomfited, when they flapped themselves slowly away. It grieves me to tell of such doings, but I have always tried to be fair, even on a certain occasion when, having landed a twelve-pounder from the Rangitata after a struggle I thought must interest two ladies on the bank, I heard the words, "Oh, he's caught quite a large fish." "Yes, dear; and she burnt the cakes as black as a saucepan," etc., etc.

PROTECTION OF FORESTS FROM FIRE.

The problem of protecting the forests of the country from fires is receiving considerable attention from associations of private owners, associations of lumber companies, State forest wardens and the National Government, and the United States Department of Agriculture has just issued Bulletin 82, Forest Service, relating to the subject. In spite of all that has been done, however, probably 60 per cent of the private forests have no adequate system of protection.

There are three classes of forest fires: Surface fires, which burn the surface layer of leaves, dry grass, brush and small trees; ground fires, burning the deep accumulation of vegetable mold; and crown fires, which accompany surface fires and burn the crowns of the trees.

Surface fires are the most common and may start under ordinary dry conditions. The severity of the fire, of course, depends largely on the amount of accumulated leaves and brush and the strength of the wind. Surface fires kill seedlings and young trees, but in many cases do not kill the larger trees. Under some conditions they may kill every thing in the area which they cover.

Ground fires occur only when the vegetable mold has become thoroughly dry. They burn slowly, but with intense heat, and are exceedingly difficult to extinguish. They have been known to burn all winter, creeping along under a deep layer of snow. Ground fires usually destroy all trees, killing the tissues of the roots, and the trees die and are blown down.

Crown fires almost invariably accompany surface fires and occur only when the woods are very dry and there is a high wind. Usually all trees are killed. Sometimes, however, where there are a great many hardwoods in mixture with coniferous trees, single trees or groups of trees may escape injury.

As the value of lumber and of the forests increases and the necessity of protecting them from fires as far as possible becomes appreciated, the owners and the different organizations controlling the forests are using every means of securing them against destruction by a thorough patrol system, organized fire-fighting squads with tools and equipment for extinguishing fires located at accessible points, by constantly warning the public against the careless use of fire, and by every other available means. The number of forest guards on the National forests is inadequate for the work, in some cases a single man having the responsibility of protecting 100,000 acres, whereas in most places there should be at least one guard for every 10,000 acres. Prussia has a guard for every 1,700 acres.

The threat of disqualification is held over the "bush" meeting. Such being the case the A. K. C. will lop off over 200 local fanciers form its recognition. The followers of the new kennel governing body affect an extreme indifference to any and all retaliation the A. K. C. may take. Under which king, dogonian? Speak or die!

Drink Jackson's Napa Soda.

AT THE TRAPS.

The fifth Pacific Coast Handicap of the Interstate Association took place at Seattle, Wash., August 2, 3 and 4, under the auspices of the West Seattle Gun Club. Secretary-Manager Elmer E. Shaner was the directing genius of another successfully conducted Coast tournament. A. L. Mottinger, secretary of the West Seattle Gun Club and the members of that organization won many encomiums from visiting sportsmen for many courtesies extended and the thousand and one genial personal efforts which go to make visitors comfortable.

The attendance of shooters embraced the leading shooters of the northwest and representatives of many prominent gun clubs. The San Francisco contingent included Clarence A. Haight, D. W. King, Hugh E. Poston, Ed. L. Schultz, Clarence J. Ashlin and John T. Connelly. Among those on the firing line were many sportsmen well known in San Francisco and to California trap shooters.

Monday, August 1, was practice day, four 20 target events and one at 10 doubles—100 targets in all, was the card. Harry Ellis, of Portland, Ore., led the professionals and the field with 94 out of a possible 100. Archie Bishop, of Nelson, B. C., broke 93. The two Eastern professionals who competed, R. W. Clancy, of Chicago, and Lester German, of Aberdeen, Md., broke 93 and 91 respectively. Lee Barkley, the Seattle crack, knocked out 92, and R. H. O'Brien, L. C. Booth and Earl D. Farmin, expert amateurs, got 91 apiece.

Eighty-six shooters lined up for the first day's program, Tuesday, August 2. Ten 20 target events were shot (the eighth event was at doubles). Mrs. Ad Topperwein of San Antonio, Texas, was high gun for the day with the splendid score of 195 out of 200. Mrs. A. N. Woodward of Pasco, Wash., made the creditable showing of 122 out of 180 targets shot at. Frank C. Riehl led the professionals with 191 breaks. Lester S. German's score tallied 190. Jim McLaughlin, of Seattle, won high amateur honors with 191. A. W. Bishop of Nelson, B. C., broke 189. Ed Schultz was next up with 187 breaks. From the published scores it looks as if a number of the crack shots had hardly struck their stride.

The Preliminary Handicap for the second day, Wednesday, August 3, had an entry of only 64 shooters. E. J. Chingren, of Spokane, won the event and Interstate trophy by smashing 92 out of 100. M. H. Truesdell, of North Yakima, and A. L. Mottinger of Seattle were each but one bird behind. Jim McLaughlin and A. A. Robinson, of Seattle, came third with 90 breaks each. Among the professionals in the handicap 90 per cent scores were scarce as hen's teeth.

During the forenoon schedule, five 20 target sections—No. 3 at doubles, Frank C. Riehl scored 97 out of the allotted 100 targets, losing but two birds in the ten double rises. Hugh McElroy, of Spokane, hit the high amateur average, with 95 out of 100. In the pair shoot he lost but one target. E. D. Farmin with 77 breaks was high amateur gun for singles, 77 out of 80. Archie Bishop shot high amateur average for the day.

J. J. Law of Aberdeen, Wash., on Thursday afternoon, August 4, won the feature race of the tournament the Pacific Coast Handicap, by breaking 97 out of 100 targets shot at F. A. Dryden of Walla Walla shot into second money with 94 breaks; P. P. Nelson of Yacolt won third on 93 kills. Dick Clancy led the "pros" with a score of 93.

The morning program, 100 singles, in 20 target sections developed a sensational performance by Mrs. Ad Topperwein, who broke straight each string. Ed. L. Schultz of San Francisco, F. A. Dryden of Walla Walla and Dell Cooper of Bellingham each broke 97 out of 100.

Ed L. Schultz won first high amateur average with 340 out of 360. E. J. Chingren, 339, was second. Mrs. Ad. Topperwein won high professional average, Frank C. Riehl second. Low, who won the Coast Handicap, shot for birds only. First money amounted to \$126.

Interstate Association's Fifth Pacific Coast Handicap. Blue rocks. Seattle, Wash., Tuesday, August 2, 1910. Ten 20 target events, \$2 entrance, \$25 added. Purses: percentage system—40, 30, 20 and 10 per cent. Event No. 8 at ten double rises—

At the Bay View Gun Club monthly shoot in Alameda on the 7th inst., thirty trap shooters participated in the regular club program. Weather conditions in the forenoon were cloudy, making targets somewhat hard to locate. In the afternoon the west wind blowing from the bay shore cut into the chances for good scores. Hoelle's string of 23 breaks was the top peg in the club race. Ricklefson and Hoelle tied in the double shoot, each cracking 9 out of 12. Both shooters shot the best scores in the Selby trophy event at 50 targets. Ricklefson and L. Vosmurg made the longest runs in a miss-and-out, 7 and 9 respectively.

The team shoot for refreshments and lunch is always a pleasing feature of the club shoots. Captain Ricklefson's team prevailed. If Hughey Wohler had been present in Captain Hoelle's team, results would have been effidretn.

The September shoot will wind up the club's trap season. The closing race will be a 100 target shoot. The winners will be announced at the closing shoot and the winners given their prizes. The scores follow:

Club shoot, 25 targets—									
A. Hoelle	11111	11111	11111	11110	11011	23			
H. Ricklefson	11111	11111	11111	11110	11011	22

Club shoot, 15 targets per man—

Capt. Ricklefson 14, Swales 13, S. Parker 8, Price 11, Foster 7, Jones 13, J. Vosmurg 8, Fox 11, Gillam 3, Hardin 9, Peet 3, Murdock 11—Total 111.

Capt. Hoelle 12, Morss 6, F. Parker 13, Adams 8, Ulrichs 8, Speetzen 8, L. Vosmurg 7, Christman 11, Welch 6, Killman 12, E. Kleesahl 10, Ballo 5—Total 106.

The California Wing Club scores for the August shoot will appear in our next issue. The attendance was not up to the usual numbers. Captain A. W. DuBray shot in both club races. The only straights shot were made during the forenoon medal race. A. J. Wehh, Fred Munday, Tony Prior and Lester Prior each scored 12 birds.

COUNTRY JAY, HIS MISFORTUNES AND HIS SUCCESSES.

Country Jay was bred at R. C. Estill's Elmhurst Farm, near Lexington. He is by Jay Hawker 2:14½, out of Paronella by Parkville, and she out of Minnie Merrill by Young Jim. Paronella was foaled at Elmhurst, raised all of her family of ten trotters there, and is buried under the shade of its magnificent trees. She died in the summer of 1907 while giving birth to Margaret Preston, daughter of The Director General. In addition to Country Jay, Paronella produced Kentucky Todd 2:08¾ by Todd 2:14¾; Judge Parker 2:10¾ by Jay McGregor 2:07¾; Nella Jay 2:14¾ by Jay Hawker; Malise C. 2:17¾ by Clay King; Lady Ripples 2:19½ by The Tramp; Ormonde, trial 2:08¾, by Wilkes Boy; Parachute, trial 2:18, by Red Chute 2:18¾; Paronhurst by Todd 2:14¾, and Margaret Preston by The Director General.

The late W. W. Evans broke Country Jay as a yearling, owning him in partnership with his breeder, and he showed a quarter in 37 seconds. Gus Macey, who was at that time training for Dr. J. L. McCoy, of Kirkwood, Del., took a fancy to Country Jay, and Dr. McCoy bought him from Evans in the fall of 1897. In the spring of 1898 he displayed considerable speed, and it is related that in May of his two-year-old form he was able to trot a 2:10 clip. Before the summer was well on, however, Country Jay fell lame and had to be thrown out of training. Dr. McCoy soured on him, but Macey believed in him and bought him from the doctor, bringing him back to Kentucky in the fall of 1898. Macey persevered with the son of Jay Hawker, but it was not until he was a five-year-old in 1901 that he was able to get him to the races.

Patched-up cripple as he was, he proved to be one of the best trotting campaigners on the Grand Circuit in that year. Beginning at Detroit, where he was second to that grand filly Eleata 2:08½ in what was at that time the fastest M. and M. ever trotted; he did not miss a meeting during the season, starting in thirteen races in eleven weeks and being in each either first or second. At Readville and Terra Haute he won a \$5000 stake, at Hartford a \$3000 stake, at Glens Falls at \$1500 purse, at Providence a \$1000 purse, and he was second in the M. and M. and in a \$5000 event at Buffalo, Columbus, Syracuse and Cincinnati. His total winnings were \$17,312, putting him second to Eleata, who was the largest money-winning trotter of 1901, with \$17,925, to her credit. Through this campaign Country Jay came to be ranked among the best-known trotters in America. The public expressed great admiration for his consistency, good manners and gameness, but he was characterized as the cheapest-looking good trotter that had ever been seen on the Grand Circuit, and was often referred to as "that yellow pup." This because he was small, a yellow chestnut in color, light-bodied, slim-necked, and, as John Hervey once said, "with a low head and apologetic air that used to excite the risibilities of the uninitiated until he turned to score, but at the conclusion of which the jeers at his expense often turned to cheers." He closed the season of 1901 with a record of 2:10¾, and the prediction was freely given that he would become a world sensation the succeeding year, but when in the spring of 1902 Gus Macey began his preparation for a strenuously planned campaign, he found that Country Jay was a very distinguished cripple.

Veterinarians in all parts of the country discussed his case and many of them practiced on it, one horse doctor up in Michigan declaring that he had the "only spavin cure," entered into an agreement with Macey to treat the horse for \$500 if he effected a cure and nothing if he failed. When this doctor got through with him Country Jay still had spavin, but was nearly minus a leg. The drugs the Michiganian had used had virtually eaten the leg away.

Many horsemen suggested to Macey that he destroy the son of Jay Hawker and put him out of his misery, but Macey did not believe him to be as bad off as he seemed and decided to turn him out.

Country Jay rambled in a blue grass paddock until the summer of 1904, when his leg was again in fairly good shape. Macey put him in training at the Kentucky Trotting Horse Breeders' Association track, and in October of that year surprised all visitors at the trotting races by driving him a mile in 2:06¾, while his son Ramey Macey, rode him a mile under the saddle in 2:10. In the spring of 1905 Isaac Eckert, of Redding, Pa., bought Country Jay for \$10,000. Shortly after passing into Eckert's ownership the horse again fell lame, and he brought suit for the purchase price on the ground that he had been sold a lame horse when he was guaranteed a sound one. Macey declined to either receive the horse or to refund the money. The long litigation ended in a victory for Macey. Eckert sent Country Jay to the Blue Ribbon Sale of trotters at Cleveland in 1908, where he was purchased by Billy Smith, the Ohio "worder-worker." Smith succeeding in getting Country Jay to the races, and at the Columbus meeting he trotted close to 2:10.

With the idea that Country Jay would make a pretty fair road and matinee horse for his employer, George H. Estabrook, of Denver, Macey purchased his old favorite from Smith, and in the fall of 1908 Country Jay was shipped to Denver. He showed such good form in the matinees there that Mr. Estabrook decided to race him. He came back to Lexington with the Estabrook horses in the spring of 1909, and late in June Macey drove him a mile in 2:06¾. In July Macey started him in a

race at Terra Haute, in which he got third money. From Terra Haute they went to Windsor, where he had a terrific battle with Teasel, winning in 2:09¾, lowering his own record of 2:10½ which had stood for eight years, and then forcing her to trot in 2:09¾ to heat him. At Detroit the following week he appeared in the 2:11 trot of \$3000. There were evidences of returning lameness, and in some of the pools the odds against him were 100 to 1, but the wonderful old gelding, after four hard heats, won the race, lowering his record to 2:07½. This performance excited the admiration of every turfman who saw it and Mr. Estabrook was the recipient of more congratulations than he had ever received on the performance of any of his other horses. At Kalamazoo the week after Detroit Country Jay won another \$3000 stake in straight heats after gruelling stretch duels. In the second heat he fell lame, and won that and the succeeding heat through sheer gameness.

Mr. Estabrook then declared that he would never permit the horse to be started in another race, but at Cleveland the following week he consented to allow Ramey Macey to ride Country Jay against the saddle trotting record 2:14½, which had been made by Charley Mack in 1904. The result was that, under the guidance of Young Macey, the old son of Jay Hawker trotted a mile in 2:10¾. Mr. Estabrook, feeling that Country Jay had acquired sufficient glory, had him thrown out of training and sent him to Lexington to be turned out at Kenmore Farm until fall, when it was his intention to ship him back to Detroit. The New York State Fair management, however, was in quest of an especial attraction for the fair at Syracuse in September, and offered by Estabrook a large sum to let him go there against his own saddle record. Mr. Estabrook at first declined, but upon the entreaties of young Macey finally gave his consent. Ramey Macey came to Lexington, took the old gelding off his pasture, gave him a few day's preparation, shipped him to Syracuse and there, on September 15, rode him a mile in the marvelous time of 2:08¾, trotting the last quarter in 30¾ seconds.

When Country Jay left here for Denver last fall with the Estabrook campaigners it was announced by his wealthy owner that his racing career was at an end, but the old fellow wintered so well that Trainer Macey prevailed upon Mr. Estabrook to give him another chance in the campaign, declaring his belief that Country Jay could go a mile in 2:06 or thereabouts before the season of 1910 would close. After his repeated exhibitions of speed, stamina and gameness, any future performance by Country Jay should not be surprising, but he is certainly entitled to the palm as an example of revivification.—Stock Farm.

DUDIE ARCHDALE 2:06½.

The mare that stands at the head of this year's money winners in harness events, being already winner of three \$10,000 purses as well as several smaller ones, is a daughter of Dudie Egmont 2:13¼, a trotting mare known on half mile tracks in Kansas years ago. Dudie Archdale's breeding is thus given by the editor of Spirit of the West, an Iowa journal:

The sire of Dudie Archdale is one of the young generation members of the Great Table, having entered only two years ago in 1907 at the age of 10 years, with a pacer, Miranda 2:21¾, to start his list. Recordless himself, a Nebraska-bred and owned horse, with a recordless dam and grandam, dynamic development had not apparently done much for Archdale 37304. But he was sired by Expedition 2:15¾, and he is the richest bred son of Electioneer 125, probably, and his dam was a quadruple producer by Alie West 745, and that is good enough for anybody, and the next dam was Coquette, dam of Nutmeg 2:16 and Col. Stevens 2:28½, by American Clay 34, and that is good also, and back of this is Carrie Lexington, and next Bertrand, real blue-blooded thoroughbred of the "first water," and there is speed and race-horse caliber to back up anything. So it would appear without additions made by dynamic development, or in any other artificial manner there is ancestral inheritance in Archdale to sire two-minute trotters or faster as well as there is in Sidney Dillon, Delmar or any other. It is true Lexington blood and other blue blood that is like a red flag to a mad bull with a few theorists, is on both sides not far removed in Archdale, but Expedition 2:15¾, a good trotter and sire, gets between in the male line, and Aline, dam of four, and Coquette, dam of two, with their sires Alie West 2:26¾ and American Clay 34, on the dam's side, and that covers up the feared and fateful element. To any other class of breeders and students the balance in Archdale looks mighty good, and his grounding a foundation of solid rock and not shifting sand or miry clay, such as dung-hill cold-blood and mongrel-plug advocates seem to have so much appreciation for.

But the dam of Dudie Archdale 2:06½ is to be considered also, and she would be no disgrace minus a record of any sort. But she proved the merit of her ancestral heritage on the track. Dudie Egmont 2:13¼, a trim, racy, thoroughbred looking little mare, was sired by Egmont Chief 2:24¾, a Kansas owned stallion that with indifferent opportunities had in the last Year Book to his credit three trotters and two pacers, and the dam of a pacer. Egmont Chief was by Egmont 1828, dam Lady Frankfort by Frankfort Chief 11, out of a mare by another non-standard son of the same progenitor; second dam of Egmont Chief by a grandson of the Morgan horse, Black Hawk 5, then Sinclair's Rockingham. The dam of

Egmont, sire of Egmont Chief, was Minerva by Pilot Jr. 12, next dam daughter of Mamhrino Chief 11, and next by Downing's Bay Messenger. As Egmont was a son of Belmont 64 by Abdallah 15 by Hambletonian 10, out of a Mamhrino Chief 11 dam, the Chief blood was very much in evidence with Hambletonian top cross. But the dam of Dudie Egmont 2:13½ and second dam of Dudie Archdale 2:06½ was Maggie S. by Col. Crockett 11940, trotting record 2:29¼, another Kansas-owned stallion, not known else as a speed producer. Col. Crockett was sired by Ripple 11939 that was out of the Simon Kenton mare; Ripple being by Romulus 271, son of Hambletonian 10 and Maggie Jones by American Star 14. The dam of Col. Crockett was Belle Green by Bashaw 50, son of Vernol's Black Hawk and Belle by the pacer Tom Thumh out of the Charles Kent mare, dam of Hambletonian 10; the second dam of Col. Crockett said to be by Como Chief 855 by Appleby's Chieftain, out of a Magna Charta bred mare. The Chief and Morgan largely predominating. Dudie Archdale was Daisy by Kirkwood 198, record 2:24, son of Bashaw 50, out of a mare by Young Green Mountain Morgan. The next and last traced dam in the breeding was the Evans Mare by Kincaid Morgan, son of Young Green Mountain Morgan. Then it will be seen that the mare that produced Dudie Archdale was a combination of foundation trotting progenitors, with the blood Hambletonian, Mamhrino Chief and Morgan largely predominating. Dudie Egmont 2:13½ was no accident, and was a trotter of a high rate of speed, rather overly nervous and high strung, with a tendency apparently to be somewhat unsteady. She, however, was a common type of the best brood mares, and it will be no surprise to those conversant with her make-up to see that she has a trotter with the caliber of Dudie Archdale, and particularly mated with a horse with the speed inheritance of Archdale.

THE MOTOR CAR CRAZE.

The spectacle was witnessed this week of one of the largest and best-known automobile manufacturing companies in the country going from bank to bank in New York City and asking in vain for a loan of \$650,000 on \$750,000 real estate mortgages as collateral. The mortgages represented property valued at \$1,000,000 or more. The would-be borrower was turned down on the ground that the craze to buy automobiles had been at the danger stage for some time, and that the banks did not care to encourage it.

The collateral offered consisted of mortgages on the homes of buyers of cars, and was undoubtedly good, but the representative of the auto-making concern who sought to turn his mortgages into cash met with a cold reception everywhere he went. The bankers had in mind the failure, within the last ten days, of three goodly sized auto manufacturers, due to the falling off in orders from dealers, and they were frank to say that they regarded the automobile industry as in a distinctly unhealthy state, and that a smash would in all probability come if a check were not put upon the dangerous expansion in the auto trade.

Automobile huying, though not as brisk or in the feverish and excited state of a few months ago, is still on in considerable volume, and has been felt in this July period, which is usually given over to heavy huying of securities by those whose incomes are largely augmented on July 1 by the receipt of dividend and interest money. Investment houses hear the explanation from salesmen who have been sent to sell some security to a prospective customer that failure has been caused by the fact that the individual whose capital it is sought to direct into investments had put his money into the purchase of a car and the erection of a garage. A Wall Street investment house, took the trouble to look into the real estate mortgages filed in the Registrar's office in New York City, ascertained that in one day 45 per cent of the mortgages were in favor of automobile dealers or manufacturers. They had been given by persons who, not possessing the means to pay for cars, had mortgaged their homes to raise the necessary cash or had given a mortgage to the auto dealer.

"This sort of thing is going to end in trouble if it is not checked," said a well-known banker, in discussing the automobile craze among people who cannot afford to buy cars. "The developments of the last few months have been such as to warn bankers against taking any great quantity of securities offered for loans by automobile makers. Many of them are overtaxed to an alarming extent. The foundation is unsound, and though the auto has undoubtedly come to stay, the industry will have to go through a drastic reorganization before it can again be considered to be on a sound basis. The little mushroom concerns will die off and there will be combinations of the larger companies. These will ultimately be able to turn out cars at a much cheaper price than is now possible. Our statistics tell us that only 20 per cent of the autos in use at present are for commercial or business use. The other 80 per cent is for pleasure wholly. It has reached the proportions of a national extravagance, and it must be stopped, or trouble will ensue. As a matter of fact, I do not see how trouble can be averted."

A large National bank in New York City, which has made some careful investigation in the matter, says that at the present time \$750,000,000 is invested in automobiles in this country, and that fully 80 per cent of this money was spent for cars for pleasure or recreation solely.—The Financial World.

Drink Jackson's Napa Soda.

THE FARM

LIVE STOCK AND THE

MANURE QUESTION.

Barnyard manure is one of the most efficient means at the disposal of the farmer to permanently improve his soil. Probably no other fertilizer possesses to so great a degree the power of restoring worn soils to productivity and giving them lasting fertility. It accomplishes this result, however, not so much by the actual fertilizing constituents which it supplies as by improving the physical properties of the soil, increasing the amount of humus, which is generally deficient in worn soils, improving its texture, and increasing its water-absorbing and water-holding power. Experience have shown that the influence of manure may be perceptible twenty years after application.

1. Barnyard manure is the most important manurial resource of the farm and should be carefully saved and used. It represents fertility which is drawn from the soil and must be returned to it if productivity is to be maintained. It not only enriches the soil with the nitrogen, phosphoric acid, and potash, but it also renders the stored-up materials of the soil more available, improves the mechanical condition of the soil, makes it warmer, and enables it to retain more moisture.

2. On the basis of prices charged for commercial fertilizers it is estimated that the average value of the manure annually produced by each horse or mule is \$27, by each head of cattle \$19, by each hog \$12, and by each sheep \$2. Probably less than half these values are actually realized in practice.

3. The urine is by far the most valuable part of the excreta of animals. It is especially rich in readily available nitrogen, which rapidly escapes into the air if special precautions are not taken to prevent its loss. It is also rich in potash, but deficient in phosphoric acid. It should, as a rule, be used in connection with the solid dung, and one thus supplying the deficiencies of the other and making a more evenly balanced manure.

4. Barnyard manure is a very variable substance, its composition and value depending mainly upon (1) age and kind of animal, (2) quantity and quality of food, (3) proportion of litter, and (4) method of management and age. Ordinary barnyard manure properly cared for may be assumed to contain on the average one-half per cent each of nitrogen and potash and one-third per cent of phosphoric acid.

5. Mature animals, neither gaining nor losing weight, excrete practically all the fertilizing constituents consumed in the food. Growing animals may excrete as little as 50 per cent of the fertilizing constituents of the food, milch cows excrete from 65 to 85 per cent, fattening or working animals from 85 to 95 per cent. As regards the fertilizing value of equal weights of manure in its normal condition, farm animals probably stand in the following order: Poultry, sheep, pigs, horses, cows.

6. The amounts of fertilizing constituents in the manure stand in direct relation to those in the food. As regards the value of manure produced the concentrated feeding stuffs, such as meat scrap, cotton-seed meal, linseed meal and wheat bran, stand first, the leguminous plants (clover, peas, etc.) second, the grasses third, cereals (oats, corn, etc.) fourth, and root crops, such as turnips, beets and mangel-wurzels, last.

The nitrogen of the food exerts a greater influence on the quality of the manure than any other constituent. It is the most costly fertilizing constituent. It undergoes more modification in the animal stomach than the mineral constituents (potash and phosphoric acid), and rapidly escapes from the manure in fermentation. The secretion of urine increases with the increase of nitrogenous substances in the food, thus necessitating the use of larger amount and value of the manure. The use of watery foods, as is obvious, produces the same result.

7. Barnyard manure rapidly undergoes change. When practicable to remove the manure and spread it on the field at short intervals the losses of valuable constituents need not be very great, but when the manure must be stored for some time the difficulties of preservation are greatly increased.

8. The deterioration of manure results from two chief causes, (a) fermentation, whereby nitrogen, either as ammonia or in the gaseous state, is set free, and (b) weathering or leaching, which involves a loss of the soluble fertilizing constituents. The loss from destructive fermentation may be largely prevented by the use of proper absorbers and by keeping the manure moist and compact. Loss from leaching may be prevented by storage under cover or in water-tight pits. Extremes of moisture and temperature are to be avoided, and uniform and moderate fermentation is the object to be sought. To this end it is advisable to mix the manure from the different animals thoroughly in the heap.

9. The disposition to be made of the manure of the farm (both fermented and unfermented) must be determined largely by the nature of the crop and soil. Where improvement of the mechanical condition of the soil is the principal object sought fresh manure is best adapted for this purpose to heavy soils and well-rotted manure to light soils. Where prompt action of the fertilizing constituents is desired, the best results will probably be obtained by applying fresh manure to the light soils, although excessive applications in this case should be avoided on account of the danger of "burning out" of the soil in dry seasons. Fresh manure has a forcing effect, and is better suited to early garden truck, grasses and forage plants than to plants grown for seed, such as cereals, or to fruits. Direct applications to root crops, such as sugar beets and potatoes, or to tobacco, often prove injurious. The manure should be spread when carried to the field, and not left in heaps to leach.

10. One of the best ways to utilize barnyard manure is to apply it in connection with such fertilizing materials as supplement its fertilizing constituents. These materials may be either composted with the manure or used separately, except in case of a nitrate, such as nitrate of soda, which should never be composted with barnyard manure on account of danger of denitrification and loss of nitrogen. As is well known, barnyard manure is lasting in its effects, and in many cases need not be applied so frequently as the more soluble and quick-acting superphosphates and potash and nitrogen salts.

[Extracts from Bulletin No. 21, by W. H. Beal of the Department of Agriculture.]

PROTECTION OF

FORESTS FROM FIRE.

The problem of protecting the forests of the country from fires is receiving considerable attention from associations of private owners, associations of lumber

The Most Perfect Colt Bit Made EVERY COLT

Should wear the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE** from the very beginning of its training, as it is the easiest, most comfortable and most humane bit on the market. With its use the colt will not fret, worry, pull, toss its head and get into the bad habits so often caused by the use of other bits and checking devices that inflict punishment or keep it under too much restraint, and at the same time you will have absolute control over it at all times.

Patented Aug. 11, 1896. Patent No. 565,681

BEWARE of worthless imitations and Checking Devices claimed to be as good as the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE**. Illustrations of some of these check bits and devices are made to look as near like the genuine as possible, but the article itself is very different, and will not give the same results.

ALL GENUINE are stamped G. S. ELLIS & SON on the supporting strap and back part of Check Rein. Any that are not so stamped are not genuine. **FREE**—Our new Catalogue No. 45, with wholesale discount sheet, the largest, finest and most complete Horse Goods Catalogue ever published, is ready for distribution. It contains illustrations, descriptions, and guaranteed to be lowest prices on Harness, Horse Boots, Horse Clothing and Tack Goods of every description. Every horseman should have a copy. You can save many a dollar during the season by buying direct from us, as we are now selling direct to horsemen, allowing them from 30 to 50 per cent discount from retail prices. Write us today for a copy and we will take pleasure in sending it to you all charges paid.

companies, State forest wardens, and the National Government, and the United States Department of Agriculture has just issued Bulletin 82, Forest Service, relating to the subject. In spite of all that has been done, however, probably 60 per cent of the private forests have no adequate system of protection.

There are three classes of forest fires: Surface fires, which burn the surface layer of leaves, dry grass, brush and small trees; ground fires, burning the deep accumulation of vegetable mold; and crown fires, which accompany surface fires and burn the crowns of the trees.

Surface fires are the most common and may start under ordinary dry conditions. The severity of the fire, of course, depends largely upon the amount of accumulated leaves and brush and the strength of the wind. Surface fires kill seedlings and young trees, but in many cases do not kill the larger trees. Under some conditions they may kill every thing in the area which they cover.

Ground fires occur only when the vegetable mold has become thoroughly dry. They burn slowly, but with intense heat, and are exceedingly difficult to extinguish. They have been known to burn all winter, creeping along under a deep layer of snow. Ground fires usually destroy all trees, killing the tissues of the roots, and the trees die and are blown down.

Crown fires almost invariably accompany surface fires and occur only when the woods are very dry and there is a high wind. Usually all trees are killed. Sometimes, however, where there are a great many hardwoods in mixture with coniferous trees, single trees or groups of trees may escape injury.

As the value of lumber and of the forests increases and the necessity of protecting them from fires as far as possible

becomes appreciated, the owners and the different organizations controlling the forests are using every means of securing them against destruction by a thorough patrol system, organized fire-fighting squads with tools and equipment for extinguishing fires located at accessible points, by constantly warning the public against the careless use of fire, and by every other available means. The number of forest guards on the National Forests is inadequate for the work, in some cases a single man having the responsibility of protecting 100,000 acres, whereas in most places there should be at least one guard for every 10,000 acres. Prussia has a guard for every 1,700 acres.

ABOUT FEEDING COWS.

Cows giving milk are voracious eaters. It is from their food and drink that their milk is made. The lacteal arrangement of the animal body is such that these elements go to milk with some of the impurities unchanged. Witness the bitterness of the rag weed, the odor of turnips and onions, and even clover and rye. So it stands to reason that the food and drink of the dairy should be clean and healthful. I have seen grease floating on the milk of cows fed on kitchen slops. This is carbon unassimilated.

In Jersey Isle, I am informed, they feed their cows on mangel-wurtzel, sugar beets and their other root crops, which are raised in great quantities for this express purpose.

In our country, there are certain native grasses and grains which make the best of milk. Our common bluegrass is the best for pasture, and our Indian corn is the best grain. Alfalfa hay and timothy mixed with clover—not too much clover—are superior for roughness. Wheat-bran and middlings, mixed with chopped hay, and wet and salted is a food the cows eat with great relish.

In the winter the common stalk pasture where corn has been husked out, makes very sweet and very rich milk, and from this, we might guess at a matter thoroughly tested and proven to be true; to-wit that shredded fodder is a very wholesome feed for dairy cows. They eat it better if the taste of salt has been imparted to it.

There seems to be some chemical action in nature's milk making process, for it is said that pure sweet milk is produced by food taken out of the silo. And ensilage is soured in the natural process of making.

Cows will drink heartily at stated times, when driven to the water. So they may be shut off from the ponds and supplied with water perfectly clean at the trough or tank. Of course a running stream, not contaminated by a strawboard factory, a brewery or a distillery, will be most convenient, and almost unobjectionable. The water supply should never be skimmed.

A good feed, that serves for both food and drink is obtained from the canning factories that put up sugar corn. The cobs are soft and sweet; and they and the husks are the very best of milk producer.

Oil cake in small quantities will do service as a laxative; but when natural foods can be had laxatives are not necessary.

Cows are, as intimated above, creatures of habit. So the feeding and watering should be matters of regularity. And sheltering stands closely allied to feeding. It is this way: If a cow has to shiver about the muddy barn lot, or even against a straw stack her food will be required in creating animal warmth;

and the milk yield will necessarily be scant. Nor will it rank high in quality. —Walter S. Smith, in Indiana Farmer.

A fact not generally known, but which has been demonstrated in long years of experience in the west is that sheep can live without water for weeks at a time, provided they have an ample supply of green food. This one fact more than any other has caused much of the trouble which has arisen from time to time between sheep and cattle men on the great ranges of the West. The cow outfit is absolutely dependent upon water and cattle cannot be raised unless they can have easy and frequent access to it. On the other hand, the peculiar powers of the sheep permit them to be driven over long stretches of country which are not supplied with water. As sheep eat the vegetation down very closely the territory they cover becomes rather threadbare until it has had time to recuperate after sufficient rainfall.

STEERS MAKE NEW PRICE RECORD.

Thirty head of steers from the experimental feed yards of the Colorado Agricultural College recently set a new high mark for commercial steers sold upon the Denver market. The steers were fed and sold in three lots, with ten head in each lot. All lots were fed alfalfa hay. Lot 2 received California feed barley, gaining 4010 pounds in six months' feed, and selling for \$7.60 per cwt. Lot 3 received corn, gaining 4535 pounds, and selling for \$7.85 per cwt. Lot 4 received cottonseed cake and sugar beets were discontinued, and corn and molasses added to the ration. This lot gained 4465 pounds, and sold for \$8.00 per cwt.

The lot on California feed barley held its own with the others during the first half of the feeding period, but then fell behind. The combination fed cattle kept the lead for a long time, but finally fell a little behind. Just two weeks before the close of the experiment these cattle weighed 85 pounds more than the corn lot. Evidently warm weather spoiled their appetite for molasses, so that at the close, they were behind the corn lot in total gain.

Figuring hay at \$8.00 per ton, corn chop and barley chop at \$1.20 per cwt., cottonseed cake at \$32 per ton, and beet sugar molasses at \$9 per ton, the profit over feed for the barley lot was about \$1 per head, the corn lot \$7.50 per head, and the combination lot of \$9 per head.

The steers were range bred yearling Herefords, and were in prime condition for the Denver market. The combination lot proved satisfactory in its returns, but the grain fed cattle were too expensive. The cattle fed barley and those fed corn received full feed, the other lot receiving 50 pounds of sugar beets and 4 pounds of cottonseed cake per head when transferred from beets to molasses and corn. When on full feed of the latter they received 12 pounds of corn, 3 pounds of cake and 3 pounds of molasses.

Beet sugar molasses is a cheap feed

As they Sometimes Are.

As "Save-the-Horse" Can Make Them.

Let Us Prove It

Puts Money in Your Pocket.

Puts the Horse on His Feet.

"Save-the-Horse" is the safest, surer and most humane as well as the most wonderful remedy known to Veterinary science and practice.

Eldorado, Ill., June 19, 1910.

Troy Chemical Co., Binghamton, N. Y.

Dear Sirs:—Send at once a bottle of "Save-the-Horse." I can't recommend your medicine too high, for I advised several of my friends to try it. Some have a complete cure, while others are still improving. One that I know of is Ralph Bourland. He had a half-brother to my horse and he slipped on a bridge and strained himself. A thoroughpin resulted. He asked me what to do, so I had him use this medicine. Cure resulted and he sold him the other day for \$185.00. I am satisfied that he saved \$75.00 after medicine was paid for. I will give your "Save-the-Horse" credit for what it has done for me, for I know there is no other made will equal it. Yours respectfully,

W. W. BLANKINSHIP.

Pawnee City, Nebr., May 30, 1910.

Troy Chemical Co., Binghamton, N. Y.

Gentlemen:—I enclose acknowledgment for a bottle of "Save-the-Horse" to use on a ringbone.

I will say that I purchased a bottle of "Save-the-Horse" last summer to treat a mare that was quite lame from a bruised knee and had been that way for six months, and now she has fully recovered from her lameness and is a valuable animal. Yours resp.,

F. H. ANDERSON.

"Save-the-Horse" permanently cures bone and bog spavin, ringbone (except low ringbone), curb, thoroughpin, splint, shoe boil, windpuff, injured tendons, and all lameness, without scar or loss of hair. Horse may work as usual. \$5.00 per bottle, with a written guarantee as binding to protect you as the best legal talent could make it. Send for copy and booklet.

At all druggists and dealers, or express paid.

TROY CHEMICAL COMPANY, Binghamton, N. Y.

D. E. Newell, 58 Bay Vista Avenue, Oakland, Cal. 1108 Market Street, San Francisco, Cal.

FOR SALE—Two standard-bred and registered stallions, sired by McKinney 2:11½. One mare sired by Zombro 2:11. Pedigrees and photos furnished on application. Address Box 33, Hill P. O., Cal.

TO THOROUGHBRED HORSE-OWNERS.

FOR SALE AT A SACRIFICE.

First six volumes of Bruce's American Stud Book, practically unused. Cost \$10 per volume. Hard to get.

Two volumes of American Horse Breeders' Guide and Hand Book, with 100 tabulated pedigrees of leading stallions (work now out of print).

The American Thoroughbred, by Capt. Thos. B. Merry.

Two volumes Goodwin's Turf Guide for 1907. Cost \$12.

About 50 thoroughbred catalogues, including Rancho del Paso, Palo Alto, Rancocas, McGrathiana, Nursery Stud, Marcus Daly and all the great stock-farms of the country. These are handier than a studbook, because they are tabulated.

Price, \$60 for all these works.

at \$9 per ton and combined either with pulp or beets and with alfalfa hay, it is difficult to better the combination for a western feeder's ration. Caek or corn should be used to finish.

G. E. MORTON,

Colorado Agricultural College, Fort Collins.

CLOVER.

The following paragraphs are taken from a paper given by Forest Henry of Dover, Minn., on the subject "Pigs in Clover."

"There are three ways of fertilizing the soil. One is by a rotation of crops; one is by raising cattle, and one is by using commercial fertilizers. The latter is the most expensive and the least satisfactory. The Eastern farmer is applying half the value of his crops to his land before he gets the crops. The vicinity of Rochester, N. Y., was once the garden spot of America. The farmers were raising live stock and were getting along all right, when along came the commercial fertilizer men. It is easy to make a man believe he is working too hard and these salesmen convinced the farmers. So they bought fertilizer and gradually went out of stock raising. This worked all right for a time, but they found as years went by that more and more fertilizer was necessary until today it takes almost the entire value of a hay crop to pay for the fertilizer.

"There are lands in that vicinity which at one time sold for \$100, \$125 and even \$150 per acre, which can now be bought for \$40.

"Clover is the foundation of fertilizers. Alfalfa never has and never can mean to the Minnesota farmer one-quarter what June clover has. Alfalfa is all right on some farms, strictly dairy farms, for instance, but the general farmer had better stick to clover. In the use of clover and the raising of stock we have been working the wrong way around. We keep some stock and raise enough clover to supply feed. What we should do is sow one-fourth of one-fifth of our entire cultivated area to clover and then keep enough stock to eat it up.

"The value of clover in renewing the soil cannot be overestimated. All the matter in the soil acts as a sponge. The water sinks out of reach. The vegetable matter and what have you? The soil consists of pulverized rock and

or too little rain results in poor crops. The presence of sufficient vegetable matter in the soil helps in either case. "We are told that there is no way of maintaining the fertility of land equal to raising animals. Clover is one of the best mediums for the purpose. And there is no better pig feed than a clover pasture. Clover will keep pigs more healthy than anything else. And I believe the best way to get good results is to increase the acreage of the pastures and only have the pigs eat the best. In twenty-five years of pig raising I have never lost one from disease, and clover not only makes healthy pigs but cheap pigs."

Here is a new way of dipping sheep which certainly looks reasonable. The idea is suggested by a writer in one of the live stock papers. The correspondent says: I notice in a recent issue that you advise to dip sheep for lice, ticks, etc., while they have their long coats on. I have found what I believe to be a much better way, and only requires a small amount of dip. Turn the sheep on its back and pour about a quart of the dip along the under side of the animal, from chin back to the end of body, put a little on the legs, hold the sheep for a few moments while the dip runs around the body, which it will do, as it is the wrong way of the dip. If you pour the dip on the the sheep's back it will run off and do no good. I tried this method on seventy-five head a few days since and cannot find a tick on the 1909 crop of lambs. Some of the large ewes need a little more than a quart of the dip. I mixed the dip with warm water and two of us did the work in about two and one-half hours, and do not believe we lost more than a quart of the material that ran off after we let go of the sheep. If sheep men in general would try this plan I believe their dipping tanks would become useless property.

Secretary Wilson's meat inspectors will continue to inspect lard substitute, and not a pound of that article can go into inter-state or foreign commerce unless it bears the mark "U. S.

Inspected and Passed." This is the gist of an opinion rendered by Judge Fowler, who is acting as Attorney General during the absence in Alaska of Mr. Wickersham. Judge Fowler, in his opinion, holds that lard substitute, which is a cooking compound made up of 1-5 animal fat and 4-5 cotton-seed oil, is fairly within the definition of a meat food produce and must be inspected under the meat inspection law. Acting Secretary of Agriculture Hays said: "The opinion of the Attorney-General confirms the construction placed upon the law by Secretary Wilson. We have inspected lard substitute ever since the meat inspection law was passed. We never had any doubt about the matter, but some of the manufacturers of lard substitute thought inspection of their product was not required."

The consumption of cream has increased over all former records. The new laws in various states call for real cream in ice cream and the result is that far greater quantities of cream are demanded in the cities. The substitution of cream for the custards and dopes that formerly passed as ice cream has enlarged the markets for real cream at least five and probably ten per cent.

Feed plenty of silage, clover hay, and other rough feeds. Feeding too heavily of concentrated feeds ruins the cow's digestive organs and shortens her period of usefulness.

S

SMITH GUNS

HUNTER ONE-TRIGGER

WEATHER conditions aren't always at their best in the "blind" or in the skiff. That's when you don't want your gun to balk or double.

YOU CAN easily wear gloves if you shoot with a Hunter One-Trigger. And without "fiddling." It won't balk—because there is no friction to make it balk. And it won't double—because there is no second trigger to get tangled up in your glove.

The very newest Hammerless Smith Gun is the 20-Gauge Hunter One-Trigger. Weighs only 5 3/4 to 7 lbs. Just the finest gun that can be made at the low price.

Write for free Catalog to-day.

Three-Legged Horses

are not curiosities by any means. The country is full of them. The fourth leg is there all right but it is not worth anything because of a curb, splint, spavin or other like bunch. You can cure the horse of any of these ailments and put another sound leg under him by the use of

Quinn's Ointment.

It is time tried and reliable. When a horse is cured with Quinn's Ointment he stays cured. Mr. E. F. Burke of Springfield, Mo., writes as follows: "I have been using Quinn's Ointment for several years and have effected many marvelous cures; it will go deeper and cause less pain than any blister I ever used. Thought it my duty for the benefit of horses to recommend your Ointment. I am never without it." This is the general verdict by all who give Quinn's Ointment a trial. For curbs, splints, spavins, windpuffs, and all bunches it is unequalled. Price \$1 per bottle at all druggists or sent by mail. Send for circulars, testimonials, &c.

Annual Fair and Race Meeting

GIVEN BY THE

Woodland Driving Club

(Member National Trotting Association.)

August 24th to 27th, inclusive
AT WOODLAND

YOLO CO., CAL.

Races declared filled and to be given during the meeting: 2:30 trot,
\$600; 2:20 pace, \$500; 2-year-old pace \$400, 2:15 pace, \$300,
2:24 trot, \$300.

THE LOS ANGELES COLT STAKES FOR 1910

will be trotted and paced at this meeting under the auspices of the California
Breeders Association, as follows:

California Breeders Stake No. 1, foals of 1907—60 per cent to trotters, 40 per
cent to pacers.

Canfield Stake, foals of 1908—60 per cent to trotters, 40 per cent to pacers.

Canfield-Clark Stake No. 1, foals of 1908—\$1000 for trotters only.

THE WOODLAND RACES which open next Wednesday to continue four days, will furnish some very interesting contests. One of the important contests of the meeting will be the California Breeders' Stake for foals of 1907. This is one of the stakes offered by the Los Angeles Association, and transferred to Woodland because the Los Angeles track is being remodeled. There are eight three-year-olds on which final payment has been made and they are the same, with one exception that started in the Breeders' Futurity last Friday at San Jose. This exception is the colt Voyageur by Bon Voyage, that did not start in that stake, while Bahe Verne, winner of fourth money, was not entered in the Los Angeles stake. This colt stake promises to be a great race, and while Strathboule is a great trotting colt, there is a chance that some other colt will be returned winner of first money. Matawan, winner of first in the two-year-old stake at San Jose, is also entered in the two-year-old event at Woodland, there being but three more eligibles—Dorothy Ansel, winner of third money, Zorankin, winner of fourth, and Luna M. Both races will be well worth going to see. Besides the colt stakes there is an excellent program of class races with large entry lists and generous purses. The Woodland track is one of the fastest in the State and there are numerous good hotels in the town.

SALT LAKE CITIZENS, after the recent bad running meeting held in that town recently, got up a petition to the city council asking that future race meetings be limited to six days. The petition recites that "experience shows that long meets cause a drainage of funds from the community and affect general business adversely." The petition is signed by the following: Max Florence, Allen T. Sanford, J. E. Clark, B. F. Ott Drug Company, F. H. Grosbell, I. X. L. Stores Company, Druhl & Franken, Paris Millinery Company, J. H. R. Franklin Company, Keith-O'Brien Company, Davis Shoe Company, L. & A. Cohn, A. H. Crahne, Daniel Alexander, Siegel Clothing Company, Max Daniels, Luna Theater Company, L. G. Hoffman, Hershel B. Lyman, E. L. Allen, Isis Theater Company, F. H. Hatch, Auerbach Company, Alfred Sorenson, Hedrick & Knowlton Company, Oakley Marshall.

"What you want to do is to have that mud-hole in the road fixed," said the visitor. "That goes to show," replied the farmer, "how little you reformers know about local conditions. I've pretty nigh paid off a mortgage with the money I made hauling automobiles out of that mud-hole."

UHLAN IS CHAMPION.

Black Gelding by Bingen Trots Mile in 1:58¾ Without Wind Shield.

Cleveland, Aug. 12.—Uhlán 1:58¾, king of harness horses, trotters or pacers, was the title hung up at the North Randall Grand Circuit meeting to-day.

The black son of Bingen trotted around the mile track in 1:58¾ without a falter all the way, and going as freely and as easily at the wire as though he had not trotted faster than any horse ever trotted or paced before without the aid of a wind shield.

The wild cheers of a crowd of 10,000 barness horse lovers, who realized as the quarter miles were reeled off by the sweet-stepping trotter that marks were falling with every step, did not hother the big black, either.

He tossed his head proudly, however, when "Doc" Tanner jogged him back to the judges' stand to hear that the mile had been turned at such speed as no other horse had ever shown without artificial aid. Uhlán was followed to the three-quarter pole by a runner hitched to a sulky. John Dickerson, driving the runner, closed the gap of two cart lengths as they rounded into the stretch and then came along fast. Not till two strides from the wire did Tanner touch the gelding. Then he laid on his short whip in four or five quick, short flicks. He knew he had almost equalled Lou Dillon's mark of 1:58½ behind a wind shield and wanted to better it. The mark set up was only a quarter of a second slower than Uhlán's stable mate. Both the great trotters are owned by C. K. G. Billings of New York.

The mark is the recognized world's championship for trotting horses, wind shield marks being under the ban now. Dan Patch turned a mile at the pace behind a wind shield in 1:55 and Lou Dillon trotted a mile in 1:58½. No other records come near to that set by Uhlán. No pacer except Dan Patch has equaled the time made in this race against time by Uhlán, and now there are two trotters and only one pacer that have beaten 1:59.

Uhlán is a son of Bingen 2:06¼, he by the California bred stallion May King 2:21¼ (son of Electioneer and May Queen 2:20 by Norman 25.) The dam of Uhlán is Blonde by Sir Walter Jr. (son of Sir Walter and Kate Clark by American Clay 34.) Uhlán's second dam is Brunette by Black Eagle, a non-standard horse. The breeding of Uhlán is traced no further in the Year Book and probably Blonde is not registered, as under the present rules she cannot be until she produces another standard performer and both are registered.

HAS WON OVER \$12,000 IN STAKES.

To win both trotting divisions of the Pacific Breeders' Futurity at one meeting has never before fallen to the lot of a single breeder, but Mr. Geo. L. Warlow of Fresno, California, experienced that pleasure at San Jose last week, his colt Matawan by Athadon winning the two-year-old trotting stake and his three-year-old colt Strathboule taking first money in the three-year-old trotting division of that stake.

Mr. Warlow's first colt to start in a Pacific Breeders' Futurity was Athasham, a full brother to Matawan. Athasham was a starter in the two-year-old division of this stake in 1909 at San Jose and earned fourth money. He did better as a three-year-old, winning second money when North Star trotted the three heats in 2:13¾, 2:13¾ and 2:16. In 1906 Mr. Warlow started Nogi in the two-year-old trot and won second money with him, and the next year Nogi captured first money in the three-year-old stake, going to Sacramento later and winning both the Occident and the Stanford stakes. This year he has an excellent prospect of getting a goodly share of the Occident and Stanford stakes with Strathboule.

Mr. Warlow was asked by Secretary Kelley to state how much he has won in colt stakes in this State and has sent the following reply.

"I never had a pacer, but I have won in the futurities which include the Pacific Breeders' Futurity, the Occident and Stanford stakes, with colts I bred, raised and had trained by Mr. S. C. Walton, the sum of \$11,500. In addition to these winnings by my colts I have started some of them in purse races while on the circuit and these winnings have amounted to more than \$1000."

SOLD FOR \$10,000.

It was currently reported at the Detroit track Thursday that Robert Golet and John P. Townsend of New York City, had purchased of J. B. Hall, Lexington, Ky., the handsome and fast three-year-old trotting filly, Eva Tanquay (2) 2:16½, paying for her the sum of \$10,000.

Eva Tanquay (2) 2:16½ is by Peter the Great 2:07¼ and out of Madame Thompson (dam also of Madam Peters 2:17¼,) by Guy Wilkes 2:15¼, grandam, Eva 2:23½ (dam of three) by Sultan 2:24.

Last season she took part in four events, three of which were rich futurities and while she failed to secure first money in all of them, she nevertheless made a very satisfactory showing and was separately timed in 2:11. This spring she was turned over to Billy Andrews and received practically all of her work at the North Randall track.

Her beauty, gait, manners and race speed made her many admirers at the local plant and many good judges predicted her chances as being very bright in her various engagements. During the latter part of the week of the Kalamazoo meeting she worked a full mile at Recreation Park in 2:10 and was not greatly urged at any point.—American Sportsman.

CRESCUS' TIME BEATEN.

The Harvester Trots Third Heat in 2:02 and Lowers Many Records.

At the Fort Erie track, just across the river from Buffalo, New York, where the Buffalo Racing Association is holding its Grand Circuit meeting this week, the five-year-old trotting stallion The Harvester trotted the third heat of the 2:07-trot in 2:02 thus lowering the record which Cresceus 2:02¼ has held for nine years. This mile is also the fastest ever made in a race by a five-year-old and the fastest third heat ever trotted.

The Harvester 2:02 was bred at Walnut Hall Farm, Donerail, Kentucky. He was sired by Walnut Hall, five-year-old record 2:08¼, son of the California bred stallion Conductor 2:14¼, son of Electioneer and Sontag Mohawk. The dam of Walnut Hall is the great broodmare Maggie Yeazer by Red Wilkes. Maggie Yeazer is the grandam of those famous pacers Hedgewood Boy 2:02¼ and Lady Maud C. 2:02¼.

The Harvester's dam is Notelet by Moko (son of Baron Wilkes 2:18 and Queen Ethel, dam of Bumps 2:03¼, etc., by Strathmore), second dam Tahlet (dam of Norselet 2:24¼) by Cuyler 100, son of Hambletonian 10, third dam Prefix, great brood mare by Pancoast, fourth dam Galatea by Messenger Ducoc, fifth dam Hyacinth by Volunteer 55, sixth dam the great broodmare Clara, dam of Dexter 2:17¼, former world's champion, and also of Dictator, the sire of Director and Jay Eye See, and of the dams of Nancy Hanks 2:04 and many other famous trotters, pacers and broodmares.

The Harvester is one of the most intensely trotting lines on both sides of his pedigree. As he is only five years old and sound, it is reasonable to expect him to still further lower his record, and if pointed for a fast mile against the watch, may reach the two-minute mark.

WOODLAND PROGRAM.

Wednesday, Aug. 24.

2:20 pace, \$500—Joe Athby, Patery, Chiquita, Ice-man, Geo. Woodard, T. D. M.

Canfield and Clark Stake No. 1; two-year-old trotters, \$1000.

Matinee race.

Thursday.

2:20 trot, \$600—Harold K., All Style, Prince Lot, Bobby H., Lijero, Crisis, Bodaker, Little Branch, McDougal, Tell Tale.

Two-year-old Pace, \$400—Noemie, Victor Pointer, St. Patrick, Little Lucille, Joseph D., Grace Chalmers.

Three-year-old Pace—Jean Valjean, Sirius Pointer.

Friday.

2:15 Pace, \$300—Joe Athby, Patery, Little Dick, Meridian Mac, Choro Prince, Chiquita, Iceman, T. D. W., Elsidelo.

Three-year-old Stake, California Breeders' Association—Strathboule, Ateka, Bon Guy, Voyageur, Sweet Bow, Pegasus, Pal, Almutz.

Matinee race.

Saturday.

2:24 Trot, \$300—All Style, Harold K., Lady Sutter, Godolla, El Rio Rey, Dietrich.

Canfield Stake—Two-year-old Trotters, \$400 added—Luna M., Zorankin, Dorothy Ansel, Matawan.

Matinee race.

DEATH OF MONA WILKES 2:03¼.

Information from Illinois is to the effect that the California bred mare Mona Wilkes 2:03¼, sold a year ago last winter by her breeder James W. Marshall, of Dixon, Cal., for \$1500 to Mr. McDoel, of Chicago, was found dead in pasture week before last on the farm where she had been bred to Constenaro, the sire of Ross K. 2:02¼.

Mona Wilkes was foaled in 1902. She was sired by Demonio, dam the great broodmare Trix by Nutwood Wilkes. As a two-year-old in 1904 she won second money in the Pacific Breeders' Pacing Futurity and as a three-year-old she won that stake and took a record of 2:11½. The following year she did not race, but as a five-year-old she was raced through the California circuit, reducing her record to 2:06½ at Santa Rosa. In 1908 she made a very successful campaign through California, defeating the Diablo pacer Sir John S. 2:04¼ at Santa Rosa and getting a mark of 2:03¼. In the winter of 1909-10 she was purchased on an order from Chicago by Gil Curry and shipped east, where she was matined some by her owner.

Mona Wilkes wore no hopples and only a few boots and was one of the most cheerful race animals ever seen on the circuit. She had a temper of her own, but under the careful tutelage of Fred Chadbourne who trained and drove her in all her races she very seldom made a mistake, but raced from wire to wire. Bred to a horse like Constenaro she would probably have produced a very fast pacer, and her demise is regretted as her dam Trix is one of the greatest broodmares ever bred in California.

"GIVES GOOD SATISFACTION."

E. S. McPhederau, Everton, Canada, writes: "Have just received the six bottles of Quinn's Ointment; very thankful to get it. Have tried it before on curbs and bunches and found it to give good satisfaction. I can certainly recommend it." For curbs, splints, spavins, windpuffs, and all blemishes, use Quinn's Ointment. If cannot obtain from druggist, address W. B. EDDY & CO., Whitehall, N. Y. Price, \$1.00, delivered.

Breeders' Meeting at San Jose.

The two-year-old trotters of 1910, eight of which started in the Pacific Breeders' Futurity at San Jose on Thursday of last week, did not trot as fast or put up as close a contest as the two-year-old trotters of the previous year. The race was won by Mr. George L. Warlow's colt Matawan, by Athadon out of the great broodmare Cora Wickersham by Junio. Matawan is a full brother to Athasham 2:09 1/4 and Donasham 2:29 and more than a half brother to Nogi 2:10 1/4, as Nogi is by Athabio and Athabio is by Diablo out of the dam of Athadon. Matawan is a good gaited colt and had no difficulty in winning the stake in two heats, the time, 2:24 1/2 and 2:19 1/2 being several seconds slower than the race of last year. Valentine Girl, a Nutwood Wilkes filly was second in both heats and Dorothy Ansel, Det Bigelow's big Prince Ansel filly was third, and M. C. Keefer's Zombro colt Zorankin was fourth in each heat. They were all pretty fair baby trotters and all of the eight were inside the flag. Matawan could have trotted faster had it been necessary.

The three-year-old pacers in the Futurity put up a race the same day that started off sensationally in several particulars but when ended at the fifth heat was not very exciting. In this race there were but three starters—Normono, last year's two-year-old winner, driven by John Quinn, Ben Rush, a Demonio colt, driven by Elmo Montgomery, and Jean Valjean, a very fast son of Bon Voyage driven by Ted Hayes. The Bon Voyage colt was known to be very fast and the majority who had seen him at work expected him to win the race in straight heats. He had drawn the pole and the three scored down almost at a two-minute clip head and head. Starter Kenney swung his big megaphone into position and shouted go in stentorian tones. The megaphone was pointed toward the head of the pole horse and the word was given when they had passed the starter's box a few feet. Jean Valjean made a break, something he very seldom did in his work, and when Hayes got him settled he was an eight of a mile in the rear, as the other two were pacing a tremendous clip. From the quarter to the three-quarters Jean Valjean stepped in 1:01 but he was too far back to catch up as the other colts paced the mile like free-for-all pacers, and Ben Rush got to the wire first in 2:10 1/2 with Normono second and Jean Valjean distanced. The second heat was won by Ben Rush in 2:16, Normono having made a break that would have caused her to be distanced had Montgomery driven his colt out to the end, but he let him come in easy and Normono beat the flag. When the third heat was called Ben Rush was tired, that first heat having taken a lot out of him, and Normono won the next three in the slow time of 2:20, 2:19 and 2:21, thus winning the three-year-old stake in slower time than she had made in winning the two-year-old stake the year before, when she won a heat in 2:14 1/2. The race from start to finish was rather unsatisfactory and was really the only race of the meeting that could not have been called a good race for the class.

The best contest of the afternoon was in the cup race for horses owned in the Park Amateur Driving Club of San Francisco. There were three starters, Reina Directum, Charley T. and Laddie G. Cups were offered for first and second horses in the race. In this event Charley T. was driven by his owner, A. Ottinger, Laddie G. was driven by D. E. Hoffman, and Reina Directum was piloted by Charles James, instead of her owner S. Christenson, who had driven her in all her previous races. The first and second heats of this race went to Charley T. in 2:16 and 2:11 1/2, Reina Directum making a break in the first heat, and the gelding winning easily, but in the second heat the mare was right at his collar and made him trot the fastest mile he has gone this year to beat her. After this she came strong and made the mile in 2:12, beating him handily, then took the next two in 2:14 1/2 and 2:15, with Laddie G. second in both these heats. Mr. James drove an excellent race. Charley T. bled in the third heat or the result might have been different.

The three-year-old trotters in the Pacific Breeders' Futurity were the leading attraction for Friday, the third day of the meeting and there was a good attendance to see the youngsters perform, as it was known that several had beaten 2:15 in their work and a great race was expected.

Before the first race was called a couple of horses came out to go against time for records. The first to try was Mrs. S. V. Barstow's grand looking McKinney stallion Nearest McKinney that was announced to try to lower his record of 2:20 1/4. He did it very easily, Farmer Bunch holding the reins and bringing him to the finish in 2:14 1/4, a reduction of six seconds from his former record. Nearest McKinney is a pacer.

Budd Doble then brought out his handsome chestnut son of Kinney Lou 2:07 1/2, Kinney de Lopez, for a trial against the watch. Mr. Doble's young stallion is a trotter, one of the purest gaited ones ever seen, and he expects to race him next year, but thought a mark of 2:26 or 2:27 would not hurt him any. He drove him a nice mile well within the colt's limit, but the time was a little faster than he intended and the timers hung out 2:23.

After this the two-year-old pacers in the Breeders' Futurity came out to pace for their share of the stake—\$750. There were five of them and first and

second money went to a filly and colt by old Star Pointer 1:59 1/4. Charlie Whitehead of Salinas can't seem to get over the habit of winning stake money, and he was first in two straight heats with Pointer Belle, a daughter of Star Pointer and Dictatus Belle by Dictatus, owned by Mr. J. B. Iverson of Salinas, who also has the stake winning habit. This race was not as fast as some of the previous two-year-old stakes but it brought out a fine lot of young pacers.

Then came the event of the afternoon, the three-year old trot for a stake worth \$300. Eight of as fine looking three-year-olds as one would want to see came out for the race. Sweet Bow 2:17 1/2, winner of the two-year-old trot last year, was there driven by John Quinn; Babe Verne 2:25 1/4, winner of second money in the two-year-old stake of 1909, was also there; Pal 2:17 1/4 and Bon Guy, both of whom were starters in the race won by Sweet Bow last year were also present again, and there were four others who were making their first appearance in a Breeders' Futurity—Strathboule, Pegasus, Olmutz and Ateka. There was little scoring before they got away and Babe Verne who had the pole took the lead. Sweet Bow was right after him, however, and soon had the front position, while Joe Twobig brought Bon Guy up fast and soon had second place. There was a collision at the half between the sulkeys of Ateka and Olmutz, and the former got away and ran. Bon Guy and Sweet Bow raced out in front and the colt beat the filly to the wire, with Babe Verne third, and Strathboule who had shown speed, but had been dodging the runaway, fourth. The drivers of all the others also had a hard time avoiding Ateka and her "career" and they made a straggling finish. Marshal Dick Havey caught the mare on her second time around and the entire bunch started in the second heat. The time of the first heat was 2:16, slower than was anticipated before the collision occurred. In the second heat it was soon seen that Geo. Warlow's colt Strathboule, driven by the stake winning driver Schuyler Walton, was some trotter. He is a fine big black colt and his few breaks are only revolutions and he is back trotting faster than ever after indulging in one. Bon Guy and Sweet Bow set the pace in this heat and before the half was reached Bon Guy had taken the filly's measure, and looked like a winner. Then Walton's colt began showing his class and he overhauled Bon Guy, carried him to a break and took a commanding lead. Babe Verne and Pal took up the contest and there was a good race to the wire with Strathboule there first, Babe Verne second and Pal third in 2:13 1/2, which time equals the record of this race. The third heat went to Strathboule in 2:14 1/2 after another race with Pal and Babe Verne, the son of Palite getting second place this time. The fourth heat was quite exciting. Chadbourne took Pal away fast and hung right alongside Strathboule and the two raced in the lead almost to the half, when Walton's colt left his feet and there was a shout that Pal had him beaten. The son of Stamboulette got back on his gait after losing about four or five lengths and set sail for Pal. He caught him at the seven-eighths pole and the two made a grand race of it to the wire. The Fresno colt had the most speed and won the head and the race in 2:16. This was one of the best races of the meeting.

The 2:15 class trot was then called. There were eight starters and it was not difficult for Prince Lot, the black gelding by Prince Ansel to win in straight heats, taking a new record of 2:12 in the first heat.

The program for the last day of the meeting had but one regular race, the Pacific Slope Stake for 2:20 class pacers, so it had to be eked out with a couple of specials, one for the 2:08 pacers with three starters, the other for roadsters owned in the San Jose Driving Club. This program did not attract as large a crowd as was seen on either of the previous days, but there was a fair attendance nevertheless.

The Pacific Slope Stakes, value \$1000, was the first race called. There were seven starters but the Los Angeles mare Chiquita, driven by Walter Maben, rather outclassed her field and she won in three straight heats, Iceman forcing her to take a record of 2:09 1/2 the first heat, and the Nutwood Wilkes gelding T. D. W., well driven by Farmer Bunch, coming second to her in the next two in slower time and thus getting second money. Sam Hoy's reinsmanship landed the bay gelding Paterly in third position the second heat thereby earning fourth money.

The special pace was not much of a race, although it furnished the fastest heat of the meeting. There were only three starters, Solano Boy 2:07 1/2 driven by Elmo Montgomery, Happy Dentist 2:11 1/2 driven by his owner, Dr. Nash of San Jose, and Amado 2:16, a full brother to Conqueror 2:10 1/4, driven by Fred Ward. The first heat was quite a horse race, Solano Boy winning in 2:07 1/2 equalling his last year's record, but the next two heats were of the perfunctory order and the horses finished each in the same positions in 2:12 1/2, very slow time for such horses.

The Driving Club race had five starters. The winner was the pacer Flashlight by Searchlight, driven by Jos. Cuicello and he won in straight heats in 2:19 1/2 and 2:20. This ended a meeting that was successful under many adverse conditions.

The official summaries of the four days' racing is given below, together with a list of the horses that were given time records during the meeting:

SUMMARIES.

California Stakes, \$1000, 2:20 class trotting:
Helen Stiles, b. m. by Sidney Dillon-Silver.
Haw by Silver Bow (C. A. Durfee).....1 1 1
Lijero, br. s. by Jas. Madison (Ivey).....2 2 5
Bodaker, rn. s. by Antrim (Montgomery).....4 3 2

Prince Lot, br. g. by Prince Ansel (Spencer).....3 4 3
Dr. Wayo, b. s. by Wilkhurst (Ward).....5 5 4
All Style, b. s. by Stam B. (Daniels).....dis.
Harold K., b. g. by Wm. Harold (Galindo).....dis.
Time by quarters:
First heat—33 1/2, 1:06, 1:39, 2:11.
Second heat—34, 1:06, 1:39, 2:11.
Third heat—33 1/2, 1:05, 1:38 1/2, 2:10 1/4.

Trotting, 2:12 class, \$800:
Dr. Lecco, blk. s. by Lecco-Bessie D. by McKinney (C. A. Durfee).....4 1 1 4 1
Lady Inez, b. m. by Nutwood Wilkes (Culclough).....1 2 4 1 3

THE FUTURITY WINNERS.

The breeding of the winners of the different divisions of the Pacific Breeders' Futurity, is always a matter of interest to the breeders and owners of trotting and pacing horses, consequently we print below a three-generation tabulation of the futurity winners at the meeting of the Pacific Coast Trotting Horse Breeders' Association held at San Jose last week:

Winner Three-Year-Old Trot.

Strathboul 2:13¾ { Stamboul { Sultan
 { Fleetwing
 { Lady Escott { Artburton
 { Young Lady
 { Vernon
 { Strathway { Steinway
 { Countess
 { Strathalie { Harkaway
 { Mag
 { Athalie { Harkaway
 { Mag

Winner Three-Year-Old Pace.

Normono (2) 2:14¾ { Obas. Derby { Steinway
 { Katie G
 { Bertha { Alcantara
 { Barcena
 { Welcome { Arthur Wilkes
 { Lettie
 { Louisa { Lenora
 { Lestre
 { Eleanor by Elector

Winner Two-Year-Old Trot.

Matawan 2:19¾ { Matadon { Onward
 { Fanny Ally
 { Athadon (1) 2:27 { Harkaway
 { Mag
 { Electioneer
 { Cora Wickersham { Nelly
 { Whippleton
 { Gladys
 { by Gladiator

Winner Two-Year-Old Pace.

Pointer Belle 2:17½ { Brown Hal { Tom Hal Jr.
 { Lizzie
 { Sweepstakes { Snow Heels
 { Kit
 { Dictatus { Red Wilkes
 { Miss Lollie
 { Dictatus Belle { Vermont
 { Salmas Belle { Mary
 { by Owen Dale

RECORDS GO AT CLEVELAND.

Uhlan Trots a Mile in 1:58¾ and The Harvester One in 2:03¼.

Cleveland, Ohio, Aug. 8.—The opening of the second annual meeting at North Randall track and the third week of the Grand Circuit racing today was signalized by the breaking of a world's record. Uhlan, driven by his owner, C. K. G. Billings, trotted a mile to a wagon in 2:01 flat, thereby setting a new mark for trotting geldings.

It was apparent that the son of Bingen and Blonde was out to make history when the first quarter was passed and the board showed his time to be :30¼. When the half and three-quarter poles were passed and the black had not faltered for an instant the big crowd stood up and begged him to beat his old mark of 2:02¾. He responded nobly and clipped one and three-fourths seconds off the record.

Favorites had an easy time of it in the four events on the program. With the exception of the 2:04 pace, the races were won in straight heats, with the choice of the field leading handily.

The feature race, the 2:10 trot for the Fasig stake of \$2000, went to H. K. Devereaux's chestnut mare Teasel. Oro Bellini, who was thought to have a good chance, was a bad sixth in the first heat, but came back strong in the next two, and by finishing second in both cases divided second money with Nancy Royce, the money being awarded on the result of each heat.

Telemachus threw a shoe at the start of the first heat and was scratched.

Velzora, the favorite in the first event of the day, the 2:19 trot, got away to a poor start, but fought her way to the lead and finished easily. The next two heats were pie for her.

By the conditions of the race only those finishing inside the money in the first two heats contested in the third, and Princess and Maud's Pilot were drawn.

Major Mallow took the first heat of the 2:04 pace in 2:03¾, coming up behind the field, but was unable to finish better than second in the next two heats, although he fought it out to the end with Ross K., the favorite.

The Friend was scratched after the first heat because of sickness.

Nellie Temple took the lead away from Baroness Evelyn at the half mile pole in the first heat of the 2:21 pace, and in the second led all the way. Summaries:

2:19 trot; purse \$1000; three in five:
 Velzora, b. m. by Kahichi (Cox)1 1 1
 Oriena, br. m. by Ormonde (Shaffer)6 2 2
 Henry Winter, b. s. by Ed. Winter (McDonald)2 6 4
 Helen Turner, b. m. by Conquest Star (Packer)3 3 3
 Princess, b. m. by Ormonde (Stevens)4 4 0
 Maud's Pilot, b. m. by Pilot Prince (Castle)5 5 0
 Time—2:15¾, 2:13¾, 2:12¾.

2:10 trot; sweepstakes, with \$800 added; three in five:

Teasel, ch. m. by Aileen Downs (Andrews)1 1 1
 Oro Bellini, br. g. (Dickerson)6 2 2
 Nancy Royce, blk. m. (McCarthy)2 3 4
 Melva J., b. m. (Cox)3 4 5

 Jennie W., b. m. (Sunderlin)5 4 3
 The Friend, br. s. (Brawley)3 dr
 Time—2:03¾, 2:04¾, 2:06½.

2:21 pace; purse \$1000; two in three:
 Nellie Temple, b. m. by Nervolo (Proctor)1 1 1
 Baroness Evelyn, rn. f. (McDonald)3 2 2
 Lottie Hal, br. m. (Hatch)2 4 4
 Lawanda, blk. s. (H. Jamison)4 3 3

Aug. 9.—Favorites had another good day in the Grand Circuit races today at North Randall. In only one event were the forecasts upset. That was in the concluding race, when Fuzz Johnson, a black stallion by The Baron-Shell, driven by Frank Jones of Memphis, beat Louis W. Winan's chestnut mare Dora after a hard struggle. The event was the 2:15 trot, and four heats were necessary before Fuzz Johnson was finally decided the winner. Dora looked like an easy winner of the first heat, but broke in the stretch. She won the second heat, but broke again in the third, when she had a fine chance to land the money.

The \$3000 Edwards stake went to The Abbe. Ed Geers got the Chamber of Commerce stake winner away in third place in the first heat and at the three-quarter pole had him battling with Evelyn W., passing her a few yards from the wire in a driving finish. The time was 2:04 flat, a new mark for The Abbe, who made 2:04¼ at Detroit last week. The second heat developed into an even hotter battle. A blanket would have covered The Abbe, Evelyn W. and Branham Baughman as they passed under the wire in the order named. The Abbe was never headed in the final heat. Earl Jr. let W. D. S. set the pace to the three-quarter pole in the first heat of the 2:10 pace, and then took the lead handily, finishing an easy winner. In the next two heats Cox kept the gray gelding ahead of the field the entire distance.

Country Jay kept up his great record at Kalamazoo and Detroit by jogging home an easy victor in both heats of the 2:08 trot. The 14-year-old son of Jayhawk could have beaten the mark of 2:05¼

he made at Detroit last week easily, as he passed the half mile post in 1:01¾, but Gus Macey pulled him up 200 yards from the finish, even then landing the veteran ahead of the field by a dozen lengths.

Lou Billings, a three-year-old trotter, by John A. McKerron 2:04¼ and Lou Dillon 1:58¾, was driven a mile in 2:12¾ by John Dickerson with a runner as a pacemaker. Summaries:

2:10 pace; purse \$1500; three in five:
 Earl Jr., gr. g. by The Earl (Cox)1 1 1
 W. A., br. g. (Floyd)2 4 2
 Hallie Direct, ch. m. (F. G. Jones)4 2 3

 Time—2:08, 2:06¾.

2:15 trot; purse \$1000; two in three:

Fuzz Johnson, b. s. by The Baron-Shell (F. Jones)2 2 1 1
 Dora, ch. m. (Pennock)4 1 3 2
 Josie Mae, b. m. (Packer)1 4 4 ds
 Lulu Arion, ch. f. (J. Benyon)3 3 2 ds
 Time—2:14¾, 2:13¾, 2:14¾, 2:19¾.

Aug. 10.—Rain which fell in torrents during the forenoon and part of the afternoon prevented any racing today and the program went over until Thursday.

Aug. 11.—Dudie Archdale, winner of the \$10,000 Merchants' and Manufacturers' stake at Detroit, landed the \$5000 Ohio stake, the biggest feature of the program at North Randall track today.

It took only two heats for the Geers mare to capture first money, though the veteran driver was compelled to use the whip in both heats, Bervaldo and Billy Burke crowding her all the way. Hailworthy, who pushed her hardest in the second heat, and was only a scant nose behind her at the finish, was placed ninth for swerving in the stretch.

The event being run on the three-heat plan resulted in Dudie Archdale losing her first heat of the season in the third. Billy Burk, fighting for the money, managed to finish first, with Bervaldo and Bisa both landing ahead of the black mare.

Geers was presented with two silver cups for winning this stake and the Edwards stake on Tuesday.

The first division of the Tavern "steak" race, the second big feature of the day, could not be finished because of darkness. Henry H., winner of the first two heats, appeared to have captured the event easily, but was set back from first to third place in the third heat, because he mixed gaits on the home stretch.

The event will be finished tomorrow, when the 2:15 pace, which could not even be started today, will be decided.

The 2:08 pace furnished plenty of excitement. Shaughran, who started out a 10 to 1 shot in the betting, proved himself the best stayer. Good Goods took the first heat, Caffeno the second and Shaughran the third and fourth, in the last of which only the winners of the first three heats participated.

King Cole and Big Boy, who were most favored in the betting, proved big disappointments.

Gamar, the favorite in the 2:12 trot, was never in danger, capturing the three heats in order. Presiding Judge Newton announced just before the start of the Ohio stake race that Uhlan will try to lower his own world's record for trotting geldings to a wagon of 2:01 tomorrow, providing track and weather conditions are favorable.

Summaries:

2:12 trot; purse \$1500; three in five:
 Gamar, b. s. by Tekmar (Harrison)1 1 1
 Captain George, br. s. (Murphy)3 2 2
 Margate, rn. g. (Snow)2 4 4
 Sable Maid, blk. m. (E. Murphy)4 3 3
 Time—2:08¾, 2:08¾, 2:08¾.

2:08 pace; purse \$1200; two in three:
 Shaughran, b. s. by Ananias (Keyes)2 7 1 1
 Good Goods, b. g. (McDevitt)1 5 6 2
 Caffeno, b. g. (Merrifield)7 1 2 3
 Big Boy, blk. g. (Snow)5 2 3
 King Cole, b. s. (Dodge)3 3 4
 Gordon Prince Jr., blk. c. (E. Jones)4 4 5
 Miss Castle, br. m. (Castle)6 6 dr
 Time—2:05¾, 2:07¾, 2:07¾, 2:09¾.

2:14 trot; the Ohio stakes; purse \$5000; three heats plan:

Dudie Archdale, blk. m. by Archdale (Geers)1 1 4
 Billy Burke, br. c. (E. Benyon)6 2 1
 Bervaldo, b. g. (Murphy)2 3 2
 Bisa, b. m. (Cox)4 4 3
 Hailworthy, b. g. (Nuttingham)3 9 5
 Ario Leyburn, b. s. (Rosemier)9 6 7
 Major Strong, b. g. (Snyder)5 5
 Captain Cate, blk. g. (Skahen)7 7
 Time—2:06½, 2:07, 2:06¾.

[Continued on page 11]

NOTES AND NEWS

Uhlan 1:58¾.

The Harvester 2:02.

Trotting records are falling.

Woodland races begin next Wednesday.

The California State Fair opens Saturday, September 3d.

Dudie Archdale was beaten at Buffalo this week and only got third money.

Honors are easy now. Gov. Hughes is a Republican and Gov. Harmon a Democrat.

Uhlan 1:58¾ and The Harvester 2:02, are both members of the Electioneer families. Great is Electioneer.

Mr. Geo. L. Warlow of Fresno has won about \$12,000 with trotting colts of his own breeding since 1904.

Helen Stiles 2:10¾ by Sidney Dillon, will make her next start in the \$10,000 trot at Portland, Wednesday, September 7th.

The world's champion three-mile trotter, Ed Bryan, to wagon, is now being specially prepared to make another trial against the record, 7:30¾.

Zombrewer, the pacing mare by Zomhro, reduced her record to 2:10¾ in a winning race at Lansing, Michigan, last week.

Diamond Mac was outside the money in his race at Peoria Tuesday. The heats were trotted in from 2:09¾ to 2:12¾.

Dick McMahan, deciding that Donax, p., 2:07¾ cannot pay his way on the Grand Circuit, has shipped him home to his owner.

Monday, September 5th, is the opening day of the Portland, Oregon, meeting. The \$10,000 trot is on the program for Wednesday, September 7th.

Demonio Wilkes 2:09¾ is racing in poor luck this year. He got the flag in the first heat of a race at Lansing last week. The heat was paced in 2:08¾ by the winner.

The trainers shipped their horses from San Jose to Portland last Tuesday evening going by express. They were due to arrive at Portland early Thursday morning.

A side har, hike huggy with dust dash, as good as new, three-quarter seat, can be had at a bargain. It has a high arch and can be used for speeding. Apply to W. J. Kenney, 531 Valencia street.

The three-year-old On Voyage by Bon Voyage is starting in the class trotting events in Illinois. He took a record of 2:25 in the 2:40 class trot at Bushnell last week.

Phoebe Childers 2:10¾, the mare formerly owned by Mr. L. E. Clawson of San Francisco, has a foal at foot by Bingen 2:06¾ this year. She is now owned at Ardmaer Farm.

Emily Ellen 2:10¾, Lon McDonald's daughter of Todd, with which he won the three-year-old division of The Horseman Futurity, has three crosses of Electioneer blood.

Ernest Kemp of Stockton has purchased a new No. 15 McMurray sulky which T. D. W., his fast pacer by Nutwood Wilkes, will pull in the rest of his races this year. Mr. Kemp bought this sulky from W. J. Kenney, 531 Valencia street.

Grace Pointer, the three-year-old gray filly that Chas. DeRyder won with at Peoria last Tuesday in 2:09¾, 2:10¾ and 2:09¾ is by old Star Pointer 1:59¾ and out of a mare by Chas. Derhy.

The Star Pointer foals are showing up well this year. Two of them won first and second money in the Breeders' Futurity for two-year-old pacers, while Charley DeRyder has given a three-year-old by the old champion a record of 2:09¾ in a winning race.

Normono is the second winner of a Pacific Breeders' Futurity as a two-year-old to come back and win the three-year-old division. She took a record of 2:14¾ in winning the two-year-old event, but did not have to trot as fast by ¾ seconds to win the three-year-old race.

About 40 trotters and pacers were shipped from San Jose to Woodland last Sunday and will race at the Woodland meeting this week. Among the trainers whose horses made the trip were C. A. Spencer, J. S. Towhig, John Quinn, S. H. Hoy, Pat Hunt, Frank Williams, Schuyler Walton and Sutherland & Chubbourn. There will be some good racing at Wood and this week.

Tommy Murphy has snipped Paderewski 2:05¾ to his owner, Charles Campbell of Jerseyville, Ill., at Malvern, Ia., where the latter was attending the races. Murphy despaired of getting the gelding into form, and Mr. Campbell will try to do so.

Mr. Detels, owner of the good colt Bon Guy 2:16 winner of one heat and second money in the Breeders' Futurity at San Jose, thinks the three-year-old will make a better showing at Woodland next week. Bon Guy's shoes were changed a day or two prior to his race and caused him to strike himself and break. He is now shod in the old way and is expected to make a better showing.

Only one new 2:10 performer appeared at the Breeders' meeting last week—the pacer Chiquita 2:09¾ by Highland C. 2:19¾, dam Reina del Diahlo by Diahlo. Chiquita was bred by Mr. W. A. Clark Jr. and foaled at Pleasanton. Reina del Diahlo was bred by Mr. R. E. de B. Lopez at Pleasanton. She is now owned by Mr. A. B. Cox, of Paoli, Penn.

The blood of old Stenwinder, the dam of Directum went to the front in the races at San Jose where it was represented. On the first day Dr. Lecco whose dam Bessie D. is a daughter of Stenwinder, won his race and took a trotting record of 2:11¾, while on Thursday the mare Reina Directum, a daughter of Stenwinder, won a five heat cup race, taking a matinee record of 2:12. Good blood goes marching on.

Will Clifford, who for many years past has been in the grocery business in this city with his brother Geo. Clifford, and who had an extended acquaintance with the harness horse owners who attend the club races at Golden Gate Park, died suddenly one day last week from heart trouble. He was highly respected and his sudden death is deeply regretted by all who knew him.

The developed sires had the best of it at the Breeders meeting last week. The sires of horses that made new records during the meeting are Sidney Dillon, Lecco 2:09¾, Athadon (1) 2:27, Zolock 2:05¾, Stamboulet 2:10¾, Highland C. 2:19¾, Demonio 2:11¾, Star Pointer 1:59¾, Nutwood Wilkes 2:16¾, Prince Ansel 2:20, Dictatus 2:17 and Direct Heir.

About fifteen head of horses, mostly well bred mares owned by the estate of Geo. Fox of Clements, will probably be sold at auction in this city by Fred H. Chase about the middle of September. The Silver Bow mares are becoming very popular with breeders, and as the late Mr. Fox owned Silver Bow, the majority of these mares are daughters or granddaughters of that horse. They are all registered or eligible to registration.

Mr. P. J. Chalmers of Stockton, is now the owner of the hay colt One Better by Nearest McKinney 2:14¾, dam Much Better 2:07¾. One Better is a fine looking two-year-old, bred in the purple and a great prospect. He was sold at the Barstow auction in San Jose last Saturday for \$350, being purchased by Mr. C. H. Thompson of Salt Lake, who sold him the next day to Mr. Chalmers for \$500.

Major Mallow 2:03¾ is something of an iron horse. He started racing first in 1906 when he was eight years old. He took a pacing record of 2:16¾ that year and in 1907 one of 2:06¾. In 1908 he knocked a second off this mark, closing the season with a mark of 2:05¾. At the end of the season of 1909 his record was 2:04¾ and this year he has lowered it to 2:03¾.

Citation 2:01¾, who has been pulling the family survey of her owner, Judge J. H. Cartwright, of Oregon, Ill., since her permanent retirement from the turf last fall, is to be shaped up for an exhibition at the coming meeting at Oregon, Illinois. Despite the fact that she was bred, foaled and raised at that town, she never raced there, and in deference to the public wish to have her speed exhibited over her home track, her farewell to sulky will take place there.

Sonoma Girl 2:04¾ has now been a winner on either the Grand or Great Western circuit, or both, for four successive years. When we consider, says the Horse Review, that she was a sensation from the beginning, trotting in 2:05¾ her first season, and in 2:06¾ in her second race, and that she was a patched-up cripple at the outset, she is certainly one of the most wonderful trotters ever seen.

Mr. C. H. Thompson of Salt Lake City, who attended the meeting of the Breeders Association at San Jose last week was greatly pleased with the horses he saw race there. While in San Jose he purchased the well known McKinney mare China Maid 2:05¾ pacing and will take her to Salt Lake for use on the road and will probably breed her to some high class horse. China Maid is now thirteen years old and was bred by T. J. Drals, of Farmington, California, who sold her to Ho Yow, at that time the Chinese consul at San Francisco, who gave her the name she hears. She was trained and raced in California by Farmer Bunch, but was afterwards sold to J. M. Nelson, who took her east and raced her. She took her record at Columbus, Ohio, in 1904. She is a fast trotter on the road and could probably take a fast record at that gait. For several years past she has been owned by Mr. Grove of San Jose.

Mr. S. Christenson will take his fast matinee mare Reina Directum to Woodland to start in a cup race if one is given for her class. This mare has no mark and will not start in any regular event this year, but may be driven a mile at Woodland to see how fast she can trot. Her third heat at San Jose in 2:12 was a splendid performance as she pulled a big heavy cart and had only been just beaten the previous heat in 2:11¾.

The man who thinks that all the good colts are to be found on the large trotting breeding establishments is mistaken. Of course it is natural to expect that the large establishments equipped with mares of the choicest breeding and highest merit that talent can select and money can buy and mated with the most successful sires of speed whose services can be obtained will produce very superior stock, and so they do, but it sometimes happens that a mare the wise pedigree experts have overlooked or turned down, when mated with a good stallion, produces a trotting wonder. The non-standard Blonde, dam of Uhlan 1:58¾, is one of that kind, and there are others.—Coleman's Rural World.

Frank Dohle of Olliewood Stock Farm, Havre de Grace, Md., is campaigning a stable through the Lake Erie Circuit. He is a brother of Budd Dohle, who piloted Dexter to a world's record over the old Buffalo track forty-three years ago. In speaking of the Bradford races Frank Dohle said: "I have been coming to this noted old city ever since a boy in my knee pants, with my father, William H. Dohle. The old track was over yonder in Tarpot (now aristocratic East Bradford), and how the horsemen did wager money. They stood up and down the quarterstretch with rolls of big bills in both hands to wager. I have never in all my experience seen anything like it. Great old times—'Gen.' Turner, 'Knap' McCarthy, Warren Peahody, Charley Green, Frank Baldwin and all of the old-time celebrities were present."—Horseman.

W. J. Kenney, the popular sulky agent, who owns the matinee pacer W. J. K., by Dexter Prince, dam Psyche 2:16¾ by Cupid, concluded to drive his own horse in the event carded for him at the matinee of the San Francisco Driving Club at Golden Gate Park last Sunday. Some of the other drivers thought it quite a joke that Kenney, who weighs close to two hundred was to pilot his horse but when the race was over W. J. K. had won it in straight heats and had paced three or four seconds faster than he ever before showed in a race. There was great cheering when President Kenney won and although some of the defeated reinsmen wanted to make the race over for a purse Mr. Kenney declined and said one race was enough to ask a horse to go in one day. W. J. K. is quite a pacer and if put in regular training should pace close to 2:10. Mr. Kenney uses him as a business horse nearly every day in the week.

One of the best bred colts ever brought to this State is the two-year-old Beirne Holt 49283, bred by Gen. C. C. Watts, of Charleston, West Virginia, and now owned jointly by Mr. C. H. Thompson, of Salt Lake City, and Fred Ward, the well known Los Angeles trainer. Beirne Holt was sired by Co-chato 2:11¾ (son of Todd 2:14¾, son of Bingen 2:06¾ and Fanella 2:13 by Arion 2:07¾). The first dam of Beirne Holt is Belle Andrews, a producing mare by Billy Andrews 2:06¾ (producing son of Bow Bells and May Hudson, great brood mare by Gen. George H. Thomas). The second dam is Prospect Belle producing mare by Mambrino King, third dam by Sweepstakes, son of Hambletonian and fourth dam Gray Kate by Harry Clark 45. Beirne Holt is a trotter and with scarcely any work has shown quarters in 3¾ seconds, and a mile around 2:20, which is a pretty good showing for a two-year-old.

A number of excellent judges in matters pertaining to trotters have expressed the opinion that Dudie Archdale 2:06¾, the fastest new trotter of the year and the winner of the first \$10,000 purse to be raced for this season, will not be a good wearing campaigner, their reason for this opinion being found in the fineness of that mare—her lack of size and substance—says the Horse World. Possibly these good judges are right in the opinion they have formed of this wonderful little mare, but there is a chance for them to be wrong. The very lack of size noted in the daughter of Archdale makes it possible for her to wear well with less substance than would be necessary in a larger horse. Then, again, she is said to be a trotter with a gait far less wearing on the muscles and ligaments than that of most of the fast trotters. When at speed she goes so close to the ground that, even on a hard track, the sound her feet makes is scarcely louder than the foot-fall of a dog. Differently gaited it is probable that she would develop some weakness much sooner than she is likely to, gaited as she is. Then, too, there is a vast difference in the quality of the structural system of different horses. If this seemingly wonderful little mare has bone of sufficiently high quality to enable her to carry her weight with the same degree of ease to her structural system that characterizes the largest trotters, with their greater amount of substance, it is possible that she will be able to stand a severe campaign as well as the larger ones. There have been a number of small horses among the fast performers, notably Penisa Maid 2:04¾, among the trotters and Robert J. 2:01¾, among the pacers, and both of the pair named showed the capacity to stand a strenuous campaign; indeed, Robert J. stood two or three exceedingly severe ones.—Rural World.

SHOULD BE A GREAT RACE.

Occident Stake of 1910 Has Ten High Class Three-Year-Olds Eligible to Start.

Final payments have been made on no less than ten three-year-olds in the Occident Stake to be trotted on Monday, September 5th at the California State Fair. It should be the greatest Occident Stake ever trotted, and if the track is in good condition the record of the race, 2:13½, made by El Volante last year, should be lowered.

Among those on which final payment has been made are Strathboule 2:13½, winner of the Pacific Breeders' Futurity last Friday at San Jose; Bon Guy 2:16, winner of second money in the same stake; Sweet Bow 2:17½, winner of last year's two-year-old futurity; Pal 2:17½, winner of two races for two-year-olds last year; Babe Verne 2:25¼, winner of second money in the Breeders' Futurity for two-year-olds in 1909; Donasham 2:29 as a two-year-old, full brother to Matawan 2:19½, winner of the two-year-old Breeders' Futurity this year; Voyageur by Bon Voyage, Olmutz by Zombro, Pegasus by Zombro, and Expedito by Lijero. The full list of the three-year-olds on which final payments have been made in the Occident Stake are:

Voyageur, b. c. by Bon Voyage, dam Lucie May by Oakland Baron; W. A. Clark, Jr.
Pal, b. c. by Palite, dam Lorna Doone by Bayswater Wilkes; E. D. Dudley.
Babe Verne, br. c. by Jules Verne, dam Little Babe by Bradmore; Henry Peters.
Pegasus, b. c. by Zombro, dam La Belle by Sidney; Valencia Stock Farm.
Sweet Bow, b. f. by Bon Voyage, dam The Silver Bell by Silver Bow; L. H. Todhunter.
Olmutz, b. g. by Zombro, dam Floretta by Prince of Norfolk; L. B. Daniels.
Strathboule, bl. c. by Stamboulet, dam Strathalie by Strathway; Geo. L. Warlow.
Bon Guy, b. c. by Bon Voyage, dam La Moscovita by Guy Wilkes; W. E. Detels.
Donasham, b. c. by Athadon, dam Cora Wickersham by Junio; C. A. Canfield.
Expedito, br. f. by Lijero, Gilt Edge Stock Farm.

SAN FRANCISCO DRIVING CLUB.

The usual large crowd saw the San Francisco Driving Club's races at the Stadium track in Golden Gate Park last Sunday and there was some good racing.

The officers of the day were: W. J. Kenney, starter; Albert Joseph, G. Lindauer, George E. Erlin, judges; W. F. Bennett, E. Cerceit, M. W. Herzog, timers; Fred Lauterwasser, Jr., marshal; J. M. McGrath, secretary.

The results:

First race, 2:30 class:

John Kramer's Cloudlight	1	4	3	1
A. Benson's J. Arthur	3	3	1	2
G. Tassi's Steve D.	4	1	4	3
J. D. Sexton's Alfred E.	2	2	2	wd

Times—2:29½, 2:30½, 2:29, 2:23½.

Second race, 2:25 class:

E. C. Chase's Dollie	1	1
Captain Olson's Zulu	4	2
W. Higginbottom's Prince Almont	3	3
H. D. Chase's Don C.	2	6
H. Schottler's Lulu S.	5	4
H. Campodonico's Baldy Mitchell	6	5

Times—2:22½, 2:20.

Third race, 2:16 pace:

H. Frelson's Jack	1	1
Chase & Giannini's Kitty D.	3	2
Duncan Campbell's Ginger	2	5
P. Kohn's Alfred D.	4	3
Rob Burnett's Sydney B.	6	4
James O'Kane's King V.	5	6

Times—2:15½, 2:16½.

Fourth race, 2:20 class:

W. J. Kenney's W. J. K.	1	1
V. Verilhac's Dr. Hammond	4	2
"Shorty" Robert's Charley J.	2	4
T. H. Corcoran's Caliente Girl	3	3

Times—2:16½, 2:17½.

A novel horse show was held on the steamship Minnewaska July 28 while in mid-ocean on her voyage to New York. Classifications for Shires, Percherons, Belgians and German coach horses were filed from the 226 head on board, including the importations of Trumans' Pioneer Stud Farm, Bushnell, Ill.; Bell Bros., Wooster, O.; W. S., J. B. and B. Dunham, Wayne, Ill.; W. E. Prichard & Sons, Ottawa, Ill.; Edwin Hobson, W. V. R. Powis, Hamilton & Son and J. Hawthorne, Messrs. Bell, Truman, Hobson and Hawthorne were the judges, the single judge system being employed. The large number of passengers on board took great interest in the afternoon's entertainment furnished by the horse show committee. The affair was held between decks in a ring with space for showing the horses at a trot.—Breeders' Gazette.

Alice Roosevelt 2:08¼ was foaled in 1898, hence is 12 years old. She was bred by Dr. William A. Goddard of Sedgwick, Kan., and was first raced by A. M. Sefton of Wichita, Kan. Her grandam, Josephine Young, was bred by Mr. Shupe of the firm of Shupe & Cbitenden, Peahody, Kan., owners of Joe Young 2:18, at the time of that stallion's death in 1897, and for several years prior to that, and is not identical with the mare of the same name that produced Joe Patchen. She has a record of 2:26, but said record is not found in the Year Books. It was secured over a non-association track, and the meeting was never reported.

OUR LOS ANGELES LETTER.

Los Angeles, August 16, 1910.

Trotting matters here are at a standstill for the present, and will remain so until the campaigners return and most of them with an enlarged edition of Murray Howe's Excuse Book. In the meantime the sporting page of the daily papers and the weekly "horse" papers are in demand by the stay-at-homes, and of course Uhlman's wonderful mile at North Randall is the principal subject of conversation. Sensational performances ever since the season opened, beginning with Dudie Archdale, then Country Jay, whose recent interesting history was given in last week's "Breeder and Sportsman," and followed by the trial to wagon of Uhlman, and the race of The Harvester, have given the trotting horse enthusiast plenty to think about and sufficient grounds for chapters of predictions.

The final payments due August 14th in the Canfield-Clark Stake No. 1, for two-year-old trotters to be raced at Woodland next week are coming in and should all have been received today, but this is one of the numerous election days that Los Angeles is afflicted with and there is but one early delivery of mail, so the contestants will not be known till tomorrow.

I met Joe Sresovich, the owner of the fast green mare Etta McKenna, on the street yesterday and he told me he was spending his vacation at San Diego. He has the mare with him and is using her on the road with occasional little brushes on James C. Wallace's track, which he says is in tip-top shape for working. Wallace is busy with Kenneth C. and a three-year-old, getting them in shape to take to Denver, his home town, to start and then go south and eventually to El Paso and Phoenix. Kenneth C. is working round 2:30 with halves in 1:08 and the filly looks good; both have had distemper, that has been so prevalent this year down here but are now completely recovered, but of course backward in their work, which is the reason probably that the filly will not be started in the California Breeders' stake in which she was entered.

L. J. Christopher, I'm told, received a telegram from the trainer in charge of Rancho Del Paso in Nebraska saying: "Rancho been sick; well now. Wire me a hundred dollars."

"Did you wire him the money?" he was asked.

"Certainly not. Has he not the horse? What does he want, the earth? Next thing he'll be wanting me to send him a box of bon-bons and prepay the express on them at that. Now he telegraphs that Rancho is well again, let him go win a hundred if he wants it so d—bad. I've got delivery horses to feed here in my business."

W. G. Durfee is still delighted with the Santa Ana track as a training ground and says it is the best in the State for that purpose. All his horses are doing well and he thinks that Copa de Oro will show a sensational mile this fall. So far he has been working Carloklin and the pacer in the same notch, each getting a mile in 2:14½ last week, the trotter working the last eighth in 14½ seconds and the pacer the same distance a second faster. He thinks Copa capable of a half in 58 seconds, and Carloklin one in a minute flat. They certainly are both looking and working better than ever before.

Clarence Berry's three-year-old pacer Aviator worked a mile in 2:14, last eighth in :14½. If he keeps good Berry will have a chance to square himself through him for his mistake on the Jeffries-Johnson scrap.

A five-year-old green mare by Petigru, out of the dam of Aviator, a trotter, looks good to W. G. He stepped her an eighth in 15¼ seconds without any trouble last week.

Kid Dillon, the little Sidney Dillon pacer, is at work again and has been an easy mile in 2:23.

James S. Stewart has started Lady Mac again after a long lay up. She is Mr. McLean's matinee pacer by Zombro that he intends sending East next season. Stewart also has L. J. Christopher's Direct Maid, getting her in shape for the matinees next winter when the new track is finished. JAMES.

TROTTING IN AUSTRALIA.

Evidently trotting is still making progress in Australia, and with so many highly-bred horses to draw from, it should, if properly managed, not be long in taking a high standing. At the last meeting of the Melbourne Trotting Club the fields were large, including several performers of more than average merit. One of these, in Philos, a son of John Osterley, accounted for the chief event, covering the mile in 2:26 1-5. Favoritism rested with Grattan Bells by Abbey Bells from Blonde Grattan, who is credited with being the champion two-year-old trotter of Australasia. He was driven by Lou Robertson, but failed to get amongst the placed horses. Owyhee Jr., a son of Owyhee and Lucretia, sire and dam bred in California, made short work of the lot that opposed him in the 2:47 class event, and another blue-blooded one in Mr. J. B. Zander's Lottie M., a speedy two-year-old daughter of Mauritius and Lottie Derby showed to advantage in the Distance Handicap. In this event the handicaps were worked out on a distance basis, while in most of the other races starts were given in seconds. Austerlitz was amongst the unplaced division in the 2:37 class, as was Lottie Derby, and it would seem that the New Zealander has had his day. Evidently Ladies' Bracelets are just as popular in Melbourne as in Canterbury, for the race of that class drew the largest field of the day; being won by Robert Alto, a four-year-old son of Dixie Alto.

GAVE FIRST LESSONS TO THREE WINNERS.

San Jose, Aug. 15, 1910.

Breeder and Sportsman:—I am much interested in the success of the new San Jose track and was very much delighted at the way the horses raced and stepped there last week, especially Helen Stiles 2:10¼, winner of the 2:20 trot; Bon Guy 2:16, winner of second money in the three-year-old futurity, and Flashlight, winner of the cup race, paced in 2:19½. All three of these I broke and drove while at Pleasanton, giving them their first lessons and development. I drove Helen Stiles in the futurity at Chico in 1908 in 2:14¼, last half in 1:04, separately timed, and there Mr. Durfee fell in love with her and paid her breeder, S. S. Stiles, of Oakland, \$2,000 for a half interest in her. I broke Bon Guy and taught him the way to go, and he was a trotter. Mr. Detels could have taken \$1,000 for him before Bon Guy had his first shoes on. Flashlight worked two months to a day in the rainy season and stepped a mile in 2:27, a half in 1:10, and a quarter in 33 seconds in 1908.

I have a great prospect now in my stable—Bon Roy, two years old. He has stepped a mile in 2:27, a half in 1:12¾, and a quarter in 34½ seconds on a trot. Cresto, a green horse owned by Mr. James F. Dunne, of Gilroy, with three months' work stepped a mile in 2:15¾, a half in 1:07¼ a week ago to-day, on a four-cornered trot, and I am sure will make a Helen Stiles for next year, barring accidents.

Bonnie Derby, another green horse I have, by Bonnie Direct, dam by Cbas, Derby, stepped an easy mile Saturday last for his owner, Mr. Ed Johnston, of Los Molinas, California, in 2:20, last half in 1:09½, last quarter in 34½ seconds. We expect to trot him south this year in some good man's stable. Bon Roy is in all the three-year-old stakes for 1911.

I am still in San Jose—have been sick, but am now quite well and getting stronger every day.

Yours truly,

J. S. PHIPPEN.

THE GOVERNOR HUGHES MEETING.

This is the unofficial title that horsemen have given to the Grand Circuit races to be held at the Empire track in New York, next week, under the auspices of the newly organized Trotting Horse Breeders' Club. The name is not inappropriate. The meeting represents an attempt to put high-class harness racing on a new basis in New York and test the question as to whether the sport can survive under a strict enforcement of the laws against race-track gambling, which Governor Hughes has put through the legislature in pursuance of the express provisions of the constitution. Private wagers will not be prohibited, but no bookmaker will be allowed to pursue his business on the grounds. Two propositions have been made to the club for the privilege of laying odds, but both were promptly turned down.

It is perhaps not generally known that Governor Hughes had a great many supporters among horsemen identified with trotting when he started out to stop bookmaking on the race tracks of New York.

Most of the patrons and officials of the Governor Hughes meeting are wealthy men whose interest in trotting horses is that of the amateur stock breeder or fancier. Nearly all are themselves prominent breeders, and the horses they campaign are for the most part the product of their own farms, sent to the turf for the glory rather than the money they can win. To finance the meeting twenty of them have subscribed \$500 each and are willing to lose it if necessary to sustain high-class harness racing in New York.—Horse Review.

NO TWO-YEAR-OLDS IN TRAINING.

Hanford, Aug. 10, 1910.

Editor Breeder and Sportsman: Replying to Jacob Broliar's suggestion for a two-year-old trotting race at the Hanford Fair next October, I will state that there are no two-year-olds being either worked or driven on the road in Kings County that could be possibly made ready to race in so short a time. Stanley Eddy has a three-year-old showing fast at the trot for the limited work the veteran trainer has given him. The fast daughter of Expressive Mac, Vera Hal, owned by J. H. Liggett, is doing well in her work, and the same can be said of a four-year-old by Milton Gear, and Beretta, a three-year-old filly by Expressive Mac. The latter, a McKinney-Electioneer stallion, is working nicely in the string of Charles Clark, of Toggles 2:08½ fame, at Fresno.

The directors and manager of the fair association are working assiduously and harmoniously to give one of the best fairs Kings County has ever held, and it is to be hoped that unstinted success will crown their efforts.

Alex Anderson has a pacing colt by Expressive Mac and a trotting colt by Hambletonian Wilkes out of a Dictatus 2:17 mare. Both are good gaited and promising and are being trained by Russel Gray.

Yours sincerely,

P. C. BYRNE.

In support of his contention that his cross-bred Hackney-trotters can beat a pure-bred horse of either breed at a long distance, Gen. Brayton Ives has volunteered to match one of his three-year-olds to go ten miles with a trotting-bred youngster of like age—speed, action and condition at the finish to determine the award of the stakes. It is expected that some member of the Trotting Horse Breeders' Club will accept the challenge for a race during the Grand Circuit meeting at the Empire track.

ROD, GUN AND KENNEL

CONDUCTED BY J. X. DeWITT.

NATIONAL RIFLE MEET AT CAMP PERRY.

The National Rifle Association matches began Monday, the 15th inst., and comprised a week of rapid and high-class shooting. The matches opened with the skirmish run of the President's match at 8 a. m. Sunday morning and simultaneously the Wimbledon cup match of twenty shots at 1000 yards was shot. These were followed by the 200-yard stage of the President's match and the 800-yard stage of the Leech cup match. In the afternoon the match for the State Secretaries of the National Rifle Association, the Regimental match and the Press match were started.

The Regimental match is a team match open to teams of six from the army, navy, organized militia, military and naval academies and cadet organizations of educational institutions and is shot at 300, 600 and 1000 yards. For this match a new trophy has been presented by Brigadier-General Frank A. Rumbold, Adjutant General of Missouri, the former trophy having been won three times by the Sixth Massachusetts Infantry and thus becoming its permanent property. It was won last year by the First Infantry team from the Colorado National Guard, which thus has a leg on the new trophy. An important change has been made in the Press match. There will be no entrance fees this year and no cash prizes, but a silver cup will be presented to the winner and the second man will receive a life membership in the National Rifle Association, valued at \$125. In addition a handsome solid silver trophy, known as the Press trophy, will go to the publication represented by the winner of the match to be held for a year. The trophy has already been won by representatives from several different publications whose names and papers represented are inscribed on the trophy.

The program for Tuesday included the first stage of the Evans skirmish match, starting at 8 a. m. and continued all day. This is the most spectacular rifle match in America and aroused the greatest interest at the camp.

The trophy is a handsome silver cup given by Col. R. K. Evans, U. S. A., who is serving his fourth successive term as executive officer of the National matches. It is open to teams from the army, navy, marine corps, military and naval academies and educational institutions having military departments and the organized militia. The teams consist of one captain and eight men. The competitors start from a point beyond the 1200-yard line and carry 40 rounds of ammunition each. At intervals the targets are exposed and while they are up the competitors fire under the direction of the team captain. While they are down the teams advance. If they are hit on a target the opposing team at once loses a man and his remaining ammunition, and the man thus lost must remain at the place where dropped until the run is completed. The runs continue until each team has lost all of its men or both teams have exhausted all their ammunition. The winning team will be determined by the aggregate number of points which are given according to the halt where the opponents were put out. For instance, the halt furthest away from the target being in the neighborhood of 1200 yards, is the most difficult range. For each opponent put out at this range the team will be allowed six points. All points drop off at each halt down to the sixth halt, where one point is allowed. In case of ties the teams will make extra runs. The Evans match required all day Tuesday, Wednesday and Thursday to finish.

The individual long range Tyro match at 1000 yards was also set for 8 o'clock Tuesday and also the 600-yard stage of the Regimental match. In the afternoon the Company team match and the 600-yard stage of the President's match and the final 1000-yard stage of the Regimental team match was on the card.

Wednesday morning the 600-yard stage of the Marine Corps match began the day's work on the range in the series of National Rifle Association matches. This match is for individuals and comprises 20 record shots at 600 and 1000 yards. The trophy was contributed by the officers of the United States Marine Corps and cost \$1,500. It is of beautiful design and solid silver and is held for one year by the winner. The 1000-yard stage was shot in the afternoon. The Evans skirmish match was continued all day, and in addition, the 900-yard stage of the Leech cup match, which began on Monday, was shot. In the afternoon the 600-yard stage of the Company team match was shot and also the rapid-fire stage of the President's match. This, it will be seen, made a very full day for hundreds of riflemen.

The program for Thursday was the wind-up of the National Rifle Association matches for 1910, as yesterday and to-day the program arranged calls for practice for the National Team match, which begins on Monday next. The entire range was in use on Thursday. The Evans skirmish, which had been running for the two days previous, was concluded late in the afternoon.

Beginning at 8 a. m., the 1000-yard stage of the President's match was shot and also the match for members of the National Rifle Association at 200 yards. At 10 a. m. the individual rapid-fire match

at 200 yards was on. In the afternoon the wind-up of the Leech cup match at 1000 yards and the 600 yard stage of the Members' match was the card, and on the revolver range took place the Revolver team match. The final match of the Association week was the Inter-Club match at 200 yards, which started at 4 p. m.

The Wimbledon cup match for the famous cup presented to the Association by Major Henry Fulton of England is shot at 1000 yards and each contestant is allowed two sighting shots and twenty shots for record, making the highest possible score 100 points. Any rifle and any ammunition may be used and the match carries with it a gold, silver and bronze medal, together with certain cash prizes.

The Wimbledon cup was first won in July, 1875, by Major Henry Fulton on the famous Wimbledon range, from which the cup takes its name. It is a massive piece of solid silver in the form of a tankard, standing about twenty inches high and with a capacity of several gallons. It is a happy custom for the winner to fill the cup and pass it around on the night of the match. In the front the cup bears the following inscription: "Challenge Cup presented by the National Rifle Association of Great Britain to the United States for competition at their annual meeting," and another inscription to the effect that it was "received from the hands of her Royal Highness, the Princess Louise of England, by Major Henry Fulton, the first winner at Wimbledon, July, 1875." The cup is also engraved with the names of the winners and their scores.

The conditions of the match having been changed several times, the first scores do not agree with the latter scores, but eliminating them the winners of the cup appear as follows:

Won in 1876 by J. L. Allen, in 1877 by Dudley Selph, in 1878 by Frank Hyde, in 1879 by C. H. Laird, in 1880 by William Farrow, in 1881 by F. J. Rabbeth, in 1882 by W. Budworth, in 1883 by H. T. Rockwell, in 1884, 1885 and 1886 by J. W. Todd, in 1887 by T. J. Dolan, in 1888 by W. M. Merrill, in 1889, 1890, 1891 and 1892 by Charles H. Ganz, in 1893 by S. J. Scott, in 1894 by Peter Finnigan, in 1895 by S. J. Scott, in 1896 by George Cann, in 1897 by F. C. Wilson, in 1898 no contest (Spanish War), in 1899 by F. C. Wilson, in 1900 by Wm. D. de V. Foulke, in 1901 by Wm. B. Martin, in 1902 by K. K. V. Casey, in 1903 by Wm. H. Richards, in 1904 by George E. Cook, in 1905 by William Tewes, in 1906 by John C. Semon, in 1907, and 1908 by K. K. V. Casey, in 1909 by Victor H. Czegka.

The list of contestants this week included many of the former winners of this historic trophy and a number of marksmen who have been trying to capture it for many years.

Five hundred regulars, two State rifle teams and fifty individual sharpshooters arrived at Camp Perry, Saturday, August 6th, for the opening matches of the Ohio State Rifle Association's seventh shoot which opened Monday morning, August 8th. Nine companies of the Twenty-sixth Infantry, from Ft. Wayne and Ft. Brady, Mich., in command, respectively, of Major Hatch and Major Durfee, went under canvas next to the Second Infantry.

Troop I, Sixth Cavalry, from Ft. Des Moines, got in Friday to act as mounted orderlies. About 1,200 regulars are now there.

Two Southern teams, Mississippi and Virginia, came Saturday afternoon. The Mississippians, who got thirty-sixth place last year, brought their own coffee and molasses.

The Virginians, thirty-eighth last year, have the biggest delegation of shooters on the grounds, 37.

Colonel Lloyd W. Howard, Sixth Ohio, arrived Saturday afternoon and relieved Major Charles Becht, First Ohio, of command of the camp. Colonel Howard is to be assistant executive officer of the Ohio matches.

Captain Henry B. Kirtland, of the Ohio Signal Corps, who was Acting Chief Signal Officer of the division at the Columbus strike, assumed his duties at Chief Signal Officer of the range, to which Adjutant General Weybrecht appointed him. A detachment of Company H, Signal Corps, U. S. A., from Ft. Omaha, 10 men and a sergeant, was placed under his command.

To facilitate familiarity with the involved rules the range officers were divided into squads under four experienced range officers, Major James H. Frier, Tenth Infantry; Captain John T. Haines, Twenty-fourth Infantry; Captain Julian R. Lindsay, Fifteenth Cavalry, and Captain Charles H. Lyman, Marine Corps.

Few men are more expert with the military rifle than Dr. Walter G. Hudson, of the Manhattan Rifle and Revolver Association of New York City. He was connected with the National Guard of New Jersey for a number of years and afterwards was Captain and Assistant Surgeon of the Ninth New York Infantry, but modestly prefers to be known as a civilian rifle shot. He has been in attendance at the matches at Camp Perry and Sea Girt, N. J., and other rifle camps for a number of years and has won many prizes. He was a member of the Palma Trophy team of 1902, of the American Team in the Irish-American match at Sea Girt in 1901, and of the Palma Trophy team again in 1907. For a place

on the latter team Dr. Hudson made the high score in competition. He also made the high score with the rifle and revolver in the International match between the Manhattan Rifle and Revolver Association and the Cerole des Carabiniers of Paris in June, 1907, when he broke the French and world's record at 200 yards on the French target. Dr. Hudson is especially well known as an authority on ballistics and explosives and is the author of several famous works on rifle practice. He will be, it is claimed, one of the leading contestants in the matches at both Sea Girt and Camp Perry.

Among the many marksmen competing in the matches at Camp Perry is Major William B. Martin, of Sea Girt, New Jersey, who is there to defend his title of "Military Champion of the United States." Major Martin won this title last year by making the highest aggregate score in the President's match and the National Individual match, although he did not win either of these matches. His total score in the President's match was 314 and in the National Individual match 322. The winner of the President's match was Midshipman Andrew D. Denny and of the National Individual match was Midshipman Herbert O. Roesch. All three of these marksmen received letters from President Taft congratulating them on their victories. Major Martin, familiarly known as "Billy" Martin, is one of the most popular men in the shooting game. A total abstainer from alcohol and tobacco, he is nevertheless a most companionable fellow, always ready with a good story and a hearty laugh. He has done some great shooting. Among other trophies he carried off the Wimbledon cup in 1901 and was a member of the American team which captured the World's prizes at the Olympic games at Bisle, England, in 1908. On his return he was given a rousing reception by the Mayor and citizens of Elizabeth, N. J., his home town.

A great deal of attention has been directed at Camp Perry to the operation of the Benet-Mercier gun, which is one of Uncle Sam's new death dealers. The gun is fired from a rest and held against the shoulder of a man sitting or lying prone on the ground. The gun fires the regulation rifle cartridge from clips, each containing fifty cartridges. A rapid handler can discharge from 300 to 500 shots per minute if assisted by someone passing the cartridge clips. In reality, the gun is a machine gun on a small scale and can be easily operated by two men, who are supposed to carry the gun and ammunition. It is manufactured in this country by the Colt Patent Fire Arms Company for the United States Government.

Monday next, August 22d, the National Team match, competed in by twelve-men teams from the U. S. Army (infantry and cavalry), U. S. Navy, U. S. Military Academy, U. S. Naval Academy, one team from each State and Territory and the District of Columbia, organized militia and naval militia, will be started. The National Individual and National Revolver matches will follow. The meeting will be finished on the 25th inst.

Adjutant General J. B. Lauck has announced the list of militiamen who will make up the California rifle team of 15 to compete at Camp Perry, Ohio, as follows:

Captain Frank W. Cameron, Company G, Second Infantry, Sacramento; First Lieutenant James A. Esterbrooks, Company G, Second Infantry, Sacramento; First Lieutenant Claud H. Sanborn, Fifth Infantry, Santa Rosa; First Lieutenant Bert T. Demmitt, Company A, Seventh Infantry, Los Angeles; First Lieutenant Fred S. Campbell, Company G, Seventh Infantry, Redlands; First Sergeant Irwin D. Newcomb, Company A, Second Infantry, Chico; Sergeant Henry J. Lewis, Company F, Second Infantry, Woodland; Sergeant Henry I. Marshall, Company D, Fifth Infantry, Santa Rosa; First Sergeant Leo A. Jacker, Company I, Fifth Infantry, Livermore; Sergeant Harman Becius, Company A, Seventh Infantry, Los Angeles; Sergeant Roy V. Kopf, Company K, Fifth Infantry, Petaluma, Private Chester A. Kimball, Company A, Fifth Infantry, Oakland; Private Charles A. Pimental, Company H, Fifth Infantry, Hayward, Cook Earl F. Brunner, Company H, Fifth Infantry, Hayward, and First Sergeant Francis Webster, Fifth company, Coast Artillery Corps, San Diego. Captain Charles F. Hutchins of Company I, Major John G. Lee of the ordnance department, who will act as team coach, Captain Albert B. Austin, quartermaster of the Seventh Infantry, who will be the team spotter and disbursing officer, and Captain Joshua B. Dickson of Company K, Fifth Infantry, who will serve as range officer.

Last year the California team ranked fifteenth in the entries of forty-seven.

Four Bears Bagged.—James Miller of Campo Seco, Calaveras County, killed four bears in the mountain fastness of his home county a few days ago. Miller, who is but 16 years of age, went hunting with a party of older men. Straying from camp alone, he came upon a cub. He crippled the cub, whereupon the dam put in an appearance and rushed him. One shot from his rifle pierced the heart of the mother. As the big bear fell dead Miller fled from the scene in fear. He hastened to camp, where the men reinforced him and hastened back to the scene. There they found the crippled cub and two others. Miller killed all of these. The dam weighed 700 pounds.

Drink Jackson's Napa Soda.

FISHERMAN'S LUCK.

The fisherman fished in the waters deep,
And he fished by the mountain dell,
He fished where the torrents roared their song,
And he fished in the lakes for a spell;
And he fished and fished, and he wished and wished
That the fish would bite as they ought;
But it seems that they knew he was fishing for them,
For never a fish was caught!

He whipped the streams from the ice-bound crest
Of the highest mountain peaks;
He followed the course of the river's run
For seven or eight long weeks;
And he tried new lures both early and late,
From brook down river to sea,
But not in the brooks or the ocean deep
One beggarly fish caught he.

So he kept on wishing, and kept on fishing,
And kept on whipping the streams;
At the time for dispersing he found himself cursing
The fish he had seen in his dreams!
"I have fished," he moaned, "where the fish were
thick,
With hook and with spear and with seine,
But never a thing has nibbled for me,
And I think I will catch the train!"

So fishermen, all, read a fisherman's words,
And when you have fished in vain.
Just pack up your tackle and hope for the best,
For you always can catch—the train!

TAMPICO TARPON FISHING.

As most people are aware, Tampico is a seaport, her existence in a great measure depending upon this fact. But probably few seaports ever gained such a reputation as a fishing resort. From the time you enter your hotel when the season is on in March till you leave you will hear, see, and smell fish, fish and fishing tackle—that is, if you are unfortunate enough to become gathered into the fold of the fisherman's-paradise-hotels, which you will, if you do not know better.

Stuffed fishes decorate the walls; new catches, if notable, are pretty sure to be on exhibition; and fish stories galore whet (or pall on) the appetite of the visitor. Of course everybody tries his luck. Men and women make sacrifices untold to catch these unwieldy monsters.

The program is to engage a boat and tackle from the suave hotel proprietor-manager, paying therefor 33 1-3 per cent of the original cost—and the boats are used every day for four months. But that is a mere item, and the visitors are all supposed to have money. Then you hire a boy, for whose services as oarsman and guide are paid for at a rate a trifle over four times his actual wage. You buy him his supper and pay for his bed in the hotel, to be sure that he is there when you get up, at 4 a. m. By the time the sun gets good and high, the genial proprietor has had the dining room opened and fed all the fishermen and sold them lunches at a "slight" advance over the standard price of the food in the stylish restaurant on the plaza. You get down to your boat, buy a palm hat at an extra price, and rent a chair, which is placed in the bow of the boat. Then you start to tan your hide for half a day in quest of the elusive tarpon.

This is the general experience of the novice who tackles this finny (not funny) pastime. The chances are a hundred to one you'll come home empty handed, and a thousand to one you'll be done brown or red according to the character of your epidermis. Add to the above a possibility of stomach disorder, and you have a fair idea of the beauties of this most interesting diversion.

But it is too important an enterprise for the port to think of relinquishing it. From the boat boy to the opulent, not to say genial, hotel proprietor, all will insist that you have not seen Tampico until you have done this stunt. It's a kind of initiation, plus sundry fees, which every able bodied visitor must endure. Naturally the easiest victims are the inland enthusiasts, who know little about the water.

A partial list of the finny tribes that occupy these waters are the tiburon (sounds nicer than shark), tarpon, cherna, pege sierra, robalo, huachinango, lisa pege espada, jurel, pege zapo hoge, sabulo, fanton, tortuga and mero.

There are two other varieties that the visitor of an observing turn of mind is likely to encounter here, whether he takes a boat or stays ashore—the chupador (sucker) and tiburon de la tierra (land snark.)

The tarpon fishing season this year was not productive of anything unusual in the angling line, although several good catches have been made. No records for size were made, however, although several fairly large ones of the finny tribe have been captured.

Perhaps the most notable of the visitors to the resort this season have been the Duke and Duchess of Manchester and Miss Shonts. The Duke and Miss Shonts took part in the fishing and had good luck. The Duke capturing several of the big fish while Miss Shonts succeeded in landing two fairly large sized specimens. The Duchess did not take part in the fishing excursions while in Tampico. So successful were the Duke and his party that their stay in Tampico was prolonged several days.

Other notables have visited the resort this season and all had fair success in their angling. Robert W. Goelet and his party spent several days

fishing in the Panuco river while several Englishmen of title have indulged in the sport this year.

The sport of tarpon fishing is one of the most absorbing and inspiring of all the different kinds of angling when understood and indulged in by the angler of skill and experience. The immense fish does not tarry in taking the bait. He makes a dash for it and when he feels the barb of the hook, his leap from the water into the air in his efforts to rid himself of the unwelcome piece of steel is one of the grandest sights imaginable. Back and forth he darts and bad luck to the inexperienced angler who lets the silver beauty get any slack on the line, for then the fish will make his escape and the fisherman will have broken tackle for his pains.

Tampico is becoming yearly more famous for its tarpon fishing and more tourists come here every year to enjoy this sport. Tampico hotels are crowded at that time of the year and every man in the coast city has a skiff and tarpon tackle to rent to those who come unprepared to take part in the sport.

The outlet waters of the Panuco make an ideal fishing ground and here the big beauties come to feed, coming in over the bar in large schools, passing by the wharves of the city deep in the water only to come to the surface when the cool green water of the river is reached.

Here, too they are seldom followed by sharks, their great enemies of the sea, and they can feed in peace and unmolested. Here is where the sportsman can nearly always be sure of a strike for the tarpon is a voracious eater and will take almost any kind of bait that may be offered him.

The season lasts about four months. The hope of every fisherman who visits the resort is to get a record fish, but the record for Tampico was made in 1907 and has never been equalled up to the present time.

"Black Jack" Lemmer, of this city, paid a brief visit to Tampico last June and gives his views of the game as follows:

"Tarpon fishing is great sport, but do you know it is hard work to catch one of those confounded fish, and the only thing that I have to regret is that I failed to get one of those big fellows on my hook. To hear Johnny Seibe and others tell of this sport, it would seem that it is an easy task to land one of these sea racehorses, but I find it is an exceedingly hard proposition. I prided myself at being a good angler but when I went after one of those fellows, much of the conceit was taken out of me; but even at that, I had a trial at the game anyway and the tarpon beat me to it. I must say I fancy black bass fishing in Merced river better.

"Tampico is an interesting port, and there is an immense amount of traffic being handled there, and in my opinion she will be one of the greatest ports in all Mexico in the next few years to come."

HORNS AND ANTLERS AS MEDICINE.

It would be curious to know the reason why horns and antlers have been considered from time immemorial to possess a medicinal value to which modern science shows that they have not the slightest claim. Possibly the fact that "hartshorn," or ammonia, was originally obtained from these appendages may have had something to do with the matter; while, on the other hand, there may also be a phallic element in the belief as to the medicinal value of both horns and antlers. Rhinoceros horns were, it is scarcely necessary to mention, highly esteemed in the middle ages as poison detectors, and are still, we believe, used for the same purpose in China, says a writer in the Indian Field. Goblets were cut from them, and, when gorgeously mounted in gold and studded with precious stones, were used by Eastern monarchs as a ready means for detecting attempts to administer deadly drugs; as the liquor would, it was believed under such circumstances, effervesce and overflow when poured into the vessel. Even the cuttings of the horns produced during the manufacture of the goblets would act in the same manner, so that these also were carefully preserved and sold. As to the value attributed in ancient days to deer-antlers in medical practice this may be gleaned by reference to the old Pharmacopoeas.

Our present theme relates, however, to the use of powdered deer-antler in China as a medicine of great reputed value, especially, it is said, in female diseases. Till the Altai was opened up by British and other sportsmen during the last twenty years or so, practically nothing seems to have been known in Western Europe as to the existence of a great trade in these antlers between Central Asia and China. Neither, for that matter, was it realized that Central Asia is the home of various races of wapiti which supply a large portion of these highly valued commodities. Perhaps the strongest part of the matter is that the antlers to be used in medicine must be cut from the head of the animal—either alive or dead—while still imperfectly formed and clothed with the highly sensitive, vascular, velvety skin technically known as the "velvet."

According to an excellent account given some years ago by Prince Demidoff, the wapiti, or maral, are kept by the farmers of the Altai in large enclosures, known as "Maralniks," solely for the sake of their antlers, which are annually sawn off from the heads of the unfortunate stags while still in a partially developed condition. As every one knows, an antler is then a most delicate and tender structure; and to saw off these appendages while in this state from the head of the living animal is one of the most terrible and revolting acts of cruelty that it is possible to conceive. Indeed, our

friends of the Humanitarian League have here an excellent field for the exercise of all their energies; and one on which they would be much better employed than in harrassing the Zoological Society about the feeding of a few snakes.

To stop the traffic would, however, be a tough job as it is almost incredibly profitable and brings in a large revenue to the Altai Kalmuks. According to the information supplied by Prince Demidoff, the cash-value of deer antlers in the Altai is about thirty shillings per pound, at which rate a good head will be worth from £10 to £12. And as some of the maralniks contain 150 head of deer, while the total number of captive deer in the whole Altai has been estimated at 6000, of which perhaps one-third are profitable stags, some idea can be obtained as to the magnitude of the trade.

China is a big country, but one would think such a supply would allow every woman in the empire a good share of the precious "dewai." As a matter of fact, however, the wapiti of the Altai afford only a portion—and perhaps a relatively small portion—of the total supply of deer antlers sent to China. For it has recently been ascertained that the trade is also carried on in the neighborhood of Vladivostok; and it is quite like that it may also flourish throughout a large portion of Siberia.

In the Vladivostok district, the supply is afforded by the Manchurian sika—a deer less than half the size of the wapiti, with a white-spotted summer coat, exchanged in winter for a uniformly brown livery. Although some of these deer are kept in a semi-domesticated condition, like the Altai wapiti, and the stags have their antlers sawn off every season while in the velvet, the majority exist in the wild state. Of these wild sikas a certain number of stags are shot every season by the natives and their antlers cut out with the skull still attached to the bone, in which condition they are stated to be much more valuable than when sawn off from the living animal. This is indicated by the fact that sika-antlers, which are very much smaller than wapiti-antlers, realize from £7 10s. to £10 the pair. Three days after removal from the head the antlers undergo a curing process, after which they are ready for exportation. They are bought up readily enough by the Chinese traders at the prices mentioned; and the trade enables a large number of settlers, both Chinese and Russian, to enjoy a fat living and at the same time excellent sport.

It may be hoped that the attention of the Russian government will ere long be directed to the necessity of regulating the slaughter of these handsome little deer in the Vladivostok district, for although the natives scrupulously refrain from killing does and only shoot bucks when their horns are in velvet, the slaughter of a large number of the latter sex shortly before the commencement of the breeding season must, one would imagine, have a marked effect on the number of the species. The natives, it is said, spend a large portion of the winter in making themselves acquainted with the haunts of the finest bucks, in order that they may have the less trouble in finding and killing them later on in the season.

In addition to deer antlers, the Chinese use large quantities of what they are pleased to call dragons' teeth for medicinal purposes. These are teeth of various extinct animals which are found in a beautiful state of preservation in cases in different parts of the Chinese Empire and may be seen exposed for sale in the druggists' shops at Shanghai and elsewhere. Like the antlers, they are ground up into powder before being used as "dewai"; and their medicinal effect is probably of about the same value as that of the former. Many of these teeth have been sent to Europe, where they have afforded valuable information with regard to the extinct mammalian fauna of China; and quite recently the British museum has received a consignment of fossil elephants' teeth from Szechuen which have been rescued from the usual fate of such remains.

The Orcutt Gun Club was recently incorporated and the officers for the first year are President, Geo. Whitmore of Orcutt; Secretary, Joe McDonnell of Santa Maria. The articles of incorporation limit the membership to one hundred and of the one hundred shares sixty have already been taken at \$25 each. The club has secured a six years lease of the Black Lake and Street property and will erect a club house and make other improvements for the comfort of the members.

Deep creek, a favorite trout stream for San Bernardino anglers, has been temporarily taken from the angling map. A cloud burst in Holcomb valley caused the creek to be filled up with sand and debris, at the same time sending the trout down stream into shallow, hot water, which resulted in killing many thousands of them.

The Southern California beaches have afforded better salt water fishing recently than has prevailed for eight years past. All kinds of fish are plentiful and at no two resorts have the prevailing catches been of the same variety.

The best fishing water is in the Feather river below the Butte county canal dam over which the fish can not pass, there being no fish ladder for progress up stream.

Big steelhead have made their appearance in Eel river. Andy Smith, a Fortuna angler, landed a six-pounder recently. This run will be pleasing news to local anglers.

AT THE TRAPS.

Lester German and Dick Clancy had their initial blue rock shoot in California on the 13th inst., at the New Oakland Gun Club grounds on the Alameda sand flats. Twenty-two guns were on the firing line. German was high gun with 96 out of 100 in the main event. The other scores shot were: Poston 94, Clark 90, Clancy 89, Holling 89, Faulkner 89, Swales 88, Haight 87, Thede 86, Thomas 85, Ashlin 82, Cook 81, Nelson 81, W. Lancaster 81, McAuley 80, Blake 79, French 76, Rink 75, Markle 72, Hammond 58, Heath 55, Webster 53.

The regular club shoot scheduled for the 14th inst. was postponed until August 21.

A live bird shoot took place at Stege on the 14th inst. under the auspices of the California Wing Club. Among the visiting shooters were Lester S. German the Eastern crack shot, Dick Clancy of Chicago and P. C. Thede, secretary of the Merced Gun Club.

The birds supplied were fast ones, this condition coupled with a strong wind put the shooters on their mettle. In the first 12 bird race Nauman, Haight and Poston each scored straight at 30 yards rise. German shot a fine race but slipped his last bird, a straightaway from No. 5 trap. Thede had hard luck with his second pigeon, a lively bird from No. 1 trap. Poston and Nauman each rolled up straights in the second match.

Haight, Nauman and Poston killed straight in the first six-bird pool. Nauman, Capt. A. W. Du Bray and Thede shot clean scores in the second six bird pool. Nauman, Poston and Thede were high guns in a third six-bird race. In the concluding miss and out event Nauman and Capt. Du Bray tied on 5 birds each. The scores follow:

Event 1, 12 pigeons, 30 yards rise—

C. C. Nauman	2	1	1	1	1	1	2	2	1	2	2	12
H. E. Poston	2	2	1	2	1	2	1	2	1	2	1	12

Du Bray	1	1	2	2	1	5
Clancy	2	2	2	0	4	5
Thede	0	0	0	0	0	0
German	2	2	2	2	0	4
Munday	1	1	1	0	4	4
Poston	2	0	0	0	0	1

The California Wing Club regular monthly shoot for August took place on the 7th inst. The attendance was rather slim, possibly deer and dove shooting had something to do with the matter, several members also were out of town, not getting back from the Pacific Coast Handicap tournament tournament in time for a crack at the "white flyers."

Tony Prior, Lester Prior, Webb and Munday divided first money, each scoring straight, in the forenoon medal match. Nauman, Turner and Munday, 15 birds each, divided the club purse in the afternoon match. Two six-bird pools concluded the day's program. The scores follow:

Club medal race, 12 pigeons, \$50 added, three

moneys, high guns, distance handicap—

F. Prior	26	2	2	2	2	2	2	2	2	2	2	12
F. W. Munday	28	1	1	1	2	2	2	2	1	1	2	12

At a recent shoot of the West Seattle Gun Club twenty-six shooters lined up. C. Wood was high with 99. McLaughlin, Baldwin and Guest tied for second place with 97 each out of 100. Wood was third with 95 and Phiscator fourth with 94 out of 100. McLaughlin won the Ballistic cup event on a score of 15 straight. Williams won the Selby watch event after shooting off ties with Baldwin, Phiscator and Canuck. Following are the scores:

C. Wood shot at 100 broke 99; Guest 100-97; McLaughlin 100-97; Baldwin 100-97; Berger 100-95; Wood 100-95; Phiscator 100-94; Bryant 100-92; Robb 100-92; Garrison 100-91; Steel 100-89; Canuck 100-88; Williams 100-86; Campbell 100-79; Olson 100-75; Peterson 100-74; Donald 100-71; Wright 100-71; Johansen 100-67; Knox 100-61; Trimmer 80-56; Hall 50-45; Kelleher 50-40; Scarp 40-22; Costello 30-17; Lindsay 50-16.

Petaluma trap shooters have organized the Riverside Gun Club. The first shoot took place August 7.

The California schedule arranged for Mr. and Mrs. Ad Topperwein is the following:

Sacramento, August 24; Santa Rosa, August 27; San Jose, August 29; Alameda, August 30; Oakland, August 31; Vallejo, September 5; Livermore, September 8; Modesto, September 11.

Grass Valley trap shooters got together on the 7th inst. for a merchandise shoot. In the main event W. V. Tamblin was high gun, breaking 21 out of 25 targets. The scores were:

Tamblin 21, Evans 19, Shumaker 19, McKaig 18, Schmidt 17, Hays 16, Rex 13, Stone 12, Hook 11.

GAME NEEDS PROTECTION.

"The open season on deer should be shortened to not more than thirty days a year," said Dr. T. S. Palmer, head of the Federal game protection service, in an interview recently given in a Los Angeles paper.

Dr. Palmer is visiting his father, and though his trip to this part of the country was prompted by private matters, he has been devoting considerable study to the problem of game preservation in this State.

Dr. Palmer's official title is Assistant Chief of the Biological Survey of the Department of Agriculture. Under his direction come all matters pertaining to the conservation of game in the United States and its possessions. Not only is he charged with the duty of seeing what can be done to prevent the wanton slaughter of game by hunters, but under his supervision are all of the inspectors who stand guard at the ports lest birds or animals inimical to the game animals and birds of the country be imported.

It was on May 25, 1900, that the law went into effect for the conservation and care of the furred and

feathered denizens of the woods and prairies. Very shortly after that Dr. Palmer was placed in charge of the work, and for the past eight years he has been at the head of one of the most important departments of the Federal government.

One of the offices of the bureau which Dr. Palmer heads is to compile statistics on the quantity of game killed each year in the different States, with the view to ascertaining whether legislation at present in force is sufficient. The data thus secured is at the disposal of various State authorities who may be seeking to better the laws for the protection of wild game.

"The compiling of accurate data regarding the destruction of game in California is a very difficult matter," continued Dr. Palmer. "There is no doubt that deer are being exterminated very rapidly, but at just what ratio I am unable to say. This is quite the opposite from the southern New England States, where deer is increasing rapidly, owing to wise legislation."

"There is no reason why deer should not increase in this State under proper conditions. An accurate means of recording the number of deer shot each season should be secured, and after comparisons have been drawn laws should be passed accordingly."

"In two directions at least the California deer law could be materially improved. The tracking of wounded deer with dogs is now allowed. This is all wrong. It is an easy matter to wound a deer, and then if dogs can be set on its trail slaughter is sure to result. [The gentleman is evidently not familiar with some sections of our deer hunting country.—Ed.]

"For another thing the season is entirely too long. Your open season extends from July 15 to November 1, 105 days. Just think, here in California, where there are comparatively few deer (?) you can shoot them for three and a half months each year. In the State of Maine, where there is an abundance they may be shot during but two and a half months. In Wisconsin and Michigan, where deer are very plentiful, they may be shot during but twenty days each year. The law in this State should be so modified as to make thirty days the absolute limit of time during which deer may be shot."

"In Southern California it would doubtless be beneficial to have all killing of deer stopped for say five years, but I doubt if people in the northern part of the State would stand for such an arrangement."

"Then your dove law can stand a whole lot of amending. To begin with, doves should not be classed as game birds for they are too valuable to be killed off by hunters. The dove is one of the greatest destroyers of weed seed and in many States is protected for that reason."

"But it is probable that the dove will be classed as a game bird in this State for a good many years to come and some change should be made in the law. To begin with, the season opens entirely too early. Not only are the doves being wantonly destroyed but the laws for the protection of quail are being more or less nullified by having the embargo on doves taken off as early as it is."

"There should be no shooting of any kind of birds during July anyway. Regarding the best date for the opening of a dove season I would say that in many States it has been found advisable to have the seasons for all upland birds open at the same time. There is no doubt but that a great number of quail are destroyed out of season by hunters out after doves."

"At the present time there is no protection on the wild pigeon in this State. This is probably an oversight when the game laws were framed but it should certainly be rectified at the earliest possible opportunity."

"Your season on ducks lasts too late in the spring. This States is famous for its duck shooting and an enormous quantity of money has been invested in duck clubs. The members of these clubs should entirely support legislation which will tend to increase the supply of these game birds."

"Under no consideration should it be lawful to shoot ducks after they begin mating. February 1 is as late as duck shooting should be allowed, and January 15 would be better. At present the season does not close until February 15."

"It would do no harm to any one to have that last two weeks' shooting stopped, for there is no sport during that time. But the promiscuous hanging away of the late hunters annoys the mating birds and drives them away. Every effort should be exerted to induce the birds to stay here instead of migrating."

Though the conservation of animal and bird life is the primary object of the bureau which Dr. Palmer heads, destruction of such life under certain circumstances also devolves upon that bureau.

Great aid has been rendered Los Angeles by the Federal authorities in their efforts to keep out the English sparrow. When the Supervisors appropriated money to destroy the colonies of English sparrows along the lines on the Southern Pacific through the northern part of the county some years ago, the work could only be partially done because an invasion of birds was threatened by way of the Santa Fe lines and the authorities could not go outside of this county to fight. Then the Federal authorities stepped in and destroyed the birds as far north as Mojave.

Striped bass and black bass angling with now and then an odd pike (hardmouth) makes up a variety of fish for Oroville anglers.

Drink Jackson's Napa Soda

[Continued from page 5]

Aug. 12.—Driven by Charles (Doc) Tanner of Cleveland, C. K. G. Billings' black gelding Uhlman today established a new world's record by trotting a mile at North Randall track without a wind shield in 1:58½, beating Lou Dillon's record by 1¼ seconds and coming within ¼ of a second of equalling the record made by her with a wind shield October 24, 1905, she trotted a mile at Memphis in 1:58½.

Horsemen who held watches on the great gelding's attempt say as a result of today's performance that with a wind shield he will be able to better the mare's mark.

The big crowd gathered at North Randall had expected to see Uhlman driven to a wagon, but was all the more enthusiastic when the announcement was made that he would try for the world's record to a sulky without a wind shield.

Tanner drove him the first quarter in :29¾. The half was reached in :59 flat. The crowd seeing a record about to fall, let out a great cheer, which changed to deep silence, however, when the time for the three-quarters was hung up, showing that it had taken the gelding 30¾ seconds to negotiate the third quarter.

Uhlman nevertheless proved to have speed in reserve and did the last quarter in 29 seconds flat.

When the figures were announced driver and horse were given an ovation.

A season's record came near falling in the Forest City stake race, the third event of the day. Ess H. Kay pushed by Ella Ambulator and Walter W., paced the first heat in 2:02¼, equalling the mark set by Ross K. at Detroit last week.

Walter Hall took the second heat and Merry Widow the third, Walter Hal winning first money under the three-heat plan.

The final heat of the first division of the Tavern "steak" continued from yesterday, went to Henry H., who had captured two heats before darkness fell. Joan had little trouble in winning over the entries in the second division of the race, except in the third heat, when Willy finished second by a nose.

Emily Ellen, winner of the Horseman and Spirit of the Times futurity at Detroit last week, was an easy winner in the 2:19 trot for two-year-olds.

Four heats of the 2:17 trot were run without a winner developing, and the finish was postponed until tomorrow. Summaries:

First division Tavern "Steak"; 2:16 trot; purse \$2000; three in five; concluded from Thursday:
 Henry H., h. g. by Gregory (F. S. Jones).....1 1 3 1
 Robert A., br. g. (Townsend).....11 3 1 4

 Bland S., b. s. (Barnes).....4 6 ds
 Tony Swift, blk. s. (Dean).....9 9 7
 Time—2:02¼, 2:04, 2:06¼.

Aug. 1.—Another world's record was broken in the grand circuit races at North Randall park today. The Harvester, driven by Ed Geers, won the two heats of the 2:06 trot in 2:04¼ and 2:03¼, respectively, making the two fastest heats ever trotted in a race by a stallion.

Incidentally The Harvester clipped one second off his own record, equalled the stallion trotting race record, made by Cresceus at the Brighton Beach track in 1902, and set a new mark for five-year-old trotting stallions in a race in the second heat.

The stallion had such a big lead over Sonoma Girl, Wilkes Heart and Oro that Geers did not extend him in the stretch. Had he done so The Harvester would have eclipsed Cresceus' record of 2:02¼, made against time at Columbus in 1902, which still stands as the stallion trotting record.

The free-for-all pace, with four entries, was easily won by Ross K., fast time being made in both heats. In the second heat Ross K. stepped the mile in 2:02¼, a half second slower than the track record. Carter, who was behind Giftline, was taken to task

by the judges for not warming up his horse before the second heat, and when Giftline acted badly in ten attempts to start was replaced by McDonald.

The 2:12 pace developed the fiercest competition of the week's program. It took six heats to decide the event. Sunny Jim, the favorite, won the first heat, but Colonel Forest took the next two. Then Peter Pan, who had little over the field, proved himself the best stayer and took the next three heats in order.

The final heat of the 2:17 trot, unfinished, from yesterday, developed a pretty fight between Dovell and Butterhook, each of whom had won two heats, until the three-quarter pole, when Butterhook broke and Dovell won without trouble.

Remorseful, winner of the 2:21 trot, the closing event of the meeting, narrowly escaped being distanced in the first heat, but came back strong and captured the second and deciding heats in easy fashion.

Judge Newton announced today that the sulky to which Uhlman was driven in his record breaking mile of 1:58½ yesterday was the one used when Lou Dillon made her mile in 1:58½ at Memphis, October 24, 1905.

Acting on instructions from Governor Harmon, Sheriff A. J. Hirstius and a corps of deputies raided the betting shed and the auction tent shortly after the races began. As far as arrests were concerned, the raid was ineffective, as the tip had been given and the bookies had made a quick disappearance.

There were some hundreds of others, however, who had not been warned and the sheriff and his deputies found them standing patiently in long lines before the betting stands. Each man had a little ticket in his hand and was waiting smilingly for "paying off" time.

Protesting bitterly, they were hustled out of the shed. A number of these disappointed bettors spent a fruitless evening hunting for the bookies with whom they made their wagers. Summaries:

2:12 pace; purse \$1200; three in five:
 Peter Pan, b. s. by Decourcy
 (Chambers).....3 5 2 1 1 1
 Col. Forest, h. s. (McMahon).....4 1 2 2 3

 Time—2:11¼, 2:11¼, 2:08¼.

The European bred trotting mare Dora 2:12¼ despite the fact that she is greatly handicapped by an injured hoof, still continues to secure her share of the money on the Big Ring, now having to her credit a first at Kalamazoo, a second at Detroit, a third at Grand Rapids and a second at Cleveland.

This mare when quite young, showed considerable speed, but had a disposition that could not be expressed in polite language. Al Pennock, however, felt that by the exercise of unlimited care and patience, he would be able to make the mare tractable and accordingly purchased her for Mr. Louis Winans, paying in exchange the sum of \$12,000.

In a surprisingly short space of time a big improvement was noticed in the filly and in her first start was an easy second. After that she won the five richest stakes for three-year-olds and established three European records. As a four-year-old she was equally successful, among her victories being the Derby, the greatest of European events, which carries with it a gold medal and \$9000 in American money. Last season, notwithstanding the fact that she was heavily penalized in her various engagements, owing to her brilliant racing career, she annexed four of the leading classics of the season.

Dora, during her limited campaign, won the sum of \$19,000 and occupies the unique distinction of being the first racing proposition purchased by Mr. Winans, that paid for herself. Willy 2:08¼, her stable mate, also proved a money making investment, which in a way, reflects considerable credit on Al Pennock, as he not only selected the pair, but trained and drove them in all of their races.

AMERICAN BREEDERS' FUTURITY.

A Great Race Expected in This \$15,000 Stake to Be Trotted in New York Next Week.

New York, Aug. 13.—What promises to be a record breaking race for three-year-old trotters is in sight for the New York grand circuit meeting to be held at the Empire track August 23 to 27. When Native Belle trotted in 2:07¼ last season, cutting down the record for two-year-olds three seconds, it was thought she would surely win all the big futurity stakes in sight this year. A colt that is apparently greater than any three-year-old yet has come to the front to dispute the supremacy with Native Belle.

At Kalamazoo, Mich., a few days ago Ramey Macey, a young reinsman not yet of age, drove the three-year-old colt, Colorado E., a mile in his work in 2:06¼, with the last half in 1:01¼. Ed Geers, J. B. Chandler, Mike Bowerman and L. C. Wehn, who held their watches on the wonderful young trotter, at first thought that something was wrong with their timing. The world's record for three-year-olds is 2:06¼ and it was made late in October instead of July. General Watts, the present record holder, had not beaten 2:10 at this stage of the season.

Colorado E. and Native Belle will come together for the first time this year in the \$15,000 Matron futurity stake race on the opening day of the New York meeting. Native Belle will carry the colors of Edward Thompson of Northport, L. I., and will be driven by Thomas W. Murphy of Glen Cove, who broke her to harness in February and drove her to her record of 2:07¼ in October of last year. Colorado E. is owned by George H. Estabrook of Denver, Colo., who also owns the veteran free-for-all trotter, Country Jay, 2:05¼.

The great three-year-old trots without hoots and with shoes no heavier than those of a thoroughbred runner. He was bred by W. L. Spears of Lexington, Ky., and is by The Bondsman, a son of Baron Wilkes, 2:18. In his two-year-old form he divided second money with Eva Bellini in the junior division of the Kentucky futurity, when Native Belle set the record of 2:07¼.

It was Eva Bellini that finished second to Native Belle in her record breaking heat at Lexington. She will start in the Matron futurity at the Empire track, and there are not a few horsemen who expect to see her hold her own even in the company of Colorado E. and Native Belle. This filly was bred and is owned by W. B. Dickerman of Mararoneck. She is essentially a Westchester country product, her sire, Bellini 2:13¼ having been bred by Mr. Dickerman and got by the old time trotting stallion, Artillery 2:21½, owned twenty-five years ago by Hugh Downey of Dohhs Ferry and sold by him at twenty years for something like \$30,000.

Among other local entries in the race is the black filly, Emily Ellen, bred and owned by David M. Look of Greenwich, Conn. Starting for the first time in public at Detroit this year, she won the \$15,000 Horseman futurity stake in the fastest race ever trotted by a three-year-old so early in the season. She is a daughter of Todd 2:14¼, the stallion for which William Bradley paid \$32,000 at auction in Madison Square Garden about three years ago. Bergen, a hay colt owned by W. C. Brown, president of the New York Central Railroad, was one of the money winners in this race, and he is among the entries in the Matron futurity. Another notable entry is the chestnut filly, Lou Billings, by John A. McKerron 2:05¼, dam Lou Dillon, owned by C. K. G. Billings, who bred her. She has a record of 2:11¼ made last week. All told about thirty of the fastest three-year-olds in training are eligible to start.

GREAT IS NETTIE KING.

Tuesday evening as we were making our way to the cars, writes Duntley in the American Horseman, Billy Andrews exclaimed, "My, what a great mare that Nettie King was!" This remark was prompted by the performances by two of the produce of this great producer by Mambrino King. The Abbe had won the Chamber of Commerce and Necla, her two-year-old daughter, had defeated a high class lot of youngsters and had taken a maiden record of 2:13¼. Billy Andrews when employed at Village Farm broke Nettie King as a two-year-old, so the performance on Tuesday by two of her colts was of more than passing interest to him. He said that as a two-year-old Nettie King was extremely double gaited when driven to the pole, and he despaired of ever making a trotter of her, but one day when he hooked her single for the first time she squared away and was a good four-cornered trotter, and early in the spring could pull a high wheel sulky a quarter in 34 seconds. Nettie King is now owned by Hillandale Farm, Mararoneck, N. Y., and aside from The Abbot 2:03¼, The Abbe (3) 2:10½, as a trotter and 2:04½ as a pacer, and Necla (2) 2:13¼, she has produced several others that should trot to fast records. John Dickerson tells me that they have a stallion at the farm, now three years old, called King Bellini, by Bellini 2:13¼, and out of Nettie King that will surely trot in 2:10 as a five-year-old. They also have a yearling out of her by Baron McKinney 2:10¼, and a weanling by Bellini, Arthur Parker of Bedford, Mass., owns a gelding, The Huguenot (6) by Chimes out of Nettie King, that is said to be very fast at the trot and likely to step in 2:10 this fall, so it would seem with fair luck the good daughter of Mambrino King will take even higher rank as a brood mare in the near future.

Drink Jackson's Napa Soda.

THE FARM

WATER A VERY CHEAP

POULTRY FOOD.

We believe that more poultry does poorly from lack of ample water than from short food supply, says Mrs. B. F. Wilcoxon in a farmers' institute talk. Generally, particularly in the summer, when there is among all animals the greatest suffering from thirst, a hen can, if nothing better can be found, fill her crop with grass and the tender leaves of weeds when running at large; but often water can only be had from wells, and it takes something stronger than a hen to get at it.

Eggs are fully 80 per cent. water, and in very warm weather many a poor hen does not get enough water during the day to supply an egg, say nothing of the large amount needed for her closely-feathered, over-heated body. Many seem to think almost any kind of filthy water will do for the poultry, and still more appear to think, if they think at all about such things, that one good drink a day is pretty liberal watering. We put out a pan of water to a flock the other day whose owner had just told us his poultry always had enough water, and the rush and crowding to get just a little of the precious drink was something pitiful to see.

This man had just been complaining to us of the cost of his chicken feed, and there his poultry were nearly dying for the want of a perfectly costless food his inexcusable negligence had failed to supply them with. Man can live without food for weeks if given plenty of water, but shut off the water and no amount of dry food can keep him alive more than a very few days. No matter how well-to-do a poultry keeper may be, he cannot afford, saying nothing of the humane side of it, to let his fowls want one hour for plenty of fresh, clean drink. It is a cruel shame to do it; besides, it is a worse than inexcusable waste. It costs little to have a good, clean, protected and shaded earthen drinking pan, and nothing on the farm pays better than to keep it filled.

SAVING THE ASHES.

Years ago the Indians demonstrated the value of hardwood ashes as a fertilizer by sprinkling liberal handfuls around each hill of corn. But many farmers of the present generation fail to profit by the lessons in good farming taught by the Indian corn growers. These farmers burn in their heating stoves and ranges many cords of wood during the year, and the ashes are thrown out onto a pile in the back yard where they are allowed to accumulate and the strength is leached out of them by the rains and melting snow. Then they pay out large sums of money for potash fertilizers. The ashes that are made on the average farm where wood is burned as fuel amount to several barrels each year, and suburban gardeners pay dealers at the rate of \$2.25 per barrel of 200 pounds to use on their gardens. Thousands of tons are sold annually at this rate. Good hardwood ashes contain from four to six per cent. of potash. They are very beneficial on lawns and grass lots. Spread around the raspberry and blackberry bushes, all kinds of fruit trees and in the vegetable garden they will increase the yield of fruit and improve the quality of the vegetables. They will aid in the growth of sweet corn and where such nitrogenous manures as hen manure and sheep manure are used ex-

tensively they help to make a balanced fertilizer, but should never be mixed with the manure.

We have had such good results in the use of ashes on gardens, small fruits, lawns and meadows that we are convinced that everyone who uses wood as fuel should carefully save the ashes and use them on the land. You would not think of throwing your crop of potatoes out on the ground to rot and spoil; yet according to the price gardeners say ashes are worth more pound for pound than potatoes.

MEDICATED STOCK FOODS.

Rural Life has never been able to understand why certain "eminently respectable" agricultural journals will denounce patent medicines for humans and rule them out of their advertising columns, and at the same time run pages of advertising extolling the virtues of patent medicated stock foods. Several experiment stations have made investigations showing that these so-called feeds are of little value as medicines and are sold at enormous profits. The Iowa station has recently conducted a test of the various stock foods and has reached the same conclusion as other stations that there is little merit in any of them. The basis of most of these foods is corn, bran, linseed meal, etc., with a "filler" that is of no value whatever, to the feeder. A circular bulletin issued by the Iowa station, says:

Every stock food manufacturer claims that his particular brand of food will give greater gains or cheaper gains when fed alone. This claim is based upon the assumption that the spices, seeds, barks, roots and herbs of which each food is said to be "scientifically compounded," either directly stimulate the glands of the stomach and intestines which have to do the work of digesting and assimilating the ration; or else that the compounds act indirectly on these glands by toning up the entire animal system, purifying the blood, etc.

Each of the following conclusions includes only the results of our own investigations of the influence that stock foods have on a ration of corn fed to swine.

1. Stock foods did not have any beneficial effect on the digestion.
2. Stock foods did not have any appreciable effect on getting greater gains from a corn ration than can be obtained from feeding corn alone.
3. It required more feed to produce a pound of grain when stock foods were used than when corn was fed alone.
4. A bushel of corn produced as much or more pork when corn was fed alone than it did when stock foods were added to it.
5. The pork produced by corn alone returned a greater net value per bushel of corn fed than was returned when a stock food was added to the corn.—Rural Life.

"JUST HENS" PAY WELL.

It is highly refreshing to come across a householder who keeps hens on the safe and sane principle, who started with "just hens," of no particular breed, strain or cross, who housed them in a cheaply erected coop that would just "do" but who, notwithstanding the lack of labor-saving appliances, fancy feeds and condiments, or the fussy care as advocated by certain systems, has proven to himself and others that hens are a well paying venture. This is in line with what has always been claimed, viz: That it is the same flock banded by the observing keeper, fed on the waste from table, kitchen and garden, which is paying the handsome dividends. In this case, eleven hens laid 105 dozen of eggs

The Most Perfect Colt Bit Made

EVERY COLT

Should wear the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE** from the very beginning of its training, as it is the easiest, most comfortable and most humane bit on the market. With its use the colt will not fret, worry, pull, toss its head and get into the bad habits so often caused by the use of other bits and checking devices that inflict punishment or keep it under too much restraint, and at the same time you will have absolute control over it at all times.

Patented Aug. 11, 1896. Patent No. 565,681

BEWARE of worthless infringements and Checking Devices claimed to be as good as the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE**. Illustrations of some of these check bits and devices are made to look as near like the genuine as possible, but the article itself is very different, and will not give the same results.

ALL GENUINE are stamped **G. S. ELLIS & SON** on the supporting strap and back part of Check Rein. Any that are not so stamped are not genuine.

FREE—Our new Catalogue No. 45, with wholesale discount sheet, the largest, finest and most complete Horse Goods Catalogue ever published, is ready for distribution. It contains illustrations, descriptions, and guaranteed to be lowest prices on Harness, Horse Boots, Horse Clothing and Turf Goods of every description. Every horseman should have a copy. You can save many a dollar during the season by buying direct from us, as we are now selling direct to horsemen, allowing them from 30 to 50 per cent discount from retail prices. Write us today for a copy and we will take pleasure in sending it to you all charges paid.

from January 1st to July 1st, making it an average of almost 115 eggs per hen for six months. In other words the hens produced about 19 eggs every month each. The eggs sold for or were used up at home at the prevalent market prices as follows:

20 dozen at 50 cents each	\$10.00
20 dozen at 40 cents each	8.00
10 dozen at 35 cents each	3.50
55 dozen at 28 cents each	15.40

Total \$36.90

From this sum was expended for mixed feed, beef scrap, etc., the sum of \$6.50, leaving a balance of \$30.40 for the flock, or \$2.76 net per hen for six months.

It should be borne in mind, that weeds and offals from the house or garden were not counted in, as they were waste and considered as snob. The labor is not counted, because the pleasure of caring for the hens and the chance of studying the flock easily balanced this up. As the entire coop and run were purchased and erected at a cash expense of \$3, it is easily seen that the invested capital is but small.

This small flock was handled exclusively for an experiment to discover the real or imaginary profit, and its owner is now able and ready to begin with a thoroughbred flock in a somewhat more elaborate coop, and if a strain of layers is selected, no doubts need be entertained, but that they will even make a better showing.—Rural Life.

SEPARATOR RECOMMENDATION.

A dairy paper tells of an agent who penetrated into a remote region where dairy cows were not by any means plentiful. One old farmer had one cow and a steer. After considerable display of salesmanship the representative sold the farmer a second-hand machine, but the

customer, not having either the cash or credit, the deal was finally closed by the agent taking the cow in payment. This left the old man with a steer, a second-hand separator and food for reflection. Later on the office wrote to the customer for a testimonial, not being aware of all the particulars of the transaction. The old man who, it seemed, had considerable native humor wrote: "I have now had my separator one year, and in that time I haven't spent one cent for repairs or oil. It is the most economical piece of machinery I ever bought. If that red-headed hot-air artist ever shows up in this part of the country again, you had better hire a new agent. That one will

Warranted to give satisfaction.

GOMBAULT'S CAUSTIC BALSAM

A safe, speedy and positive cure for

Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a **HUMAN REMEDY** for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of **Caustic Balsam** sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address **THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio**.

certainly be spoiled." The company is making no effort to extend its business in that territory; but still retain the agent with an increase in salary.

J. H. Davis of the Petaluma Poultry Journal, is an old experienced poultry breeder who professes to know something of poultry. His ideas in regard to fat hens are somewhat different from those of the average Eastern poultry expert. Mr. Davis says: "I never had an overfat hen—a hen too fat to lay, and I know that on the farms it is the fat hens which are the best layers, which shell out the most eggs. Chickens never die from good feeding. But they do die sometimes if fed heavily with fattening feeds and have no exercise. It is just impossible to make a hen overfat if she has plenty of exercise. If the hen scratches for what she eats she can't get too fat.

At the Tennessee experiment station exhaustive experiments have been made in regard to the replacing of grain with alfalfa in rations for dairy cows. The results indicated that 1½ pounds of alfalfa will replace one pound of wheat bran. The tests showed further that with alfalfa hay at \$10 a ton and wheat bran at \$20 the saving effected by substituting alfalfa for wheat bran is \$2.80 for every hundred pounds of butter and nearly twenty cents for every hundred pounds of milk. Experiments at other stations along the same line have given equally favorable results in favor of alfalfa in the dairy ration.

There is always more or less risk in taking up a new variety of fowls. It is easy to look back over the past decade and recall at least a dozen varieties that have sprung into sudden prominence, enjoyed a temporary boom, and then as suddenly dropped out of sight. It is true that many of them possessed merit of a high order, but somehow they failed to secure a substantial popularity. The novice cannot afford to take chances with any but the well-established, popular varieties. There are a number of these.

Feed the little chicks the first thing in the morning. If you cannot get around at sunrise, better scatter some seeds in the litter of the brooder runs after the chicks have gone to sleep.

Make little gullies around the upper side of coops located in steep slopes, so the rain will not wash into them. See that those little ditches are kept clean.

You need not be afraid, but just let the chicks and fowls of all ages have all the wheat and bran they will eat. Keep it before them all the time, it is one of the most profitable feeds to feed and is more profitable to feed it in this way.

BRILLIANT FUTURE FOR BREEDERS.

What's the matter with the live stock breeding business? Nothing, thank you. It is true that the market prices for cattle, sheep and hogs to be used for human food have reached a point that almost equals the prices at which fine breeding stock has sold. It is true that for this reason much really fine stock has been marketed for slaughter. But the present situation means this:

That the demand for thoroughbred stock for breeding purposes is going to be greater than ever. Why? Because the market demand for all meat products is going to be well sustained and at relatively high prices for many years to come.

Therefore, it behooves breeders and experts to bend every effort to the increase of their flocks and herds and to the further improvement of their animals.

Still more essential is it that farmers and stockmen who heretofore have been content with scrub stock or ordinary animals shall now buy only the best animals with which to grade up their herds. If good stock had universally displaced poor animals years ago how vastly would farmers have increased their profits.

The so-called average farmer has become habituated to inferior live stock. The average cow of the average dairyman "eats her head off." We need to break up the habit of getting along with such poor stock.—New England Homestead.

THE DAIRYING BUSINESS.

There is no line of farm business that pays better than that of the dairy. Yet it must be run right. Slipshod methods do not go so well in these days of inspection. It is now quite common for boards of health to send out from the city and inspect dairies for many miles in the country.

Some experience is also necessary in order to get best results from a dairy. No one should expect to make a fortune the first year. It will be necessary to correct some mistakes that necessarily will be made. The best art of feeding will have to be acquired gradually. You can come to know your cows only by degrees.

It may take years to reach your ideal in building up a herd. If you do the right sort of work, you will always be getting better and better results. Many little points of improvement can be picked up by slow experience.

To succeed best one must love his work. Hired help is all right, but close personal attention is also necessary. No one can care for details better than the owner. The work must all be unified under the eye of the master.

The side line of breeding is very important. If properly conducted it may become the most profitable feature.—Pacific Homestead.

SPECIAL ADVERTISING.

Wanted, For Sale, and Miscellaneous advertising under this head will be set in nonpareil type (same type below) and will be published at the rate of 2 cents per word each insertion, or 6 cents per word by the month. Count each abbreviation and initial as a word.

FOR SALE—Black French poodle puppies, pedigrees contain blood of noted poodles in England. Miss Alice Harrison, Menlo Park, Cal.

FOR SALE—Light bay colt, two years old, will weigh 1050 lbs., has been driven a few times and is gentle. Sired by Monterey; dam by McKinney; 2d dam by Antevolo; 3d dam by Johnathan; 4th dam a Patchen mare. The dam of this colt is also for sale. Louis Bergella, 1112 Market St., Oakland, Cal.

FOR SALE—Two standard-bred and registered stallions, sired by McKinney 2:11½. One mare sired by Zombro 2:11. Pedigrees and photos furnished on application. Address Box 83, Hill P. O., Cal.

TO THOROUGHBRED HORSE-OWNERS. FOR SALE AT A SACRIFICE.

First six volumes of Bruce's American Stud Book, practically unused. Cost \$10 per volume. Hard to get.

Two volumes of American Horse Breeders' Guide and Hand Book, with 100 tabulated pedigrees of leading stallions (work now out of print).

The American Thoroughbred, by Capt. Thos. B. Merry.

Two volumes Goodwin's Turf Guide for 1907. Cost \$12.

About 50 thoroughbred catalogues, including Rancho del Paso, Palo Alto, Rancocas, McGrathiana, Nursery Stud, Marcus Daly and all the great stock-farms of the country. These are handier than a studbook, because they are tabulated.

Price, \$60 for all these works.

DUAL PURPOSE COW.

The controversy between dual purpose cow men and those who believe in keeping only a strictly dairy breed goes on year after year just about the same.

The fact is both kinds are profitable. Probably the man and his system of farming has more to do with the question than the intrinsic qualities of the cattle. A man living near a large city, who has a special high priced trade for milk or butter, or both, will probably do better with a strictly dairy breed, because he can soon make the beef price of a cow's weight by feeding in such a way as to get large return in milk.

On the other hand a farmer living some distance from a large town, with plenty of pasture and beef producing feeds, will make more money by raising calves from cows that will make large quantities of beef and not give quite so much milk, that is, he will make more money from the amount of milk that he does get supplemented by the amount of beef he can make from the growing stock than he would by keeping a small dairy herd and depending entirely upon the amount of money received for the milk products alone. There is plenty of room for the smaller dairy herds, and there is a continually growing demand for large cows that will milk well and beef well.

If you have been breeding "any old thing," get some eggs from a reliable breeder, hatch and start now to raise some good poultry. They will eat no more, sell and look better. Order eggs and start with a resolution to have better poultry.

Fowls are very fond of milk and thrive well upon it. Sour milk will bring better returns in eggs than in any other way in which it can be fed.

PRIVATE RECORDS.

It will pay every farmer and breeder to keep a record sheet of the performance of each breeding animal that he keeps on his farm. If we succeed in developing our herds and flocks to the highest degree of perfection it is very essential that we study them more carefully as individuals than collectively.

Every practical dairyman knows the value of milk records; whether they are certified by the officials of the experiment stations or not, such records may entitle certain cows to places in an advanced registry, or increase their value in the eyes of men who are buying them or their progeny for breeding purposes; but the private record sheet will tell just as good a story of profit from day to day.

It tells us the difference between the good and the bad, and enables us to weed out the inferior cows that are not paying their board. Without these records the dairymen would find the work of building up their herd slow and very uncertain.

Too many men look upon these record sheets as simply long rows of figures that mean nothing, but to the intelligent breeder they have for many years kept a private record sheet of their breeding animals.

Their figures carry with them no official recognition whatever, but they have enabled the breeders to carry out their ideas of improvement and make greater progress than would have been possible without them. They have never been verified, authenticated, or investigated by any public official, yet they have done their work.

The well kept private record is just as valuable to a breeder and the breeds as though each individual record had been under the eye of a government official.

By keeping an accurate record of the performance of each brood-sow and every breeding-ewe, and adding a few notes, it serves as an excellent guide in making selections for the next year's breeding animals.

Our knowledge is more definite and we have a record of performance of the ancestry of all our breeding animals that we can consult when buying new blood to use in improving our herds and flocks.

Every flock owner who keeps a large number of breeding ewes, knows how difficult it is to select the best to keep over for another year, when he is compelled to judge them from

their appearance alone. Accurate record sheets tell the truth.

On every record sheet a note should be made of the condition under which the animal's record was made, for many times we must make allowances for unfavorable conditions surrounding a breeding animal, before we can accept as final, evidence of its inferiority.

DAIRY TERMS.

Every intelligent dairyman is supposed to be familiar with the literature of his profession, and there are certain terms which may need definition. A few of these we give as follows:

Bacteria.—These are vegetable germs that change the character of milk, turning it from sweet to sour and otherwise modifying its keeping qualities.

Pasteurization.—This refers to the destruction of germ life in milk by heat, so that it will keep much longer and not convey the germs of disease.

Bahcock Test.—This is one of the various ways of determining the percent of fat in milk, and is so much superior to all others that it is practically the only one now used.

Albuminoids.—These are substances rich in aluminum like the white of an egg. Besides aluminum proper we have included in the albuminoids also casein, which is of prime importance in the making of cheese.

Certified Milk.—Milk produced under perfect sanitary conditions which are certified to by a medical milk commission. Ordinary milk sours in from one to three days, but certified milk often keeps from ten to fourteen

There are not many horses which can stand sudden changes in either quantity or kind of feed. Violation of this rule brings sudden disaster, in fact underfeeding is much to be preferred to overfeeding. A pound of grain and a pound of hay to a hundred weight of horse is a good general rule. The kind of working and doing qualities of the horse may vary this considerably, however. It is marvelous how some close, deep ribbed horses stand up on light feeding.

A good indication of large milking qualities of a cow is a large udder extending far forward and high up behind. The udder should carry little flesh.

MY WATERING OR GOPHER DEVICE.

To water small fruit trees, herry-hushes and plants, I make a hole in the ground beside the tree or plant and pour the water into the hole, and it soaks in around the roots.

The water, when poured on top of the ground soon evaporates, and will cause the ground to bake hard and dry.

I cut a tough limb from a tree with a fork at the top and with a branch on the side about one foot from the big end. To a round piece five inches long I nailed the forks as a handle.

The branch was cut off letting it protrude about four inches.

This forms a step by which it can be forced into the ground. The lower end is about one inch in diameter and pointed. A short fork handle, sharpened at the lower end and a bolt extending through the side for a step can be used.

This device is used for watering plants and making holes in the ground on the gopher runways.

Wheat is soaked in a solution of strychnine, sugar, and anise-oil, and put in the holes to poison them. It is the last of Mr. Gopher in the garden and orchard, according to my experience.—F. W. Culbertson.

WINDPUFFS
REMOVES
SPLINTS

Take It In Time

If you have the remedy on hand, and are ready to act promptly, you will find that there is nothing in the form of Spavins, Splints, Curbs, Windpuffs and Bunches which will not yield promptly and permanently to

Quinn's Ointment

It has saved thousands of good horses from the peddler's cart and the broken-down horse market. Mr. C. B. Dick, of Minneapolis, Minn., who conducts one of the largest livery stables in the Northwest, writes as follows: "I have been using Quinn's Ointment for some time and with the greatest success. I take pleasure in recommending it to my friends. No horseman should be without it in his stable. For curbs, splints, spavins, windpuffs and all bunches it has no equal." Price \$1.00 per bottle. Sold by all druggists or sent by mail. Write us for circulars, testimonials, etc. Sent free for the asking.

TWENTY YEARS does not seem very long to those who have passed that period of life after which one is said to be living on borrowed time, but to the younger generations occurrences of twenty years ago are old and musty. A vast majority of those who will attend the California State Fair this year and thrill over the Occident Stake when it is trotted, were too young to know or care what colt won it in 1890—just twenty years ago, but there are a few who will recall some of the races of that year with much pleasure. The Occident Stake of 1890 had but two starters, the Electioneer filly Coral owned by Palo Alto Stock Farm, and driven by Richard Havey, and Lot D. Slocum's filly Moss Rose by Anteeo, driven by Orrin Hickok. Coral won the stake, worth \$1535 in straight heats, the fastest of which was the last in 2:25. The same day Havey won an \$800 purse with Palo Alto Farm's mare Ladywell by Electioneer, beating Johnson's Sargent and Snider's Vidette, the fastest heat also in 2:25. John Goldsmith took the 2:30 class pace that day with Rupee by Guy Wilkes, the fastest heat 2:18½. Beaury Mac, was a winner at that meeting of an \$800 purse but did not have to trot faster than 2:19¼ to beat Wanda, Mary Lou and Pink. Wanda is now dam of the Roman 2:09¼, etc., and Mary Lou is the dam of Kinney Lou 2:07¼. There was a great race for a purse of \$1000 in the 2:30 trot that year. It went to five heats, Silas Skinner getting the first two and Orlam driven by Tommy Keating, the next three. Balkan and Lee were the other starters. The fastest heat of this race was 2:19. Other winners at that meeting were L. Funk's Lottery Ticket by Dexter Prince, Thos. Smith's George Washington, J. Garrity's Hummer, D. M. Reavis' Vic H., Dan Misner's Mattie P., Wm. Corbett's Sister V., Wilbur Smith's yearling Kebir, Corey's Almont Patchen and John W. Martin's Clay Duke. The fastest heat of the meeting was 2:16¼ made by the pacer Almont Patchen in the \$1000 free-for-all. Among the drivers at that meeting who have since crossed the great divide are Thos. Keating, James Dustin, John Goldsmith, C. H. Corey, W. Vioget, Worth Ober, Peter Brandow, Wm. McGraw, Lee Shaner, Orrin Hickok, John McCord and B. C. Holly. It is a long list and contains the names of some of the greatest reinsmen in the history of the trotting turf. There has been a great change in the management of the California State Fair since then, and the old timer who visits the fair this year may see a vaster crowd of people than he saw inside the gates in 1890, but the "broncho busting" and other attractions of that nature will not have for him the interest that the old fashioned trotting race, three best heats in five, aroused twenty years ago.

A WRITER on running race affairs in the Chicago Tribune expresses the opinion that small purses for runners induce graft, and instances a case where the owner of a horse starting for a \$200 purse is given a ticket on another horse calling for \$525 at 20 to 1, thus showing that it will be more profitable for his horse to lose than to win. These daily paper turf writers insist on making gambling the chief end of racing. If their line of reasoning were carried out in other matters, no farmer would plant wheat, corn or oats unless he could gamble on them in the pit, or produce anything else the price of which was not controlled by the brokers. In spite of the fact that a vast majority of the men who breed horses and expend money on their training, never gamble on the races, the daily newspaper scribes insist on making the bookmaker and professional gambler the "main guy" in all racing affairs. It is this, more than anything else, that has brought about the passage of anti-betting laws in several States, and it were far better that racing be stopped entirely than that it should be conducted solely that men may gamble on it. When the professional gambler is banished from all race tracks in America, horse racing will resume its place as the grandest and the best sport ever devised.

THERE IS MUCH IN EVERY RACE that the judges fail to see, and it very often occurs that the three legal lights in the judges' stand depend upon the clerk of the course to tell them how the horses finish. The protest that has been made against awarding fourth money in this year's M. and M. to Henry H., on the ground that he paced the greater part of the second mile in that stake, is doubtless properly made, as nearly every turf scribe and horseman who saw the race admits that Henry H. trotted only a very small portion of the heat. When the horse raced at Cleveland, the judges saw that he was pacing most of the time and set him back for it, but had their attention not been called to it by the previous protest they would probably have never known that Henry H. was not sticking to the gait at which the race was supposed to be raced. Now that starters are required to have a knowledge of the rules of racing, perhaps it might be advisable to license the judges and require them to qualify before going into the stand.

JUST HOW a turf paper can claim to be consistent, when it condemns the officials of a race meeting for failing to enforce the rules of the National Trotting Association while in the same issue it condemns a Governor for enforcing the laws of his State, is one of those peculiar things that it is hard to understand. The rules prohibiting foul driving, laying up heats, etc., are supposed to be mandatory and the officials of race meetings are expected to enforce them. The laws prohibiting bookmaking are also mandatory and the official who permits them to be violated is not doing his duty. If it is not the business of an executive to see that the laws—not a few, but all of them—are enforced then what is his business? It is within the power of the majority in associations or governments to amend or abrogate all laws that are not to their liking, but when laws are on the books, no official should be condemned for enforcing them. The easiest way to get an obnoxious law repealed is to enforce it strictly.

GOOD SCORE CARDS.

It would seem that the time would come when it would appear to be needless repetition to insist upon the publication of score cards by racing societies complete in all necessary details. But repeated failures to do so by managers evidently desiring to do any and everything furthering the interests of their racing occasions suggest that attention and insistence upon the matter are still much needed. A program recently issued that was very neat and clear in all features but one suggests the detriment one item left out may be. This program gave the name of the horse, sex, the owner and his address, the driver and color worn, but omitted to name the sire of the performer, one of the highly important matters alike for awakening the interest of onlookers educating them in the direction and starting them in a line to insure them as future patrons, as well as to render the program worth preserving for those having no other record of the event. The other items are all important and helpful to the spectator to watch the race and keep the track of the horses starting, and the matter of the sire producing them is the vital concern from the breeding standpoint which is the one that first of all should be considered. It is the pedigree viewpoint which practical horsemen look to in every field of horses and racing contest, and that alone will ever develop an intelligent race going public. Persons who attend races

and see only a certain number of unknowns go around a track once or twice and come out in different positions never evolve any enthusiasm in their own make-up, or inspire it in others. But those who come to look upon a field of horses as representative of rival tribes aspiring to supremacy, and every animal as a combination of blood with a peculiar interest because of what enters into him, will see much more than a figure or machine at work and will eventually be seeking to know deeper and further on all matters having to do with the production of trotters. For this reason pedigree should be made more prominent rather than less so by previous write-ups and announcements advertising a set of races, and eminently on the occasion when brought off, in the program put in the spectator's hands. It is one means also of bringing out and interesting all owning or breeding animals of the same or near akin families. It makes a big difference when it comes in the direction of home with almost anyone engaged in the horse line, and if horses are programmed with breeding touching at all what is owned, there is a source of attraction else would not exist. So for varied and numerous reasons breeding should be shown on programs as fully as space permits.—Spirit of The West.

FOUR TWO-MINUTE PERFORMERS.

Four harness horses have obtained records better than two minutes without a wind shield or a runner in front; they are Star Pointer, Audubon Boy and Minor Heir, pacers, and Uhlman, trotter. The fastest of the four is Uhlman, and he outclasses the pacers for speed. Here is the record of the fractional time of the mile in which the record of each horse was made:

	1	2	3	4	5
Star Pointer, 1897.....	:30	:29¾	:29¼	:30¼	1:59¼
Audubon Boy, 1905.....	:29	:28¾	:30	:31¾	1:59¼
Minor Heir, 1909.....	:29	:30	:30	:30¼	1:59¼
Uhlman, 1910.....	:29¾	:28¾	:30¾	:29	1:58¾

It will be noted that Uhlman is the only one of the four that covered three quarters in less than 30 seconds each.

LATE CLOSING PURSES.

The following entries were received for the 2:20 trot, 2:24 trot and 2:25 pace at the Portland meeting. These purses closed for entry August 15th.
2:20 Trot, purse \$1000.—May Mason, Babe H., Gloria O'Neil, Almaden, Stalene, Mrs. Herbert, Dr. Wayo, Lucile Patchen, Doc Munday, Ora May.
2:24 Trot, purse \$800.—Dolly McKinney, Sis Meridian, Florodora Z., Ora May, Honey Boy, Doc McKinney, Angie Malone, Shelagh, Velma Z., Joe Cannon, Marguerite, Dr. Lecco, Judge Dillon, Lucile Patchen.
2:25 Pace, purse \$800.—King Bird, Captain Wilder, Palestine, Lotisca, Alfreda D., Kit Crawford, May Moon, Baron Lovelace, Haltimont, Tom S., Harry Luft, Walter Barker, Nique, Harold Welcome.

ANSWERS TO CORRESPONDENTS.

F. H. Holloway, Hemit—California Nutwood is registered. His number is 15119. He was bred by E. B. Moran, San Jose, Cal. He was foaled in 1881, sired by Nutwood 600, dam Fanny Patchen by Geo. M. Patchen Jr. 31, grandam Laura, a fast road mare, pedigree not traced.

Amado worked a mile in 2:07 for Fred Ward before leaving San Jose for Portland. Amado is entered in the \$5000 pace at Portland which is set for Wednesday, September 7th.

OUR LOS ANGELES LETTER.

Los Angeles, Aug. 23, 1910.

It may not be generally known but it is nevertheless a fact, that Wm. G. Durfee is a violin virtuoso. As I passed his house a few evenings ago I heard the most dulcet strains of music and on entering was surprised to find in W. G. a disciple of Ole Bull. He was sitting in the twilight improvising on a violin, with only his pet Maltese kitten for an audience. We all knew he could "razoo" a trotter through the stretch in a fifth or sixth heat, but nobody gave him credit for the gentler art. The violin he was performing on may or may not be a Cremona or a Stradivarius, but Durfee told me it was known to be 160 years old, and had been handed down in his family from father to son for generations. To whom he will leave it is a question.

Mr. McGowan of Spokane, now an insurance adjuster of this city and a veteran horseman, has certainly been in hard luck here lately. A broodmare he bought a little while ago from D. P. Stewart of Spokane, died; then her nine months' old colt by Sherlock Holmes fell in a post hole and was killed and last week he lost a very promising three-year-old filly by the same sire from enlargement of the heart. He still has a three-year-old gelding by Sherlock Holmes and a yearling filly by Zolock.

Copa de Oro worked a mile in 2:09 with the half in 58½ seconds last Friday. Durfee was not far wrong when he told me a week ago that he thought Copa would step a half in 53 seconds. The same day he worked Carlok in a mile in 2:11½, last quarter in 30 seconds and the last eighth better than a two-minute gait, and repeated in 2:14 with the last eighth in 14 2-5 seconds. This horse is certainly on his good behavior this year; so far he has not made a break, going at speed, and has only left his feet once or twice when warming up and then just because he felt good and wanted to play.

Walter Maben will be in Portland, Oregon, the week of the State Fair at Sacramento, so W. G. Durfee will go up there to drive C. A. Canfield's entry Donasham in the Occident and Stanford stakes. At San Jose Walter Maben drove Donasham a mile in 2:13½, so it looks as if he had a pretty fair chance, and in any case make Strathboule step to his limit.

Rapidan Dillon was shipped here after her race at San Jose with the intention of turning her out, but on her arrival it was decided to send her to Santa Ana for a week or ten days let up, and then ship her to Portland from San Pedro with G. W. Ford's stallion Goldennut.

C. H. Thompson, who bought China Maid 2:05½ by McKinney, shipped her here to be bred. She came down in the car with Rapidan Dillon and Laudena and the latter's colt by Nutwood Wilkes. The last two are owned by W. H. Loftus and were consigned to Will Durfee. Mr. Loftus has an exceptionally fine looking colt now 2 years old, by Star Pointer, dam Anna Belle, the dam of Murray M. and Robert I. and a filly of the same age by Star Pointer, dam Leonora McKinney, nearly as good looking, owned jointly with Durfee.

Leonora McKinney is taking her work nicely after her let up and was given five heats last week, the third one in 2:12½ with the last eighth in 14½ seconds. She ought to make a more than useful mare next year. She is a nice age (6 years), very level headed, plenty of speed and has no mark.

Crescendo, the four-year-old trotter, that is a full brother to Copa de Oro, has just been started up after a let up and worked a mile in 2:22, last eighth in 15½ seconds. Tom Moko, the four-year-old by Moko, was given a mile in 2:20½ and the chestnut mare by Petigru that Durfee likes so much, came home from the half in 1:12½ with the last eighth in 16½ seconds, and Clarence Berry's three-year-old pacer Aviator was worked a mile in 2:18, last eighth in 14 seconds.

Jas. S. Stewart is giving Mr. McLean's Zombro mare, Lady Mac, easy miles after her long let up and is also working McLean's bay colt the same way.

Dr. Smith has a nice looking and very promising colt in Stewart's stable by Pedgru, dam Egletta, that stepped a quarter for Stewart last week in 32 seconds. The doctor has also a yearling by Carlok in out of the same mare down on his ranch, that is as handsome as a picture and a great "lot" trotter.

O. E. Heller worked his two-year-old pacer by Young Hal, dam the dam of Frank Lang's matinee pacer Siegfried a mile in 2:18 down at Santa Ana on Friday. Heller has begun giving his four-year-old pacer Hal McKinney easy miles after his season in the stud and is trying to get him to go without the "straps."

Walter Maben has sold to C. H. Thompson three colts, one by Oh So, dam by St. Vincent, and two by Del Coronado; the dam of one is Azeta by Dick Turpin and the other's dam is Geraldine by Zombro.

By the time this is published the California Breeders' stakes will have been decided at Woodland. It was a disappointment that only three, out of the fourteen that had made all the other payments in the Canfield-Clark \$1000 purse for two-year-old trotters, made the final payment. It looks as if Geo. L. Warlow's colt Matawan had scared some of them out. Still there was a fourth money, and that would have helped some. Besides horse racing is an uncertain proposition, and because a colt won a race in 2:19 is no guarantee that he may not be "off" the next time he starts or have one of the hundred and one things happen that would spoil his chances.

Dr. Wm. Dodge, who used to own and matinee Lohengrin, has not as yet been tempted by the automobile. He still drives a good looking big bay colt in

a road wagon in his practice, and if he does not arrive at a patient's bedside quite as quickly as some of his brother practitioners he is infinitely surer of getting there eventually. JAMES.

COLORADO E. WINS \$15,000 STAKE.

The Matron Stake, valued at \$15,000, the first of the two big stakes inaugurated by the American Horse Breeders' Association three years ago, was decided over the track at Yonkers, New York, on Tuesday of this week and was won by the great three-year-old Colorado E., owned by Mr. Geo. Estabrook of Denver, Colorado. In winning this race, which was two best heats in three, Colorado E. set a new record for two heats by a three-year-old, trotting them in 2:07½ and 2:07½, certainly a wonderful performance. Full particulars of the race will not reach us until next week, but the account telegraphed states that he won with comparative ease, although he met a very high class field of three-year-olds—Emily Ellen, winner of the Horseman Futurity at Detroit, Native Belle that took a two-year-old record of 2:07½ last year, which is the champion record at that age, Eva Tanguay, bought two weeks ago by her present owner for \$10,000, and Eva Bellini that was second to Native Belle when she took her record last year in the Kentucky Futurity for two-year-olds.

When Ramey Macey gave Colorado E. a workout mile in 2:06½ at Kalamazoo, three weeks ago, there was general apprehension among horsemen that the young man had driven the colt too fast for that season of the year, but this race shows that Colorado E. must be in the very pink of condition or he could not have stepped two such miles, which are faster than any two trotted by a three-year-old before.

The world's records for three-year-olds are as follows:

Colt, Gen. Watts, by Axworthy 2:06½
Filly, The Leading Lady, by Bingen 2:07

The record of Gen. Watts was made in the first heat of a race, but the second heat which decided the race was won by him in 2:09½. This race was in October.

The Leading Lady's record of 2:07 was also made in October, and was made against time.

Colorado E. raced last year as a two-year-old, starting twice. In the Kentucky Futurity for two-year-olds, won by Native Belle in the record time of 2:12½ and 2:07½, he was second in the first heat and third in the second heat. Ten days later he started in a purse race for two-year-olds, which was won by Sue D. in straight heats, with Eva Bellini second, Colorado E. third and Eva Tanguay fourth. The time of this race was comparatively slow—2:16½, 2:17.

This year Colorado E. has been showing phenomenal speed from the first, and it is certain that were he pointed for one fast mile that he could lower all three-year-old harness records, including those held by the pacers Klatawah 2:05½ and Jim Logan 2:05½.

Colorado E. is by The Bondsman, son of Baron Wilkes 2:18 and Sorrento, dam of Jayhawker 2:14½ (sire of Country Jay) by Grand Sentinel.

The dam of Colorado E. is Flossie McGregor by Jay McGregor, son of Jayhawker and a mare by Robert McGregor; his second dam is Black Bess by Wellington 2:16, son of Kentucky Prince, third dam Strathliene 2d by Strathmore, fourth dam by Mambrino Patchen. There is a lot of thoroughbred blood in the pedigree of Colorado E.

MATINEE RACING AT WATSONVILLE.

Fully seven hundred people journeyed to the Watsonville Driving Club's track on the Beach road last Sunday afternoon to witness the third meet of the season, which was the most successful that has been held under the auspices of the local club. The crowd displayed its enthusiasm and interest by loudly applauding each event and tumultuous cheering both the winning and losing drivers. Results:

First race, mile heats, 3 in 5:

J. P. Soare's Lettie S. (owner) 1 1 1
O. H. Whiteman's Sidney (Berdu) 3 2 2
J. Cruz's Little One (owner) 2 3 3

Time—2:42, 2:36, 2:32.

Second race, half mile heats, 2 in 3:

M. Silva's Daisy S. (Soares) 1 1
Geo. Mann's Black Diamond (owner) 2 2

Time—1:15, 1:14.

Third race, mile heats, 2 in 3:

N. Mortza's Babe (Starks) 2 1 1
F. Mann's Trixie M. (owner) 1 2 2

Time—2:32, 2:23, 2:27.

Fourth race, running, quarter mile dash:

Elmer Neilson's pony (owner) 1
H. A. Fitch's pony (Martin) 2

Time—0:26.

Two new track records were established Sunday. Nick Mortza's Babe, driven by Vance Starks in the second heat of the third race, set the record for the mile at 2:23 and Elmer Neilson and his pony hung up a quarter mile running record of 26 seconds.

The officials of the course were: Judges, Jess Neilson, Gus Hushbeck and Paul Alaga. Timers, Robert Mann and Jerry Driscoll. Starter, E. J. Kelly.

Sonoma Girl (11) 2:04½, Major Mallow (12) 2:03½ and Country Jay (14) 2:05½ were the "old guard" at the Cleveland races.

Drink Jackson's Napa Soda.

A LIVE PRESIDENT'S VIEWS.

J. T. Williams, president of the Woodlawn Farm Company of Sterling, Ill., and also president of the fair association there for the last ten years, in a letter to The Horseman, Chicago, strikes several good keynotes. He says:

"As president of our fair association for the last ten years, a breeder in a small way, and occasionally racing one, I have naturally had more or less opportunity to see the game from all its different angles. And if it were possible to convince the race track owners and managers, the horse owners and the breeders that their interests were mutual and that instead of each one trying to do the other fellow they should all work together and try to get the money from the box-office instead of out of each other, it would take but a few short years to make harness racing what it justly deserves to be, the most popular sport in America and a money maker for all concerned.

"The baseball managers long ago learned to cater to the people and to rely on the box-office for the money to finance the game. The same is true of the theater owners, the nickel show owners; in fact every amusement except horse racing. Unfortunately the average secretary seems to regard the box-office as the last place to increase his receipts. Many of them sit up nights trying to devise some new kind of a payment plan that will catch horsemen enough that they will make entries enough to race for their own money trusting to the concessions, many of them doubtful as to character, for the rest of his expenses and hoping that the few people that come through the gate will be left as a profit. The average horseman on the other hand is hoping that his owner is dead game or that he may hit the pool hox at the right minute and the public who spend their money so liberally for entertainment in other lines and who may be induced to spend for a harness race are entirely lost sight of.

"When it finally dawns upon those connected with horse racing that what the public wants is clean, sharp, quick racing, with attractive surroundings, and that they are willing to pay for what they want, horse racing will then take its place as one of the most popular sports in America. The thing that most people connected with the horse racing game seem to be totally unable to realize is that the person who is not a horse crank sees absolutely nothing to attract or interest them in a harness race as conducted today. The average individual knows nothing about pedigrees, is not interested as to whether one family of horses can go three heats or ten; does not take any particular pleasure or enjoyment out of a bunch of hobble pacers going over to the quarter pole in 30 seconds where they cannot see how fast they are going and finish down the home stretch at a 4-minute gait with every driver yelling and batting his horse like an Indian; they get sick and tired and disgusted of a long drawn-out race with the last heats backing up from 5 to 10 seconds slower than the first heats; a dusty track, bare, brown buildings, a motley assortment of caretakers, half-drunk gamblers and touts, filling up the track, and an illy-dressed lot of drivers, to say nothing of a lot of other personal discomforts which do not make them very enthusiastic about coming back the next day. Horse races of this kind do not pay, and it is a case of dog-eat-dog between those interested.

"Theaters or any other amusement would not last for thirty days if conducted in the same manner. I sincerely trust that you people will keep hammering for progress. There is certainly plenty of room for improvement. In our small way we are trying to in our circuit, and especially in our little association at Sterling, to get in line. We are offering a race this year all the way through Illinois circuit for 2:30 pacers without hobbles. The circuit is also at their own expense going to furnish the drivers with appropriate suits, also neat suits for the caretakers, so that the casual race goers, and especially the feminine end of it can have a favorite in each race if for no other reason than that they like the color of the jacket the driver is wearing.

"Here at home in our own association we are trimming up our weeds, have let a contract for white-washing every building we have on the place, which by the way we did two years ago. We have for years made it a practice to have the track sprinkled in front of the grand stand and to absolutely keep the track clear in front of the grand stand of caretakers and everybody else. In other words we are trying to interest the people. We adopted the same course last year and while we unfortunately had a soaking rain two days, we had the best prospects that we have ever had in our history and harring rain this year I believe that with good weather we will be able to interest the people. And if we are successful in our small way what could not be done by other associations more favorably situated than we are?

"So keep hammering through your paper for progress. Falling water finally wears a stone and results may come in time even in harness racing."

The McKinneys in the stable of Everett Middleton at Lexington, Ky., are doing finely. The star of the outfit is the three-year-old black filly Arona McKinney, out of Barona by Baron Wilkes 2:18, second dam Lou, the dam of Axtell (3) 2:12. She has trotted in 2:15½ and can step an eighth in 15 seconds. Comely McKinney, nod four, stepped in 2:15 and Boyd McKinney in 2:17½. The latter is out of Grave Boyd, the dam of Grace Bond 2:09½.

EASTERN HORSE GOSSIP.

Ess H. Kay 2:02½ is the fastest of the get of Direct Hal.

Bingen and Blonde, the sire and dam of Uhlan, are owned at Ardmaer Farm, Raritan, N. J.

The Fasig-Tipton Company announces its 16th annual "Old Glory" horse auction at Madison Square Garden for the week beginning November 21.

It is too bad that "Anti-two-minute" Bailey could not have lived to see Uhlan perform the trick he so strenuously urged could never be performed by a trotter.

Tommy Murphy has become disgusted with the fast but erratic stallion Sterling McKinney 2:06½ and the horse is likely to find his way back into trainer Shuler's hands.

May Queen, the pacing mare that won her race in the Grand Circuit without getting a record faster than 2:10½, had to step three heats in 2:09½, 2:09½, 2:10½, to get the money over the half mile track at Lansing, Mich.

De Courcy 2:13½, sire of the pacer Peter Pan, winner of two heats at Kalamazoo in 2:07½ each, is an own brother of the great sire Grattan 2:13, being by Wilkes Boy 2:24½, out of Annie Almont, by Bostick's Almont Jr., 2:29.

Peter the Great 2:07½, gets another 2:10 trotter in Peter O'Donna, that took a record of 2:08 at Lexington recently. This fast going trotter is out of Prima Donna, 2:09½, by Betterton, a mare that was one of the great race mares of a dozen years ago.

Gurney C. Gue, secretary of the Trotting-Horse Breeders' Club, introduced a novelty at the New York Grand Circuit meeting in the shape of a catalogue of all horses entered, with their pedigrees and past performances in 1909 and 1910, arranged in the style of Chester's Trotting and Pacing record.

Uhlan 1:58½ is a treble "only," perhaps considerably more than that. First: He is the only animal that ever trotted on the outside of and lapped on another entire mile in 2:01½. This was as severe a test of gameness as any horse ever endured. Second: He is the only animal that ever trotted a mile in 2:01 to wagon without a pace maker pulling a dirt shield in front. Third: He is the only animal that ever trotted or paced a public mile so fast as 1:58½ without a pace maker pulling a dirt shield in front.—American Horse Breeder.

It is reported from what appears to be reliable sources that C. K. G. Billings is after Uhleen, a full sister to Uhlan 1:58½. For many years the New York trotting-horse enthusiast has paid immense sums of money to own several of the turf's noted champions, yet it was not until last week that he entered in the list of breeders of standard trotting speed through the performance of Lou Billings (3) 2:11½. Uhlan being unsexed, it is not any surprise to see Mr. Billings buy a sister of the great trotter for breeding purposes, after she has been prepared for some more championship records.

Gus Macey has decided to turn the \$10,000 Lillie W. out for the remainder of the season, and point here next year for the M. & M. Lillie W. was one of the fastest four-year-old trotters ever trained last season as her trial mile in 2:07, last half in 1:01½ demonstrates. It was after this remarkable showing that George Estabrook purchased her for the amount above named. For a time she gave every promise of making good, but later sickness preventing her being trained sufficiently to do herself justice in her engagements her owner and trainer decided to lay her over until next year. She is the only member of the Estabrook stable that failed to make good.

The following story comes from Mason City, Ia.: "Goldust Prince 2:20½, a famous trotting stallion in his day and owned as a driving horse and family pet by Dr. Clack, of Clear Lake, died last week, aged 28 years. He was foaled in Prairie du Chien, Wis., June 28, 1882, the property of Rev. William Clack, father of Dr. Clack, sired by Star Bashaw and dam Rose, by Sleepy Fred. On his mother's side Goldust Prince was a descendant of a cavalry horse, used during the Civil War by a Wisconsin regiment. His death ends a remarkable record of 111 races, in which he won 71 first. His record of 2:20½ was made sixteen years ago when he was started on a local track by J. C. Sherwin, now a member of the Supreme Court of Iowa."

One of the big surprises of the North Randall meeting was the performance of the chestnut mare, Teasel, which defeated Nancy Royce 2:06½, on the opening day, taking a new record of 2:06½. Teasel was formerly a matinee mare, being owned by Harry Devereux, president of the Grand Circuit. Two years ago she was raced by Geers and took a record of 2:10½ at Kalamazoo. Last season she was figured to be a star, but after she had defeated Country Jay in a race at Windsor and taken a record of 2:09½, she broke down in a race at Detroit and was retired. Last spring she was placed in the stable of W. H. Andrews, who raced her at Grand Rapids, Kalamazoo and Detroit without showing much class. Last week she was right, however, and gave Nancy Royce the first trimming she has sustained this season.

BUFFALO SUMMARIES.

Aug. 16.—2:17 trot; purse \$1000; best three in four:
Direct Tone, b. g. by Directum Kelly (Ryan).....1 1
Veizora, b. m. (Cox).....2 2
Captain Cate, blk. g. (Shahen).....2 7
Oriona, br. m. (F. G. Jones).....3 4

Walter Hal, gr. s. (W. Garth).....4 4

Time—2:06, 2:06½, 2:07.
A GOOD ONE ON "FATHER" SHULTS.
Horsemen who follow the Grand Circuit are telling a story which illustrates the lottery of horse breeding and incidentally exemplifies the ill luck which has sometimes attended the breeding operations of Mr. John H. Shults. Mr. Shults, as all horsemen know, has expended more than a million dollars in buying and breeding trotters at Parkville Farm, on Long Island, and at Shulthurst, in Westchester county.

For twenty-five years he has made it a rule to buy and sell only at auction. At one of the big sales held in Madison Square Garden about seven years ago he disposed of a number of discarded brood mares, some of which had been bred to the then almost unknown as trotting sire Axworthy 2:15½. Among them was the four-year-old mare Alsenna, by Altivo 2:18½, son of Electioneer. She was struck off for \$210 to Floyd Brothers, of Bridgeton, Va. The colt that she foaled the next spring has developed into the sensational trotter Hailworthy, a better horse than Mr. Shults ever had in his stable. Starting for the first time on a mile track at Grand Rapids, on July 22, Hailworthy won one of the fastest five-heat races on record, beating the great Austrian stallion Willy, and trotting the fourth heat in 2:07½. The man who bred him will soon have a chance to see him trot at the Grand Circuit meeting in New York. He is entered in the 2:13 race to be trotted at the Empire track on August 26.

At the same sale and on the same day Mr. Shults sold for about the same price the four-year-old bay filly Carpet, by Prodigal 2:16. She, too, had been bred to Axworthy, and the colt that she foaled a few months later is now known as General Watts 2:06½, holder of the world's record for three-year-old trotters.

It is a common saying among horsemen that when Mr. Shults sells at auction the bottom is out of the horse market, and when he wants to buy prices are usually up in the clouds. At one of his sales a few years ago no bid whatever could be obtained for a horse that was before the auction block. Nettled by the failure of the horsemen to bid, Mr. Shults called to one of the attendants:

"Here, boy, pin this twenty-dollar bill on the halter and tell them it goes with the horse. Maybe that will start them bidding."

This practical witicism was successful, and the horse with the twenty-dollar bill attached brought \$180.—New York Herald.

George Gano has been turned over to M. W. Savage, having joined the combination at Peoria, Ill., on Sunday last. His first exhibition will be at Des Moines, Ia., August 27, and Mr. Savage believes that the Gambetta Wilkes horse will be in the pink of condition by that time.

Uhlan pulled the same sulky that Lou Dillon went her championship miles in seven years ago.

PEORIA SUMMARIES.

Aug. 16.—2:12 pace; purse \$1000:
Knight of Strathmore, blk. h. by Twelfth Knight (Frost).....1 1

Time—2:09½, 2:10½, 2:09½.
Grand special:
Minor Heir (Hersey).....1
Hedgewood Boy (Erwin).....2
Lady Maud, c. (Palmer).....3
Time by quarters—29¼, 59¼, 1:31, 2:03¼.

Aug. 17.—Rain interfered with the second day's racing in Peoria. Just as several thousand people had assembled and the races started rain began to fall in torrents and continued for an hour thoroughly drenching the followers of the racing sport. Officials announced that the races will be extended one day and the entire program will be given, ending Saturday instead of Friday.

Aug. 19.—First race, 2:09 pace; purse \$700:
Joe Brown, b. g. by Cookoo (Rash).....1 1 4 7 7
W. A., b. g. (Floyd).....11 11 8 1

Captain Hunt, b. h. (McMahon).....9 8
Fidudal, b. m. (Richmond).....10 ds

Time—2:11½, 2:11½, 2:12½.
Third race—2:18 pace; purse \$1000:
Denervo, b. h. by Demonio (Smith).....1 1
Walton Boy, br. h. (Doan).....2 2
Brother Will, b. g. (Wilson).....4 6
Bonnie Rexhart, br. m. (Barcky).....6 4
Nellie G., br. m. (Marvin).....3 5
Cecil Hearst, br. h. (Myers).....ds

Time—2:09½, 2:09½, 2:08½.
Fourth race—three-year-olds; trot; purse \$500:
Lulu Arion, ch. f. by Peter the Great (Benyon).....1 1
Miss Templebar, b. f. (Marvin).....2 3
Eva Thompson, b. f. (Doan).....3 2
Jane Jones, b. f. (Chandler).....4 4
Lopewood, b. c. (Walter).....5 5

Time—2:16½, 2:16½.
Fifth race—2:05 pace; purse \$700:
Tony K., br. h. by Constanero (McMahon).....1 1
Ross Swift, blk. m. (Doan).....2 2
Eland S., b. h. (Barnes).....5 3
S. F. All, br. h. (Anderson).....3 4
Macenda, b. m. (Albin).....4 5
Major Mallow, b. h. (Mallow).....5 dr

Time—2:05½, 2:04½, 2:05½.
Special—Pole team against time:
Hedgewood Boy and Lady Maud C.....1
Time by Quarters—30¼, 1:00, 1:32½, 2:14½.

Aug. 20.—2:10 trot, purse \$800:
Charles P., br. g. by Cicerone (Rash).....4 2 1 1
Nancy Royce, b. m. (McCarthy).....1 1 2 3 3
Safeguard, b. g. (Palmer).....3 4 3 4 4
Time—2:09, 2:07½, 2:07½, 2:11½, 2:12½.
Castle Dome, b. h. by Arion (McCarr).....1 1
Miss Mochar, b. m. (Bonds).....2 2
Dell Dillon, b. m. (Woods).....4 3
James Boyle, b. g. (Dean).....5 6
Billy Vago, Ed Bacon, Calipas and Remorseful were distanced.

Time—2:17½, 2:17½, 2:14½.
2:25 pace, purse \$1000:
Nathan B., br. h. by Truce (McMahon).....1 1
Jennie Gentry, b. m. (Dean).....4 2
Lacorn International, br. h. (McKeel).....2 3
Gambeta, br. m. (Wilson).....5 4
Grace R. also started.

Time—2:09½, 2:11½, 2:15½.
Evelyn Patchen, b. m. by The Patchen Boy (Palmer).....1 7 7 1 1
Becky B., b. m. (McMahon).....4 4
Swiftwood, b. h. (Minold).....2 2 3 3
Blanche May, b. m. (Myers).....3 3 3 3 2

Time—2:13½, 2:12½, 2:14½, 2:18½, 2:16½.
Special race:
Hedgewood Boy, ch. g. (Irwin).....1
Lady Maude C., ch. m. (Palmer).....2
Minor Heir, b. h. (Hersey).....3
Time—30¼, 1:02¼, 1:33, 2:02¼.

Erect, own brother to Direct 2:05½, died recently at Seattle, Wash., the property of Lee Barbee. Erect was taken to the Northwest some years ago by A. T. Van de Vanter and on account of his breeding was regarded as an acquisition to the horse industry of that section. Erect was not represented, however, by many descendants and as a sire, owes whatever notice he may have received to his relationship to greatness. He was a stallion of intelligence and good manners and was used for years as a buggy horse about Seattle.

NOTES AND NEWS

Everett, Washington, races next week.

Denervo 2:08 $\frac{1}{2}$ is Demonio's fourth 2:10 performer.

The Everett, Washington, meeting opens the North Pacific Circuit next Tuesday.

Frank E. Wright of Sacramento is starting the horses at the Woodland meeting.

It is said that Dick Wilson, the popular Portland trainer, is very ill with typhoid fever.

Grace Pointer continues to win, having taken a race last Monday at Galesburg, Illinois.

The Occident Stake will be decided one week from Monday next. It should be a great race.

Hedgewood Boy 2:01 and Ross K. 2:01 $\frac{1}{2}$ are new pacing records made at Galesburg this week.

The great fair and race meeting at Portland opens Monday, September 5th. The \$10,000 trot will be held on Thursday, the 8th.

Portland's big meeting begins on Monday, September 5th. The \$5000 pace comes off on Wednesday and the \$10,000 trot on Thursday.

The Vancouver, B. C., fair and race meeting held last week was so well attended that there will be a surplus of \$12,000 in the treasury.

Lulu Arion that took a record of 2:29 $\frac{1}{2}$ as a two-year-old last year, won the three-year-old trot at Galesburg this week, the fastest heat in 2:14 $\frac{1}{2}$.

The Harvester 2:02 has been starting in \$1000 purses this year, his record having barred him from all the big trotting stakes on the Grand Circuit.

The majority of the purses at the Galesburg meeting on the Great Western Circuit are but \$500, but the fields are large and the time fast just the same.

Owing to rainy weather there were but three days racing at the Buffalo meeting. The attendance was very large, however, much greater than at any previous meeting.

Baron Lovelace that won the Hotel Men's purse of \$1200 at Vancouver last week, is owned by W. A. Laidlaw of Portland, Oregon, and will start in the 2:25 pace at that place September 9th.

"Farmer" Bunch has certainly made a much better pacer out T. D. W. than the gelding was ever considered to be, and a mark of 2:10 may yet be placed opposite the name of this son of Nutwood Wilkes.

Dan McKinney 2:19 $\frac{1}{2}$, a new standard trotter for 1910, is by Kinney Lou 2:07 $\frac{1}{2}$, dam Queen C. by Nutwood Wilkes 2:16 $\frac{1}{2}$, second dam Queen by Venture 2:27. He was bred by the late Martin Carter.

Capt. Aubrey, by Peter the Great, recently reduced his record on a half mile track, winning his three heats in 2:17 $\frac{1}{2}$, 2:13 $\frac{1}{2}$ and 2:12 $\frac{1}{2}$. He is owned by King Hill Farm, St. Joseph Missouri, and can trot in 2:10 on a mile track.

In the free-for-all trot or pace at Vancouver, B. C., on Thursday of last week, Zolock 2:05 $\frac{1}{2}$ won in 2:10, 2:11, the first heat being the fastest mile ever paced or trotted in British Columbia.

This begins to look very much like a Bingen year, and with Uhlan 1:58 $\frac{1}{2}$ as a leader the get of Bingen will make a great showing in the list of trotters with new or reduced records at the close of the season.

Lou Dillon 1:58 $\frac{1}{2}$ was bred to Bingen 2:06 $\frac{1}{2}$ this spring and the expectant foal will be talked about as being by a horse that has sired a better than two-minute trotter and out of a mare with a record below two minutes.

When Uhlan trotted his record breaking mile at North Randall in 1:58 $\frac{1}{2}$ he came the last quarter in 29 seconds and the last eighth in 14 seconds, which were the fastest quarter and eighth in the mile. This makes the performance all the more wonderful.

Det Bigelow of Woodland, who bred, owns, trained and drove Dorothy Ansel to a two-year-old record of 2:20 last Wednesday at Woodland, also trained and drove her sire to a two-year-old record of 2:20 $\frac{1}{2}$ at Chico in 1897.

Mr. J. L. McCarthy, who was prevented from starting the horses at the Breeders' meeting at San Jose on account of important business matters that required his presence elsewhere, has accepted an invitation from the Portland association to start the harness horses there during the week of September 5th to 10th. The \$5000 pace is on the program of the Portland meeting for Wednesday and the \$10,000 trot for Thursday. Mr. McCarthy will also start the horses at Salem.

The Broncho 2:00 $\frac{1}{2}$ showed quite lame last week and the endeavor to restore her to the turf will be desisted from. If it can be arranged she will be bred to Minor Heir 1:59 $\frac{1}{2}$.

The two "little ones"—Chiquita, bay mare by Diahlo, and Chiquito, chestnut gelding by Highland C.—are now in the 2:10 list. The gelding took a record of 2:09 $\frac{1}{2}$ in the first heat of a race at San Jose, and the mare one of 2:10 in the first heat of a race at Woodland. Both are pacers.

According to the dispatches from Galesburg this week, the pacer Denervo by Demonio took a record of 2:03 $\frac{1}{2}$ in the 2:18 pace, which he won on Wednesday. This makes Demonio the only stallion on the Pacific Coast that has two representatives in the 2:04 list—Mona Wilkes and Denervo, both with records of 2:03 $\frac{1}{2}$.

Col. Robert G. Westmore, considered to have been the best-posted man in America on the breeding of thoroughbred horses, and who for a number of years has been connected with the thoroughbred department of the Fasig-Tipton Company, died at his home in Westfield, N. J., August 5, in the 64th year of his age.

DOROTHY ANSEL (2) 2:20

Winner Clark-Canfield Stake at Woodland.

Dick Curtis, who has the sensational three-year-old J. Malcolm Forbes 2:09 $\frac{1}{2}$, in his stable, also has one of the best two-year-olds seen at Lexington this year in the bay colt Sim Axworthy, a son of Guy Axworthy 2:08 $\frac{1}{2}$, and Mendosa M., by Mendocino 2:19 $\frac{1}{2}$. He trotted in 2:19 $\frac{1}{2}$, last quarter in 32 seconds, some of the railbirds having it 31 $\frac{1}{2}$ seconds.

Baron May 2:07 $\frac{1}{2}$ by Baron Wilkes is trotting in good form this year. He was second to Country Jay in 2:06 $\frac{1}{2}$ at Cleveland, and at Buffalo when The Harvester broke the world's stallion record by trotting in 2:02 the third heat, Baron May was second. Baron May is out of the Palo Alto bred mare Nellie May by Electioneer, second dam Lady Ellen 2:29 $\frac{1}{2}$ by Carr's Mambrino.

Brownie, the dam of the pacers, Darkey Hal 2:02 $\frac{1}{2}$, Charley B. 2:07 $\frac{1}{2}$, Alpha Hal 2:21 $\frac{1}{2}$, and Hal Boy, a fast son of Hal B. 2:04 $\frac{1}{2}$, now in W. L. Snow's stable, died July 20. Brownie was a daughter of Hamlet, son of Highland Boy, he by Hamlet, son of Volunter. She was owned by Mr. E. S. Baker of Guelph, Ont., who says he thinks she is the only mare ever bred in Canada that has produced two with records that average as fast as the records of Darkey Hal and Charley B.

Uhlan in his record mile drew the same sulky which Lou Dillon pulled in her wonderful performances. This sulky is seven years old and is therefore higher than those in vogue today. A representative of the Faber sulky remarked after the event that the sulky by reason of its height was necessarily slow for "Doc" Tanner is a tall man and seated high would offer much more wind resistance than if seated down behind his horse, all of which is logical.

The accident sustained by Al Commings while driving Ashline in the C. of C. at Detroit, proved to be more severe than was at first thought. Upon reaching Harper hospital it was discovered by the surgeons that Al's right leg had been broken an inch below the knee. It was necessary to operate, making incisions above and below the knee joint, in order to bring the broken bones together. While there is no serious immediate danger, Al is said to be suffering severely and the physicians state that it will be at least six weeks before the patient can leave the hospital. Meantime it has been decided to send all of the horses home.

Monday, September 5th, Lahor Day, there will be some excellent racing over the half mile track at Kentfield under the auspices of the Kentfield Driving Association. Prizes in the way of blankets, robes, whips, etc., will be given the winners. Entries for the meeting to be held on the same track September 9th, will close September 5th.

Iceman, the fast little pacer that took a mark of 2:10 and won his race at Woodland Wednesday is by William Harold 2:13 $\frac{1}{2}$ out of Mahel, the dam of Directly 2:03 $\frac{1}{2}$, by Naubuc. He is owned by W. J. Silveria of Vallejo and is trained and driven by A. T. Jackson who has returned to the game after an absence of several years. Mr. Jackson formerly owned and raced the pacer Cherokee Prince 2:18.

C. A. Durfee is trying a wire screen around the muzzle of Almaden 2:22 $\frac{1}{2}$ to keep him from being annoyed by the clods that are thrown by other horses on the track. Almaden is very sensitive about having dirt thrown in his face and Durfee says one will have to get off in the lead with him or stay out on the outside of the track where the dirt can't reach him. If the "bird-cage" works, however, it will be 2:10 for Almaden before long.

It must have been a very pleasant and satisfactory afternoon to the popular trainer Det Bigelow of Woodland, when on Wednesday last at his home town he piloted the two-year-old filly Dorothy Ansel to victory in Clark-Canfield stake, giving her a trotting record of 2:20 in the first heat, and it must have aroused many pleasant memories for him. Just seventeen years previous, lacking one week, when in the employ of the late George Woodard of Yolo county, Det sat behind Dorothy's dam Lucy B. by Alexander Button, and drove her to a hard earned victory over the same track giving her a record of 2:17 $\frac{1}{2}$ which is her record still. Lucy B. was a grand trotter and one of the gamest of race mares and whenever she won a heat she won the race. Few horses ever heat her in the stretch if she turned into it on even terms and no race was too long for her. Four years after driving Lucy B. to her record, Bigelow was at the Chico meeting and there drove the colt Prince Ansel by Dexter Prince in the stake for two-year-old trotters. The now famous John A. McKerron 2:04 $\frac{1}{2}$ and that good trotter Dr. Frasse 2:11 $\frac{1}{2}$ were then two-year-olds and started in this race with two or three others. Prince Ansel was the property of Alex Brown, his present owner, at that time, and was trained by Bigelow. The race ended after two heats, Prince Ansel winning both handsily in 2:22 $\frac{1}{2}$ and 2:20 $\frac{1}{2}$.

After the death of Geo. Woodard Lucy B. became the property of Bigelow and when Alex Brown moved his stock farm from Walnut Grove to Woodland Bigelow determined to breed Lucy B. to Prince Ansel and Dorothy Ansel is the result. There are few breeders that have bred and marked a 2:20 two-year-old trotter, who also trained and drove the trotter's sire and dam to their records.

Dorothy Ansel is a grand looking large filly and has a great future before her. The half tone on this page was made from a photograph of her taken when a yearling.

Claiming that Henry H. paced throughout three-quarters of the mile in the second heat of the Merchants' and Manufacturers' stake, W. J. Andrews entered formal protest with the judges at Detroit against the payment of fourth money to Dean's horse. Should the Board of Appeals sustain Mr. Andrews' claims, Myrtle Granett (which he drove) will stand for the fourth division of the \$10,000 purse.

VANCOUVER EXHIBITION AND RACES.

The first Vancouver, B. C., exhibition, which was held last week, was a pronounced success, both financially and otherwise, and was well patronized. The weather was all that could be desired.

The class of animals exhibited, especially in the equine division, would have been a credit to an institution of many years' standing; in fact, for an embryo association, the total results are beyond the expectations of the most sanguine.

Mr. W. S. Holland and Mr. H. S. Rolston instituted a system of judging in the horse show events. The judges of each class acted independent of each other and handed in their verdicts on a special card. This method appears to have given satisfaction; at all events, it does away with individual judging, but may not be acceptable to professional judges.

Directors Rolston and Tiffin were in charge of the speed departments, while the intricate work of the daily speed program was in the able hands of Mr. Robert Leighton and his staff. No delay occurred in the five days' racing, as many as fifteen events being run off the last day in three and a half hours.

Mr. Tiffin lent a daily charm to the mounts of the paddock, especially when he arrived with his stable of pony racers.

MAJOR.
The results of the harness races held during the meeting follow:

Starter and Presiding Judge, Mr. J. A. Fullerton; Judges, Messrs. S. L. Howe, J. A. Russell, Dr. X. McPhillips; Racing Secretary, Robert Leighton; Paddock Judge, T. Bowhill; Timers, A. Gibson, G. E. Treorey, B. F. Armstrong.

Tuesday, August 16.

Pacing, 2:17 class, \$1000:
Miss Jerusha, hy Zombro (Childs).....9 1 1 1
Olga S., (Marshall).....1 2 4 2
Billy S. (Guest).....2 6 2 4
Maple Hall (Willis).....4 4 3 3
Lightfoot, Cranky Thorne, Stella A., Lord Sidney Dillon, Capt. Jay, Harry Luft, San Lucas Maid, and Esther B. also started.
Time—2:17½, 2:19, 2:18, 2:18½.
Trotting, 2:40 class, \$400:
Nellie Morris (Millington).....1 1 1
Wanneta Dwyer (Burrows).....2 2 4
Sampson (Steele).....4 3 2
Rain in Face (Guest).....3 4 3
Rock Seal (Madsen).....5 5 5
Allamont (Cable).....dis.
Time—2:29, 2:27½, 2:26½.

Pacing, stallions in service that have served ten or more mare in 1910. Purse \$300. Half mile heats:
Zolock, hy McKinney (Young).....1 1
Pilot McGregor (Davis).....2 2
B. C. King (Hollinshead).....3 4
Burtwood (Heffner).....4 3
Time—1:08, 1:06.

Wednesday, Aug. 17.

Pacing, 2:25 class, \$400:
H. C. M. (Rippinger).....2 2 1 1 1
Princess Sunrise (Grocutt).....1 1 3 3 4
Letiska (Johnson).....5 3 2 2 2
Joe Milton (Hodgins).....4 4 5 4 3
Palestine (Richardson).....3 5 4 5 5
Time—2:20, 2:23, 2:25, 2:27, 2:27.
Pacing, 2:19 class, \$750:
Mayo, hy Zombro (Childs).....1 1 1
Haltamont (Lindsay).....2 2 3
Johnny Mac (Hodgins).....5 3 2
Lord Sidney Dillon (Deering).....3 5 5
Captain J. (Grocutt).....4 4 4
Baron Lovelace (Pendleton).....6 6 6
Time—2:20, 2:21, 2:21.

Trotting, three-year-olds; half-mile heats, \$250:
Almah Lou hy Kinney Lou (Cable).....1 1
Nellie Arnold (Richardson).....2 3
Susie G. (Moran).....3 3
Inn McKinney (McTaggart).....4 4
Time—1:25½, 1:25.

Thursday, August 18.

Trotting, 2:20 class, \$500.
Nellie Morris (Millington).....1 1 1
Wanneta Dwyer (Burrows).....3 2 2
Sampson (Steele).....4 4 3 3
Dolly Sampson (Clark).....2
Joe Cannon (Lindsay).....5
Time—2:26½, 2:29½, 2:30½.
Trot or pace, free for all, \$1000, two in three.
Zolock 2:05½ hy McKinney (Young).....1 1
Texas Rooker 2:05½ hy Texas Rooker (Rutherford).....2 2
Capt. Derby 2:12½ hy Chas. Derby (Burrows).....3 3
Miss Jerusha 2:22½ hy Zombro (Childs).....4 4
Time—2:10, 2:11.

Trotting, two-year-olds, owned in B. C., \$250, half-mile heats.
Lillooet Stock Farm's h. s. Mack Bush (Cable).....2 1 1
J. V. Millington's h. m. Ramona (Symons).....1 2 2
W. Nicoll's h. s. Grace McKinney (Nicoll).....3 3 3
J. W. Hollingshead's h. m. Lillian King (McKillop).....4 4 4
E. A. Nicoll's h. f. Alice N. McKinney (Mason).....5 5 5
Time—1:29½, 1:26½, 1:23.

Friday, August 19.

Pacing, 2:15 class, \$500.
Olga S., hy Diahlo (Marshall).....2 2 1 1 1
Mahel Hal, hy Major Hal (Rippinger).....1 1 2 2 2

Wilda (Foster).....6 3 8 3 6
Billy S. (Guest).....3 4 4 4 4
Stella A. (Lindsay).....4 7 6 6 5
Subscription (Hodgins).....8 6 7 7 7
Esther B. (Davis).....9 9 w
San Lucas Maid (Johnson).....5 8 w
Time—2:15½, 2:15, 2:10½, 2:18½, 2:19½.
Trotting, stallions in service, \$300, half-mile heats.

Rain-in-the-Face (G. B. Anderson).....2 1 1
Ora Wilkes (J. T. Wilkinson).....1 2 2
Dominion King (W. A. Blackburn).....dis.
Time—1:12, 1:13½, 1:14½.
Pacing, road race, half-mile heats.
Cashmont (W. Moffatt).....2 1 1
Byron Lass (M. Fitzpatrick).....1 3 3
Frank Wilson (Holmes & Morris).....3 2 2
Time—1:10, 1:13, 1:11½.

Trotting against 2:30.
Allamont, hay mare, owned by Lillooet Stock Farm.....2:21½

Saturday, August 20.

Trot or pace, free for all, \$1000.
Texas Rooker (Rutherford).....1 1 3 1
Josephine (McDade).....3 2 1 2
Zolock (Young).....2 3 2 3
Time—2:10½, 2:12½, 2:13, 2:16½.
Trot or pace, 2:30 and 2:35 class, \$1200.
Baron Lovelace (Pendleton).....1 1
Palestine.....2 3
Lightout.....5 2
Stella.....3 4
Dexter Glenn, Baby L. and Litiska also started.
Time—2:19½, 2:21.

Consolation 2:20 trot, won hy Glory O'Neil in straight heats, Dolly McKinney second, Lueta Dwyer third, Allamont fourth, Lou Cresceus fifth. Time—2:27, 2:25.

Sherlock Holmes made an effort to break the track record of 2:10, established by Zolock, but failed. Time hy quarters—31¼, 1:04¼, 1:38, 2:12.

FREE-FOR-ALL CAUSED A RUMPUS.

There was great rivalry at the Vancouver meeting last week between the free-for-all pacers Zolock 2:05½, Texas Rooker 2:05½ and Josephine 2:07½. The race between them on Saturday, the last day of the meeting was won hy Texas Rooker, but Josephine took one heat and had a large following who thought she was not treated fairly in the scoring. The race is thus described by the Daily News-Advertiser, of Vancouver:

The first heat of the free-for-all pace was run with the verdict going to Texas Rooker, belonging to Messrs. J. T. Wilkinson and H. Rolston. This occasioned no discussion, but in the second heat of this event, which was a free-for-all, some trouble arose, for a number of spectators showed their disapproval of the ruling of Mr. J. A. Fullerton, the presiding judge, who fined Guest, the driver of Josephine, \$25 for allowing his horse to get ahead of the pole horse in the run leading to the starting post.

In the third heat Josephine got home an easy first. Texas Rooker, which finished second, being placed third owing to cutting in on Zolock, the only other contestant. A mild demonstration ensued when this judgment was rendered, but matters reached a climax in the fourth and last heat when Texas Rooker scored again. As the horses passed the starting post Mr. Fullerton said "Go," but a large number of the crowd gave way to hissing and other forms of vocal disapproval, maintaining that a start should not have been allowed owing to Josephine being so far behind. The crowd shouted in vain, for the race was awarded to Texas Rooker and Josephine had to be content with second place, Zolock getting third money. Something like an uproar occurred when Mr. Alec Gibson, timekeeper, left his stand, declaring that he would not act after the ruling in the fourth heat. He had many supporters, but, being an official, could not properly make a protest which could be considered by the judges. A new timekeeper was requisitioned in the person of Mr. J. W. Morris. The driver of Josephine registered a protest, stating that in the far stretch his horse was fouled and consequently broke. To this complaint the judges would not listen and Mr. J. McDade, the owner, was wrathful over what he considered to be partial acting. There was some gossip around the timekeeper's box that a petition would be circulated among the horsemen asking that the whole matter be investigated, but whether it will materialize remains to be seen. The first heat was the fastest, Texas Rooker covering the mile in two minutes, 10½ seconds, which is only half a second slower than the record established hy Zolock on Wednesday.

Minerva, the daughter of Guy Wilkes 2:15½, owned by Rush & Haile of Suisun, is one of the great broodmares of this State. She was purchased by this firm from the Corbett Farm in 1898, at which time she had a hay colt at foot by Oro Wilkes that served two mares when a two-year-old and was then gelded. The result of one of these services was Mamie R. 2:15½ as a three-year-old. Minerva is now the dam of Solano Boy 2:07½, of the three-year-old pacer Ben Rush 2:10½ and of the pacer Denervo 2:03½ that is now being campaigned on the Great Western Circuit hy Henry Smith of Pleasanton. A yearling filly, full sister to Denervo was purchased at the Pleasanton sale last March hy Mr. A. W. Longley, of Chicago, and is now on that gentleman's farm near Bishop, Inyo county, Cal. Minerva is out of Rosalee, a great brood mare hy Sultan, next dam Gulnare hy The Moor, next dam the thoroughbred mare Lulu Jackson hy Jack Malone, a son of Lexington.

The heats of Dorothy Ansel's race when she defeated Matawan at Woodland this week, average a little faster than those in the race where the colt heat her at San Jose. Matawan's heats were in 2:24½ and 2:19½, while the filly trotted her winning heats in 2:20 and 2:22½. The average for Matawan is 2:22 and for Dorothy 2:21¼.

Drink Jackson's Napa Soda.

THE FAIR OF FAIRS.

Every State Fair of late years has been better than the one before it, but this year it is proposed to have a show of exhibits and a carnival of attractions that will equal any four or five State Fairs rolled into one.

Much floor space and many stock stalls are already taken.

It will be the best year, and the best place, for the counties, for the producers, the manufacturers and the livestock breeders to exhibit their products that California has ever offered.

New and powerful agencies have enlisted in the work of promotion, and by their assistance it is proposed to make the State Fair of 1910 one of the biggest and most interesting events in the history of the State.

The exhibitors will furnish the show and the educational features better and stronger than ever; the State Fair directors will supply the music, the decorations, the harness races, stock parades, saddle horse exhibitions, etc.; a strong citizens' committee of Sacramento will supply a \$75,000 program of attractions, while the Southern Pacific will help to advertise the event throughout California and all Western States.

The committee has already engaged the Frontier Days aggregation from the Rocky Mountains, the show that brought one hundred thousand people to Cheyenne last year, the show that President Roosevelt traveled from Washington to see, and which Vice-President McCormick, of the Southern Pacific, says is the biggest and best attraction on the continent.

After closing their season at Cheyenne this year the entire combination—managers, cowboys, cowgirls, Sioux Indians, lasso-throwers, bronco busters, race riders, etc.—with their animals and complete paraphernalia, will come in special trains direct to Sacramento, where, after unloading and resting a day or two, they will give a five days' exhibition of every feat known to the frontier, all by the most skilled experts in their line on the earth.

There will be \$5000 offered in prizes for the feats they perform, open to the world, and already there is talk of ropers, vaqueros and others from Eastern Oregon, Nevada, Arizona, and even Old Mexico, to say nothing about our California boys, coming here to compete in some of the wild feats.

The committee has also signed up a contract for a nightly pyrotechnic display hy Paine, of Chicago, admittedly the best fireworks man on earth, and the contract stipulates that he is to give the best display ever witnessed on this coast, not excepting Seattle, Portland or Portola.

Glenn H. Curtiss, one of the world's most daring aviators, will give an airship exhibition each forenoon, and he promises an exhibition such as the people of California never before had an opportunity to witness.

The great Fair will open on September 3d and close on the 10th, and on the 6th, Labor Day, it is proposed to present a program of all kinds of manly sports and skilled feats to be contested by members in good standing, of the different Trades Unions throughout California, and for which liberal prizes will be offered.

To sum up, it is intended to make the Fair and year one at which all will want to exhibit and that all will want to see, so make your reservations for stalls, floor space and hotel accommodations early, and be prepared to show to and mingle with anywhere from twenty to fifty thousand people a day—maybe more.

Respectfully,
J. A. FILCHER, Secretary.

Last week J. O. ("Red") Gerrity, acting for his patron, Mr. Schlesinger, of Milwaukee, Wis., purchased from Lon McDonald the six-year-old stallion The Mariner, hy Bingen 2:06¼. The Mariner has a four-year-old trial of 2:11¼ and is regarded as a very capable trotter. He is a fine individual and elegantly bred, his dam being Roxana (dam of three), hy King Wilkes 2:22¼; second dam hy Belmont 64; third dam the noted matron, Waterwitch, hy Pilot Jr. 12. Mr. Schlesinger will place The Mariner at the head of a new farm which he is establishing. "Red" Gerrity, who will train and manage the farm for Mr. Schlesinger, was previously hought several highly bred fillies, it being the aim to breed colt trotters.

James Gatoomb is certainly having hard luck with his stable this year. Just as he had brought the promising three-year-old colt Gay Audubon, hy Audubon Boy, along to a mile in 2:15 and seemed capable of reeling off one close to 2:10 when his stake engagement at Detroit came due, distemper struck the stable and all the horses except Audubon Boy were smitten hy it. The horses are rounding to and Gay Audubon has been several slow miles, one of them in 2:30, and Gatoomb is still hopeful of bringing him to the post for some of his later futurity engagements. Audubon Boy has been hred to 55 mares.

November 7 to 12 are the dates for the territorial fair at Phoenix, Ariz. There are sixteen purses for trotters and pacers, which should fill as the season in the North will then be over. There are two purses of \$3000 each for 2:19 trotters and 2:12 pacers. Two of \$1500 each for 2:12 trotters and 2:08 pacers. The balance are all \$1000 each and are for the 2:27, 2:23, 2:15, 2:12, 2:09 and free-for-all trotters and the 2:18, 2:15, 2:10, 2:08, 2:05 and free-for-all pacers. There are also two purses of \$1000 each for 2:29 trotters and 2:20 pacers owned in Arizona. The entry list will close September 15. The purses are guaranteed hy the territory of Arizona.

ROD, GUN AND KENNEL

CONDUCTED BY J. X. DeWITT.

WISCONSIN ANGLERS HAVE GOOD SPORT.

The time is approaching when the muskellunge, the king of the waters, will begin to strike again. Next month the good fall fishing begins and many Wisconsin anglers will be enjoying it. John Lemmer was in a reminiscent mood the other day. It will be remembered that "Our President" was in Milwaukee last summer and fall, during which time he put in a battery of boilers in one of the principal breweries of that city.

"Experienced fishermen say the fall is the best time for the sport. While the fishing is good in the early summer it is attended with many discomforts," said John. "The weather is hot and the flies and the mosquitoes make life a burden. Early in the season the water is too high and the spring rains bring down such an abundance of food that the fish turn up their noses at mere bait."

"There is no place in the whole wide world that offers better fishing facilities than the State of Wisconsin. The outside fishermen knew these great advantages and thousands of them from all parts of the United States go there every year."

Wisconsin is noted for the remarkably large number of its small lakes. It has thousands of them, and nearly all are connected by waterways, so one can fish in lake after lake. Where they are not so connected a short portage will bring the fisherman into one chain after another. The surface of Oneida, Iron and Vilas counties is literally dotted with lakes, and there are fish in every one of them. Other excellent fishing grounds are the Eagle river waters, Manitowish, the Turtle waters, the Pine lake region, Minocqua, Shell lake, Long lake, the Waukesha county lakes, the Madison lakes, Burlington, Reed's lake, Brown's lake and Lake Geneva. In Oconto county the lakes are separated, but there are many of them, each a beautiful spot and teeming with fish.

There are a number of private fishing preserves owned by rich men. Henry Clay Pierce of the Standard Oil Company has one in the northwestern part of the State. B. K. Miller, Jr., of Milwaukee has one on the Pine river, near Wild Rose, Wausara county.

William Jennings Bryan has fished in the waters of Wisconsin. Former President Grover Cleveland was about to start on a fishing trip, the objective point of which was the Waukesha county lakes, when he was taken ill. He was to have been the guest of James K. Eckels, the former comptroller of the currency, who has a summer home at Oconomowoc. Emerson Hough, the author, comes to Wisconsin every year to enjoy his fishing. And there are many other men of note who have been charmed by the fishing grounds of this State.

The muskellunge is the gamiest of all fish. It is a savage, sullen, and mysterious creature. It will bite one day and the next day it will not. Why, nobody can tell. It will often be concealed in the weeds and although the bait will be passed close by its nose it will not touch it. Then again, it will make a rush for it, gaining momentum enough to push itself clear out of the water. The uncertainty regarding its movements and the savageness of the fish makes muskellunge angling the sport of sports to the true fisherman.

Imagine yourself trolling, with your bait down about six inches. Suddenly the "musky" makes a rush for it, grabs it and goes up in the air. It is a thrilling sight. If hooked, it throws its head about in an effort to shake off its captor. If it cannot get the hook out of its mouth it will rush for deep water and try to get into the weeds. Your guide, who is well posted regarding its habits, will pull for the open lake. In 99 cases out of 100 the muskellunge is caught near the shore. While your guide rows about in a circle you must try to keep the fish from coming out of the water the second time by bending your rod downward. If it gets out the second time you are likely to lose it.

The muskellunge has great strength and it may smash your tackle. If you hold on and don't give it line, rod or line will break; something has got to go. The novice is likely to lose his tackle. Often he uses the wrong hook. The muskellunge has a large mouth and sharp teeth. If you do not use a long hook with a wire snell it will get the line in its mouth and saw it off.

The best tackle is a tandem made of two Skinner spoon hooks. Take the gang off one and put the spoons together, making the bait about eight inches long. Then it will be unable to get it all in its mouth. After playing the muskellunge until it is tired and you have got it close to the boat if you are not careful it will make a splurge and get away. This is the critical time, and you must be ready to give it line, but not too much, or it will get ahead of it and make a dash and snap the line.

As to the best season for muskellunge fishing you will learn that the season is always the best when you are not on the grounds. When you arrive the guides will tell you, "You ought to have been here two weeks ago; they were biting great then," and, "If you come again in about six weeks they will be biting good again." Generally speaking they bite best at two seasons of the year—early in June, just after

the first hard frost. But nobody going fishing ought to expect to catch muskellunge the way you catch pickerel or bass. If you catch one a day you will be doing well, and if in a trip of about two weeks you get three or four you ought to be satisfied. In mention of three or four, this means the good, big ones, weighing from 15 pounds up. The man who gets two small ones a day has had pretty fair muskellunge fishing.

Some may think the sport is slow, but the fun is proportionate to the difficulties encountered. You often have to play a muskellunge for a whole hour before you succeed in landing him in your boat. With a clothes-line, a great, big hook and an unbreakable pole the sport would be reduced to simple slaughter. If you want real fun you must catch the muskellunge with the ordinary tackle, with the exception of the hook. Take a four or five-ounce lance-wood bamboo or greenheart rod, with ordinary line, and you will have real sport. Then it will not be a question of brute strength, but of skill.

As to bait, each fisherman has his own idea. The spoon and the frog are the favorites. Some like a big minnow. Then there is the artificial bait. Great ingenuity is shown in the manufacture of this article. One variety is known as the "hucktail," in which the feathers are made of deer hair.

The muskellunge is found only in the waters tributary to the Mississippi, there being no record of any in the waters leading to the great lakes.

In the lakes of northern Wisconsin, where the muskellunge is found, are also wall-eyed pike and black bass, both the little and big-mouthed species.

The pickerel referred to here grows to greater size in southern Wisconsin than in Northern Wisconsin. The southern lakes abound in pickerel, and black bass can be caught all over the State. In the southern portion of Wisconsin will be found crappies, blue gills, rock bass, white bass, cisco, perch and so forth.

One of the best fishing grounds within 40 miles of Milwaukee is Lake Koshkonong. Strange to say, while Koshkonong is famous the United States over as the home of the canvas-back duck, it is comparatively unknown, especially in Milwaukee, as a good fishing place. The Blackhawk Club has a fine club-house there, and while few Milwaukee fishermen visit the place many Chicagoans enjoy their outings there.

One of the best fishing places in the State is Madison. The highest black bass caught anywhere in Wisconsin are landed there. One of the drawbacks of this region is that the lakes are large, and unless you know certain banks in the lakes and special holes in the Catfish river connecting the lakes, where the monster black bass are caught you may be disappointed.

For bass the great majority of fishermen prefer frog for bait. It comes much nearer being the natural bait for bass than for muskellunge, for bass fishing is surface fishing. Weedless hooks are now being used extensively and the up-to-date fisherman always provides himself with a supply.

Along the Mississippi is some of the best fishing in Wisconsin. This also is true of the rivers that empty into it, where bass, pickerel and catfish abound.

Old fishermen say the pickerel is one of the most accommodating fishes in that part of the country. No matter how bad the weather may happen to be, the pickerel is usually open-mouthed for business, in fact, if there is one thing he likes better than another, it is a raw, gusty day, the day when the trout and the bass hide themselves and decline to have anything to do with the lures of the great giants who live out of the water. Another excellent point about the pickerel is not only that he will take the bait eagerly, but will take almost anything that is proffered him in an artistic manner. You do not have to go to great expense and labor to carry live minnows for this fish, he won't think a bit better of you for your trouble and you can lure him just as well with a shining spoon with hidden hooks as you can with the fairest of shiners or tiniest of chubs—that is, if you know how.

The man who has never captured a pickerel, but who has been fairly successful in his catching other fishes, may think that it is an easy matter to go out in a pond where the pickerel lives and haul his victim out of the water. It really does look easy, especially when you know that the pickerel is not discriminating in its choice of food, but the hard part comes in learning just how to do the trick. Possibly the best all around lure for the pickerel is manufactured from a five-cent chunk of salt pork, if it comes handier. The real reason the salt pork is used instead of something else, is that it does not spoil quickly, is tough enough to hang on the hook indefinitely and does not give way to the water or frenzied chewing of the fish when hooked. Anything else cut into a similar shape and which would look as attractive to the fish would serve exactly the same purpose; therefore, it must be that the saltiness of the meat does not add any attractions to the fish. It is used merely because it is the most available thing that will suit the purpose.

Drink Jackson's Napa Soda.

TROUT FRY PLANTED.

A promise of much sport for anglers next season is the recent re-stocking of Fresno county and other streams by Deputy Fish Commissioner Andy Ferguson.

A great deal of territory has been covered by him and also by Deputy Ellis, the latter in Kern and Tulare counties. The prediction is made that in another three years and when the transplanted fish shall have had the opportunity to develop and multiply the mountain streams and tributaries in the Sierras in that portion of the State will afford one of the finest fields for the angler sportsman as the result of artificial work carried out by laborious means in mountain packing.

Speaking generally, Ferguson has stocked with native Rainbow trout the headwaters of Crown Valley creek, a tributary of the middle fork of the Kings river, and all streams flowing to the middle fork from the south. The north fork of the Kings and its tributaries have likewise been stocked with fingerlings, more especially Past Corral and Helm creeks.

The work that he is engaged on now is the stocking of the southern tributaries of the San Joaquin. Eastern brook trout have been liberated in the mountain streams of the Dinkey creek or Pine Ridge country, and as heretofore stated Loch Leven trout have been set free in eleven lakes in the Sierras, back of Shaver and Ockenden, with the latter as the packing point. The character of the work may be appreciated from the fact that the small fish must be packed in cans on the backs of burros and conveyed into the mountains over the most inaccessible trails, while keeping ever a watchful eye that the temperature of the water in the cans shall not fall below a certain degree.

Deputy Ellis, working in Kern and Tulare, is finishing up a task which will contribute to the fish stocking of the Kings river in Fresno county, and has overcome natural obstacles which have always stood out against the fish stocking work in the Sierras. He has stocked with golden trout taken from Whitney creek or Volcano creek in Kern county, as it is better known, all the streams flowing into the big Kern from the East.

The special piece of work for which he has been complimented was his success in carrying a full pack of golden trout across the Kern-Kaweah divide to stock the headwaters of the middle fork of the Kaweah, also conveying across the Kaweah-Kings divide fish for stocking the headwaters of Cloudy river, and the west fork of the Roaring river, a tributary of the south fork of the Kings.

The last two mountaineering expeditions are considered remarkable in their way, because of the difficulties of the feat, the rough and untraveled route and the roundabout journey made to reach the objective point. The baby fish were on pack trains for six days, traveling only six to eight hours per day for the preservation of the fish. The success of this expedition may be further appreciated when it is considered that only two fish in the packs were found dead at the end of the journey.

Warden Ferguson is authority for the statement that in about three years golden trout will be plentiful in the Cloudy river and incidentally in the Kings to stock thereafter with fish taken out by netting the water in a territory for 100 miles around the stocked streams.

SAN FRANCISCO FLY-CASTING CLUB.

Saturday Contest No. 8. Class series, Stow Lake, August 20, 1910. Wind, southwest. Weather, fair. Judges, G. E. Edwards, E. A. Mocker, T. C. Kierulff. Clerk, E. O. Ritter.

Re-entry—C. H. Kewell

NOTE: Event 1—Distance casting, feet. Event 2—Accuracy casting, percentage. Event 3—Delicacy casting; a, accuracy percentage; b, delicacy percentage; c, net percentage. Event 4—Lure casting. Event 5—Long distance lure casting, average. Fractions in Event 2, fifteenths; in Event 3, sixtieths; in lure casting, tenths.

English Angling Tourney.—Perhaps the most unique sporting event in the world is the All-England angling championship which will be held this year on September 26. It will be fished on the Derwent river at Malton. The competitive anglers take their places at a given hour. At a pistol shot from the referee they cast lines.

For three hours they use every wild known to the fishermen to attract members of the finny family. At the expiration of the three hours the fish are counted and the man having the best catch gets a silver cup. Men travel from all parts of the island to take part in this competition and some spend a great deal of money on tackle, in preparation for it.

which the obvious remedy should be applied. It can certainly be affirmed in justification that there are many guns in regular use with a state of rust underneath the ribs, such as could hardly be produced on the exterior surface by a month's exposure in a salt atmosphere. No sportsman would dream of using a gun with the surface of the barrels in the state which frequently, but unknowingly, exists beneath the ribs, and it is only when a burst occurs that the true state of affairs is revealed. Judging by the small number of instances in which evidence exists that corrosion is the direct cause of an accident, a bad state of rust is not necessarily a very dangerous thing. It is, however, bad policy to accept a wrong principle on the grounds that it does not make much difference in practice. In the interests of sound workmanship the barrels should be sweated with a resin flux, and the sooner the rule becomes firmly established as an accepted principle in gun-making the better it will be for all parties concerned. The gun under consideration had passed the nitro proof test, but, as with all trials of this character, it is impossible to say by how much margin the proof test was passed whether that marking was actually diminished by the test, and finally whether the general soundness of workmanship was sufficient to ensure a reasonable degree of permanence for strength shown to exist at the time of proof. This apparent reflection on the efficiency of the nitro proof test must be qualified by mentioning the fact that the high stress it produces is mainly exercised in the chamber as a check on the strength of the breech. The provisional proof test is the one which aims at a high pressure forward, and it may well happen that the weakness present in a finished barrel by reason of a streak of bad metal may be hidden by the good quality of the ample material surrounding it. Subsequent manufacture once in many chances removes the good material and leaves the bad.

DOINGS IN DOGDOM.

The Pacific Advisory Committee of the American Kennel Club has served notice of disqualification upon the officials and judges of the Marin Kennel Association, which recently held a successful bench show at Larkspur under the rules of the National Dog Breeders' Association, which show was held "under rules antagonistic to the American Kennel Club."

Twenty-two of the leading "insurgents," whose names appeared as the "Honorary Promotion Committee" of the Larkspur show, have not been served with notice of disqualification, apparently the challenge has not been accepted by the P. A. C. The appointment of that committee was intended to invite the application of A. K. C. rules.

Suit for damages was instituted this week in the U. S. Circuit Court against the American Kennel Club and the Pacific Advisory Committee by W. E. Chute, one of the Larkspur judges.

The question involved is one that will probably be settled in a manner that will be effective in stopping the bluffing and bulldozing career of the A. K. C. on the Coast if not in every State of the union, with the possible exception of New York.

The dates for the San Jose Kennel Club show, under National rules, are October 5, 6, 7 and 8.

The sixth annual open-air one-day show of the San Mateo Kennel Club is announced for Saturday, September 10th, at the grounds of the Peninsular Hotel, San Mateo. Entries will close September 3d. Premium lists have been issued in which the judges announced are: John D. Collins of Brooklyn, N. Y.; W. B. Fechheimer of Portland, Frank Hall of San Francisco, Mrs. C. J. Lindgren of Burlingame and George W. Clayton of Chicago. J. Bradshaw has been appointed superintendent of the show.

This show will be held under American Kennel Club rules. The list of trophies, cups and cash prizes numbers about 120—every breed being represented. Among the announced donors of trophies are Mrs. J. H. Neustadter, Alex. Wolfen, Alfred Rosenstirn, L. W. Neustadter, Mrs. Leon Roos, Mrs. L. Ehrman, Mrs. Irving C. Ackerman, Tallac Kennels, Mrs. J. P. Norman, Mrs. H. Fleishacker, Leon S. Greenebaum, N. H. Neustadter, Dr. M. Hertzstein, The Chutes, W. W. Stettheimer, Charles Brandenstein, Manheim, Dibbern & Co., The Emporium, Mrs. C. R. Walter, Irving C. Ackerman, Mrs. C. G. Saxe, J. Love Cunningham and others.

The premium list is a work of art in its line and worthy of close inspection.

Among other liberal things we note the offer of a cash prize of \$25 for "best kennel of 4 greyhounds—two or more kennels competing. This is exceedingly rich. Greyhounds! What's the matter with setters, pointers, cockers, etc?"

Another spellbinder—\$10 for best team of 4 Esquimaux!

Here's one more—\$20 for best kennel of 4 Irish water spaniels, two or more kennels competing. The same cash prize for Dachshunde's, same conditions. My goodness, boys, don't break the bank!

The cash prizes offered in the fox terrier classes are all fitted with Oregon boots, too.

The demise of David C. Brown last week will be noted with a sincere regret by many fanciers. Dave Brown has been a familiar and esteemed exhibitor and handler at most of the local and California shows for a decade past. He was a good sportsman, a man of pleasing personality and of gentle and kind disposition that won him many friends. His fancy ran to Cocker and for the past three years he had

charge of Wm. Blackwell's cocker kennels. In the discharge of his duties he was as carefully and painstaking as he was in all other matters that brought him in contact with fanciers.

Sportsmen who fancy upland shooting will deplore the recent death of two famous pointers, dogs that were bred in the purple and were not only high-class workers in the field, but were potent sires in producing a progeny that is highly esteemed by devotees of the shotgun.

Clarence A. Haight's Glen Du Pont, a grandson of the phenomenal Champion Glenbeigh, succumbed to the demands of old age last week.

J. Winton Gibbs' Ch. Mike Geary, a well known prize winner and favorite at recent bench shows, was mustered in with the canine majority a few days ago through the agency of "black tongue."

A SICK OLD ROOSTER.

The half-tone on this page is a copy of a pencil sketch drawn by Dick Reed and sent to W. H. Price a few days ago.

Dick, who is known to and esteemed by hundreds of Coast sportsmen has been ill for the past three months, but is now, we are pleased to state, on the road to rapid recovery.

Few there are, who after undergoing two opera-

tions and all that this implies in the way of attendant illness, would have the gameness to offer so clever a jest upon the inevitable hand reaching from the shadowy valley. An indomitable spirit and the gentle care of a loving wife have, however, prevailed over adverse physical conditions and it is the sincere wish of his many friends that Dick Reed may be in good health and among us again in the near future.

GOSSIP FOR SPORTSMEN.

That a deer hunter should be extremely careful in these days of high power and long range rifles is exemplified in the tragic death of James McGuire recently, who was mistaken for a deer and killed by Joseph Pechart. A hunting party composed of six Chico sportsmen were after bucks near Centerville, working along a hillside. Pechart scared up two bucks, which disappeared in the thick brush before he could "draw a bead." Running to a point where he expected to see the deer emerge he noticed "something" moving in the cover 150 yards distant. He could not see the object clearly, but it was gray in color and looked like a deer walking away from him. He fired and killed his friend.

If this hunting party had used dogs to jump the bucks the tragedy would have been averted. It is a bad practice at all times for a hunter to shoot at a moving object without first being absolutely certain of its identity. A hunter may and often does miss a buck at short range, but somehow or other, by a strange fatality, the human target is never missed, whatever distance be the range.

Fat bucks appear to be more numerous in many hunting districts than for years past. Sportsmen who have recently returned from deer-hunting trips report frequently seeing bucks, does and fawns in small bands. The bucks were inclined, earlier during the season, to remain in cover until their horns were hardened and the "velvet" had worn off. Being now in better condition to take care of themselves, either against a rival buck or in breaking through heavy cover, they have become bolder.

During the just past full moon the deer hunter had his work cut out for him. The animals feed in the moonlight hours and sleep in the early morning and forenoon. A hunter knowing his ground could "jump" a resting buck from his grassy lodging place and probably get an effective shot. Aside from this, without the aid of dogs, the morning chances were rather slim.

Notwithstanding the fact that bucks are plentiful and big enough for all purposes, reports are current from many hunting centers that does and fawns are being wantonly killed. It is a sorry hunter, indeed, who cannot accomplish something better than bagging a doe or fawn. These latter are tame as sheep in some districts and fall an easy prey to the lazy or unscrupulous huntsman or the meat hunter, who is hogishly ambitious of returning with a supply of "jerky." The flesh of does and fawns cannot be told from that of bucks—there being no evidence of sex or age in dried venison.

W. J. Webster, W. G. Simonton and Nute Nielsen of the Du Pont Powder Company, two weeks ago journeyed by auto from Cloverdale to a point sixteen miles north of Yorkville and enjoyed a successful deer hunt. Webster's buck was the largest bagged; it dressed 118 pounds. The same party, with the addition of C. A. Patterson and Fred W. Munday, left last week for another hunt in the same direction.

George A. Fox and four friends also made an auto trip to nearby hunting country, leaving here on a Sunday and returning on Tuesday forenoon. The combined bag counted nine fine bucks. The district hunted is not an open one, being a ranch holding of several thousand acres. That deer are plentiful there is instanced in the fact that the party counted 27 bucks, does and fawns one afternoon.

Last month Fox, Henry Reis, Geo. Davis, James Taylor and family, C. H. Shepard and other sportsmen, eighteen all told, were in camp on the upper McCloud, a region abounding in deer, bear and California lions and where the main river and tributary creeks were teeming with trout.

One thing noticeable in that country was the havoc made by California lions on deer. A number of partially eaten deer carcasses were found, in one instance a big cat and her two kittens were seen at a kill. Efforts to shoot the cougars, however, were unsuccessful. Several of the party laid in wait at night for the animals, but were driven back to camp by the severely cold temperature of that altitude. Returning to the spot next day the bare deer bones showed that they had been outwitted by the hungry felines.

Dr. J. Auburn Wiborn and Mrs. Wiborn are spending a month in the Klamath lake region. Floyd Judah and Otto Feudner, with Dr. Wiborn, will hunt for big game in Southwestern Oregon.

The expected run of quinnat salmon is now on, and salt-water anglers are jubilant over promised sport in the trolling launches outside the Heads and in the bay waters off Sausalito, in Raccoon straits and off the Marin shores.

A few stragglers were hooked over two weeks ago, but not until last week was there any particular assurance that the fish were hovering in the ocean outside. Various anglers have prospected almost daily in the outside fishing grounds, and on Wednesday something like definite results were developed when six fish were caught. Three launches were outside manned by Al Wilson, Doc Matson and Doc Wilson. Most of these fish were taken off Tennessee Cove. The largest salmon caught by Doc Wilson, weighed fifty-two pounds.

On Thursday more salmon were caught, one monster fish scaled over sixty pounds. Quite a number of launches were out, among others James Eisenchmel hooked a salmon weighing forty-two pounds. Experienced salmon anglers claim that the big run of large fish occurs every four years, and that the fish should on this present run be both numerous and of weight.

This theory has the flavor of merit in the fact that the appearance of the fish for the past four years has not been signaled by either numbers or size—that is, so far as the experience of the anglers goes.

Last Sunday about 15 salmon were caught, there being a flotilla of perhaps 20 boats outside. Among the fish taken were two large sized steelheads caught off the shore near the Throckmorton lagoon.

Last Wednesday the trolling launches evidently got into the thick of the run. Al Wilson's boat accounted for 20 fish, Doc Wilson's party landed 15 and Doc Matson also counted a good catch.

The killing lure has been a beaded "Siwash" spoon, brass or silver, fitted with a large-sized-eyed Carlisle hook, upon which a sardine or anchovy is placed, thus making a tempting "spinning" bait. Other rigs are a cuttyhunk leader to which is attached a swiveled salmon hook and "torpedo" sinker. Stewart and Wilson brass or silver spoons are also in vogue with the salmon hunters.

Striped bass anglers who have visited San Antonio and Wingo resorts recently have caught plenty of bass. Most of these fishes, however, are still in the baby class. Charles Daiss caught, among others, an eight-pound fish in Wingo slough last Sunday. Harvey Harmon also connected with an eight-pounder. G. F. Dorris, Geo. Palmer, E. Maltsbury and others were lucky in numbers but short on legal-weight fish.

Billy Hillegass, Frank Marcus, Professor McFarland, Will Kittle and a score of other bass anglers at San Antonio slough caught most of their fish on trolling spoons a week ago. But during the present week excellent bait fishing has prevailed.

THE LIFE STORY OF UHLAN.

[Volunteer in Chicago Horse Review]

Uhlán 1:58½ has now been before the public for three seasons and the main details of his career are well known to horsemen. Now that he has made himself immortal by beating two minutes in the open for the first time in trotting history, it will be of interest to have the collected details of his career presented.

* * *

Uhlán is a black gelding standing exactly fifteen and one-half hands high at the withers, without shoes, and about 15.1½ at the coupling—he being of a conformation, in this respect the opposite of Hamburg Belle 2:01¼, Maud S. 2:08¾, Sunol 2:08¼ and many other record-breakers of the past, who were taller behind than in front. Uhlán does not exhibit the so-called "trotting pitch"; but his greater height forward is due rather to the fact that his withers in themselves are high than any lack of balance in his conformation as a whole. He is a long horse on short legs—in which his proportions resemble those of Lou Dillon 1:58½, Alix 2:03¾ and other champions that might be named, which are longer, from point of shoulder to the swell of the hind-quarter, than they were tall. In appearance he is one of the most elegant and bloodlike trotters of extreme speed yet seen. His head is neither large nor small, is finely modeled, of clean outline and extremely expressive and intelligent, forehead broad, the eye of rare beauty and the ear well shaped, of moderate size and nicely set and carried. His neck is splendid—long and beautifully moulded, very clean at the throatle and sinking into shoulders that are superb, they being perfectly laid and sloping far back. At this point his superiority to the average trotter is noticeable, his depth through the heart being one of his most salient characteristics. His barrel is, as aforesaid, long, and he stands over a lot of ground. At the coupling, while he is not at all rough or ragged there is a slight depression just before the point of junction, which is, relatively speaking, far back, and leaves his crupper short and with a quite decided slope. His tail, nevertheless, is one of his chief beauties, being long and full and habitually carried high and banner-like. His limbs, in their formation, are beyond criticism. They are neither deer-like nor heavy-boned, but proportioned harmoniously to his general anatomy. His hind leg is not so straight as that of many modern trotters, and in structure is about midway between them and the old-fashioned ones whose hock-joints had such a noticeable angle. He is well let down, the sweep from point of hip to point of hock being unusually long, and his cannon bones are, relatively, short; in which respect he is again a departure from the latest type of trotter. His hind quarter is long rather than round and his stifle, gaskin and second thigh are striking in their length, while, viewed from behind they reveal great muscular power. His breast is broad and deep and very powerful, but his forearm in harmony with his hind leg, is long and lean rather than round and swelling. His knees and hocks are finely chiseled and below them the tendons stand out in clear relief. As a colt Uhlán was afflicted with splints, but today no trace of them remains except under veterinary examination, there being to the eye no hlemish upon his underpinning. His pasterns adhere to the general conformation of his limbs above them, being neither short nor long, and slope at an angle indicative at once of strength and elasticity. His feet are of medium size and the best quality and shape.

In harness Uhlán appears like a horse considerably taller than he really is, owing to the gallant air and high carriage with which he bears himself. His color is not a raven black, but has considerable warm brown pigment in it, and the small fleck of white in his forehead and his two white pasterns behind and white left front coronet are his only marks. His action, when he first came before the public, has suffered much change since he was placed in the hands of Charles Tanner last fall. He then had very long toes and low heels and carried a 10-ounce shoe, with a grab, a 3-ounce weight and a heavy quarter boot. He now has a comparatively short toe, his shoe weighs but 6¾ ounces (with the pad between it and the foot, 8 ounces) and he carries one of the smallest and lightest racing heel-boots, together with a two-ounce weight. Last year his gait forward was so high that he required elbow boots, while, when extended, there could at times be noticed in his stride a slight tendency to "dwell." These things have been eliminated. He is now a low, rather than a high going trotter, with great rapidity of motion, and, when moving at top speed is, without question, the smoothest and easiest going one of extreme speed ever seen, it being difficult, without a watch in the observer's hand, to estimate the rate at which he is moving. He has absolutely no tendency to break and he never wavers, shuffles or changes his stride from wire to wire, even when under the highest pressure. Possessing intelligence of the highest equine order, he is remarkably manageable, and while he has a will of his own, he is perhaps the most perfectly controllable champion that has yet broken the trotting record. His weight, a few days before he trotted in 1:58¾, was 965 pounds. Last winter, when high in flesh, he weighed 1065. Tanner, when last weighed before the mile, tipped the beam at 181 pounds—31 over "weight."

* * *

Uhlán was bred by Arthur H. Parker, of Bedford, Mass., and is now six years of age, having been foaled in the spring of 1904—the same spring that Mr. Parker paid \$3200 at auction for his sire at the dispersal sale of the stud of the late J. Malcolm

Forbes, of Boston, whose property Bingen was at the time Uhlán was got.

His sire, Bingen 2:06¼, is of world-wide fame as one of the most extraordinary sires of early and extreme trotting speed ever known—and by many breeders is considered the greatest of all. He is, beside Uhlán, the sire of Admiral Dewey 2:04¾, The Leading Lady (3) 2:07, J. Malcolm Forbes (3) 2:09½, Codero (4) 2:09¾, Totara 2:09¾—six 2:10 trotters—and a total of 70 standard performers, of which 57 are trotters and 13 pacers. Among his get are numerous sensational colt trotters and futurity winners. He is an Electioneer in the male line, his sire, May King 2:21¼, having been a son of the "monarch of Palo Alto" and the famous old-time race mare May Queen 2:20, in her day the heroine of many a hard fought race on the Grand Circuit and elsewhere. Bingen's dam, Young Miss, is also the dam of two other 2:30 trotters, two producing sons, and two producing daughters, and is by Young Jim, one of the best sons of George Wilkes 2:22. Young Jim is noted as the first horse to sire three trotters with race records below 2:10—Trevillian 2:08¾, David B. 2:09¾ and Dandy Jim 2:09¾. The gandum of Bingen is by Red Wilkes, another of the greater sons of George Wilkes, and his third dam by Alric, son of Almont 33. Bingen is thus an Electioneer-Wilkes horse, with a supporting cross of the blood of Alexander's Abdallah 15 and combines the blood of the three foremost sons of Rysdyk's Hambletonian. Bingen was foaled in 1893 and was ten years of age when he begot Uhlán.

Blonde, the dam of Uhlán, was foaled in 1891 and was thirteen when she produced him. She was first bred when ten years of age and had previously seen protracted service as a road mare, in which field of usefulness she had shown speed, gameness and stamina of a high order. Uhlán was her second foal and is thus far the only one with a public record. Her first foal, however, Lexington, own brother of Uhlán, has an amateur matinee record, to wagon, of 2:15. Her foal of 1905, Blackwood, by Alliewood 2:09½, trotted a three-year-old trial of 2:24, while her foal of 1907, own sister of Uhlán, now three, recently trotted a trial of 2:21 and a half in 1:06. Indian Hill, brother of Uhlán, foaled in 1906, as a three-year-old also showed trials below 2:30. Blonde is now the property of Ardmaer Farm, Raritan, N. J., where his sire is also owned and she will probably in the future be bred to no other horse so long as both she and Bingen shall live.

Sir Walter Jr. 2:18¾, sire of Blonde, was a game and fast race horse, who took his record to high wheels in his five-year-old form, while as an individual he was a horse of rare merit. With indifferent stud opportunities he is the sire of Alcidalia 2:10¼ (a grand race mare), Glory 2:11½, etc., etc. He was by Sir Walter 2:24¼ and out of Kate Clark, by the great brood mare sire American Clay 34, while Sir Walter was by Aberdeen 27, the renowned son of Rysdyk's Hambletonian and old Willow Machree 2:29, by Seeley's American Star, and out of Lady Winfield, by Edward Everett, another celebrated son of Hambletonian; grandam by the old-time progenitor Long Island Black Hawk.

The dam of Blonde, Brunette, brings into the pedigree an unusual element. Her sire was known as Black Eagle. A saddle horse, son of King William and a mare called Kitty Richards—blood otherwise unheard of in trotting genealogies. But Brunette was herself a good trotter, with a half-mile track record of 2:30¼ to high wheels. She was raced extensively over the New England minor tracks in the days when it was an object to keep the record of a campaigner as slow as possible and is known to have trotted many miles much better than 2:30. Brunette's dam, and the third dam of Uhlán, was Flora Temple, by Rattler 501, grandson of the greatest of Morgan sires Vermont Black Hawk 5. Rattler has numerous performing descendants, particularly notable among them being Margin 2:05¾, whose fourth dam was by him, and Baroness Virginia (3) 2:08¾, the third dam of whose sire, Baron Review, was also by him. Whip, the putative sire of Uhlán's fourth dam, is supposed to have been a descendant of the old-time thoroughbred horse Whip, whose blood has filtered, through various sources, chiefly remote, into many trotting pedigrees of celebrity.

Uhlán remained the property of his breeder until in August of his three-year-old form, when he was purchased from him by Charles Sanders, of Salem, Mass., for \$2500. He had at that time trotted a mile to cart in 2:16½ and a half in 1:06¼, driven by Edward McGrath, who broke him and drove him in 2:28 when a two-year-old. Shortly after his purchase Mr. Sanders started Uhlán at one of the Boston matinees, against aged horses, and he won his race, trotting to wagon in 2:13¾, driven by his owner, an amateur; the fastest performance of the kind ever made by a three-year-old. His public debut was made the next season in the \$50,000 American Derby mandicap, at Readville, in which, although a green four-year-old, he was placed upon the 2:10 mark, as it was known that he had worked a mile in 2:08¾, the last quarter in :29¾. In this race, however, he was left at the post in the confusion of starting the large field. His first essay in a regular event was made soon after and was successful—since when his performances, of which a table will be found in the Review, are familiar to all, the only defeat which he has sustained having been at the hands of Hamburg Belle and was due largely to an accident, as he proved by easily beating the mare the next week. In September last Uhlán was purchased by C. K. G. Billings for \$35,000 and transferred from the hands of his trainer, Robert Proctor, whose work with him deserves and has received the highest praise, to those of Charles Tanner,

who has made him the world's champion. After this change Uhlán was kept at Cleveland until in January last, when he was shipped to Brunswick, Ga. After remaining there about six weeks he was taken to Memphis and trained over the "world's record track" there until the second week in May, when he was shipped to North Randall, O., and his preparation finished over the track which he trotted last Friday in 1:58¾. His only appearance this year, prior to last week, was at Randall, July 10, when Mr. Billings drove him a mile to wagon in 2:02¾, the first time

TROTTERS AS THEY ARE AND WERE.

When harness racing was in its infancy trotters were literally "made" by taking a likely horse and drilling him year after year until he had been taught to go fast at what was in great measure an artificial gait, says an exchange. Most of the fast ones were without any trotting inheritance worth talking about, and many of them were twelve or fifteen years old before they had reached the limit of their speed by slow stages of improvement. Dutchman, one of the earliest fast trotters and the first one to beat 2:35 in harness, was foaled on 1828, trotted his first race in 1838 and was still the best trotter in sight in 1843. Lady Suffolk, the first trotter to beat 2:30, was foaled in 1838 and was twelve years old when she set the harness record at 2:29½. Flora Temple, the first trotter to beat 2:20, was seven years old before she started in public and was fourteen when she trotted in 2:19¾.

The typical trotter of to-day is to the manner born. His ancestors for four or five generations were trotters before him, and he exemplified the force of the laws of heredity by developing extreme speed at the trot about as early and as readily as the thoroughbred runner.

All horsemen who follow the performances of the trotters are familiar with the history of The Harvester 2:02, now the champion of the free-for-all class. Foaled in 1905, he was practically unbroken and wholly untrained when he went into the hands of Ed Geers in the spring of 1908. In September of that year he started in his first race, trotted in 2:10¼, and within a month won four races without losing a heat, winding up the campaign with a record of 2:08¾.

The sensational two-year-old Native Belle is another notable example of the trotter that goes fast by right of inheritance. She went into the stable of Thomas W. Murphy untrained and almost unbroken in January of last year, and in October she set the world's record for trotters of her age at 2:07¾ in a winning race at Lexington. Scores of other instances might be cited in evidence of the fact that very many well-bred colts and fillies of the present day come to their speed without any of the old-time drilling which characterized all training operations in Hiram Woodruff's day.

Some of the twentieth century trotters can go about as fast in their three-year-old form as ever they can and are about as well matured as thoroughbred runners of that age. While the practice of training and racing them as two-year-olds and three-year-olds is bound to have the same effect in many cases that it has had in cutting short the careers of the most promising runners, it still has many advantages from the viewpoint of the breeder, owner and trainer, and all signs point to a vast increase in the percentage of colt races in the next few years.

The cutting down of the best time on record for three-year-olds fairly reflects the progress in early maturity and inherited natural speed which has marked the evolution of the twentieth century trotting horse and which forms an interesting chapter in the history of the breed.

Mr. H. Murray, of Riverside, California, is the possessor of a three-months-old colt that he is very proud of. The youngster is by Worth While 40448, son of Allerton, and its dam is Romeria, the dam of Kid Wilkes 2:09¼. It is colored and marked almost exactly like the Kid, though a larger and nicer looking colt than the Stanton Wilkes gelding was at the same age. Mr. Murray also has a full sister, two years old, which is very handsome and racily built. Romeria is still strong and hearty and looks like a six-year-old. She has been mated with Cedric Mac, son of Nearest 2:22, this year and is safely in foal. The produce will be about as closely related to Kid Wilkes as one can get since Stanton Wilkes, his sire, is dead. A daughter of Romeria that is worth mentioning is a bay four-year-old sired by a son of Neer-nut 2:12¼ that shows speed.

To increase the supply of British horses suitable for army use the Hunter's Improvement Society recommends that horses for the army should be purchased at three years old, at the same average price as now given for older horses, that horses should be purchased as far as possible direct from the breeder, that high-class fillies should be purchased for the army at two or three years old and served at that age by a thoroughbred sire, and that mares good enough to breed from should be cast from the army at twelve years old, or preferably sooner, and he distributed to breeders.

The horse show committee of the Texas State Fair will endeavor to make the first horse show given in the Coliseum a credit to Dallas by awarding a special \$1000 purse for the best four-in-hand park team to be shown in drag, coach or brake, horses to count 75 per cent, appointments 25 per cent. The money is to be divided into four premiums of \$400, \$300, \$200 and \$100.

THE FARM

STRONG BEEF DEMAND IN SIGHT

During the last two years there has been a very decided increase in the value of meats in the market centers and in the local butcher shops. Within the last ten months this increase has been phenomenal. Incident to this remarkable appreciation in values of food products a wave of protest swept over the country that in some sections became a perfect hysteria, resulting in the ill-advised and futile "meat boycott." As a result of this popular ontry against high prices of food products investigations were inaugurated by many mayors of cities, judges of courts, and by State and national authority. In the public discussion of this question the "beef trust," the "farmer trust," the tariff and the over-production of gold were given as the causes of these high prices. The chief cause, however, was generally overlooked, viz.: The continued high price of grain and the consequent scarcity of fat stock. The number of cattle in the United States has been steadily decreasing for several years, and to those in a position to know this fact, the shortage in cattle is appreciable. According to the report of James Wilson, Secretary of Agriculture, we had 2,186,000 fewer cattle January 1, 1909, than we had January 1, 1907, while our population has rapidly increased. In 1840 the proportion of cattle to population in the United States was such that we had .88 of an animal to each person, .81 in 1860, .79 in 1880 and .69 in 1900. At present it is quite probable that this ratio has fallen to .50 to each inhabitant, owing to the rapid decrease in our cattle caused very largely by the breaking up of the large cattle ranches of the West. If this ratio of decrease should continue for a few decades the United States may cease to be a beef exporting nation. The earliest obtainable data of our exports of beef products are for the five years, from 1851 to 1855, during which we exported an average of 32,000,000 lbs. annually. This export trade increased rapidly and reached its climax in 1906, when we sent abroad 733,000,000 lbs. Since then there has been a rapid decline in this trade, our total exports in 1909 being only 419,000,004 lbs., a loss of at least 40 per cent from the total of 1906. A corresponding decrease was shown also in other meat products than beef.

This constant decrease of cattle and rapid increase of population certainly presages a continued strong demand for beef at remunerative prices, and assuredly affords a bright outlook for men who are breeding good cattle.—R. G. Groves.

The boar of eight months or older will do better if kept by himself; at least, he should not be where sows or gilts may arouse him. He should be kept in a comfortable pen, with a lot or pasture adjoining, and supplied with a variety of nutritious food, which means something more than dry corn with an occasional drink of diluted dishwater. The permanent quarters should be provided with a view to furnish sunlight, exercise, dry warmth and cleanliness. These should be so located that the sows may be conveniently brought to him for service. A large pen is not needed—ten feet square will do—but a yard and pasture should each be adjacent. The yard will be needed for service and for his exercise in the breeding season, and the pasture, which may be an acre, or less, should afford him water, shade, grass, alfalfa, or other succulent food.—From C. Burn's Swine in America.

TO MAKE A COW GO DRY.

Two months prior to the time when the cow is due to freshen efforts to make her go dry should begin. Her ration should be gradually decreased and a portion of her milk left in the udder at each milking time.

By the next week if the feed has been sufficiently reduced it should not be necessary to milk her oftener than once a day, and by the latter part of the week to relieve the udder occasionally should be sufficient. Persistent milkers should be watched closely and milked often enough to prevent the udder being injured. If in response to this treatment the cow continues in milk, eliminate all succulent feeds from her ration and place her in a dry lot for two or three days on a ration of hay and corn stover. A cow will soon cease to give milk on such a ration.

As soon as dry, systematic feeding should begin with three purposes in view: First, to nourish and complete the development of the fetus; second, to rest the cow's digestive apparatus which has been the portion of her body most greatly taxed by her year's work; third, to build stamina and vigor, flesh and strength to be drawn upon later to encourage a large and persistent flow of rich milk during the coming year. The average butter production of the cows in the United States can be increased at least 25 per cent by proper care and management through the six weeks preceding freshening, during parturition and for thirty days following.

OUR GROWING DAIRY INDUSTRY.

With a total of nearly 22,000,000 milk cows in the United States whose annual product is worth 25 per cent more than their value, the dairy industry is surely looking up in this country. And why should it not? Dairying is one of the most profitable phases of agriculture and it can never be overdone.

Dairying has made wonderful progress since the advent of the modern creamery and the consumer has not only been benefited by having a better, more uniform and more wholesome product but the producer has profited as well. The farm wife has been relieved of the drudgery incident to the care of milk and cream and the manufacture of butter. In the multitude of her other cares this was a serious burden from which she is now relieved by the fact that every railroad station furnishes a market for the cream at better prices than was realized under the old method while the farmer has the milk, warm, sweet and fresh for his pigs and calves. With this change in method and the consequent improvement in quality has come a larger consumption and a greater demand for good dairy products. Men will eat that which they like and the product of the modern creamery has quality, flavor and uniformity which could never have been secured in country butter made under such varying conditions and by so many different hands.

The perpetuity of the greatness of our country rests with the farmers to a much larger degree than with any other class and the question of profitable returns spells the solution of the problem of the perpetuity of the farming class. No nation ever made history which did not possess thriving and progressive farmers and these are possible only through profitable methods.

Among the means to such an end the dairy cow ranks first, as she not only manufactures the most concentrated and valuable of farm products from cheap, raw materials but she stands as the very foundation of soil improvements, and that system of farming which fosters soil

The Most Perfect Colt Bit Made

EVERY COLT

Should wear the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE** from the very beginning of its training, as it is the easiest, most comfortable and most humane bit on the market. With its use the colt will not fret, worry, pull, toss its head and get into the bad habits so often caused by the use of other bits and checking devices that inflict punishment or keep it under too much restraint, and at the same time you will have absolute control over it at all times.

Patented Aug. 11, 1896. Patent No. 565,681

BEWARE of worthless imitations and Checking Devices claimed to be as good as the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE**. Illustrations of some of these check bits and devices are made to look as near like the genuine as possible, but the article itself is very different, and will not give the same results.

ALL GENUINE are stamped **G. S. ELLIS & SON** on the supporting strap and back part of Check Rein. Any that are not so stamped are not genuine.

FREE—Our new Catalogue No. 45, with wholesale discount sheet, the largest, finest and most complete Horse Goods Catalogue ever published, is ready for distribution. It contains illustrations, descriptions, and guaranteed to be lowest prices on Harness, Horse Boots, Horse Clothing and Tack Goods of every description. Every horseman should have a copy. You can save many a dollar during the season by buying direct from us, as we are now selling direct to horsemen, allowing them from 30 to 50 per cent discount from retail prices. Write us today for a copy and we will take pleasure in sending it to you all charges paid.

improvement first is that which insures farm prosperity which is national prosperity.

A large reclamation project is being launched in Louisiana, backed by California capital. The undertaking will involve the drainage and levee protection of 300,000 acres of swamp land in Vermillion and Cameron parishes. The overflowed portion of Louisiana seems destined to become a noted agricultural district, as plans now on foot will involve the drainage of enormous areas and will bring to notice a region that suggests Holland, with the exception that the soil in the reclaimed area is much richer than any to be found under or near the Zuyder Zee. It is estimated that about 2,000,000 acres of swamp land lie in the delta of the Mississippi and there are about 2,000,000 acres along the river above the delta. West of the delta there are several million acres along the coast. These swamps lie at or near sea level. The land is so level that the water falling on it must either sink into the soil or evaporate.

Some experiments have been made in Sydney, Australia, of late with a dry-air process of preserving meat, which seems to promise auspicious results. Some of this meat after being treated by the new process has been hung up in bags, and then after about 15 days opened in the presence of veterinary surgeons and commercial men and found quite fresh. The inventor of this dry-air process claims that for \$100 a station owner can put up the necessary plant and treat sheep at a cost of one cent per carcass, and after being treated by this new process the meat may be hung in any ordinary place and atmosphere and kept good for a week. The period of treatment is about 14 hours.

An Illinois road expert says that all roads, except those on pure sand, can be materially improved by tile drainage. This opinion seems to be concurred in by many Illinois farmers in localities where such tiling has been done; and it is the universal opinion of all those farmers who have had best success in draining their own land. The cost of tile drainage there is around 50 cents a rod or \$160 per mile, and the improvement is permanent with little or no subsequent cost for maintenance. The benefit to roads is immediate and certain, and the soil is then in the best possible condition for a gravel or stone road. "Roads tiled without gravel are better than roads graveled without tile."

Warranted to give satisfaction.

GOMBAULT'S CAUSTIC BALSAM

A safe, speedy and positive cure for

Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a **HUMAN REMEDY** for Rheumatism, Sprains, Sore Throat, etc., it is invaluable.

Every bottle of **Caustic Balsam** sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

A NEW WORLD RECORD.

It remained for the Missouri College of Agriculture at Columbia, Mo., to raise and develop the champion dairy cow of all the world. Missouri Cheif Josephine, a Holstein-Friesian cow, finished her six months' test on July 18, producing 17,008.8 pounds, an average of 93.4 pounds of milk daily for 182 days. This is equivalent to 46.7 quarts, or 11.6 gallons every day. Her highest record for one day was 110.2 pounds. This record is the more remarkable because no special preparation had been made for this test and Josephine has done her full duty in the regular dairy herd of the University, having had five calves in five and one-half years.

Not only has this record smashed all previous world's records for milk production, but the per cent of butter fat is increasing daily, so that, harring accidents this cow will undoubtedly produce more butter during a period of twelve months than any other cow that has ever been tested in the world.

This cow is but one of a number of remarkable cows owned by the University of Missouri and maintained solely for the instruction of its students in agriculture and for investigational purposes. Only twenty Jersey cows in the history of the world have produced more than 700 pounds of butter in one year. Five of these cows, or twenty-five per cent of the total number are owned and were bred by this Missouri institution. The college owns more than 300 pure bred and registered animals, belonging to 17 distinct breeds.

Josephine's record exceeds the present world's record for six months by 1,458 pounds.

Dirty eggs are grouped in three classes in a bulletin published by the department of agriculture at Washington, as well as on the market. Plain dirties are those to which soil adheres; stained, are those soiled by contact with damp straw or other material discoloring the shell; smeared are those covered with the contents of broken eggs. The government bulletin says the farmers are to blame for putting plain dirties and stained eggs upon the market, but the smeared originate all along the route from the farmer's home to the consumer. Every farmer will learn much about egg production and profit in poultry by asking the department of agriculture, Washington, to send him bureau of animal circular No. 140, which is free for the asking.

If you have raised a good crop of oats this year, feed some of them to the hens. It is the best kind of food for laying hens. They won't get too fat on oats. You don't need to have the oats threshed for the hens, they will do the threshing themselves and it will be good exercise for them.

THINGS HAVE CHANGED.

Twenty or twenty-five years ago the western cattle were marketed by the train load. Now they are marketed by the carload. Then there could be one brand for twenty or more carloads. Today there are frequently twenty or more brands for one carload. It is the day of the small owner, and in the aggregate the number of small shipments so far exceeds the number of large shipments that the available market supply continues to show a steady increase from year to year despite the closing out of the big outfit and despite the steady encroachments of settlers on the open range. There is no danger of a range cattle famine in this generation at least.—Journal Stockman.

There is but little advantage in feeding ground food, as the fowls need no aid in pulverizing their grain, the gizzard doing that well; but there are some foods that can easily and cheaply be procured in the ground condition, such as bran and middlings, which makes excellent food for all kinds of poultry. Bran is very beneficial, as it contains more mineral matter than some ground foods and is as cheap as anything that can be given. Fowls, however, prefer whole grains, but they like a variety.

Unless free from lice, no flock will thrive as it ought, and the owner should help the chicks rid themselves of these pests by providing proper dust baths and occasionally dusting them himself with insect powder.

A WASH FOR THE HEN HOUSE.

Nothing is better for poultry buildings from a sanitary point of view, than a good coat of whitewash. Especially is this true when getting the poultry houses ready for winter. All may not be aware there is quite a science in whitewashing. There are different kinds, and each is adapted for a different use. A few formulas have been gathered which may prove helpful for those in search of such information. For a durable whitewash for general use proceed as follows:

Take a clean, tight barrel and put into it half a bushel of unslaked lime. Slake it by pouring hot water into the barrel, in sufficient quantity to cover the lime five inches deep. Stir briskly until thoroughly slaked. When the slaking is thoroughly done, add enough water to give it the proper consistency, two pounds of sulphate of zinc, one pound of common salt, and a half pound of alum. If desired, various colors may be produced. A rich cream tint is obtained by adding three pounds of yellow ochre. A lead or pearl color is obtained by adding lampblack, red by Venetian red or red ochre, and blue by sulphate red copper. If for the insides of poultry houses add half an ounce of carbolic acid. This whitewash is very durable, and will not crack or peel off.

A writer in Scientific American gives the following:

"The best wash I ever heard of is

ENGLISH SETTER PUPS FOR SALE.

By Marse Dan out of Bessie Larkstone. (Marse Dan by Marse Ben ex Oakley Hill's Maid. Bessie Larkstone by Lady's Count Gladstone ex Lark's Nell); five months old. Address or call

Hulda Stables, 1530 Fell St., San Francisco
Telephone West 1079.

color may be changed by adding more or less of the colors named or using other coloring materials. This wash covers well, needing only one coat, and

is superior to anything known except oil paint. I have known a rough board hard washed with this to look well for five years or ever longer, without renewing. The cement hardens, but on a rough surface will not scale."

From still another source comes the following:

"Take of lime, clean and well burned, six quarts; four ounces of Spanish whiting or powdered burnt alum; one pound of white sugar; three pints of rice flour, one pound of glue of good quality, and five gallons of boiling water. Slake the lime with hot water in a vessel holding about ten gallons, keeping the vessel to retain the steam, and strain through a sieve to clear of coarse particles; to this liquid add the whiting or alum, the sugar and the rice flour, the latter having first been made into a thick hoiled paste. Dissolve the glue in water over a water bath or in a double vessel, and mix the whole with the hot water, and let stand for an hour over a slow fire. If a specially neat appearance is desired, apply with a paint brush. For outdoor surfaces it should be applied while warm, and cold for indoors."

The coat thus obtained, will, it is claimed, retain its brilliancy for many years, and, according to the contributor, is simply "incomparable."

A cheaper whitewash, which makes a coat which will not rub off is made by taking one hushel unslaked lime, 20 pounds Spanish whiting, 17 pounds of rock salt, 12 pounds of brown sugar. Slake the lime and strain, mix with about 40 gallons of water, then add the other ingredients and stir all well together.

This is not only lasting, but looks well when applied and may be tinted to any desired shade.—Mrs. S. B. Titterington, in Homestead.

WILL BUY AMERICAN CATTLE.

To encourage the importation of American cattle into England, the city of London corporation has a big scheme on hand. It is proposed to construct a huge slaughter house and cold storage plant in connection with the Metropolitan meat market at Smithfield.

Two hundred and fifty thousand dollars will be spent on the scheme, and when they are completed the buildings will constitute one of the finest establishments of their kind in the world. They will be equipped with all the latest appliances and are expected to create a revolution in the importation of cattle into this country.

The scheme is viewed with consternation by the railroad companies there, who receive a large proportion of their income from the carriage of frozen meat from Liverpool and other ports of London. Under the new scheme cattle will be shipped direct to London.

This scheme will have a double advantage. The meat of foreign cattle killed in London will fetch as high a price in the market as if the cattle had been of English origin, while it will reduce enormously the necessity for consuming frozen meat.

There are already two great slaughter yards in England—at Bidkenhead and Deptford, near London—but their capacity is not equal to the demand which any considerable increase in the importation of live American cattle would make upon them.

WHAT ARE CHAMOIS SKINS?

The Board of United States General Appraisers at New York has officially decided that sheepskins split and dressed as chamois skins are really

the chamois skins of commerce, being bought and sold as such, and that they are, therefore, dutiable as such at 20 per cent ad valorem. The importers claimed that the skins were split leather and should pay a duty of 7½ per cent as such. That they were split sheep skins the appraisers admitted and said: "But they have been dressed and finished as chamois skins, and the importers' theory seems to be that because they are not from the skins of the antelope they are not, therefore, dutiable under the provision for chamois skins in paragraph 451." It was established by the witnesses examined that there is rarely, if ever, any genuine dressed chamois skin imported into this country; that the split dressed sheepskins are generally recognized and sold as chamois; that among the uses of chamois are the making of gloves, vests, dress protectors, and the washing of carriages.

SAFETY IN STORED WATER

Farmers in Salt River Valley, Ariz., are rejoicing in the approaching completion of Roosevelt dam. The water stored behind this structure has already saved this year's crops from what probably would have been complete destruction by drought. The normal flow of the river is lower than at any time during the last six years, and stored water to the extent of about 46,000 acre-feet was drawn from the reservoir during June. Up to July 1 a total of \$38,706.95 had been received from the sale of water. More than 130,000 acres are now under irrigation. There is great activity in the valley in the sale of farm property. The sales run from 2½ acre tract to quarter and half sections. A number of large tracts have been subdivided into 5, 10, 20 and 40 acres and are being disposed of to homeseekers. The value of lands at the present time under cultivation ranges from \$75 to \$500; raw lands from \$60 to \$250. The latter priced land, of course, is that suited to the growing of citrus fruits. The value of cultivated lands at the time the project was initiated was \$40 to \$150 an acre, and raw land \$10 to \$50.

Agricultural conditions at the present time appear to be in excellent shape, prices for farm products being uniformly good. New hay is selling for \$10 a ton, and new rolled barley at \$1.25 a hundredweight. Various lines of business in the towns throughout the valley is also good, failures in mercantile lines being practically unheard of.

A GOOD FERTILIZER.

There is no fertilizer quite so good for vegetables and flowers as poultry droppings mixed well with the soil about the plants. A small shovelful in the bottom of a hill of cucumbers or melons will make them grow and bear much fine fruit.

A harrel sunk into the earth in the corner of the garden makes a good liquid fertilizing tank. Fill the harrel with water and mix with the water cow manure and poultry droppings. Apply the liquid fertilizer to the plants about once a week.

If hoiling water is poured over the fertilizer in the harrel, all the weed seed and insect life will be eliminated. You can purchase no better fertilizer for garden or window plants than sheep or poultry droppings made into liquid fertilizer by means of hoiling water and a tightly covered harrel.

Whenever you water garden plants, give them a heavy soaking with water, and then rake over the surface to make a soil mulch to retain the moisture. A light sprinkling does more harm than good. A noted gardener says: "Water the garden with the rake."

One of the greatest and easiest steps in the way of improvement in the dairy industry is to cull out the poor cows; the butcher or the heifer trust will take them, and they are the only one who can get the money out of them. The only farm that is able to keep this kind of cattle is the poor farm and the farmer who keeps them is headed for the same place. The apology for keeping and feeding such a cow is not a reflection upon the owner but on his misguided charity.

"INFALLIBLE"

SMOKELESS POWDER

IN NEW ZEALAND

"The Pigeon Shooting Championship of New Zealand was decided on the Wanganni Gun Club's ground, May 28. There were twenty-four competitors, and the winner turned up in Mr. Donald Allan Fraser, the 16-year-old son of Mr. Duncan Fraser of Hororata, Canterbury, who killed 20 birds out of 21. This was the lad's first attempt at the New Zealand championship, and he had to compete against the best shots in the Dominion. All shot from the same mark (28 yards), and it was unquestionably a fine performance, and by far the best ever recorded by a boy in New Zealand. By his victory Fraser carried off the £25 gold and diamond medal, a 65 guinea gun present by the Colonial Ammunition Company, and £35 in cash, presented by the club.

"Messrs. Stead, Fraser (sen), Price and King divided the second and third prizes with 18 kills each.

"Young Fraser started shooting only about twelve months ago, and his performance is therefore a remarkable one. Last Easter he shot for the Colonial Ammunition Company's Cup, and got a leg in, killing 40 out of 43 birds. He will shortly visit Dunedin to compete for the first Sparrow Championship of New Zealand, and as he is reported to be an even better shot at sparrows than pigeons, he should give a good account of himself."

WINCHESTER

RIFLES SHOOT STRAIGHT AND STRONG

The name "Winchester" on a rifle barrel is the hall-mark of straight and strong shooting. This is due to the excellence of Winchester barrels, the knowledge and experience embodied in their manufacture and the great care taken in targeting them. Every Winchester rifle is shot to test its accuracy, the distance varying according to the caliber. A corps of experts devote their entire time to this work, and before a rifle is passed it must be capable of shooting seven consecutive bulls-eyes on a standard size target for the distance shot. The proper rifling, or twist, to give the best results with a given cartridge is determined in the same careful manner, assuring accuracy and strong shooting. Only good barrels ever leave our factory.

2:05 Class Pacing	1000
Free for all Pace	1000
2:20 Class Pace for Arizona horses	1000

CONDITIONS.—Entrance fee 5 per cent, additional 5 per cent from money winners except in Arizona Copper Stake; in these purses 3 per cent, with deduction 7 per cent from winners. One horse may be entered in two classes and held for one entry unless two starts are made. Two horses may be entered in one class and horse that starts only pay, but one entry fee must be paid. Horses may be entered at any time before September 15th, and any record made by horses after they have been entered will be no bar except in purses Nos. 1, 2, 8, 9, 10 and 16. In these purses horses must be eligible on September 15th. This fair is given by the Territory of Arizona and purses are absolutely guaranteed. Attendance or entries does not figure in settlement. The sun always shines at Phoenix. For entry blanks write

SHIRLEY CHRISTY, Secretary,
Phoenix, Arizona.

New Edition of John Splan's Book

"Life With the Trotter"

Price, \$3.00, Postpaid.

"Life With the Trotter" gives us a clear insight into the ways and means to be adopted to increase pace, and preserve it when obtained. This work is replete with interest, and should be read by all sections of society, as it inculcates the doctrines of kindness to the horse from start to finish.

DO YOU WANT TO SELL

Fred H. Chase & Co. will hold a Fall Combination Sale of Horses at the Pavilion, 478 Valencia Street, San Francisco,

Monday, Sept. 26, '10.

Twenty head of good serviceable trotting bred driving and express horses have already been consigned by the well-known horseman, Sam Norris of Santa Rosa, and 11 head of exceedingly well bred trotting mares, colts and fillies consigned by Mr. P. H. McEvoy of San Mateo.

THIRTY HEAD MORE ARE WANTED.

Communicate immediately with the undersigned if you want to sell. The market is good and useful horses will bring good prices.

FRED H. CHASE & CO.,

478 Valencia St., San Francisco.

Pedigrees Tabulated

(Typewritten, Suitable for Framing.)

Registration of Standard-Bred Horses Attended to.

Address, **BREEDER AND SPORTSMAN,**

366 Pacific Bldg., San Francisco

The First National Bank

Corner Post and Montgomery Streets

Complete Banking Service

I. The First National Bank fully equipped for commercial business.
II. First Federal Trust Company, associated with the First National Bank, pays interest on deposits, and takes entire charge of property, real and personal.
III. Armor Plate Safe Deposit Vaults, the highest type of security, guarantee absolute protection for valuables.

Inspection Invited

Notice to Horsemen: **German Distemper Remedy** is conceded to be the best remedy on the market for the treatment and prevention of **Distemper, Heaves, Pink-Eye, Catarrhal Fever, Kidney Trouble and Indigestion.** It is used by all the best horsemen who are acquainted with it and its merits. Price 50c per bottle. For sale by all druggists or sent prepaid. Free beautiful display horse picture on request.

German Distemper Remedy Co., 124 East Lincoln Ave., Goshen, Ind.

DEALERS may "KNOCK" our CARTS and SULKIES. If-so, it is because they can't make any money out of them.

We give the CONSUMER THE DISCOUNT and sell direct.

THE PORTLAND MEETING will open Monday next with the greatest racing program ever given on the Pacific Coast. The \$10,000 purse for trotters is the largest west of the Rocky Mountains and equals in amount any purse race given anywhere in the United States this year. In addition to this big purse for trotters, the pacers have a \$5000 purse to contend for and it also should result in a great race. The Oregon State Fair will follow the Portland meeting and two \$5000 purses will be features of its race program. Oregon is a long way ahead of California in the promotion of harness racing, but it has never had the taste of the public for the sport perverted by seven months of continuous racing from November until May year after year, and the Oregon people see in a one week's race meeting an opportunity for pleasure that a large proportion of the population of its chief cities takes advantage of and thoroughly enjoys. At the Oregon State Fair at Salem, no betting is permitted and no liquors are sold on the grounds, and the attendance runs from ten to thirty thousand per day. The ladies of all the leading churches of Salem serve lunches to the public on the fair grounds and the fair is patronized by all the best people of the State. They have found that it pays to cater to the families of the farmer, the mechanic, the merchant and the professional man, and there is no place on the fair ground that parents cannot attend with all their children. This is the reason they are patronized by thousands of people every day and the immense sum of gate money received is what enables them to give such big purses for harness horses to compete for. The Oregon people all enjoy racing and approve of it, and the grand stand at Salem on Portland day has more population to the square rod than any other place on the Coast.

THERE IS A BIG DEMAND for horses that can work. No matter whether it is a truck, dray, coach, express or delivery horse, if he is able to do his work there is a buyer for him at a good fair price. Dealers in this city report their barns as about empty, but callers numerous. The cutting up of so many large tracts of land that were formerly farmed by traction engines or not farmed at all, has made a demand for the general purpose horses, a span of which can do all the work on a twenty-acre farm. There is much construction work under way in this State at the present time and this also keeps thousands of horses and mules busy. Breeding has not been carried on very heavily in recent years, consequently there does not seem to be a supply of young horses for future use. Horses are bringing good money and are ready sale unless the owner asks more than they are worth.

THE FIFTY-SECOND annual fair given by the California State Agricultural Society will open today at Sacramento. This fair will be vastly different from its predecessors in that horse racing will form but a small part of the program of amusements. Ever since the law was passed prohibiting betting on races within the fair grounds, the directors of the fair have provided no purses or stakes for running horses, and during the past two years the harness racing program has been greatly curtailed. This year the citizens of Sacramento have come to the aid of the fair directors and with an immense sum of money, raised by subscription among the merchants of the capital city, have secured as attractions several world-famous aviators, the entire wild-west outfit from the Cheyenne cow-boy fiesta, and a band of Sioux Indians. With these and many other attractions they hope to draw a crowd to Sacramento that will exceed in numbers any heretofore seen at a State Fair. The pavilion and livestock exhibits promise to be excellent and will be well worth seeing. The Occident and Stanford stakes for three-year-old trotters should be excellent races, and if the track is in good shape we expect to see the record of these stakes broken on Monday and Saturday of next week.

BOTH the three-year-old stake winners by Bon Voyage that appeared at the Woodland meeting last week carried the blood of Woodford Mambrino in their veins. Bon Guy 2:13½, winner of the trotting division of the California Breeders' Futurity, inherits the blood of Woodford Mambrino 2:21½ through his third dam, Mosa, dam of five in the list, who was by that horse. Jean Valjean 2:10, winner of the pacing division of the same stake, is out of She 2:12½, whose sire, Abbottsford 2:19½, was a son of Woodford Mambrino. The Woodford Mambrino cross seems to be a very happy nick with Bon Voyage, and while no person living can figure out just what influence it had in giving those two colts their speed and gameness, the fact that it exists in their pedigrees is worthy of consideration by breeders.

MR. GEO. A. ESTABROOK of Denver has been one of the gamest buyers of trotters and pacers that has entered the racing game for many years. He has had some very bad luck with his purchases, luck that would have driven many a richer man from the market, but he has stayed in and is now getting the reward of his gameness. In Colorado E. he owns the greatest three-year-old trotter ever foaled, and in Country Jay the gamest "old horse" the world has ever seen. While his \$10,000 purchases, C. The Limit 2:06¼ and Lilly W. have temporarily gone wrong, they will round to for next year's races and we hope that both will have speed enough to cover a mile in two minutes.

THE CITY COUNCIL of Salt Lake, obeyed the wishes of the majority of the merchants and business men of that city, and refused to grant the Utah Jockey Club a license for a thirty-day meeting beginning September 17th. The last meeting was such a bad one, that the citizens concluded they could get along better without any running races this fall. It is getting so everywhere.

COLORADO E. 2:06¼ outclasses every three-year-old trotter that has yet appeared. After working a mile in 2:06¼ at Kalamazoo the last week in July, he has since won all his starts and trotted every heat below 2:08. No other three-year-old ever made such a showing and the son of The Bondsman has certainly earned the three-year-old crown.

THE PRICES being offered for horses that have championship form at the trot looks like a revival of old times in the east. Some of the tin-horn fellows would have us believe that unless the gamblers are given full sway at race meetings horses will not be worth a dollar a hundred, but all sensible people know better.

The colts of Nutwood Wilkes, sired since he went East, the oldest of which are foals of 1910, made a clean sweep in their respective classes at the Clarke County Fair, held at Springfield, Ohio, last week, winning first for stallions under one year and also first for fillies under one year, showing that Nutwood Wilkes sires handsome individuals with size and quality, as well as extreme speed.

PORTLAND AND SALEM PROGRAMS.

The programs of harness racing to be given at the Portland and Salem fairs next week and the week following are here given. These are the leading meetings on the Pacific Coast this year and the purses given are larger than those hung up at any other meetings.

SAN FRANCISCO DRIVING CLUB.

Three or four thousand people were at the stadium track in Golden Gate Park last Sunday to see the trotting and pacing races given by the above named club. The grand stand was not large enough to hold half the crowd, while the space for autos and other vehicles on the south side was crowded all the afternoon and many were unable to get near enough to view the sport. The racing was excellent and the time made very good. Starter Kenney was in good form and got his fields away well. The races resulted as follows:

First race, 2:25 pace:	
W. F. Bennet's Lulu B. (McGrath).....	2 1 1
John Kramer's Cloudlight (Burton).....	1 3 3
T. D. Sexton's Alfred E. (Sexton).....	3 2 2
A. Benson's J. Arthur (Benson).....	4 4 4
Time—2:20, 2:23, 2:22.	
Second race, 2:18, mixed:	
D. Campbell's Ginger (Schwarz).....	1 1 1
V. Verilhac's Dr. Hammond (Verilhac).....	3 2 2
Chase & Giannini's Kitty D. (Kenney).....	8 4 4
J. Kohn's Alfred D. (Donnelly).....	4 8 8
R. Bennett's Sydney B. (Burton).....	5 6 6
E. C. Chase's Dollie (Frelsen).....	7 5 5
E. C. Chase's Georgie Z. (Chase).....	6 7 7
Time—2:15½, 2:16½.	
Third race, free-for-all pace:	
George Giannini's George Perry (Becker).....	1 1 1
D. E. Hoffman's Dictatum (Hoffman).....	3 2 2
H. Frelson's aJck (Fresson).....	2 3 3
John Kramer's Celia K. (Burton).....	4 4 4
Time—2:12½, 2:14.	
Fourth race, 2:22 pace:	
H. Schottler's Lulu S. (Schwarz).....	1 2 1
T. H. Corcoran's Caliente Girl (Corcoran).....	2 1 2
H. D. Chase's Don C. (Chase).....	6 5 3
H. Campodonico's Baldy Mitchell (Burton).....	5 3 5
W. Higginbottom's Prince Almont (Higginbottom).....	4 4 4
Time—2:23, 2:24, 2:20.	
Fifth race, 2:25 trot:	
H. Hagensen's Search Me (Hagensen).....	1 1 1
G. Tarri's Steve D. (Tassi).....	2 3 3
E. T. Ayres' Dalto A. (Ayres).....	5 2 2
B. S. Rybiki's Babe Benton (Rybiki).....	4 4 4
W. P. Hammer's Clara W. (Hammer).....	6 5 5
Time—2:26½, 2:25.	
Sixth race, 2:20 trot:	
A. Ottinger's Mike Kelly (Frelsen).....	1 1 1
M. W. Herzog's Lady Nell (Herzog).....	2 2 2
H. C. Ahler's Sunset Belle (Ahlers).....	3 3 3
Time—2:21, 2:22½.	

Drink Jackson's Napa Soda.

NEW YORK GRAND CIRCUIT MEETING.

New York, Aug. 23.—Seven thousand trotting horsemen, owners, breeders, drivers and followers of the sport, cheered wildly today when Colorado E., a bay colt by The Bondsman-Bess McGregor, established a new world's record for three-year-old trotters at the opening of a four days' Grand Circuit harness meeting at the Empire City track, Yonkers.

In the Matron Futurity Stake of \$15,000 Colorado E. won in straight heats in 2:07½ and 2:07½, the fastest work ever done by a three-year-old in the history of light harness racing.

The colt is owned by George M. Estabrook of Denver, Colo., and was bred by W. L. Spears of Lexington, Ky. Driven by Gus Macey, the Western colt never faltered and Native Belle, who beat him as a two-year-old, got only third prize, being beaten for second place by Emily Ellen, through a break in the second heat.

Native Belle, on last year's form, was the favorite among the Eastern men, but she was beaten decisively.

The track was in fine condition and all three races on today's card were won in straight heats.

In the event for amateur drivers, F. Whitney of Cleveland drove Peter Dorsey to an easy victory. Evelyn W., owned by George W. B. Chisolm of Cleveland, and driven by Shank, took the pace race which opened the meeting, so that all the honors of the day belong to the Western horsemen. Summaries:

Fashion stake; 2:12 pace; purse \$2500; two in three:

Evelyn W., b. m. by The Spy (Shank).....	1	1
Lady Isle, b. m. (Cox).....	2	2
Buster Brown, b. g. (Kelly).....	3	3
Mike Wilcox, br. g. (Opdyker).....	4	4
Alwanda, b. g. (Keegan).....	5	6
Claro, ch. g. (Gibbons).....	6	5

Time—2:06½, 2:06¼.

Matron Futurity Stake; three-year-olds; trot; purse, \$15,000; two in three:

Colorado E., b. c. by The Bondsman (G. Macy).....	1	1
Emily Ellen, blk. f. (L. McDonald).....	3	2
Native Belle, b. f. (Murphy).....	2	4
Eva Tanguay, br. f. (Andrews).....	5	3
Eva Bellini, b. f. (Dickerson).....	4	5

Time—2:07¼, 2:07¾.

Speedway stake; 2:16 trot, to wagon, amateurs to drive; purse \$2500; two in three:

Peter Dorsey, b. g. by Moving Star (F. Whitney).....	1	1
Sable Maid, blk. m. (F. G. Jones).....	3	2
Baron Dell, b. g. (W. Devision).....	2	3
Rohin Hood, br. g. (H. D. Gill).....	dis	dis

Time—2:14¼, 2:15½.

Aug. 24.—Followers of light harness racing enjoyed another good day's sport today at the Empire City track, where the best horses on the Grand Circuit will be seen during the remainder of the week. A stiff wind blowing down the back stretch retarded the horses somewhat, but good time was made in every event, each of which was won in straight heats.

The Harvester, holder of the world's trotting stallion record of 2:02, made last week at Buffalo, was the center of attraction. Driven by Ed Geers, he won the first heat of the free-for-all in 2:06, and later, when called upon to break his own record, he took the heat and race in 2:03, despite the retarding wind.

Under the conditions The Harvester's effort was a remarkable performance.

The Hungarian stallion, Willy, had no difficulty in winning the second division of the 2:16 class trot, and Hailworthy followed up his last week's victory at Buffalo by capturing the Fleetwood stakes of \$2500. Summaries:

Eclipse stakes; free-for-all class; trotting; purse \$1500; two in three:

The Harvester, br. s. by Walnut Hall (E. F. Geers).....	1	1
Jack Leyburn, ch. g. (Gradys).....	2	2

Time—2:08½, 2:03.

Speedway stakes; 2:16 class, trotting to wagon, amateurs to drive; purse \$2500 (second division); two in three:

Willy, b. s. by Wilburn M. (H. A. Watterson).....	1	1
Direct Tone, b. g. (James Butler).....	2	2

Time—2:13¼, 2:13½.

Fleetwood stakes; 2:13 class; trotting; purse \$2500; two in three:

Hailworthy, b. g. by Axworthy (Nuttingham).....	1	1
Gamar, b. s. (Harrison).....	2	2
Billy Burke, b. c. (Ed. Benyon).....	4	3
Major Strong, b. g. (Snyder).....	3	4
Bervardo, h. g. (Murphy).....	6	5
Helen Redmond, b. m. (Hendrickson).....	5	6

Time—2:08, 2:06¼.

Aug. 25.—The third day of the Grand Circuit meeting at the Empire City track drew a good crowd and in two of the three events the largest fields of the meeting so far were on the track. A high wind prevailed during the afternoon, precluding any record time being made.

General H., the bay stallion by Combineer, won the 2:09 class trot in straight heats and Teasel and Alice Roosevelt divided second and third moneys after two close finishes.

The Hungarian stallion Willy, driven by H. A. Watterson, won both heats and first money in the 2:13 class, trotting to wagon in faultless style, with Direct Tone, driven by James Butler, the owner of the track, stepping into second place.

The first split heats of the meeting occurred in the Beacon stakes for pacers, 2:05 class. Baron Whips won the first and Ess H. Kay the second. Only win-

ners of heats were allowed to go in the third heat and while the starter did not give them the word the two flew away, neither driver evidently having heard the bell. Ess H. Kay finished first and after some discussion it was mutually agreed that Ess H. Kay should get first money.

Although scheduled for five days, the meeting will end tomorrow with the Matron Futurity stakes of \$15,000 for three-year-old pacers, a 2:20 class for pacers and the Bonner Memorial stakes of \$2500 for trotters in the 2:25 class. Summaries:

Centerville Stakes; \$1500; 2:09 class; trotting; two in three:

General H., b. s. by Combineer (Haag).....	1	1
Teasel, ch. m. (Andrews).....	4	2
Alice Roosevelt, ch. m. (Murphy).....	2	4
Aquin, b. s. (McDonald).....	6	3
Demarest, b. g. (F. Jones).....	3	6
Ora Bellini, br. g. (Dickerson).....	5	5
Miss Baraone, b. m. (McDevitt).....	7	7
Soprano, ch. f. (Andrews).....	dis	dis

Time—2:07¼, 2:09.

Beacon stakes; \$1500; 2:05 class; pacing; two in three:

Ess H. Kay, hl. s. by Direct Hal (White).....	6	1	1
Baron Whips, ch. g. (Murphy).....	1	2	2
Walter W., b. g. (Geers).....	2	3	
Black Lock, bl. s. (Shank).....	3	5	
Walter Hal, gr. s. (Murray).....	4	4	
Ethan Roberts, br. g. (Healy).....	5	6	

Time—2:05, 2:05¾. No time taken for third heat.

Speed way stakes; \$2500; 2:16 class, trotting to wagon, amateur drivers, two in three:

Willy, b. s. by Wilburn M. (Watterson).....	1	1
Direct Tone, b. g. (James Butler).....	4	2
Baron Dell, b. g. (Devison).....	2	5
Sayle Maid, bl. m. (Jones).....	3	4
Peter Dorsey, b. g. (Devereaux).....	5	3
Ismalian, ch. g. (Hinds).....	ds	ds

Time—2:11¼, 2:10½.

Aug. 26.—After four days of interesting harness racing the Grand Circuit meeting under the auspices of the Trotting Horse Breeders' Club ended today at the Empire City track.

Three events were on the final card, with the Bonner Memorial stakes of \$2500 for 2:25 class trotters as the feature. This was won in two straight heats by the bay mare Joan, owned by David Shaw of Cleveland.

Joan was driven in good style by McDevitt and won both heats with Dudie Archdale, driven by the veteran E. F. Geers, second each time. Both finishes were close, and, as twelve horses started in the first heat, it was the largest field but one in the Grand Circuit this season.

Captain George and Ario Leyburn divided third and fourth moneys.

The pacing division of the Matron Futurity stakes was won handily by the bay filly Leftwhich, owned by Michael Murphy of Philadelphia, also in straight heats, the three competing horses finishing in the same order in both heats.

The Abbe, with E. F. Geers as reinsman, always had the foot of his only opponent, Branham Baughman, in the 2:20, and won both heats without leaving the issue in doubt at any stage.

In addition to the money prize won by Leftwhich in the Futurity, a silver cup, valued at \$250, was awarded to L. V. Harkness of this city, who bred the winner. Summaries:

Bonner Memorial Stakes, \$2500; 2:25 class; trotting; two in three:

Joan, b. m. by Directum Spier (McDevitt).....	1	1
Dudie Archdale, bl. m. (Geers).....	2	2
Captain George, b. c. (Murphy).....	6	3
Ario Leyburn, br. s. (Rosemier).....	3	6
Sterling Hal, b. c. (Maloney).....	5	4
Mary G., b. m. (Cox).....	4	5
Areo, b. g. (Merryfield).....	7	7
Henry Winter, h. s. (McDonald).....	8	9
Albia, b. m. (Proctor).....	10	8
Camera, b. g. (Hendrickson).....	9	10
Ben Cameron, b. g. (Deveson).....	ds	ds
Fred Hope, br. g. (Brooks).....	ds	ds

Time—2:10¼, 2:09¼.

Matron Futurity stakes, \$15,000; three-year-old class; pacing; two in three:

Leftwhich, b. f. by Moko (Healy).....	1	1
Neil Gentry, b. f. (McDonald).....	2	2
Tommy T., b. c. (Proctor).....	3	3

Time—2:12, 2:12.

Union stakes; \$2500; 2:20 class, pacing; two in three:

The Abbe, bl. s. by Chimes (Geers).....	1	1
Branham Baughman, b. s. (Cox).....	2	2

Time—2:12, 2:07.

Farmers are not accustomed to count the cost of keeping a few idle horses around for weeks or even months. Many would be surprised to find what a horse's board bill amounts to even on light grain feed, although it would not be so serious on a farm as in this instance of discarded city horses. There were fifteen aged horses which the city of Chicago no longer needed in the municipal business, so according to law they were advertised for sixty days and the bids then were opened. On a basis of actual cost of feed and care the expense to the city during the two months has been about \$300 and if the \$20 for advertising, and the cost of the special council meeting to act on the sale and the time of various city employees were figured in the cost of selling these horses would doubtless exceed \$400. When the bids were opened the highest offer for the entire lot was just \$400. It was a cheap lot of horses but it was no cheap job getting rid of them.

GREAT WESTERN CIRCUIT AT GALESBURG.

Galesburg, Ill., Aug. 23.—Hedgewood Boy, 2:02¼, beat Minor Heir 1:59¼, and George Gano 2:03¼, in a sensational special mile race here today, the opening day of the meeting. The great Chitwood stallion paced within one-half a second of the world's race record and lowered his own mark one and one-quarter seconds.

Minor Heir finished nose and nose with Hedgewood Boy, while Gano paced the mile in 2:02. It was a wonderful mile and especially so in view of the fact that a stiff wind was blowing against the pacers on the back stretch.

The other three races on the card were won in straight heats by the favorites.

An unusually large first day's crowd was in attendance. Summaries:

2:25 trot; purse \$1000:		
Henry H., b. g. by Gregory the Great (Dean).....	1	1
Dr. Tregg, b. h. (Rash).....	2	4
Castle Dome, b. h. (Chandler).....	4	2

Time—2:10½, 2:07¾, 2:10½.

2:21 class pace; purse \$500:

Gracie Pointer, g. m. by Star Pointer (De- Ryder).....	1	1
Dr. Treg, b. h. (Rash).....	2	4
Mr. Hal, b. h. (Ross).....	3	2

Time—2:12, 2:11½, 1:11¾.

Preparatory; 3-year-old trotters; purse \$500:

Lulu Arion, c. f. by Peter the Great (Benyon).....	1	1
Celestine, b. f. (Rennick).....	2	2

Time—2:15½, 2:14¾.

Special race:

Hedgewood Boy (McMahon).....	won
Minor Heir (Hersey).....	second
George Gano (Erwin).....	third

Time—2:39¼, 1:00, 1:30, 2:01.

Aug. 24.—Interest in the great race yesterday, in which Hedgewood Boy nosed out his stable rival, Minor Heir, is so intense that another important race has been arranged between these great stallions for tomorrow. The same drivers will be up and it will be a battle royal from wire to wire.

The majority of the horsemen at the track seem to expect Minor Heir to win.

The condition of the track is such that many expect to see the world's record equaled, it being approached within half a second in yesterday's struggle.

Today's feature was Ross K.'s mile in 2:01¼. The California horse Denervo won a good race. He paced to a record of 2:03¼ in the second heat, and was then beaten a couple of heats but came back in the fifth heat and won it in 2:10¼. The time of the third and fourth heats, won by Nathan B. was not given in the report sent out for some reason. Summaries:

2:18 pace; purse \$1500:		
Denervo, b. g. by Demonio (DeRyder).....	1	1
Nathan B., br. s. (McMahon).....	2	1
Waltun Boy, br. h. (Dean).....	3	2

Time—2:06½, 2:03¼, 2:10¼.

Nancy Royce, blk. m. by Allerton (McCarthy).....	1	2	1
Zito, b. h. (Benyon).....	2	1	2
Bertha C., b. m. (Chandler).....	3	3	2

Time—2:10½, 2:10, 2:07¾.

Ira Gay by Ira Band (Marvin).....	1	1
Harry Weaver (Caine).....	6	2
Prince Albert (Harris).....	2	5

Time—2:08½, 2:06¼, 2:07½.

Special to beat his record of 2:02¼, pacing: Ross K., b. h. (McMahon). Time—2:39¼, 1:59¼, 1:30½, 2:01¼.

Aug. 25.—A new world's pacing record in a race of 2:00 flat was set today by Minor Heir in a special race at the Great Western circuit harness meet. A brisk breeze was blowing, and the weather was unseasonably cool during the race, in which M. L. Hersey drove Minor Heir to victory against Hedgewood Boy, a stable companion. The fastest quarter, the third, was covered in :29.

The previous record of 2:00½ was held jointly by Minor Heir, which turned the trick at Lexington, Ky., October 6, 1908, and Star Pointer, which set the mark at Springfield, Ill., October 1, 1907. Hersey drove Dan Patch when that animal paced a mile against time in 1:55 at St. Paul, Sept. 8, 1906, but declared that today's drive was the greatest he ever had made, everything considered. He asserted that the wind made the track two seconds slow and that the temperature was too low for the best work.

J. B. Ewing of Roseville, Ill., breeder of Minor Heir, a bay horse by Heir at Law, saw the race. Ewing sold the record breaker about two years ago for less than \$5000. As a two-year-old Minor Heir soon made a phenomenal record. He was purchased a year ago last February for \$45,000 from P. C. Isaacs of Johnstown, Pa., by M. H. Savage of Minnesota.

In addition to the special race between Minor Heir and Hedgewood Boy, a good card of regular trots and paces was presented to an unusually large crowd. Summaries:

2:10 pace; purse \$1000:			
W. A., b. g. by Blanalco (Floyd).....	6	1	1
Auctioneer, blk. h. by Correll Wilkes (Taylor)	1	3	2
Joe Brown, br. g. (Rash)	1	3	2

Carter G., Fly By Night, Bessie Ross, and Silver Fox also started. Wilkesbrino distanced.

Time—2:07¼, 2:07¼, 2:07¾, 2:08¼.

2:14 trot purse \$1500:

Bobbie B. McGregor, g. g. by Robert L. McGregor (Rash).....	1	1
---	---	---

OUR LOS ANGELES LETTER.

Los Angeles, Sept. 1, 1910.

The California Breeders' Association stakes were raced at Woodland last week and brought out an exceptionally high class of colts in all the events, and though they were all won in straight heats, there was no lack of interest as nearly every heat was won in a drive and with the exception of the trotting division of the Canfield-Clark stake last Saturday all the fields were close up. I am not going to describe the races as they are fully given in another column, but as a Los Angeles owned colt won one of the stakes and as a Los Angeles horse sired two of the winners we naturally down here are sitting up and taking notice.

The first race on the program was the Canfield-Clark purse of \$1000 for two-year-old trotters and though Voyageur, a Los Angeles colt by Bon Voyage and owned by W. A. Clark Jr., was entered, he was not in shape to start. The race was conceded to Mr. Warlow's colt Matawan, and several colts failed to make the final payment after the San Jose race that the Fresno colt won, evidently scared out by his performance there, but as I said in last week's letter horse racing is a very uncertain proposition (if it wasn't there would be no horse racing), and that notwithstanding there was \$100 fourth money only three started and the odds on favorite was heated in straight heats, by the local entry, which was naturally a popular win and worthy of a better crowd of fellow townsmen than turned out.

Next came the pacing division of the California Breeders' stake for \$1090, with Jean Valjean by Bon Voyage, both sire and youngster owned by W. A. Clark Jr., and Sirius Pointer. It was even money and take your choice for though Jean Valjean had started at San Jose he had been distanced in the first heat, having made a break just after leaving the wire and though he paced the middle half in a minute he saw the flag tall in his face, his driver Ted Hayes accounting for the break by saying he was scared off his feet by the starters' megaphone, which was immediately wired to Murray Howe for his second volume of the Excuse Book. At Woodland Mr. Wright, the starter, had an excellent voice, clear and distinct, and a quick eye, and needed no outside aid to his natural abilities, consequently the colts were sent away on very even terms and Jean Valjean won, but had to step every heat from wire to wire, the first in 2:10 and the last in 2:11½.

The trotting division brought out four of the best three-year-olds on the coast with Mr. Geo. Warlow's Strathboule, the favorite on account of his winning at San Jose in 2:13½ and Bon Guy by Bon Voyage as second choice. Then began a horse race worth going miles to see. They got away to a line start and at the first turn Strathboule made a break; he was right at Bon Guy's head when he did it and Strathboule's breaks are not simply leaving his feet, but are great lunges and dives, pretty hard things for a three-year-old right along side not to pay some attention to, and yet Bon Guy never paid any more attention to him than if he was in the next county, just kept on trotting and how he did trot. The same thing happened at the same place in the second heat but with no more effect on the son of Bon Voyage and he finally won the race in the fastest time a three-year-old ever trotted three heats in the State of California. Too much credit cannot be given to Joe Twohig, his trainer and driver for developing the natural good headedness the colt had and educating him not only to trot fast but to keep at it under all circumstances, for outside of an actual collision a severer test of a colt's steadiness could hardly have been devised and as to the gameness of both there can be no question for they tried from wire to wire in every heat.

The last day brought out the four contestants for the trotting division of the Canfield stake for two-year-old trotters which was practically the same as in the Canfield-Clark purse the first day, with the addition of the Pasadena filly Luna M., owned by the veteran miner, Wm. Morgan. Here was another example of the aforementioned uncertainty of horse racing. The local filly, Dorothy Ansel, was conceded first money but had to be content with dividing second and third moneys with the other local colt Zorankin, as she finished second and third to the Fresno colt Matawan, that she beat on Monday.

Woodland is an exceedingly pretty town and lies in a beautiful country. The track is as fast as lightning, the stabling and water excellent, with magnificent trees to cool out under, and a body of gentlemen as managers as game as the colts that trotted there, for though with the exception of one day when attendance was fair or would have been for a first day, and a light card, the balance of the meeting the people did not fill more than one section of the grand stand; yet, notwithstanding this lack of interest in their efforts and consequently lack of gate receipts, they paid off all the purses and their obligations without a murmur and greeted everybody as warmly and cheerfully as if they were entertaining thousands instead of a few hundred.

Woodland will see another sight next year if fairs are inaugurated in this State as they are held in the East. With the present officials, the grounds and track they have, and San Francisco and Sacramento to draw from, there should be not less than a \$1000 every day and a \$5000 gate on Thursday, or which ever day they decide on for the Big Day.

I saw C. A. Canfield's colt Donasham at Woodland and have never seen a colt so improved in looks as he. Last year as a two-year-old he was a great over-

grown common looking brute and did not race any better than he looked in the Canfield Stake here. But now he is a handsome horse. He is not fatter than he was as a two-year-old and I doubt if he weighs anymore but he has rounded out and grown symmetrical till he is hardly recognizable and I'm told he can step very fast. Sacramento will tell the story, for he has to race Bon Guy and Strathboule there. JAMES.

DIABLO 2:09¼ WILL GO TO ILLINOIS.

On Sunday last Mr. H. I. McKinley, for the past year a resident of Auburn, California, closed a deal with Dr. Thos. Strong, of San Francisco, whereby Mr. McKinley became the owner of the great pacing sire Diablo 2:09¼ and his son Daedalion 2:08½, and will ship both stallions east in the near future. It is his intention to ship them to Oklahoma where they may be wintered in a mild climate and in the early spring take Diablo to Galesburg, Iowa, for the breeding season of 1911.

Diablo was bred at Oakwood Park Stock Farm in this State and is beyond all question one of the grandest looking trotting bred stallions living. He is a rich dark chestnut with a coat like satin and his proportions are almost ideal. Although he is now 21 years old he is still vigorous and should be good for several years yet if given proper care.

Diablo was purchased when a colt by the late William Murray, who started him twice as a three-year-old, winning second money in his first start, and first money and a record of 2:14½ in his second race.

As a four-year-old Diablo started in four races, winning them all, and set the four-year-old pacing record at 2:09¼, a reduction of a half second from the mark made by Robert J. the year previous. He was then retired to the stud where he was immensely popular and in 1897, when he was eight years old, his first standard performers appeared, both pacers. They were Diawood that took a two-year-old record of 2:21½ and Hijo del Diablo 2:11½, a three-year-old. From that time on Diablo's list of standard performers grew fast and at the close of 1909 he was the sire of seven trotters and 37 pacers in the list, while five of his sons and two of his daughters were producers of standard speed. Seven of his get have taken pacing records of 2:10, viz: Sir Albert S. 2:03¾, Sir John S. 2:04¼, Clipper 2:06, John R. Conway 2:07, Daedalion 2:08½, and Tom Carneal 2:08½.

Diablo is one of the best bred stallions living. His sire Charles Derby 2:20 (son of Steinway and Katy G. by Electioneer) is the sire of eight 2:10 performers. His dam Bertha by Alcantara, is the greatest speed producing broodmare in the world, as she is the dam of 11 with standard records, five of which are in the 2:10 list. Demonio 2:11¼, a full brother to Diablo is the sire of four 2:10 performers, including Mona Wilkes 2:03¼ and Denervo 2:03¼. Many of the leading breeders of California place great value on the daughters of Diablo and while they have been used to but a limited extent in the stud they have shown themselves to be very high class broodmares and will show well as producers of standard speed in the very near future.

Daedalion 2:08½, the son of Diablo that Mr. McKinley also purchased, is also a royally bred horse. He is out of the great broodmare Grace by Buccaneer, second dam Mary by Flaxtail. For many years Mary was the only mare that had produced two daughters, both of which were represented by two 2:15 performers. These two daughters were Grace, (dam of Daedalion 2:08½ and Creole 2:15, the last named sire of Javelin 2:08¼) and Lettie (dam of Welcome 2:10½ and Wayland W. 2:12½ sire of Bolivar 2:00¾, the fastest pacer ever bred on the Pacific Coast. Grace is also the great grandam of Sir Albert S. 2:03¾.

Daedalion was a good race horse and hut for an accident which prevented him from being trained would still farther have reduced his record. He has had little or no opportunity in the stud hut is a producer of standard speed. Both these stallions are standard and registered.

Mr. McKinley, who is the new owner of these horses, came to California a good many years ago as a young man and worked for a time for Mr. Stevenson, the breeder of Sir John S. who resided near Marysville, then entered the employ of the late D. E. Knight. He returned east however, and was in the employ of Mr. C. Williams, the owner of Allerton and Axtell. About a year ago he returned to California with an invalid brother and has resided for the past year in the mountains of Placer county. He expects to ship Diablo and Daedalion east within a few days. Diablo will doubtless be well patronized by the breeders of the Mississippi Valley, as besides being a grand individual he will be the only sire in that country whose dam is the mother of five 2:10 performers. Mated with the well bred mares to be found in the section where he will stand Diablo should sire a large number of 2:10 performers before his days of usefulness in the stud are over. He is one of the greatest stallions ever bred in California.

The Buffalo Horse World, commenting on the recent meeting at Ft. Erie, states the following: "The only drawback to the enjoyment of the horsemen during the meeting was the knowledge that Racing Secretary C. R. Bentley was too ill at his home in this city to see the successful fruition of the plans which he and his associates laid to give local horsemen in charge to see the Grand Circuit stars race here."

Vestale, hy Parole	2	2	3
Empire Queen, b. m. (Bron).....	4	4	2
Beauty Wright, h. m. (Chandler).....	3	3	4
Time—2:12½, 2:11¼, 2:10¾.

Time—2:19¼, 2:13½, 2:17½.			

Special—Pat Logan, ch. c. by Bert Logan, dam by Williamson's Beauty, to beat world's pacing record for two-year-olds, 2:07¾.

Time—33¼ 1:04¾, 1:36½, 2:09¾.

STOCKTON MATINEE RACES.

August 21.

First race, half mile, running:			
Butterfly (Renuecamp)	1		
Samar (Dugan)	2		
Wine Bell (D. Greening)	3		
Time—:52½.			

Second race, 2:40 class, trot or pace:			
Black Beauty (M. Friedberger).....	1	1	
Lloyd A. (Jere Aker)	2	4	
McRey (F. A. Murray).....	4	2	
Laura D. (Carroll)	3	3	
Time—2:41, 2:48.			

Third race, 2:20 class, trot:			
McDougall (Ernest Kemp)	1	1	
Linden Girl (Dan Lieginger).....	2	2	
Time—2:37, 2:29.			

Fourth race, free-for-all pace:			
Guy Vernon (W. H. Parker).....	1	1	
Blanche A. (J. Aker and D. Lieginger).....	2	2	
Time—2:18½, 2:15¼.			

Fifth race, 2:15 class, pace:			
Newport (Dan Morris)	3	2	1
Chappo (T. F. Donovan).....	1	4	3
Trix McAdrian (P. J. Chalmers).....	2	2	2
Bonnie W. (C. W. Nance).....	4	3	4
Time—2:16¼, 2:18½, 2:21½.			

Judges—Frank Lieginger, Arthur Cowell and Tom Carroll.

Starter—Frank Lieginger.

Timers—Charles Fagan and M. Madden.

August 28.

First race, half mile dash, running:			
Samar (D. Greening)	1		
Wine Bell (A. Renuecamp)	2		
Butterfly (G. Nevins)	3		
Time—:51.			

Second race, 2:40 class, mixed:			
Lloyd A. (Jere Aker)	1	1	
Black Beauty (M. Friedberger).....	2	3	
McRey (F. A. Murray).....	3	2	
Laura D. (T. Carroll)	4	4	
Time—2:40, 2:38.			

Third race, 2:15 class, mixed:			
Bonnie W. (Nance).....	1	3	1
Newport (Dan Morris)	4	1	2
Chappo (T. F. Donovan).....	3	1	4
McDougall (E. Kemp)	2	4	3
Time—2:21, 2:21½, 2:22.			

Fourth race, free-for-all pace:			
Guy Vernon (W. H. Parker).....	1	2	1
Blanche A. (D. Lieginger).....	2	1	2
Modesto Mac (Charles Helm).....	3	3	dr
Time—2:15½, 2:15½, 2:15½.			

Fifth race, 2:30 class trot:			
Gladys J. (C. Nance).....	1		
Linden Girl (D. Lieginger).....	2		
Time—2:32.			

TRAINER'S REPORT ON ABSORBINE.

"In regard to your ABSORBINE, will say I have used it most every way and for most all ailments and have always gotten good results. Would not be without it." This is what D. M. Lake, Trainer, London, Ohio, thinks about this remedy. ABSORBINE is an excellent preparation for treating Bog or Bone Spavin, Thoroughpin, Capped Hock, Rheumatism, Big Knees, Bruised Tendons, Inflammation and Swellings of all kinds. At druggists, \$2.00 a bottle, or sent direct upon receipt of price. Write for pamphlet giving detailed information how to treat various cases, sent free upon request. W. F. YOUNG, P. D. F., 54 Temple Street, Springfield, Mass.

NOTES AND NEWS

Jean Valjean (3) 2:10 pacing.

Bon Guy (3) 2:13½ trotting.

Both stake winners and by Bon Voyage.

Henry Helman has returned to California and it is said will locate at San Jose.

Lady Maud C. won a heat in 2:05 3-5 over the Des Moines half mile track last Saturday.

Denervo was second at Joliet this week, the fastest heat of the race in 2:06¼. Natban B. was the winner.

R. A. Strong, of Woodland, has purchased the young stallion Diablo Jr. and also the mare Edna R. 2:11¼ by Sidney.

The Bondsman, sire of the greatest of three-year-olds, Colorado E. 2:07¼, has been consigned to Old Glory sale in November.

Charley De Ryder is driving his horses in their races on the Great Western circuit, but his broken ankle is giving him a good deal of pain at times.

The Occident Stake at Sacramento next Monday should be a great race. The highly touted colt Donaham will make his first start of the year in this race.

In the American Trotting and Pacing Derby banters at Readville this year the scratch horses were up in front at the finish, a change from the races of the two years previous.

Adam G. 2:06¼ made his first start of the year at Galesburg, Illinois, last week and was third in each heat, getting third money. The race was a fast one, two of the heats being below 2:04.

Miss Stokes 2:19¼ as a yearling, by Peter the Great, worked a mile in 2:10 with the last half in 1:03 at Lexington one day last week. She promises to trot to a record below 2:10 this year as a two-year-old.

The average time made at Kalamazoo was 2:08.43; at Detroit, 2:09.11; at Cleveland, 2:07.62, and at Buffalo, 2:08.77. You have to have a horse sure of beating the average in order to win on the Grand Circuit.

McKinney 2:11¼ gets another producing son in Baron McKinney 2:10¼, sire of Fred De Forrest 2:22¼, pacing, and The Gleaner 2:21¼, trotting. Both are two-year-olds and made their records against time at the Cleveland meeting.

There were two new 2:10 performers on the first day of the Woodland meeting, both pacers—Iceman 2:10 and Chiquita 2:10, both of the Steinway breed. Iceman is by William Harold, a son of Steinway, and Chiquita by Diablo, a grandson of that horse.

James W. Marshall's mare Madeline by Demonio is now entitled to a place in the table of Great Brood Mares. She is the dam of two standard trotters. One, Zoblack by Zolock 2:05¼ took a time record of 2:24¼ at San Jose, and the other Zoblack by Zombro 2:11 a time record of 2:26 at Woodland.

H. S. Hogoboom gave his two-year-old colt trotter The Bulletin, a time record of 2:28½ the first day of the Woodland meeting. The colt is by Palo King and is out of a mare by Diablo. We believe Palo King is the only stallion on the coast that has had two two-year-olds to take standard records this year.

The three-year-old stake winner Jean Valjean 2:10 by Bon Voyage (3) 2:12¼, is out of the mare She 2:12½ by Abbotsford 2:19¼. This is a strictly trotting bred colt but he is smooth a pacer as one would want to see. He has paced a half in 1:01½ in a race and barring accidents will get a very low mark when he is fully matured.

Pat Logan, a two-year-old by Bert Logan 2:16¼, paced a mile at Galesburg, Illinois, last week in 2:09¼, in an attempt to lower the world's pacing record of 2:07¼ for two-year-old colts held by Directly. Bert Logan, the sire of Pat Logan, was bred by Dr. A. W. Boucher, now residing at Los Banos, and is by Colbert 2:07¼, dam Miss Logan 2:06¼.

Sam Norris, the well-known Santa Rosa horseman, has consigned twenty head of good, serviceable trotting-bred horses to the Fall Combination Sale to be held by Fred H. Chase & Co., at 478 Valencia street, San Francisco, on Wednesday, September 26th. These horses are just what is needed in this market, and Mr. Chase would like to secure about thirty head additional to make up a good sale. Horses that can be used are the ones in demand. If they are serviceable sound and will work at anything from pulling a business buggy to hauling a truck they will sell well. A few good roadsters will also bring good prices. If you have anything to sell write Fred H. Chase & Co. about it immediately.

It has taken the Woodland Stock Farm gelding Prince Lot quite a while to get into a winning stride but he has now won two good races and taken a record of 2:10¼.

There will be an extra fine exhibit of saddle horses at the California State Fair next week, the entry list for the saddle classes being the largest in the history of the society.

Dr. Treg is continuing his victorious procession through the Great Western Circuit. He won at Joliet Wednesday. The California trotter, The Angelus by Zombro was a close second.

Morris A., the sire of Choro Prince 2:10, is a registered horse. He was sired by Dictatus 2:17 and his dam Stella C. 2:30 by Director 2:17 is also dam of Edna R. 2:11¼.

The attendance at the Woodland meeting was very poor except on Friday when the Woodland merchants very kindly declared a half holiday and closed their places of business.

Sirius Pointer (2) 2:18 is said to be a 2:08 pacer right now and he was given an easy drive in his race with Jean Valjean at Woodland. He has no other engagements.

Geo. W. Ford of Santa Ana, has shipped his game race trotter Goldennut 2:11¼ north and will race him at Portland and Salem hitched to a new McMurray sulky that was purchased from W. J. Kenney last week.

Leftwich, the filly that won the \$15,000 Matron stake at New York last week is a daughter of Moko. Her dam is Miss Topic by Allie Wilkes, second dam by Nutwood, third dam by Cuyler, fourth dam by Clark Chief, fifth dam by Carr's Edwin Forrest.

L. Richardson, of this city, who is an expert photographer, took many pictures of the horses racing at San Jose and Woodland, the reproductions of finishes in those races which have appeared on the front page of this paper during the past three weeks being from photographs made by Mr. Richardson. Some of the pictures he secured at Woodland are the finest we have ever seen.

Possibly the smallest horse to take a standard record this year will be the bay filly Virginia Hill, whom H. C. Moody marked in 2:23¼ at the Blue Grass Fair, Lexington. She is but thirteen and one-half hands high, but is a good gaited, busy trotter and went her mile like a strictly game horse.

The Readville trainer, Henry Titer, is very much pleased with the trotting mare, Belle McKinney 2:24¼, by McKinney 2:11¼. He worked her two fairly good miles recently, in the first of which she went to the half in 1:10 and finished the mile in 2:15. The repeat was an evenly rated mile in 2:14.

The Inter-mountain Horse Breeders' Association has been organized at Ogden, Utah, for the purpose of advancing the breeding of draft horses. The association plans to create the American draft horse as distinctive from the various European breeds. It is likely that an expert will be employed to assist in putting the movement on foot.

Fred H. Chase & Co. will hold a combination sale Monday, September 26th. There is a big demand for useful horses and there will be plenty of buyers at this sale. About thirty head more are wanted. Broke horses that can pull a light wagon are the ones most wanted. A few good roadsters will sell well. Correspond with Mr. Chase at once. His address is 478 Valencia street, San Francisco.

Colorado E. won the American Horse Breeders' Futurity for three-year-olds at Readville last Wednesday in 2:06¼, 2:07¼. The first heat is a new world's record for a three-year-old trotter, and the two heats are the fastest ever trotted in a race by a three-year-old. Just before the race Mr. William Bradley of New York raised his previous offer of \$50,000 for Colorado E. to \$75,000, but Mr. Estabrook would not accept it.

The fastest heat ever trotted in an Occident Stake was the 2:13¼ made last year by El Volante, the handsome colt whose death this spring was a severe loss to the breeding interests of the State as he was probably the most intensely bred trotting colt that ever won the stake. He was by the great sire Zombro 2:11, was owned by Mr. C. A. Canfield of Los Angeles, and was driven in the race by Walter Maben.

Minor Heir made a race record of 2:00 at Galesburg on Thursday of last week. A brisk breeze was blowing, and the weather was unseasonably cool during the race, in which M. L. Hersey of Savage, Minn., drove Minor Heir to victory against Hedgewood Boy. The fastest quarter, the third, was covered in 29 seconds. The previous record of 2:00½ was held jointly by Minor Heir and Star Pointer. Hersey drove Dan Patch when that animal paced a mile against time in 1:55; but he declared that Thursday's drive was the greatest that he ever made, everything considered. He asserted that the wind made the track two seconds slow, and that the temperature was too low for the best work.

It was announced at Readville last Monday that William G. Bradley, millionaire owner of Ardmaer Farm, the home of Bingen 2:06¼, had offered August Uhlein \$75,000 for The Harvester 2:02, and Geo. H. Estabrook of Denver, \$40,000 for his three-year-old colt Colorado E. 2:07¼. The Harvester is the world's champion trotting stallion, and Colorado E. is the winner of the fastest three-year-old race ever trotted. Both made their records this year.

There is a very promising yearling down at Hemet Stock Farm. It is by Kinney Lou 2:07¼ dam Louise Carter (3) 2:24, by Chestnut Tom 2:15, second dam Ingar (dam of John A. McKerron 2:04¼, etc.), by Director 2:17. Besides being thus royally bred this colt has lots of natural speed as he has already shown a mile in 2:37½, the last half in 1:15, the last quarter in 36 seconds and the last eighth in 17¼ seconds. He is good headed and a fine individual. There are three other yearlings on the farm that can step a 2:40 gait.

During the afternoon of Friday last at Woodland, Charley Spencer, trainer for the Woodland Stock Farm, worked the handsome little trotting mare Nada three heats during the interims between the heats of the regular races. Nada trotted her miles in 2:14½, 2:13½ and 2:09 and acted like a high class trotting mare. Mr. Spencer shipped her north Sunday as she is engaged in several races on the Oregon and Washington circuit. Nada is by Nushagak, dam Addie W. dam of two in the list, by Whips 2:27½, second dam Addie, dam of Woodnut 2:16¼, etc., by Hambletonian Chief. She was consigned to the Pleasanton sale last spring by her owner, M. C. Keefer of Woodland, but he refused to let her go for the highest bid received—\$600.

The Ice Man 2:10 has quite a history. He was bred by I. D. Cunningham of Haywards, California, who also bred his half brother Directly 2:03¼, holder of the world's two-year-old pacing record of 2:07¼. The Ice Man is now eight years old. He is owned by Mr. M. J. Silveria of Vallejo, who has used him for all sorts of useful work. As a vaquero horse they say The Ice Man is a hard one to beat and he pulled a business buggy through the streets and over the hills of the navy yard town for several years. His record of 2:10 makes him the second 2:10 performer for William Harold 2:13¼ and also the second for the mare Mabel by Naubuc. He is a stallion and will be used in the stud next season.

One of the handsomest mares in America is Expedito, the three-year-old filly owned by Dr. E. J. Weldon of Sacramento and given a time record of 2:25 by William Ivey on Friday last at Woodland. Expedito can trot a mile better than 2:15 and has done it, and Dr. Weldon had her given a standard record just so that she should be in the list. She is a large dark bay filly, with grand bone, a beautiful silken coat, grand head and neck, round and well made all over. She would win ribbons in any show ring and is as kind and gentle as a kitten. Expedito is by Lijero, F. E. Wright's handsome trotting stallion and is a credit to that well bred son of James Madison 2:17¼.

Mr. P. H. McEvoy has consigned 11 head of trotting bred horses to the combination sale to be held by Fred H. Chase & Co. at 478 Valencia street, San Francisco, Monday, September 26th. Nine head of this consignment comprise two grandly bred mares and their produce. The mares are Derbacher and Nakarch, both bred at the famous Oakwood Park Stock Farm, Danville. Derbacher is by the Allerton stallion Geo. W. Archer, out of a mare by Charles Derby and her four foals by Mr. McEvoy's stallion Milbrae 2:16¼ show what sort of broodmare she is. These foals are a three-year-old, a two-year-old, a yearling and a suckling. The other mare is by Geo. W. Archer out of a sister to Owyhee 2:11, and her three-year-old, two-year-old and suckling are to be sold. Those who want good young horses should look over this consignment as all will stand inspection.

Mr. Geo. L. Warlow, of Fresno, who paid \$800 for the colt Black Hall 48645 at the Pleasanton sale last spring, is greatly pleased with the son of Ozono and Maggie Yeazer. Black Hall is one of the colts brought to California by Mr. Frank J. Kilpatrick and as a two-year-old was worked a little at the trot. After Mr. Warlow purchased him he concluded that Black Hall would make a better showing as a pacer than a trotter and as soon as he was shod for the lateral gait he went off into a smooth pace that was highly pleasing to his owner, although he would rather the colt would trot. However, if he takes a fast record at the pace it will not be surprising. Black Hall is one of the best bred colts ever bred on the famous Walnut Hall Farm in Kentucky and is a half brother to Walnut Hall 2:08¼, sire of the world's champion trotter The Harvester 2:02. The sire of Black Hall is by that great sire of futurity winners, Moko, and is out of a mare by the great sire of race horses Director. Mr. Warlow said he purchased Black Hall on his individuality and breeding, knowing that even though he never trotted or paced a mile in standard time, he would sire speed to a certainty because of his speed and race horse inheritance. It is very pleasant for him to find that he has a high rate of natural speed, even though it is at the pace, and the colt will be developed. Black Hall has been bred to some very excellent mares this year.

The Woodland Meeting.

Four days of excellent racing were given at the Yolo County Fair held at Woodland last week. The entire program was made up of trotting and pacing events, and while high-class contests were hardly expected as the majority of the leading stables shipped to Portland from San Jose and did not enter at Woodland, fast time and close contests were the rule every day, and some of the best racing ever seen in California resulted. The track was in superb condition and many records were made and reduced.

On the opening day Det Bigelow's two-year-old filly won the Canfield & Clark stake in straight heats, beating the Fresno colt Matawan that had won the Breeders' Futurity two weeks previous. Matawan was claimed to be a little out of condition, but the filly trotted a splendid race and took a record of 2:20 in the first heat.

The 2:20 pace this day went to five heats and under the rule was awarded to The Ice Man. The first heat of this race was by common consent conceded to Chiquito, the son of Diablo, driven by Lon Daniels. He won it in 2:10, but The Ice Man got the next two in 2:10 and 2:10½. Chiquita and The Ice Man were then rather tired and Farmer Bunch landed T. D. W. in front the next two heats in 2:19 and 2:15. As the money was awarded under the rule at the end of five heats The Ice Man got first money, T. D. W. second and Chiquito third.

A race for horses owned by members of the Woodland Driving Club ended the program of the day. A. C. Stevens' pacer Billy M. took the first heat in 2:18 but Bigelow's Meridian Mac got the next two easily in faster time.

There was some sensational racing on the second day of the meeting. The first event was a purse race for two-year-old pacers, and when the drivers were told that the new rules of 1910 barred hoppers on two-year-olds there was surprise and chagrin on the face of each one. They took off the extra harness, however, and drove carefully, the horsemen who saw the race expressing the opinion that it was a better race than it would have been had the straps been permitted, although the time was slower. Victor Pointer won the race in 2:32½ and 2:30.

The 2:20 class trot had six starters and was won by Prince Lot. The Prince Ansel gelding trotted three heats in 2:11½, 2:10½ and 2:10½, and could have gone faster had it been necessary. There was considerable criticism of the starter in this race, owing to the fact that the mare Tell Tale was sent away twice when she was not on her stride. Mr. Wright, the starter, is the owner of Lijero, a starter in the race, but he had offered to withdraw and let some other person do the starting. All the drivers had expressed their willingness to have Mr. Wright start, however, and it was evidently his effort to see that Lijero was not given any the best of it that caused him to overlook Tell Tale and give her a poor send-off. In the third heat of the race the stallion All Style made a great bid for the heat, but went to a break in the stretch and lost all chance to win.

The sensational performance of the day was that of the Bon Voyage three-year-old pacer Jean Valjean in the California Breeders' Stake. It will be remembered that this colt got a bad send-off in the Breeders' Futurity at San Jose, which his trainer and driver, Ted Hayes, claimed lost him the race. Mr. Hayes' claim was given pretty strong support when Jean Valjean stepped his three heats at Woodland in 2:10, 2:10½ and 2:11, winning the race and first, third and fourth money, second money going to the only other contestant, Sirius Pointer. Jean Valjean is out of the good race mare She 2:12½ by Ahotsford.

On Friday, the third day of the meeting, the program opened with the Canfield Stake for two-year-old pacers. There being but one starter, Laura Rodgers by Prince Ansel, she walked over for the money paid in, and Charley Spencer sent her along to show that she had speed. She made the mile in 2:15½.

Then came the chief event of the meeting, the California Breeders' Stake for three-year-old trotters. It was worth \$1635, divided into four moneys and there were four starters—Strathboul, winner of the Breeders' Futurity at San Jose, Pal, Sweet Bow and Bon Guy, the last two being by Bon Voyage. On his showing at San Jose Strathboul was picked by the talent as the certain winner of this race, but though he was in good shape and tried his best he was out-trotted by W. E. Detel's colt Bon Guy, ably driven by Jos. Twohig. The race was really between these two, Pal and Sweet Bow being several lengths back at the finish of each heat. Bon Guy trotted every step of the way in all three heats while Strathboul went to several breaks in which he did not lose much. After the word was given in each heat Strathboul would indulge in rather wild galloping for the first sixteenth of a mile, but would get settled by the time the back stretch was reached and tried hard to win, but the little Bon Voyage colt would not be denied and, sticking to his gait, trotted like a demon from wire to wire. The time of the three heats is the fastest ever seen in a three-year-old race in this State. Who Is It, holder of the three-year-old State race record of 2:12 for a three-year-old made it in a two-heat race where the time was 2:16½, 2:12. North Star won the Breeders' Futurity of 1905 in 2:13½, 2:13½ and 2:16. El Volante won the Occident Stake of 1909 in 2:14½, 2:13½ and 2:14. These were the California race records for three-year-old trotters until Bon Guy won his race at Woodland last Friday

in 2:13½, 2:13½ and 2:13½, the fastest three heats trotted by a three-year-old in this State. Sweet Bow showed the greatest amount of speed in this race, rushing out in front in the first heat, leading to the quarter pole in 32½ seconds, to the half in 1:04 and to the three-quarters in 1:38½, but she finished last, the pace being too much for her. Bon Guy is by the great colt trotter Bon Voyage (3) 2:12½, his dam is La Moscova, dam of Yolanda 2:14½, by Guy Wilkes, second dam Muscova 2:28½, dam of Mamie R. (3) 2:15½ and Oro Belmont 2:15½, by Belmont 64, third dam Mosa, dam of 5, by Woodford Mamhrino, fourth dam Hermosa, dam of Hermes 2:27½, by Edwin Forrest, fifth dam by Tom Teemer. Bon Guy is not a large colt but he is one of the best formed and best gaited trotters ever seen in any of the stake races. He is entered in the Occident and Stanford Stakes to be trotted at Sacramento on Monday and Saturday of next week respectively.

The next event was the 2:15 class pace with five starters. The race went to five heats. The first heat, like the 2:20 pace of Wednesday, was conceded to the Chico horse Chiquito, and he won it in 2:10½, there not being much of an effort made by any other horse except T. D. W. to head him at the finish. Little Dick went after the second heat and won it in the fastest time of the meeting—2:09½. This was a rather hard heat for Little Dick as he was driven from the half mile pole to the finish for all he was worth, and when Verhila tried to do the same thing with him in the next heat the Dictatus gelding could not last to the wire and Choro Prince, that had evidently laid up the two previous heats, came on and won handily in 2:10½, then took the next two in 2:10 and 2:14. Choro Prince is by Morris A., a son of Dictatus. At San Jose he was started without hoppers and failed to make much of a showing, but with the straps he is a good race horse, with a very high rate of speed, a good actor and game.

A matinee race for members of the Woodland Driving Club closed the day's program. Charley Marley's black colt Sir Poleon by Nushagak won it easily.

On Saturday, the last day of the meeting, three good races were on the card. It opened with the Canfield Stake for two-year-old trotters, worth \$722. Matawan, Dorothy Ansel and Zorankin met again in this race, with a fourth starter in Luna M., driven by Frank Williams. Matawan was himself when this race was called, while Dorothy Ansel showed up a little lame. Matawan won the race in straight heats in slower time than the race wherein he was beaten on Wednesday. Dorothy Ansel and Zorankin, a colt that will be heard from next year, divided second and third moneys in this race, Luna M. getting fourth. Four horses came out for the 2:24 class trot, which was an easy race for the Stam B. colt All Style, who won three heats handily, the fastest in 2:17.

There was much interest in the driving club race which ended the four days' program. Wild Bell, owned by Frank Ruhstaller of Sacramento; Katalina, owned by W. J. Miller of Chico; Reina Directum, the property of S. Christenson of San Francisco, and Joe Brown, owned by A. B. Rodman of Woodland, were the starters. The three first named are trotters and Joe Brown a pacer. It was expected that Reina Directum would either trot a mile in 2:10 or compel the horse that heat her to trot faster, but she was in a car nearly 48 hours in being shipped from San Jose to Woodland and landed at the track a sick mare. Mr. Christenson started her against his own convictions, and she failed to come up to her stadium or San Jose form. The race went to Wild Bell in straight heats in 2:12½, 2:11½ and 2:13, a good race for club horses.

The racing during the week was all good, and the time made very creditable. Three new 2:10 performers entered that list during the meeting. The officials who occupied the stand during the four days were:

Judges—J. W. Marshall, Dixon; T. B. Gibson, Woodland; J. L. Scott, Woodland; W. B. Miller, Chico.

Timers—J. L. Harlan, Woodland; Dr. D. F. Herspring, Woodland; J. A. Murray, Woodland; A. C. Stevens, Woodland.

Starter—F. E. Wright, Sacramento. Clerk—Geo. B. Kelley, San Francisco.

Official Summaries Woodland Races.

ANSWERS TO CORRESPONDENTS.

D. A. Allen, Los Banos.—The mare you refer to is probably Hester Diablo. She was bred by Mr. R. P. M. Greeley of Oakland, California, and sold by him to Mr. James Grove, formerly owner of the Lawrence Stock Farm, near San Jose. Hester Diablo is by Diablo 2:09½, dam Winnie Wilkes 2:17½ pacing by Rey Wilkes, son of Mamhrino Wilkes, second dam Pet by Cresco 4908, third dam Toppy by Gen. Taylor. She has no record.

Lou Billings (3) 2:11½, the daughter of John A. McKerron 2:04½ and Lou Dillon 1:58½, is still in charge of Johnny Dickerson and according to present plans will start for a reduced record at the Syracuse, N. Y., meeting during the week of September 12th, after which she will be retired until 1912, as her owner, Mr. Billings, has great hopes of her proving equally as fast as her famous mother and intends affording her every advantage.

ROD, GUN AND KENNEL

CONDUCTED BY J. X. DeWITT.

GROUSE MEADOW—A REMOTE SIERRA VALE.

To men, who go to the mountains, the mention of a place, remote, inaccessible and unvisited, is both an invitation and an inspiration. For six months we had discussed Grouse Meadow, not the Grouse Meadow that you know, but that unique and charming plateau, hemmed in by sheer walls of granite, which lies on the Middle Fork of the Kings, five miles, in an air line north of where Cartridge Creek cascades into the river, writes J. P. Bernhard in the Fresno Republican. To the best of our knowledge it has been visited by two parties from this side of the Sierras, and they are far-famed pioneers in mountaineering. If it were possible to go up the river, the meadow could be reached in a few hours, but the only way of approach is to follow the three sides of a parallelogram of which the river is the fourth side. It took us four days to make this trip, during three of which we scrambled over a rough, steep and rocky country, without trail, monument or blaze.

We traveled by train to Visalia, from there to Lemon Cove by electric car, and then a day and a half's staging over poor and dusty roads brought us to Quail Flat, whence we went by saddle animals to Kings river canyon. Reaching the floor of the canyon at dusk, the last seven miles were made in the dark. One could just see the moving shadow of his horse's head. There was no other course but to put your trust in your steed and give him free rein. The shadows of the tree trunks and boulders loomed threateningly. The rapid rushing river often seemed dangerously near. We forded streams whose foaming waters and white rocks glowed like phosphorus. We slipped suddenly into wooded tunnels so dark that you could not see the trees whose branches brushed your head. It was a wild, weird journey through a wonderland of invisible influences and magical possibilities.

In the canyon we met Mr. J. N. LeConte, the "Map Maker of the Sierras," and he kindly drew for us a rough sketch of the country beyond the trails, which we found a great aid in the first part of our journey into the rough country. That evening we took supper with the Sierra Club. The clothes worn by the different members of the club were strange and startling. There was a miscellaneous array of motley costumes. Such combinations as African helmets and felt slippers, black hats and tennis shoes, bathing suits and patent pumps were frequent. Garments of wonderful hues were thrown together regardless of harmony and reckless of result. One lady was most attractive in a cardinal shirt just like the volunteer firemen in our town wear. The Chinese attendants showed the effect of this sartorial association by appearing in straw hats and overalls. It was a sight that no "hard-time" social or masquerade could surpass.

After supper the ladies gave an original play in which the actors impersonated animals as in the Chantecler. It was well written and well acted. The setting was ideal. The stage was an immense rock; the footlights, a pinecone fire; the scenery, a grove of oaks and pines, and the roof, the starry sky. All the animals of the forest were arrayed in very ingenious costumes, even to the snake who had as rattles a cluster of fruit cans. The animals recite their wrongs against the Sierra Club and plan to get rid of them. All seems hopeless, until at last man hemmed in by the restrictions of sleeping bags and feminine society, declares that he will return to Berkeley, where he can in his own room at last pull his trousers on while standing up.

The next day, with our regular equipment of four pack animals, we climbed steadily up 5400 feet to Granite Basin. Three years ago we here found an abundance of snow, this year there was none, this great bare bowl of solid granite seemed harsher than ever. At this camp we began to become acquainted with our packer, Frank Thomas, who in the trying days that followed, proved to be cool, even-tempered, and courageous, undaunted by hardships and unconquered by obstacles and difficulties. It was he who discovered the remains of Kenneth Archibald, who was lost two years ago near Ray Lake. He found, between two immense boulders, the trousers, a few finger bones, eyelets of shoes, six teeth, watch, a purse with \$19.40, a bandana handkerchief and dairy. At the time this young man was lost, a reward of \$2000 was offered for the recovery of the body, but all efforts proved useless, and now, after two years, the retreating snow solves the manner of a puzzling disappearance.

Our next camp was at Dougherty Meadow, and early the next forenoon, from the top of the hill, we saw the beautiful Middle Fork, with its turrets and domes scarred and colored. At Simpson Meadow we had our first trout and killed our first snake. We had now been out a week, and the country so far was familiar. We still felt hampered by civilization, but realized that in a short time we should be into the unknown country. Sitting on a log facing Tunemah Mountain, famous for its roughness and its history of death to horses, last night black and fearful this morning, gray and cruel, and yet possessing trails and monuments, we wondered what this country which we were seeking beyond the trails, held for us.

The trail to Fiske Cabin proved unexpectedly easy. A log across Cartridge creek looked slight and the torrent terrible, so we held to a branch as we walked it. On our return ten days later, we had so changed, that the log looked safe as a bridge; the terrible torrent a ditch, and we sort of two-stepped across.

That was an ideal camp. Climate was perfect, fishing good, wood plentiful, and a near-by spring provided clear, cold water. This cabin, constructed of logs, was built many years ago for mining purposes. It possesses a window and a grand fire-place. Framed in the bark of a cedar tree just outside the door, and so protected from the wind, rain and snow, is the photograph of a woman, a subject of surprise and speculation for all who pass that way.

Just below Triple Falls on Cartridge Creek we left all trails and signs of man, and breaking through a heavy wood of willows, seemed screened from all the world. Up the mountain we made our way over talus and brush as best we could. This was slow work as the way had to be prospected, prepared and marked before we could go on. From where we camped we had a magnificent view of the Canyon of the Middle Fork. Tunemah and Woodworth showed gray, green and orange in the soft light of parting day, while their tops were veiled in clouds of fleecy whiteness.

At Triple Falls we had cached all of our canned goods, amounting to some fifty pounds. Realizing that our load must be lightened still more, we reduced ourselves to the actual necessities. Our culinary equipment now inventoried as follows: One frying pan, one stew pan, one Dutch oven, one coffee pot, one tin plate, one butcher knife, and one tablespoon, in addition there was a cup and spoon for each individual. Out of this cup we ate our stewed fruit, mush, bacon, hot cakes and coffee.

The going now was slow and difficult. We traveled over immense piles of talus, sharp and slippery, through brush so thick that closing in behind the pack animal it hid him from the view of the person following close behind. The way was steep, rocky and hard. In two weeks, thick walking shoes, protected by hob nails, were worn out. The nails were pulled out or worn even with the leather so that our footing was neither secure nor comfortable. To add to our discomfort, the wood-rats ate our leather shoe strings from the shoes placed under our heads. In some camps it was hard to find enough clear space to lay our beds. At one place we had a bed of boughs but it was so poorly made, that it was as comfortable as a net work of ball bats and rake handles.

The next day will always be remembered. Starting early, we climbed along a comparatively easy ascent for several hours, and then a mighty struggle up a precipitous rise of loose small rocks brought us to Observation Pass at an altitude of 11,500 feet. On the other side was an immense snow-field dropping some 1500 feet in the distance of a mile. It was old snow, almost ice. Trail was dug in the steepest parts with ax, pick and shovel. Waiting until 2 o'clock, when the snow was softest, we zigzagged the pack-trail safely down. Then we got into talus—broken rocks of all sizes and shapes, sharp as glass, hard as flint, loose and shifting. In it were immense holes which had to be filled. We built trail for 200 feet by throwing rocks into the holes, the entire party worked rapidly and steadily for several hours before we dared risk taking our animals over.

After a couple of hours of rough going the next morning we landed on a wooded slope, through which we slipped gradually down into Palisade Valley. Palisade Creek is a beautiful stream rising in the Palisades and emptying into the Middle Fork. For about five miles an undefined meadow follows this stream through thickets of yellow pine, willows, aspens, manzanitas and tamaracks, walled in on every side by rough and jagged peaks. This scene of green was a welcome relief to the eyes after the glare of the granite and the blinding brightness of the snow.

Grouse Meadow, large, level, free of trees and brush, lies shut in by high precipitous walls. At the head the river comes dashing down over the rocks with eternal foam and unabated roar, but in the valley its clear waters flow slowly in serpentine course through the high grass tinged with the yellow of early autumn and sprinkled with a goldenrod and other flowers. It is a beautiful meadow whose charin is intensified by its seclusiveness and exclusiveness. Deer abound, and it was here we procured the venison which was a necessary and welcome addition to our food supply.

One bright, still morning, I sat for a long time in the meadow grass along the river bank watching the water ouzels. Two young ones perched on a rock in midstream, chirping and bowing up and down, waiting to be fed. The older birds dive into the stream to procure the food. Chunky built, thickly feathered like a water fowl, but without webbed feet, they bowed up and down continually with all the activity of a dancing bird.

George Congrave climbing one of the ravines for deer, fell and punctured his corduroys and incidentally his leg. Fortunately, there was a horse doctor at hand. By the light of the blazing bonfire he washed and dressed the wound, treating it with brandy which he happened to find among our medical supplies, tell-

ing us at the same time of the remarkable success he had had with his last patient, a horse with a broken leg. The treatment was effective, suitable and appropriate, for the patient was soon able to walk without inconvenience.

On the return trip we found that the snow had melted at both ends of our recently built trails, and we were compelled to do considerable work filling in these places. It was at this spot that we nearly lost one of our animals. The donkey slipped, fell into a hole and in trying to recover himself, firmly fixed his hind leg into a crevice between two enormous boulders. For an hour and a half four men worked hard to free that animal. We all felt blue and the case seemed hopeless. It looked as if we would be compelled to kill him. Finally by turning the animal entirely over, and taking all sorts of chances, and pulling with a united effort, he was released, and we were happy.

At this night's camp, one of our number claiming to be versed in sanitary and scientific cooking, volunteered to stew some dried apples. He filled the stew pan, but in a short time its lid was forced off by the swelling fruit. He then transferred them to the Dutch-oven, but even its capacity and heavy cover could not withstand the raise. As we had caked out bath-tub, it became necessary to fill all of our utensils with dried apples, giving a supply of that commodity against which even mountain appetites proved helpless.

On reaching Kings river canyon, we were able to procure but one saddle horse, so three of us walked to Hume by the lower trail, reaching there at 4 p. m., three hours before the riders. At the beginning of our vacation to have made this trip in two days would have tried us, but now we reeled off mile after mile at a good pace, climbed 4000 feet high, dropped 4000 feet down, and then climbed up again, and next morning felt fit to repeat. The canyon side of Boulder Creek was dry and parched and looked more like a lower foot-hill than a place of its altitude and situation and scattered all along the side was a cactus plant resembling yucca. During the latter part of this day's trip we passed through Sequoia Grove, where the wonderfully beautiful giant trees, never common, rearing their crests high into the heavens, stand as one of the greatest creations of nature.

The question has been frequently asked, "Is such a hard trip worth while and do you really enjoy it?" I can only answer thus: To the mountain man there is a charm irresistible and unexplained in the pure, clear air, the cold, sparkling water, the clean, green grass, the pretty flowers, the odor of the trees, the mighty cliffs and the wonderful coloring. To have observed the work of the mighty forces of nature, constructive and destructive; what they have done, are doing, and have to do; to have seen Triple Falls; to have beheld at close range the jagged Peaks of the Palisades; to have crossed Observation Pass, with its slippery snow and treacherous talus; to have known the charm of Palisade Valley and view Grouse Meadow, placed like an emerald in a setting of granite gray is an ample reward for any human effort. When standing on the last hill guarding the entrance to the mountains, you dimly see the plains far below obscured by dust and smoke, you realize what the mountains mean to you. Conquest is sweet. To go where no men are, and few have been, is a triumph, and the hardships endured, the disappointments suffered, the difficulties encountered, all now vanished, become happy remembrances.

THE ROMANCE OF THE FUR TRADE.

The history of the lady's fur coat is, if one thinks of it, full of strange contracts. A wild creature of the Canadian forests, a silent Indian trapper and his wife, a lone H. B. Co. trader, the half-breed paddlers of a "north" canoe, the hands of the Hunsdon Bay steamer in the ice-floes of Ungava, the employees of a British railway company, the operatives of a London furrier—all these may have played a part in the making of the coat before it can appear in the window of a shop. The fur trade is one of the few departments of modern business about which there still lingers the odor of romance. Other trades have been revolutionized by nineteenth century science, it has remained, almost alone, primitive in its methods. Since the day when "The Honorable Company of Adventurers Trading in Hudson's Bay" was founded by Prince Rupert, it has hardly changed at all. In unimportant details it may have altered, perhaps. The trade-mark of a famous Pittsburgh steel works may now be stamped upon the Indian's traps; and the legend "Made in Germany" may now adorn the barter that is given for the furs, but these slight innovations have the force of bald anachronisms. They stand out sharply from the surroundings into which they are intruded; and they merely serve to show by contrast how primitive these are.

The life of the bush is a closed book to most people. A great deal has been written about the life of the wild animals that furnish the fur; but very little has been written about the life of the traders and trappers, who collect it, though the latter is a subject full of the most romantic interest. The life of the bush often appears on the surface one of bitter trial and hardship.

The Indian trapper often goes through trials and hardships that would crush another man. He goes off in the autumn to his winter's hunting grounds with a single small canoe; he sleeps all winter in a bark tepee or in a canvas tent, when he does not roll up in his rabbit-skin in the snow; he travels through the bush when the mercury is frozen in the glass, snow-shoeing, with his pack upon his back, and his rifle on his arm, through windfall and

through tangled swamp, and worst of all, through perilous hurnt hush, where a wilderness of cbarred poles sways in the wind like the masts of countless ships. Comfort is a thing he knows not. He lives on pork and beans, and flour and tea. His clothes he never changes, night or day. His only remedy for all the ills that flesh is heir to, is a drink of burning "Painkiller." He lives and dies in debt, and would not become solvent if he could. A good winter may bring him in £100, a bad winter £10. On the whole, his life is that of Hobb's natural man, "nasty, poor, mean, brutish, and short." But on the other hand, he is quite content. He does not feel the need of comfort or a balance in the bank; and he has a stoical and philosophic calm that enables him to take with equal mind whatever the gods may send. He can always get, he argues, credit with the traders. Why, then, should he take thought for the morrow, what he should eat, or what he should put on?

The trader's lot seems even harder, because he has as a rule, known better things. The Hudson Bay Company traders are, with a curious unanimity, sons of the "land of wild heath and shaggy wood." The story is told of one poetic minded trader who, among other snatches, would recite with no small amount of feeling:

"From the dim shieling of the misty island

Mountains divide us, and a world of seas;

But still our hearts are true, our hearts are Highland,

And we in dreams behold the Hebrides."

This trader was a Scot who had come out to Hudson's Bay when a young man, and had married an Algonquin wife, of whom he had a family of little Indians who lapsed in broken Scotch, when they condescended to speak English at all. He lived at his trading-post from January to January, receiving letters from the outside world once or twice a year, and seeing white men hardly oftener. Another of the verses he frequently repeated was:

"O solitude, where are the charms

That sages have seen in thy face?

Better dwell in the midst of alarms

Than dwell in this horrible place."

And yet himself was the first to confess that anyone who had tasted the life of the hush, could not go back to another. "Once a Hudson Bay man," he said, "always a Hudson Bay man."

There is a fatal fascination about the free life of the forest that claims a man captive. Such a one had heard the call of the world. To ply the paddle, to shoot the wild duck, to hit the trail across the virgin hush, to sleep beneath the stars, to breathe the scent of cedar or of pine—these things are life to him whose blood has caught the fever.

The labors of the traders are not arduous. They have to sell the trappers their outfits in the autumn; and they harter for the peltries in the spring. They have to sort the peltries that they buy, and transport them by canoe or dog-train to the nearest railway or steamboat wharf; and there their duties end. The only time when they have cause for worry is when they have to meet with opposition. Then they have to fight for very life. When the Northwest Company set up against the Hudson Bay men in the beginning of last century there was a bitter fight, in which trading-posts were burned, and men were kidnapped, and often blood was spilt. The methods of warfare now adopted are those of commercial aggression, and they are directed mainly against what are called "free traders"—free-lances who set up beside the H. B. Co. posts, and try to win the company's Indians over. Many a thrilling tale might be told of the bitter commercial fights between the "Great Company" and the lonely "free-traders" in the heart of the forest primeval. One such fight took place a couple of years ago at what, for caution's sake may he called Ghost River. A low, illiterate Dutchman set up in opposition to the H. B. Co. post, and made a bid for the fur trade of the district. He cut rates, and made loans, and dispensed whisky, and married a chief's daughter, with the acumen of an un-to-date programmer trying to break a slate. And though he did not manage to make good his footing, he gave the factor at the post a most uncomfortable time, and made that easy-going man hestir himself in earnest. The story of that fight, enacted against the background of the wild primeval bush, is only typical of what is going on, here and there, all over Northern Canada.

Such is the life of the traders and trappers. The rest of the story of the fur is simple and easily told. Early in June, when the pelts have been gathered and sorted and cured, the great six-fathom canoes are hrought down to the water, and loaded with their precious freight. The "packers" (as the Indians are called) step in and man the thwarts. In procession the canoes stream out across the lake. With gaudy handkerchiefs the Indian village waves a last farewell, and the fur brigade disappears around the bend.

The furs are shipped at Hudson's Bay on to the H. B. Co. steamer, which makes an annual passage through the ice-floes of the northern channels to the far-off shores of England. And when the furs reach England, in the workshops of the furrier, they are made into all kinds of furry garments, to keep warm a sheltered race.

The sport must be good in Monterey county. Two Salinas sportsmen, Sam Beever and Chas. Munch recently hagged three hucks near Jamesburg. One buck, a seven-pointer, weighing 224½ pounds, will probably stand as the record for this season. The other huck tipped the scales at 174 pounds dressed. A "spike" huck filled out what is the best tally on venison reported so far this season.

Drink Jackson's Napa Soda.

ECHOES FROM THE NORTHWEST.

[By August Wolf]

Acting Commissioner Dunlap of the Federal Bureau of Fisheries, has advised Charles Litchfield, chairman of the ways and means committee for fish protection, of the Spokane Chamber of Commerce, that a biological survey of the lakes and rivers in the Inland Empire will be made under the direction of the department, probably before the close of the year.

Mr. Dunlap has sent the following letter to Mr. Litchfield in response to a request for the survey:

"The receipt is acknowledged of your letter of July 23. It is noted that your desire to have an expert sent to the Spokane country for the purpose of making such a physical and biological survey of the streams and lakes of the region as would result in the acquirement of the data necessary to determine the character of fish culture work which would be most desirable in that region, such as the introduction of additional species, elimination or reduction of objectional species, increase of proper fish food and kindred problems.

"This is just such an investigation as should be made in any region in order that contemplated fish culture work may be done in rational and effective manner. The bureau feels particularly interested in the Spokane region, and will be very glad indeed at the first opportunity to make the investigation which you suggest.

"Your kind and generous offer to co-operate with the bureau to the extent of furnishing the necessary funds for the field work is highly appreciated and will enable the bureau to make a much more thorough and comprehensive survey than would otherwise be possible with the funds provided by congress.

"The commissioner is now in Europe, immediately upon his return, which will be within the next six weeks, this matter will be called to his attention, and you will be advised as to when the investigation can be made."

Mr. Litchfield said in an interview in outlining the plan of the chamber of commerce:

"The purpose of this survey by the government is to ascertain what, if anything, of an offensive character there is in the waters of the streams and lakes of eastern Washington and Oregon, northern Idaho and western Montana, so that it may be removed; what the water may lack in the way of vegetable matter; what small fish are necessary to support the larger fish; what fish should be stocked in what hodies of water, according to the varying temperatures; what streams should be screened to prevent fish going heyong a certain point; what effect on our waters the sawmills and sewerage systems are having, and what we may lack in the way of legislation to protect our fish."

Victor G. Bergimen, graduate of Harvard and son of wealthy parents in Ohio, and trapper and rancher in central Idaho by choice, missing from his home camp on Mallard creek, southeast of Spokane, since March 7, was found in a cabin in the Bitter Root mountains on April 29, by Gardner E. Porter, forest ranger, and Clyde Moses, at the head of a rescue party sent out early in April.

Stricken with rheumatism at the end of his trap line in the foot-hills, 120 miles from Red river, he had sought shelter in the shack, where he was helpless and down to the last scraps of his provisions when the rescuers came upon him after a search of four weeks. It was feared for a time that Porter and Moses, too, were lost. Ed Hahinson was forming a relief party when word was received from Moses that the search had been successful.

Moses, on his return to Red River, reported that Bergimen was within the shadow of death when the party found him. He was so ill he could not be moved. Provisions were found by Porter and Moses in another cabin owned by the trapper. Porter remained with him until he was moved to his home.

Though possessed of an education that would enable him to take up almost any line of work, Bergimen finds more pleasure in the hills, studying the animals and flowers. He is one of the most successful trappers in central Idaho, and never a spring goes by that he does not bring out from his quarters on Mallard creek the highest lot of valuable furs sent out from that part of the State. Trapping, however, is not his only means of livelihood. He has one of the best ranches in the country, carrying blooded stock, and every season he turns off from 35 to 50 head of the fat cattle. His home proves that one does not have to live the typical life of a hermit even though far from the railway and civilization. He has a camera and a phonograph and on days when he is not working on his farm he may be out taking pictures of scenery or wild animals that come to his door.

He runs a trap line and photographs wild birds and animals for pastime, deriving a good revenue from his furs and pictures. Two black fox pelts were sold by him in the London market for \$1500 in 1909. It is said that elk feed with his cattle on the ranch, protected by him from hunting parties.

Bergimen is wealthy enough to gratify every whim and he is known far and near for his kindly hospitality. No one has ever gone to his place without being invited to partake of the best the ranch and mrrkets afforded and every visitor has taken with him a little souvenir as a reminder of the soft spoken, genial middle-aged man who was his host.

The misfortune to Bergimen recalls many of the trying experiences the hardy trappers are compelled

to undergo at times. It is not uncommon for rescue parties to be organized in little places in the mountains of central Idaho to search for trappers whose return is long past due.

The trap line is fraught with danger. A broken snowshoe may lead to death or the attempt to dispatch one of the larger animals caught in a trap may prove fatal, for the real trapper never shoots an animal caught in a trap. The falling of trees is another danger to the man alone in the hills. This may not result in instant death, but a tree falling on a man to render him helpless would hold him until he freezes or dies of starvation. Cases of snow-blindness are common in the spring, but trappers are generally always prepared for this emergency.

Elk City is the center for a dozen or more trappers and the bond of fellowship between them and the townspeople is so strong that when it is learned a trapper is missing, no time is lost in organizing a rescue party and starting over the hills to find him.

THE ANGLER.

There is no commercial side to angling. It is a dignified, gentle sport, generally indulged in by those who love the woods and the waters and who enjoy a day with rod and line without regard to the size of the catch.

Poets, artists, and naturalists are horn anglers, and the nature lover who takes to the woods for health and recreation soon becomes an ardent angler. The song of the reel, the dainty swish of the line, the graceful curves of the leader as the flies hover for an instant over the clear, cool stream and then light as delicately as a zephyr-carried roseleaf on the surface of the water, when, if the cast is successful, there comes a dash and a whirl, and the fight is on, the world is forgotten, every care and ill vanishes; brain, eye, nerve and skill all combine to land the prize. Sport! It is of all the sports the most refined and artistic. Health giving, joy bringing sport, in which no element of cruelty, no bloody slaughter, no evil thought or action has a place. Truly, angling is the gentle art, and it is small wonder that its devotees number millions of the best people in this workaday world.

Walton tells of the angling exploits of Marc Anthony and Cleopatra, and Sir Humphrey Davy declares Trajan an angler. Plutarch's account of Anthony's fishing, and description of the numerous paintings on the walls of the houses at Pompeii, and Oppian's hook on fishing are conclusive. Fly fishing is first mentioned by Aelian, who flourished A. D. 226. He also describes a species of trout and the manner of dressing an artificial fly. While many modern writers have supposed fly fishing to be a comparatively modern invention, Stephen Oliver's "Fly Fishing" cites many proofs of the great antiquity of the art.

Among those who never tired of saying bitter things about angling and anglers was Dr. Johnson who is recorded as having said of fly fishing: "A rod and line with a fly at one end and a fool at the other." The doctor, however, made amends to the fraternity later when he induced the Rev. Moses Brown, in 1750, to publish an edition of "Walton and Cotton's Complete Angler," which had been many years out of print. Wolcott, better known as Peter Pindar, in his "Ballade to a Fish of the Brooke," thus sings:

Enjoy thy streame, O harmless fish,
And when an angler for his dish,
Through gluttony's vile sin,
Attempts—a wretch—to pull thee out,
God give the strength, O gentle trout,
To pull the raskall in.

Byron, in a fit of spleen, said of good old Walton: The quaint, old, cruel coxcomb in his gullet
Should have a hook and a small trout to pull it.

"The call of the wild" that comes to every man and woman who has once tasted the joys of the great forests, the camp and the chase is stronger than that of every other claim on our time and leisure—so strong that those who have been must go again and are sure of returning stronger and better able to take up the battle of life, sweetened with the memory of a flirtation with Dame Nature in her own drawing room.

Buffaloes in Canada.—We quote from an exchange:

"The largest herd of buffalo in the world is owned by Canada. They roam over the new national reserve set apart for them near Wainwright, one of the advancing towns on the Grand Trunk Pacific, 125 miles east from Edmonton. It is only within the past summer that Canada on the north has wrested from the United States the honor of having the most representative herd of this distinctively North American animal, which is rapidly disappearing. The Dominion Government recognized the need of action if the bison were to be preserved, and purchased practically the entire herd of 600 or 700 from Michael Pahl of Montana. Their "stamping-ground" covers an area of 107,000 acres—165 square miles. A wire fence eight feet high and 73 miles long encloses it."

And when the animals take the notion that their "stamping-ground" is too limited that eight-foot fence will be knocked into smithereens in jig time.

Marysville sportsmen complain of a scarcity of doves in that vicinity. Several years ago limits of 50 doves were comparatively easy, the present limit of 20 is hard to fill. All agree that the season opens too early and many sportsmen advocate a close season for two or more years.

AT THE TRAPS.

The local trap season will come to a close tomorrow with the season's end pigeon shoot of the California Wing Club at Stege and the 100 target shoot of the Bay View Gun Club in Alameda.

Fred Willet is high gun in the California Wing Club medal race, having lost but four birds out of 72 so far. Captain A. W. Du Bray and Clarence Nauman, each lacking six pigeons, are in second position. Tony Prior is seven birds behind and Frank Turner nine. The three club medals for this year are very handsome.

At the Bay View shoot the shooters will be divided into four classes. High gun in the first class will receive a silver cup trophy—the high guns in the other classes will each receive a merchandise prize. The entrance for this race will be the price of the targets.

Th Otto Feudner prize will be awarded, the conditions are contained in a sealed envelope.

Mr. and Mrs. Topperwein will be present and give exhibitions of the shooting stunts that have excited wonder and admiration at many previous exhibitions of these two crack shots. This is the initial trip of the "Tops" to the Coast, and no doubt their appearance will draw a crowd.

Jack Fanning writes that he is still "knocking around New York and New England, shooting more or less all the time in registered tournaments." His average has been 95 per cent which is not so bad at all in these days of very high scores at clay pigeons.

The Owl Rod and Gun Club will hold a big shoot on the 11th inst. at Modesto. The Topperweins will be the leading attraction.

The Arizona State Sportsmen's Association three-day tourney, September 22, 23 and 24, will take place at Phoenix this year. About \$1200 has been raised for added money distribution. The purses will be divided into five equal moneys. The feature events will be the territorial championship and the four man team race, each at 50 targets per man. There will also be a special 50 target race, for amateurs, \$100 added money.

Tony Prior won the Ballstite cup shot for in six 100 target races on the grounds of the New Oakland Gun Club. At the last club shoot he broke 95 out of 100. In this shoot he has been high gun at every meet.

GOSSIP FOR SPORTSMEN.

Salmon Angling.—The midweek trolling launches connected with the long awaited run of salmon in a manner that aroused the enthusiasm of salt water anglers to an extreme degree ten days ago. Daily the boats had been outside trolling hither and thither, but not until Wednesday a week ago did the anglers get into the thick of the run.

Al Wilson's launch accounted for twenty fish. "Doc" Wilson's launch caught fifteen and "Doc" Matson's boat also made a good count. These fish were nearly all caught between Duxbury reef and "bird rock," off the Marin shore toward Point Bonita. Along this course most of the best results in salmon trolling have been recorded.

The theory advanced is that the current running up coast from Monterey bay, about ten miles and more off shore, is deflected inshore by the Farallones. The set of the current then tends toward Duxbury reef, from which point there is a back current and eddies down along shore to Point Bonita.

The salmon follow the current up from Monterey bay, some of the fish finding their way in through the Golden Gate on the above course, while others continue north and finally work into the Russian river, Humboldt bay, etc. That the fish go with the coast stream is evidenced in the fact that for several weeks good catches have been made from the pilot boats cruising twenty odd miles outside and also by the men on the lightship anchored off the bar.

The salmon also follow the schools of sardines. Whenever the trolling launches sight flocks of gulls or whales feeding on the small fish they make for that spot also for generally the salmon are there feeding.

Following the Wednesday catch numerous boats were out daily and quite a number of salmon were taken. Some of the fish hooked must have been hefty ones, for several anglers had strong tackle cleaned out.

During the past week a few fish have been caught outside. Last Sunday about twenty boats were out, the weather however was extremely boisterous and most of the anglers were inside by midday. A few salmon have also been caught inside, off Belvidere and in the entrance to Raccoon straits.

Last Wednesday was an ideal day, the ocean's surface was as placid as a millpond and inside the heads quite a breeze was blowing. Several salmon were caught and also halibut, green and gray cod on the trolling rigs.

The market fishermen up the river have been seining plenty of large fish for a week past. The season will be open until September 16th.

Sea bass, which for several seasons past have been noticeably absent from the "outside" waters, are also said to be in the quadrennial class. Several fine specimens of this variety were caught during the past week by salmon anglers.

Striped Bass.—The striped bass anglers have also drawn some lucky numbers in the fish lottery, San Antonio slough, near Burdells, in Marin county, has awakened from its piscine lethargy, and among other good things, contributed a twenty-nine pound bass to angler Charley Hollywood a week ago. On this day, at least two score of fishermen were on the

slough. Nearly everybody caught striped bass, many of them legal weight. The small fish are, it seems, making way for the big fellows.

Billy Hillegas, Will Kettle, Al Cummings and others had a pleasing midweek seance with the bass.

The Wingo waters have not shown any indication of striped bass recently, nor will this resort until October, if tradition has any merit.

In unison with the local reports of a run of larger sized striped bass comes the news of the appearance of big bass in the Russian river in the vicinity of Duncan's Mills.

The record fish for the river, a fifty-two pounder, was landed early last week by J. P. Parmeter, who was fishing at the time one mile below the railroad bridge at 8 o'clock p. m. The lure used was a No. 4 bass spoon, brass, baited with a six-inch flounder. This fish was forty-eight inches in length, twenty-eight inches in girth and put up a gallant struggle before it was gaffed.

Prior to this Parmeter caught a twenty-five pound bass, William and Walter Owens landed a forty-pounder.

Mrs. Ad. Topperwein.

Sportsmen Will Organize.—The California State Fish and Game Association will hold the annual meeting probably sometime this month. The association and its allied country associations have an enrolled membership of many thousand sportsmen. It is also possible that the meeting will be held this fall in San Francisco.

Sportsmen are very much worked up over the present situation of affairs and are perfecting their organizations throughout the State. They propose to take an active part in the forthcoming election. They are intensely interested in the preservation of the game and fish and are much disgusted with the conduct of these affairs in the past. The movement will support the candidate or candidates who can be relied upon for the proper care and attention of fish and game interests and the wise and economical distribution of the large fund contributed by the sportsmen for hunting licenses.

Ad. Topperwein.

Ducks Very Plentiful.—Reports from the duck hunting marshes indicate that the coming season will be one of the best in years. The season has been exceedingly dry and the birds next month will seek the baited ponds in search of water and feed.

The Suisun marsh preserves are at present covered with thousands of ducks. There has been a big flight of mallard on the marsh; undoubtedly local birds, but not local birds for the Suisun marsh, they evidently are birds that have bred up the river farther as they are in great numbers. What has started them may be this: last year at the opening of the season tens of thousands

of acres were under water near Sacramento and Stockton and the birds found a feeding and resting place there, but most everything up that way has been reclaimed since then and in consequence the birds have to move elsewhere. Jersey island is reclaimed, Bouldin island is reclaimed, and that immense Victoria island near Stockton, and all that vast country up around Little river, evidently the birds have got to find different sanctuary.

Mountain Lion Killed.—Miss Mamie Avilla, a deer hunter of note, killed a mountain lion Thursday last on Doe Mill ridge east of Chico. She was after deer, when she suddenly came upon the lion, crouched on the limb of a tree, as if to spring, almost directly above her. Scarcely taking time to aim, she fired at the brute, and it fell at her feet. The bullet had penetrated exactly between the eyes. Miss Avilla has killed several deer and is one of the best shots in the upper Sacramento valley.

George R. Porter, of Chicago, representing the Colt's Patent Fire Arms Company, was in this city during the week, this being his second trip here this year. Porter was formerly assistant manager of the sporting goods department of Hibbard, Spencer, Bartlett & Co., of Chicago. He is popular here, as elsewhere, with the trade.

Chas. F. Breidenstein, a popular local angler, has enlisted under the banners of Ellery & Co., where he can be found at the fishing tackle counter. His duties will also embrace trips to the interior for the purpose of supplying the trade with tackle and sporting goods.

George Lawrence, a San Bernardino angler, whilst fishing for trout in Lytle creek, found a gold nugget worth \$15 in a granite bowl.

Bakersfield sportsmen have recently found no difficulty in shooting dove limits.

TRADE NOTES.

A New World's Record.

J. H. Graham of Long Lake, Ill., broke the world's amateur blue rock record Thursday, September 1, the last day of the Chicago Handicap Tournament, when he broke 417 straight. He actually broke 432 straight; 15 of these targets, however, did not count on average.

This great performance was done with a Remington pump gun and U. M. C. steel lined shells. Merit tells. This performance tops the previous best continuous run by an amateur by 66 targets.

Peters Points.

The Tournament at Columbus, Ohio, July 12-15, resulted in one of the most decisive victories that Peters shells ever won. High general average was captured by C. A. Young with a total of 490 out of 500, being 98%, with Mr. Woolfolk Henderson a close second, 487. Mr. Wm. Webster was second-amateur with 471, while Mr. W. R. Chamberlain was high over all on the last day of the shoot losing but one out of 150. In the 100 targets shot from handicap Messrs. Young and Henderson, both at 20 yards, were first and second with scores of 96 and 94 respectively. All the long runs of the Tournament were made with Peters shells, as follows: Woolfolk Henderson, 117; C. A. Young, 110, 106; W. R. Chamberlain, 118. Including practice and 20 yard events, Mr. Young's score for the entire shoot was 782 out of 800.

At Wilkes Barre, Pa., July 12th, high general average was won by Mr. Neaf Apgar with Peters shells; score 190 ex 200. Mr. Apgar scored 169 ex 175 at Seneca Falls, N. Y., July 15th, and Mr. Sim Glover 170 ex 175, both with Peters shells. At the Seneca Falls shoot Mr. O. E. Carpenter of Syracuse tied for second amateur average with Peters shells; score, 165 ex 175. At Crookston, Minn., July 15th and 16th, Mr. J. H. Stair won third professional average, 353 ex 400, using Peters factory loaded shells.

J. S. Day, shooting Peters shells, won high amateur average at Dallas, Texas, July 28th-30th, score 373x 380. Third professional average was won by L. I. Wade, with a score of 372, also using Peters shells.

Medford Tournament.

The Blue Rock Tournament, held at Medford, Oregon, on August 18th and 19th, again demonstrated what can be done with the best ammunition. On August 18th, Lee R. Barkley, using a Winchester repeating shotgun and Winchester "Leader" shells, and J. A. Forbes, using Leader shells, tied for high professional average with 147 out of 150. Mrs. Topperwein, with a Winchester repeating shotgun and Winchester "Leader" shells was third, with 143 out of 150. The three highest amateur averages were won by J. R. Converse, C. Hellman and Dr. Seeley, all using Leader shells. C. S. Mills won the special event, 24 out of 25, with a Winchester repeating shotgun and Winchester shells.

Good for Singles or Doubles.

Mr. T. D. Barclay, of Walla Walla, Washington, shooting a Smith gun with the automatic ejector and the Hunter one-trigger, carried off the honors at the Montana State Shoot this year. The three days' shoot was held at Missoula on June 9th, 10th and 11th.

One of the best pieces of shooting at the Grand American this year was the long run of doubles by W. D. Stannard. He made 41 straight and was winner in the event.

Mr. Stannard also made high score on all doubles, breaking 57 out of 60. Both wins were made with a Smith gun having the Hunter one-trigger attachment.

SENSES OF THE HORSE.

If the nature of the horse were better understood he could be more easily trained and accidents would be of less frequent occurrence.

John S. Rarey, the celebrated horse trainer and tamer, said: "Of the five senses of the horse, the worst is that of sight, better is that of taste, still better that of touch, that of hearing is excellent, and most excellent is that of smell."

Considering this subject in the same sequence, beginning with the sense of sight and ending with that of smell, it will be shown that Rarey was mistaken. The construction of the eye of the horse demonstrates that it is a wonderful organ. What we call instinct is in reality the development of the senses.

The sensitive retina (that oblong spot in the eye) which reflects in a special manner objects lying on the ground. The organ is capable of receiving more rays of light at one time than that of man or of most animals. The horse sees in the darkest night. It is an old story that asserts that the helated and bewildered traveler throws his reins upon his horse's neck or loosens them and trusts to his ability to find his way home; and horses have been known to jump ditches or avoid holes or obstacles in the road that were undistinguishable to his rider or driver.

Observing persons may see horses grazing when at pasture during the hours of darkness, while cattle and sheep, which perchance are in the same pasture, are lying down either sleeping or chewing their cuds. Wonderful, indeed, is the horse's eye, and sight is not the worst of his five senses, Mr. Rarey to the contrary notwithstanding.

The sense of taste is not so highly developed as that of some of the other senses, for while musty hay or fermented grain is not relished, it is a well-known fact that in sections where it grows the locoweed and other obnoxious and poisonous herbs are often eaten, and who shall say that the sense of smell has not as much, if not more to do, with the rejection of bad food as that of taste.

Regarding the sense of touch or feeling, it must be borne in mind that almost the entire surface of the horse's body is endowed with corrugating muscles. The twitching of the skin all over the body to shake off stinging insects, flies and the like, proves this conclusively. Man has these corrugated muscles only in the forehead, which enables him to frown—possibly in this statement.

The upper lip of the horse has growing from nerve centers, long hairs or feeders, which enable him to know when his nose is within an inch or two of the ground; thus the lip, the forefeet and the tongue form a partial substitute for hands. Indian ponies on the western plains have been seen to place one forefoot upon the green cotton-wood sticks, thus holding them down while they tore the bark off with their teeth and devoured it.

In the horse the sense of hearing is quite wonderful. Each ear can be turned exactly half-way around. The right or off ear turns to the right, the left or near ear to the left. The retrehears muscle turns the ear backward, the otrehears muscle forward; the attolens muscle lifts the ear up. Thus it is shown that the horse can hear in a circle when his head is in a stationary position.

Many horsemen believe that the sense of smell is the most highly developed of all in the horse.

The horse belongs to that class of animals which are endowed with "scent." Undoubtedly this faculty aids the animal in finding his way in the dark. A totally blind horse driven singly was known always to leave the highway at the correct spot which led to the stable. The horse is very susceptible to the smell of blood.

FINDING THE SOURCE OF LAMENESS.

There is an old stable axiom to the effect that "if a horse is lame in his head, have the shoe off," and it is so often found that the trouble is in the foot that it is good practice to search it unless quite satisfied that the mischief is elsewhere. There are so many foot lamenesses that, to use a sporting phrase, the odds are on the foot. It runs greater risk of injury from sharp stones and picked-up nails than any other portion of the limb, apart from the risks attendant on shoeing, and the still too prevalent custom of cutting out horn that should be left to protect the more sensitive structures. Therefore, always search the foot. When this has been done, and nothing has been found, the trouble may still be within the hoof, as in laminitis and navicular arthritis. Persons without any special anatomical knowledge will often discover a warm or swollen or tender spot in a joint or tendon, or by pressure on a suspected region make the animal flinch, and so locate the trouble. With a limb bent, it is easy to trace the outline of the splint bones, and often to discover a periosteal inflammation as the cause of lameness, which would presently result in the formation of splint; or detect a tendon or ligament which feels hot and tender, or press upon a partly-buried thorn. Lifting a front leg high and forward is painful to an animal lame in the shoulder, and the grunt he gives and his anxiety to be released will tell its tale. If the elbow is injured he may feel either a forward or backward movement, and this portion of the limb is easily examined and manipulated. The inability to lift or extend the limb as mentioned in connection with the step or door sill is the most diagnostic symptom of shoulder lameness. The pointing of the foot, which we have said is so characteristic of foot lameness, is quite commonly believed to be a symptom of shoulder troubles, and the foregoing distinctions should be borne in mind.

QUALITY IN HORSES.

In discussing this subject Professor Hooper of the Department of Animal Husbandry, says:

The first point is that of general appearance. In noting this characteristic, the student studies the size and weight of the horses before him, noting the symmetry of body, to see that the forehead is not out of proportion to the croup or barrel, and to see that the legs are not too long or too short, and the student makes a study of the style and "air" exhibited by the horse, together with his disposition and character.

Conformation is the next point noted and this includes, of course, the build of the horse in detail. It includes the shape of the head, neck, forehead and harrel, croups, thighs, hocks, and in fact every part of the horse in detail. Constitution is a point I always lay special stress upon, including therein the size of the nostril, width and cleanness of throat latch, cleanness about the windpipe, width of chest and spring of rib, together with the correlated point, width through the heart and the size of the heart girth.

Then comes the point in question, quality, which includes the fineness and denseness of the bone about the head, with veins apparent, evidencing a fine mellow skin and fine hair, then fineness and denseness of bone about the canon, knees, hock and hind legs. I would consider a horse that is meaty about the hock as lacking in quality in other parts as well. The horse that has quality is one that has refinement and denseness of texture throughout. A horse lacking quality is coarse in hair, bone and skin and has not the refinement desired. A dense hoof is another indication of quality.

In my work I have the students particularly examine the feet and legs and report thereon. This includes the conformation of feet and legs, the proper muscling of forearm and gaskin being the uppermost points examined under this special heading. Then the set of limbs, size of bone below the knee and flatness thereof, size and shape of feet are considered.

The above heading includes an examination for unsoundness and the students are particularly taught to guard against any malformation that would give rise to unsoundness. When the horse is put in motion, his wind is observed as well as the eye when standing still.

Action is the last, but one of the most important points considered, and this includes a consideration of truthness of the gait, discrimination being made against winging or padding or closeness of gait. The saddle horse is scored on his ability to go properly the three or five gaits. During the time that the horse is in action particular attention is paid to the first characteristic mentioned above, namely, the general appearance (style and vigor).

I am writing this article merely to give my ideas in regard to what is meant by each of the above terms used by the horsemen. It is necessary that we should have some universally understood terms in order that everyone may understand what is indicated when each term is employed.

A FRENCH CANADIAN STUD BOOK.

Horsemen in Canada are greatly interested in the recent action of the Federal government at Ottawa in giving authority for the establishment of a stud book in which the French-Canadian type of horse will be eligible for registration.

There was a time when this distinctive breed was one of the features of the Province of Quebec, but outcrosses with unsuitable stallions, chiefly Clydes and Belgians, have practically exterminated the type, which once was predominant. There are, however, in a few districts some good specimens still, and an effort is to be made toward rehabilitating the breed.

The true French Canadian horse of half a century ago was a stout bodied horse on short legs. He had many of the qualities of the Morgan, although as a rule much larger than his American cousin, and there is little reason to doubt that many Morgans brought from Maine and Vermont across the Canadian border were used in the stud throughout Quebec and that some of the most prized of the French-Canadian horses had a strong infusion of Morgan blood. Their trappy action and lightness of foot showed that it was no extraordinary thing to find horses of 1400 pounds and more capable of 2:40 speed, with the bend of the knee and the flex of the neck that are the delight of every man who knows the horse and what is most desirable in the way of gait.

Their most distinguished characteristic was their heavy manes, tails and foretops, the hair of the former invariably falling to the point of the shoulder and often to the knee, while the bottom of the tail in many instances reached the ground. In the cases of the stallions the manes had to be turned on alternate sides of the neck in successive years to prevent the crest from being pulled out of shape so heavy was the mass of hair.

Their strength was prodigious and for their inches they could outpull any horse in the world. Used in the heavy snows of the long winters, where they were often up to their hocks in the lumber woods, and sharply shod, it was a rare thing for them to cut themselves.

Boh Douglas was the winner of the trotting, and Aileen Wilson of the pacing division of the American Derby handicap cup at Readville this year.

ARE TROTTERS IMPROVED?

The New York man, Mr. C. W. Watson, who has hought and launched in the show ring so many high class horses, calls attention to the failure of trotting horse breeders to take advantage of the opportunities which have been open to them in the way of finding a most profitable market for horses possessing show ring qualifications, and says, in his opinion, that the future supply of show horses must come very largely from the hackney breed. Mr. Watson believes that a trotting-bred horse of the highest class is the best in the world for show or service in heavy harness, but in hunting the country over for fresh ones good enough to win he has been forced to the conclusion that the supply of such horses is practically exhausted. The breeders of hackneys, especially in England, have preserved the heavy-harness type with much more system and care, and if not now destroyed in the way that the trotting-bred carriage horse has been, the hackney will, he believes, hereafter dominate the show ring. When it comes to harness horses of the road type, as distinguished from the park or show ring type, the trotter is still supreme and is likely to so remain, according to Mr. Watson's opinion. Mr. Watson also says that while trotting horse men have lost sight of beauty in their breeding operations they have cultivated speed and endurance to the highest degree, and the victories of the American road fours in the coaching Marathon at the International Horse Show in England last year and again in 1910 afford convincing evidence that the trotting-bred horse has no rival in harness for long-distance work. In one respect, some good judges will disagree with Mr. Watson, and that is in his conclusion that the trotting horse breeders have lost sight of beauty. There has never been a time when good looks cut so much of a figure with the trotting horsemen as right now. Speed and racing courage are, of course, the first desiderata, but most of the breeders of today want good looks along with those qualities, and the gradual trend in this direction during the last fifteen years has resulted in a vast improvement in the looks of the American trotter. The trotters of today average much more beauty than those of twenty years ago, a statement that any close observer who has been long identified with the harness racing interests will corroborate.—Horse World.

ARE HALF-HOPPLES, HOPPLES?

Springfield, Ohio, August 18.—"Are half-hopples, hopples?" is a question the Arbitration Board of the Trotting Association will be called upon to decide at its next meeting, and the horsemen of the country will await its decision with much interest.

The question has been raised as a result of May Elect, owned by D. S. Trimmer of this city, winning the two-year-old trotting stake at the County Fair on Tuesday. The filly wore what is called half-hopples. Last winter the American Trotting Association adopted a rule to go into effect this year that two-year-olds must be raced without hopples. The rule is the result of the war being waged against pacers being raced in "pajamas."

Mr. Bryson, owner of Homewood, winner of second money in the stake, filed a protest against May Elect on the ground that she wore hopples. Mr. Trimmer insists that half-hopples cannot be classed as hopples, and will appeal the case to the Arbitration Board. If the protest is sustained Homewood will be awarded first money, Lord Davis second and D. A. S. third.

On the surface it would appear as though the association intended to place the ban on the half-hopples also, when they made the ruling mentioned above.—American Sportsman.

WAS THE TIME SUPPRESSED?

The Press has no racing department, but the "horse" editor—he who listens to the "kicks"—in casually glancing over the reports of the recent meet, notices that the time given for the fastest heat in the 2:15 trot is reported in two famous horse journals as 2:13½. Unless our memory fails us and unless our own records are wrong, the starting judge announced that the time of the second heat of this race, 2:12¼, was the fastest heat ever trotted on a half mile track in Nebraska. If this is correct, and our idea is supported by numerous local horsemen, the man who reported the Nebraska City meet to these racing journals is wrong in his report, and for the sake of fairness and in order to give this city her fair due notice should he sent the journals to correct the figures. A track record such as Colonel Yoeman announced to the assembled crowds on that Thursday afternoon is such that we should not be robbed of our laurels. We can ill afford it at this time, and by having our record published correctly we shall probably aid a great deal in drawing large numbers of horsemen to our race meeting next year. We may be wrong in our assumption, but our score card shows that the time of this heat was 2:12¼; not 2:13½, as published.—Nebraska City Press.

"UNIVERSALLY USED."

Mr. M. Holleran of Albany, N. Y., states: "I have known of and used Quinn's Ointment for many years. It has given universal satisfaction and I cheerfully recommend it to all horsemen. Quinn's Ointment is universally used by leading breeders and horsemen throughout the United States." For curbs, splints, spavins, windpuffs and all blemishes, use Quinn's Ointment. If cannot obtain from Druggist, address W. B. EDDY & CO., Whitehall, N. Y. Price, \$1.00, delivered.

Drink Jackson's Napa Soda.

THE FARM

PHOTOGRAPH YOUR GOOD COWS

I have spoken before of the desirability of owners procuring photos of their great cows; as any cow or heifer that is able to make one of the large records, such as are reported in every issue of these official reports, is surely deserving of the honor of being presented to the dairy public in picture form. An owner who procures and distributes a good picture of his great cow, accomplishes a double good; in that he serves both his own interests and those of his fellow breeders. Aside from advanced registration tests, there is not a more effective method of advertising known than by means of the camera; and the owner using it wisely derives for himself a great personal advantage, while benefitting also his fellow breeders to the extent he thus aids in popularizing the breed.

But there are photos, and photos; and, perhaps, the most favorable comment that could be truthfully made on the majority of the photos taken by our breeders is that they might have been worse. This should not be; the great cows of the greatest of the dairy breeds deserve better of their owners. The dairy and agricultural papers complain to me that they can not get good pictures of Holstein-Friesian cows; and from a very wide experience in the matter, I must admit that their complaint is not lacking in the truth. Good photos are wanted in the dairy and animal husbandry departments of our State Agricultural Colleges as aids to the instructors, some colleges going to the expense of enlarging the photos. They are wanted by the dairy and agricultural press as illustrations; and the Advanced Registry office and the publicity bureau of our Association make use of them in the same way.

No one can truthfully assert that the Holstein-Friesian cow is not one of the handsomest of dairy cows; so the trouble in obtaining attractive photos can not rest with the cow. I also note that it is easier to obtain three good photos of hells than it is to procure one of a cow, so must conclude that the fault lies with the owner. I have been up against the problem myself, and know the difficulties of the position. The traditional Rocky Mountain photographer, who, whenever he felt his art at risk, was accustomed to draw a bead on his subject and give the cheerful order, "Look pleasant now, or off goes the top of your head," had an easy snap, as compared with the man who undertakes to "pose" a cow in such a manner as to get both a correct and an attractive photograph. It is well for Joh that he never tried it; it might have wrecked his reputation for patience.

Form and function measure the individual excellency of a cow. A. R. O. records prove function; photos are supposed to show form, and to show it truthfully. But when it comes to misrepresentation and distortion of a subject, the improperly focused camera can give points to the most conscienceless Ananias, and then entirely outclass him in the falsehoods it will tell. Let the owner remember that he is trying to show form and not function, and keep his mind off of the udder, except as a constituent part of the cow. Then, when the cow stands "side on," he will not focus the camera so near the udder as to give the cow a peaked appearance, larger behind and smaller in front than she is, but will focus on or near the heart and get a truthful picture. Photograph the cow, and the udder will take care of itself.—F. R. Houghton.

HOW DAIRYING

EFFECTS FERTILITY.

Where buttermaking has been carried on in the United States for a number of years, the farms have steadily improved in production. Where cheese-making and milk shipping has been the rule, farms have steadily declined in producing power. The reason is not far to seek. A ton of butter contains only about fifty cents worth of fertility, and that only in what casein is left in the butter, whereas a ton of cheese contains about thirty dollars' worth of fertility. Consider what must be the final effect on the fertility of a farm where the milk is constantly sold off. If the owner of the farm has realized what he is about, and purchased fertilizers to make up for this drain, the farm will not suffer. But not one farmer in a hundred will do this until it is too late. The milk of every cow that gives 4,000 pounds a year contains about six dollars' worth of fertility. If fed to calves and pigs after the butterfat is taken out, fully 80 per cent of this fertility is saved to the farm. This would amount to \$4.80 per cow.

Suppose the milk shipping farmer has 30 cows. This would amount to \$144 a year. Now, will the milk shipping or cheese-making farmer buy one hundred and forty-four dollars worth of fertilizer a year to make up for the loss of this fertility? Not one in a thousand will do it. And yet he must do it or else the farm is being steadily drained of its fertility.

Good dairy farming consists, first of all, in so managing as to keep up the fertility of the land; next, in the production of the right kind of crops and curing them in a way that will yield the largest amount of nutriment to the cows; lastly, in so managing as to have the best cows possible to feed the crops to. Here are the three cardinal principles of dairy farming, good land, good crops, good cows, but at the bottom lies good land and a farmer wise enough to keep it good.—Hoard's Dairyman.

NEW BUILDINGS

AT STATE FARM.

Two new buildings are under way at the University Farm at Davis.

One is for shop work and is 70x70 feet and one story in height. It is divided into three sections; one 20x70 for forge-work; another of similar size for carpenter work; and a third 30x70 for farm machinery. Students in the Farm School will receive instruction in these lines. The carpenter or wood shop is to be fitted with thirteen double benches; each with a full complement of tools and will accommodate a class of twenty-five at a time. The forge or blacksmith shop is to have eighteen forges, each with anvil and tool. The aim of the shop work is to teach the kind of carpentry and blacksmithing that a farmer so often needs to know. The other building is a one story structure 60x80 feet to be used as office and class rooms for the Animal Industry Division.—Davis Enterprise.

Young horses are more apt to be affected by heat than older horses, hence they should be worked with care in hot weather. Remove the harness at noon on hot days, and allow the horse frequent periods of rest during the day. Indigestion and overfeeding will bring on trouble from the heat. Keep stables free of decomposing manure.

Colts and young horses may look well on good pasture alone at this season, but they will develop into larger and better animals if they are given small feeds of grain daily, preferably oats.

The Most Perfect Colt Bit Made

EVERY COLT

Should wear the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE** from the very beginning of its training, as it is the easiest, most comfortable and most humane bit on the market. With its use the colt will not fret, worry, pull, toss its head and get into the bad habits so often caused by the use of other bits and checking devices that inflict punishment or keep it under too much restraint, and at the same time you will have absolute control over it at all times.

Patented Aug. 11, 1896. Patent No. 565,631

BEWARE of worthless imitations and Checking Devices claimed to be as good as the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE**. Illustrations of some of these check bits and devices are made to look as near like the genuine as possible, but the article itself is very different, and will not give the same results.

ALL GENUINE are stamped **G. S. ELLIS & SON** on the supporting strap and back part of Check Rein. Any that are not so stamped are not genuine.

FREE—Our new Catalogue No. 45, with wholesale discount sheet, the largest, finest and most complete Horse Goods Catalogue ever published, is ready for distribution. It contains illustrations, descriptions, and guaranteed to be lowest prices on Harness, Horse Boots, Horse Clothing and Tack Goods of every description. Every horseman should have a copy. You can save many a dollar during the season by buying direct from us, as we are now selling direct to horsemen, allowing them from 30 to 50 per cent discount from retail prices. Write us today for a copy and we will take pleasure in sending it to you all charges paid.

As they Sometimes Are.

As "Save-the-Horse" Can Make Them.

CONCENTRATED IRRESISTIBLE POWER—herein lies the success of "Save-the-Horse," the only remedy sold with a contract. Every testimonial we publish is bona fide and from actual users, not from friends or agents. But the contract alone takes all the chances out of the matter so far as the user is concerned.

A. H. MEEKER,

FURNITURE AND PIANOS MOVED

Goods Forwarded to all Parts of the World

BLOOMFIELD, N. J.,

May 6, 1910.

Troy Chemical Co., Binghamton, N. Y.:

Gentlemen: Your "Save-the-Horse" has effected a complete cure on one of my horses afflicted with "bowed tendons." I have another horse just now that has, etc., etc.

Awaiting your early reply, I am, yours truly,

A. H. MEEKER.

MASTEN, Pa., June 13, 1910.

Troy Chemical Co., Binghamton, N. Y.:

Dear Sirs: You will find check fifteen dollars; please send me two bottles of "Save-the-Horse," one package of Ointment and four packages of Restorative and Condition Powders.

I have been using "Save-the-Horse" on a ringbone and stifle and I am well pleased with it.

Very respectfully,
ELMER HOSBAND.

GIRARD, Kans., Mar. 27, 1910.

Troy Chemical Co., Binghamton, N. Y.:

Gentlemen: As your "Save-the-Horse" Spavin Cure made good I will try your other goods.

Find enclosed \$2.50 to send me as follows: One package each Restorative and Condition Powders, Worm Powders, Gall Powders and Ointment.

Very truly,
W. C. JONES, R. R. 4, Box 80.

NOTES OF THE HOG LOT.

Bad practice to sell good brood sows and replace with young gilts, as continued breeding from immature sows will produce a weak strain.

It is common sense that a mature sow will produce larger and more perfect pigs than a very young one.

Do not attempt to raise fall pigs without having first prepared a perfect system of housing for the winter.

Some people claim that a hog is a scavenger by nature, but he certainly thrives better on clean feed and decent surroundings.

Free range for hogs does not mean that they should be allowed to run in the highways and through the neighbors' fields.

Every enclosure for the hog should be perfectly tight, and with the excellent wire fences that are now manufactured it is an easy matter.

Pigs, and in fact all hogs, should have ready access at all times to salt and ashes. Charred corn cobs are also excellent.

The farmer who grows a liberal supply of roots for his hogs seldom has much trouble with the ordinary diseases to which swine or subject.

The boar should always have a large lot to himself, and never be confined in dark, damp quarters.

The long, steady, dry spell of heat we are having throughout the whole State is beneficial toward ripening the deciduous fruits and is welcomed by the fruit handlers and growers, if not by those that see no gain from a prolonged sweat bath and the loss of their heavy sleep. Without the sweltering rays that are always expected at this season of the year California would not be the unfailing fruit producing State that it is.

It is better to inbreed live stock with the best animals than to cross them with scrubs and other breeds of doubtful character. Some evil results from inbreeding, but greater evil from always crossing and recrossing. Stick to one line of breeding where it is at all possible to do so.

THE AYRSHIRE COWS.

The Ayrshire cow originated in the country of Ayr, in the southwestern part of Scotland, in a district of succulent grasses and adapted to dairying, but exposed to the severe storms of an unprotected coast. There the Ayrshire still thrives in numberless herds, the pride of the Scotch breeders, by whom foundation stock is sent to all parts of the world.

Having been subjected to rigorous climatic conditions for over one hundred years, this breed has developed a vigor of constitution that can endure and easily adapts itself to the biting frosts of the North or the hot suns of the South, and is equally contented on the prairies of the West or upon the rocky hillsides of New England.

Whether the Ayrshire cow may be located, in whatever country or climate, she maintains a cheerful and gentle disposition combined with an exuberant spirit and bloom which are as apparent and pronounced in the old cows as in the young cows, the heifer or the yearling calf. This condition is the outgrowth of universal good health and explains why the Ayrshire cow continues to breed and keep up a profitable flow of milk in her advanced years.

It is not at all unusual to go through a dairy of working Ayrshires and see many cows from 10 to 15 years of age still able to keep their place on a purely commercial basis.

She is hardy and tough, a good feeder and not dainty in her appetite. The roughest food tastes good to her and she does not seem to be discouraged whether the hay is good or pure; she eats it with a relish and wants more. Although she is far from slow to respond to good treatment and feed, and even when well along in her milk-

ing year will wonderfully increase her yield if given better food and care.

She is a very persistent milker, giving a uniform quantity well up to another calving and requiring some care to dry her off.

The Ayrshire is pre-eminently a family cow and analysis shows her milk to be particularly nutritious to human kind, a balanced ration, a complete food. It is easily digested and assimilated by the system. There are at present several dairies where the milk of the Ayrshire cow is being sold at an advanced price for certified milk, simply on account of its balancing so well for baby feeding.

Ayrshire milk has much finer fat globules than the milk of grade cattle or most of the other dairy breeds. Owing to this fact the emulsion is much more complete and the milk correspondingly easily digested.

Physicians who know about Ayrshire milk strongly recommend its use for babies and invalids, and many families living in suburban places have bought and kept one or two Ayrshire cows each, solely to get the proper food for their babies or for invalids with weak stomachs.

Ayrshire milk has a good body, is rich in total solids and never looks blue. In the Pan-American Model Dairy contest at Buffalo the Ayrshire stood a close second in quantity of milk; a close second in profit of butter and milk combined, and if the value of all the by-products of the Ayrshire milk in that test had been taken into account the Ayrshire would have given the largest returns in profit based on the cost of production. Her yield was more uniform than that of any other breed entered in the contest, and there was less difference between the best and the poorest.

In the model dairy test at the World's Fair at Seattle, the Ayrshire actually made more butter, averaged more and made more net profit than any of the cows competing.

The Ayrshire cow will show more net profit every year from her beginning to her old age, taking into consideration the amount, the kind and cost of food consumed, her easy keeping tendencies and the amount and quality of milk produced from the cow of any other breed, and when no longer able to produce milk she reserves all her exuberant energies towards giving her owner the best she has, and often farrow cows have made as much as 1600 pounds on the block after having paid their way for years at the pail.

Her general appearance is striking, being alert and full of life and reserve energy, handsome and attractive, weight 1000 to 1200 pounds, usually all white and red spotted, but varying in these colors to nearly all white or nearly all red.

The Ayrshire Breeders' Association claims and is prepared to demonstrate that for quality and quantity of milk, of butter fat and solids, considering the cost of feed in each case and the actual net profit that the Ayrshire as a dairy cow stands on an average pre-eminently above them all.

Verily, as a noted man remarked upon being shown a herd of Ayrshires for the first time, "She is a thing of beauty crowned by the horns of plenty."

She is pre-eminently the farmer's friend, the mortgage lifter.—Rural World.

THE CAUSE OF MOTTLED BUTTER

Experienced creamery men, college professors, chemists, all pondered and investigated. One said the cold wind was sometimes allowed to pass over the cream vat and dry out the surface scum, and this made mottles in the butter. But mottles occurred when the cream was kept covered. Elimination No. 1. Another said that the farmers allowed their cows to eat frosted grass and the cream from this grass was whiter than other cream and caused mottled butter. Butter mottles sometimes occur where cows are kept housed all the time. Elimination No. 2. Another said that casein accumulated in spots and casein is paler than butter fat, and this accounts for mottles. The chemist analyzed and found the casein content variable and he declared this the cause of mottles. Another said that salt deepens color, and that uneven salt content will cause mottles. The chemist finds the salt content different in

mottled butter. Why does the salt content vary? Is it because the casein content varies? Not proven, for now comes a lot of buttermakers and say that the absorption of salt is varied by the coldness—hardness—of the butter, and they declare the casein factor is of little consequence. This is true: If the butter granules are soft, if they are chilled and hardened by a bath of cold water, the outside of each granule will be harder than the inside, and when pressed into a mass with the intermixed salt the warm butter and the cold butter will take up salt unequally and show mottled in color.

Once at the Iowa State Fair the writer made six different kinds of butter to illustrate some points to the visitors. It was not made from different kinds of cream. It was all brought in by one woman. It was not ripened differently. It was all ripened at home by this woman. It was not churned in different churns. It was all churned in the same churn, the one used by this woman at home.

The cream was divided into two parts and one part churned until it massed in a lump—the old way. It was then salted and worked once. Result—streaked butter. Part of this streaked butter was reworked and made uniform in color. The other half of the cream was churned to granular form. One part of this was washed with warm wash water. Result—slushy butter, grain ruined. One part was washed with water at the right temperature. Result—gilt-edge butter. Another part was washed with ice water. Result—mottled butter. Part of this mottled butter was reworked and the mottles disappeared, but the reworking was purposely too long continued (this is not necessary) and the grain was injured.

Creamery men are prone to blame the patrons for poor butter, and it must be confessed with far too frequent cause. But they themselves are not free from blunders. At a late State convention the judge said that more than half the entries showed defective body, and body depends upon the buttermaker, not the patron. The modern method of buttermaking makes far better butter than the old method, but it calls for great skill to get to the top and keep there. A good creamery and a good buttermaker in it is a boon to any dairy community and it does not pay to spend the time in making it in little dabs at home as a rule, but it seems to take a long time for some people to learn this seemingly plain fact.—E. C. Bennett, in the Des Moines Homestead.

IMPROVISED BROODER.

One may improvise a brooder to use for incubator or orphan chicks, from a tight dry goods box, a two gallon jug and an old coat or blanket.

Place paper in the bottom of box, fill the jug with hot water and cover with the coat or blanket; sand or chaff over the paper is good, and the water and food dishes should be removed after every feeding.

Clean the box and refill the jug twice a day. Of cold nights and stormy days it will be necessary to keep this box in a warm room or shed; at other times, place where sun can be obtained.

The chicks will hover under the folds of the coat or blanket when they become chilly, and no danger of lice bothers.

FOR SALE—Black French poodle puppies, pedigrees contain blood of noted poodles in England. Miss Alice Harrison, Menlo Park, Cal.

TO THOROUGHbred HORSE-OWNERS.

FOR SALE AT A SACRIFICE.

First six volumes of Bruce's American Stud Book, practically unused. Cost \$10 per volume. Hard to get.

Two volumes of American Horse Breeders' Guide and Hand Book, with 100 tabulated pedigrees of leading stallions (work now out of print).

The American Thoroughbred, by Capt. Thos. B. Merry.

Two volumes Goodwin's Turf Guide for 1907. Cost \$12.

About 50 thoroughbred catalogues, including Rancho del Paso, Palo Alto, Rancocas, McGrathiana, Nursery Stud, Marcus Daly and all the great stock-farms of the country. These are handier than a studbook, because they are tabulated.

Price, \$60 for all these works.

HOW RUTS ARE MADE.

The rain might fall for hours and do a well dragged road no damage. Regular waterspouts may flood it at night and if the sun shines and the breezes blow you may trot your new buggy over it at 10 o'clock the next morning and not soil either vehicle or team with a single spatter of mud. There will be no mud. How could there be mud without mixing; and how could there be mixing when the water refused to tarry the shortest moment? Oh, yes, the surface gets muddy if several rains fall in quick succession, or if we have a "spell" of cloudy, wet weather. But at the worst there are never any mud holes on this half mile of well dragged highway. Why? Because the King drag has smoothed and rounded this road after every rain or storm. Mud holes the kind we used to have, are a growth, though we did not realize it until we began to give close study to the effects of the drag; a study forced upon us primarily by the necessity of finding an explanation for the miracles it wrought.

A baby mud hole contains a pint of water, and the wheels cut it a little deeper and wider and longer. The road dries; the mud puddle is only a depression in the surface of the road now but it is prepared to hold more water when it rains again. Another rain and once more the wheels cut and ream it out, and for longer hours, because it contains more water and does not dry so quickly. The following rains and numerous wheels develop the baby mud hole into a giant quagmire with strength to seize a loaded wagon and powerful team and hold them helpless in the grasp of its miry fingers.

No quagmires haunt the dreams of the traveler over dragged roads. For since there are no mud holes there can be no quagmires; and there can be no mud holes because the King drag, Herod-like, slays them in their babyhood.

The solution of the problem of the hard earth road is in keeping its surface always so that the next rain will find no lodgment and hence is obviated the bad effects of "mixing."

The method used is very simple.

The King drag which is used in all these road improvents can be made by any farmer with a couple of plank or spliced logs, an auger, a few braces and a chain. All that has to be done to have a hard, durable dirt road is to draw the drag over the surface occasionally—especially after a rain, when the farmer can't work in his fields—rounding the surface of the road from the ditches so as to have the highest point in the center. This dragging creates a surface from which water readily runs off and on which it can not remain to form mud holes.

The split log drag can be used to great advantage in the autumn, hardening the ground so as to shed rain water and to preserve the soil in a firm, dry condition. Bad roads in the spring are largely the result of putting mud and water into cold storage in the fall.—Technical World.

BOTS CAUSE DEATH OF HORSE.

Recently, a ranchman in Snowflake told me he had a yearling colt suffering from bots. As there has been considerable controversy among stockmen and veterinarians as to the extent of injury done to horses by bots, some even going so far as to state that bots are never injurious, I felt interested in the case and immediately set out to visit it. On arrival at the place I found that the colt had died about half an hour previously. It had been running in an alfalfa pasture and had been brought to the corral some three hours before death. It had been seen to kick and bite at its sides and flanks on the road in. On crossing an irrigation ditch it had taken a drink of water. On arriving at the corral the symptoms grow more violent, and it would throw itself on the ground and roll, trying to turn up and lie on its back. After death I ordered a post-mortem examination, which revealed the following internal conditions. There was a hole through the stomach which had allowed the water drunk and all medicine administered to pass into the abdominal cavity. The cavity contained several gallons of liquid, which had also flooded the lungs and heart. Bots were found sticking to

the outside walls of the intestines and were very much alive. When detached they lost no time in attaching themselves again. Great masses of bots were found attached to the inside walls of the stomach, so close together that they touched each other, and with their heads and half their bodies buried in the walls of the stomach. When detached they left holes fully one-eighth of an inch in diameter penetrating practically clean through the stomach wall, which were caloused on the inside so they did not close up when the worms were removed. The spleen and liver looked as if they had been riddled with bots though none were found adhering to either organ. However, when a piece of spleen was put in a dish with some live bots, several of them immediately attached themselves to it. Samples of organs with the bots adhering to them were preserved in alcohol for future reference. Here is a clear case of death from bots and the ranchmen of Snowflake say many horses die in this community from similar symptoms.—R. W. Clothier, Professor of Agriculture of the University of Arizona.

The milk goat, like all other goats, can make a living on brushy and hilly land, where most other animals would starve. They are very beneficial to land in clearing it of weeds, sprouts and brush. They can not endure low, wet land, but thrive perfectly on rough, hilly land. Those giving milk should be fed on good grass, hay fodder and wheat bran, but no grain of any kind.

If there is no pure-bred dairy bull in your neighborhood, get in touch with some good dairyman and purchase a pure-bred bull calf. He will soon grow old enough for service, and with his use you can soon have a good herd of grade heifers from common cows. Service fees from neighbors will pay for his keeping.

Build good hog houses before bad weather sets in. Houses in the end are cheaper than feed at present prices, and hogs will not do their best when compelled to sleep out of doors in bad weather. A good feeding floor pays well. Enough feed is wasted on the average farm by throwing it into the mud and slush to pay off the mortgage.

Fall pigs after weaning should be given good feed to keep them growing when cold weather sets in. Pumpkins will be a good feed for the pigs in early winter. Feed them shorts daily in their slops while they are growing. Keep growing pigs and fattening hogs in separate pens.

Young sows to be bred this winter should not be placed with the fattening hogs this fall, but kept in separate lot or pasture. The sow to become a good mother of profitable litters must carry good flesh and frame, but not surplus fat.

A good silo may be built at present for two or three hundred dollars that will hold as much feed as a barn or other structure costing twice as much. The silo is the most economical storage for the entire corn crop that can be built.

Eight thousand pounds of milk a year is the record of good dairy cows, and extra good cows are capable of producing twice this amount. It pays to breed and keep the good kind, if not so many of them.

Feed the young colts at this season some oats or wheat bran to keep them growing through the fall. Every extra pound of flesh put on the young horse will pay well for the feed consumed.

A neighbor in building a foundation for a dairy barn, used common field stones as a filler and found that it made a very solid foundation, with a saving of half the material.

The county and State fairs are good live stock schools.

FOR SALE—Diablos 2:11 by Diablo 2:09½; has stepped half in 1:01, quarters in 29½. When ready will step in 2:07 or 2:08. Ask any Fresno trainer about her. Price \$400. Have leased ranch and sold stock. For particulars write A. S. Kellogg, 3040 Wash. Ave., Fresno, Cal.

WINCHESTER RIFLES SHOOT STRAIGHT AND STRONG

The name "Winchester" on a rifle barrel is the hall-mark of straight and strong shooting. This is due to the excellence of Winchester barrels, the knowledge and experience embodied in their manufacture and the great care taken in targeting them. Every Winchester rifle is shot to test its accuracy, the distance varying according to the caliber. A corps of experts devote their entire time to this work, and before a rifle is passed it must be capable of shooting seven consecutive bulls-eyes on a standard size target for the distance shot. The proper rifling, or twist, to give the best results with a given cartridge is determined in the same careful manner, assuring accuracy and strong shooting. Only good barrels ever leave our factory.

DO YOU WANT TO SELL

Fred H. Chase & Co. will hold a Fall Combination Sale of Horses at the Pavilion, 478 Valencia Street, San Francisco,

Monday, Sept. 26, '10.

Twenty head of good serviceable trotting bred driving and express horses have already been consigned by the well-known horseman, Sam Norris of Santa Rosa, and 11 head of exceedingly well bred trotting mares, colts and fillies consigned by Mr. P. H. McEvoy of San Mateo.

THIRTY HEAD MORE ARE WANTED.

Communicate immediately with the undersigned if you want to sell. The market is good and useful horses will bring good prices.

FRED H. CHASE & CO.,

478 Valencia St., San Francisco.

THE CALIFORNIA STATE FAIR which closes today at Sacramento, has been one of the most successful ever held in point of attendance. With the aid of the aviators, cowboys, Indians and other novel attractions and the help of several boosting commercial organizations, great crowds have been drawn to the capital city, and the gate receipts must be largely in excess of the amount taken in at any previous fair. The exhibits in the various departments are very creditable, improvement being noted in many of them. The grounds have been adorned and improved and while there are many needed improvements yet to make the fair grounds what they should be, they are in fairly good shape for the accommodation of visitors and by another year or two should be up to date in every particular. The breeders of light harness and thoroughbred horses have the most grounds for complaint in the way in which the present board of directors has handled these departments. Ever since the California State Fair was inaugurated in 1856, running and trotting races provided the principal amusement for the crowds during the afternoon until in the last few years. For some reason not understood by those on the outside, running races between thoroughbreds have been removed entirely from the program. In spite of the fact that the breeding of the thoroughbred horse has been recognized as a great industry, and contests between them a big drawing card at earlier fairs, the present board of directors declines to hang up any purses whatever for them to contest for. Harness racing has not been entirely abolished, but by holding the fair on dates that conflicted with other associations on the coast that cater to the harness horse, and arranging a program that has little or no attraction for horses of class, mediocre racing between ordinary horses has been the rule at Sacramento for the past two years, except in the colt stakes. The wild west exhibition that was given on every day of the fair this year contained features that were enjoyed by the crowds, but the racing of the cow ponies and those in which the Indian took part were of no interest to anyone outside of the participants and aroused no enthusiasm whatever. The flying machine was the greatest feature of the fair and drew more people than anything else, and while the aviator was secured and paid by the citizens of Sacramento who subscribed many thousands of dollars to make the fair a success this year, the flights made were so few and far between that an afternoon of high class racing could have been held each day without any interference with or distraction from the exhibition of the man bird. Were the horse breeding industry but a very small one in California the State Agricultural Society might be justified in showing so little consideration to the giving of a good racing program, but as it is one of the State's chief industries and is engaged in from Siskiyou to San Diego, it

is deserving of more attention from those who direct the affairs of this institution. It is the accepted opinion of those who manage the largest and most successful State Fairs in the United States that properly conducted horse racing has a stronger hold on the people and will draw larger crowds to a fair during an afternoon than any other amusement that can be provided. We do not claim that it should be the only attraction, but every successful fair secretary in America says that the greatest scramble for seats and good view points starts when the races are announced. From Maine to California and from Florida to Washington racing has been found to be the best drawing card at State and county fairs, and if the California State Agricultural Society would give it a little more attention they would doubtless find this assertion to be true. There is no reason why California, Oregon and Washington State Fairs should not be held on dates that would permit the breeders of cattle, sheep, hogs and horses as well as other products, to exhibit at all of them. This year three-fourths of all the high class horses bred and owned in California have been racing at Portland, Oregon, during the week of the California State Fair, simply because Portland made a bid for them by hanging up better purses and arranging more popular classes than were offered at Sacramento. Wise management and more courtesy would have selected dates for the great fairs at Sacramento, Portland, Salem and Spokane that would have permitted breeders of stock and owners of horses to have entered at all four of them, and it is to be hoped that such an arrangement of dates may be agreed upon in the future. We are more than pleased that the California State Fair of 1910 is drawing such crowds every day and hope that it may be a tremendous financial success, also hoping that the fair of 1911 will have a place in a Pacific Coast Circuit and provide a race program that will enable the people of California to see the best and fastest horses of this State's breeding competing at their home fair.

ONE of the often heard comments by the old timers who attend harness meetings these days is that the horses are greatly improved in looks over those raced thirty years ago. That the trotting horse has greatly improved in appearance during that time is true, but there is still room for improvement in many families of the trotting breed. However the majority of breeders are refusing to send any of their homely mares to be bred unless they have shown the ability to produce a very high rate of speed, and the stallion that is not a good looking horse commands very little patronage these days, even though he is known as a speed sire. The American trotter has never been bred to type in conformation or size, but the demand for handsome horses for the carriage and road has had its effect. Within another twenty years the good-looks of the breed should still further improve and if fairs and horse show associations will give liberal prizes for conformation, manners and style in horses, there is no reason why the American trotter should not develop into the handsomest breed of horses on earth. There are many trotting bred horses living that can hold their own for beauty in any show ring, and with a few years of judicious breeding this type will be dominant in the breed. Trotting horse breeding associations should encourage the production of this type of horse.

JUST BEFORE going to press, we learn that William L. James, Secretary of the California Breeders' Association, and Los Angeles correspondent for the Breeder and Sportsman, was found dead in his bed in the Hotel Stanford in this city last Monday afternoon. Mr. James had been in this city on a visit for about a week and had intended to go to Sacramento on Monday morning. Mrs. James came north with him and returned to Los Angeles last week, and Mr. James was to follow some time this week, they having abandoned their plan for a sea trip to Vancouver, which they contemplated taking when they left Los Angeles. The people in the hotel say that Mr. James retired in apparently good health and good spirits. The doctor pronounces his sudden death due to heart failure. The remains have been embalmed and taken to an undertaking establishment and will be sent to Los Angeles for interment.

Drink Jackson's Napa Soda.

HORSES STARTED PREMATURELY.

Each year uncovers a lot of horses entered and started in races prematurely. This applies as well to two-year-olds and three-year-olds as to aged horses. Any animal is started prematurely when the measure of preparation given to it is not commensurate with the measure of exaction to be made of it. It has been shown to be quite possible to mature a yearling to do a certain amount of racing without injury or detriment to its future. But the limit of the racing possible to qualify for is very meager, so much so that it is found not to be profitable to attempt a general development of animals at this tender age with the expectation of making a money earning campaign with them. But taken as soon as foaled and educated carefully, without ever overtaxing, an expert can shape an average specimen while in the yearling form to go a few easy races, and even to make a fast mile or so, without suffering harm of any sort. Even more so in the case of the two-year-old, or three-year-old. Keeping development of speed abreast of physical growth all the while, never allowing a soft and spongy growth of weeks or months to occur, a condition of fitness may be preserved that prepares either the two-year-old or three-year-old to endure a campaign adjusted to the age, as is done by association regulations, with no more peril or harm in the future than occurs with the aged and fully matured horse. But the vitally important matter in every instance pertains to the manner of treatment given from babyhood up. A youngster allowed to run in the paddock or pasture up to the spring or summer season of the year to be raced cannot possibly by any known process be prepared to do any racing worthy the name. Started at all in that manner would bring them into the category of racing prematurely. But with the older horse of any number of years the same is the case. Indeed multiplying years in mere idleness, or undeveloped speed conditions, endangers more than starting with short term preparation. No horse with physical growth soft and flabby, or even unadapted to fast and hard and stern strain and stress can be developed in time not proportioned accordingly to do race horse service with any prospects of proving successful in a degree worth reckoning on. Even horses eight or nine years old inured to considerable street work or road driving would be poor material, if gifted with the speed of the wind, to make campaigning race animals of with a single season's or year's preparation in the most capable hands. No part of the entire animal economy is readjustable from the estate of nature, or slow work, to that of speed-making or use in a period of time less than is required to transform and work over every part and particle of the creature, from the brain and nervous system down to the bones, and tendons and muscles, and from the heart and lungs to the other vital organs. A thorough transmutation and adjustment has to be made of an animal that is to be raced, from simply a growing up estate or one employed in ordinary horse usage. The anatomical and muscular systems require a development that no years would ever effect in other than racing occupation. Just as much so the circulatory system and respiratory have a change to undergo if no suffering is undergone, or peril of falling dead incurred, which not infrequently happens with animals thrust into the racing game in hasty manner. But the vital organs, and very particularly the lungs and heart which have herculean labor to undergo in severe race struggles have a need of development that nothing short of years can suffice properly to accomplish. In fact there is not a single fiber of the entire organism that should not be matured for the specific object of use in a racing machine before the extreme limit of demand is made upon the animal. Starting a horse at any time before this is done should only be with a full comprehension of unfitness for anything approaching strenuous exertion and for educating and developing rather than actual racing experience. A completed racing tool has to be wrought out by a process that refines, solidifies, fortifies and makes "right as a trevet" the whole horse from the point of the ears to the sole of the feet and from the valves of the blood vessels to the bones forming the entire skeleton.—Spirit of the West.

Happy Dentist 2:03, the good pacer owned by Dr. R. E. Nash of San Jose, and that took his record in a winning race at Portland last Monday, is one of the best mannered pacers ever seen on this coast. He will be a starter in the \$5000 pace at Salem next Wednesday and should come near winning. He was sired by Nutwood Wilkes and was bred by the late Martin Carter. His dam is Azroze, dam of Little Louise 2:17, by the half thoroughbred horse Azmoor 2:20½, son of Electioneer, second dam Arodi by Piedmont 2:17½, third dam Aroi 2:24 by Electioneer, fourth dam the California race mare of early days, Aurora 2:27, dam of two in the list, by John Nelson. There is a good mixture of Wilkes, Nutwood, Electioneer and thoroughbred in the breeding of Happy Dentist. He wears the straps but goes with little weight on his feet and few boots.

Mr. C. A. Canfield of Los Angeles has owned the two fastest winners of the Occident Stake. He bred El Volante 2:13¼ winner of last year's stake, while he acquired this year's winner Donashani 2:13¼ by purchase. It does not often happen that one owner wins this stake twice and Mr. Canfield is to be congratulated on his good fortune, although the loss of last year's winner by death last spring was a serious blow to his horse breeding ventures.

DONASHAM WINS OCCIDENT STAKE.

Son of Athadon Trots Away From Tried Three-Year-Olds in His First Race This Year.

The largest crowd of people that has congregated at a California State Fair in many years packed every available place from which a view of the track could be had last Monday. It was Labor Day and nearly every store and workshop in Sacramento was closed for the afternoon, giving everyone who wanted to attend the fair an excellent opportunity. There were some great attractions at the fair grounds, the chief of which was Hamilton, the birdman, who was advertised to make several flights during the day. There was also the Cheyenne cowboy outfit that did wild west stunts between the heats of the races at the track and there was the Occident Stake with seven of the best three-year-old trotters ever seen in California to compete for a stake worth very close to two thousand dollars to the winner. It was estimated that at least 15,000 were on the grounds during the afternoon, and there certainly looked to be that many.

The Occident Stake proved to be a good race, and while it was won rather handsily by Mr. C. A. Canfield's big colt Donasham whose first heat equalled the fastest heat ever trotted in an Occident Stake, he lost one heat and had there been any betting some lively business in this line would probably have been done.

The breeding and ownership of the three-year-olds that lined up for the word were as follows:

Pal, b. c. by Palite, dam Lorna Doone by Bayswater Wilkes; E. D. Dudley, Dixon, Cal.

Babe Verne, br. c. by Jules Verne, dam Little Babe by Bradmore; Henry Peters, Binghamton, Cal.

Sweet Bow, b. f. by Bon Voyage, dam The Silver Bell, by Silver Bow; L. H. Todhunter, Sacramento, Cal.

Strathboule, bl. c. by Stamboulet, dam Strathalie by Strathway; Geo. L. Warlow, Fresno, Cal.

Bon Guy, b. c. by Bon Voyage, dam La Moscovita by Guy Wilkes; W. E. Detels, Pleasanton, Cal.

Donasham, b. c. by Athadon, dam Cora Wickersham by Junio; C. A. Canfield, Los Angeles, Cal.

Expedio, br. f. by Lijero, Gilt Edge Stock Farm, Sacramento, Cal.

Pal was driven by Fred Chadbourne, Babe Verne by Sam Hoy, Sweet Bow by John Quinn, Strathboule by Schuyler Walton, Donasham by W. G. Durfee who came up from Los Angeles especially to drive the colt in the race, and Expedio was driven by William Ivey.

As soon as the colts began scoring it was seen that Donasham had the speed of the bunch and there is little to describe in his winning of the first and second heats in 2:13½ and 2:14 which he did with comparative ease. In the first heat the race for second place was between Bon Guy and Strathboule, the former winning. In the second heat Pal and Strathboule were the contestants for second place and Pal won. The third heat was a surprise. Going round the first turn Donasham made a break, and Expedio, that had been last in the first heat and next to last in the second heat, began to show a great flight of speed. She took the lead and was never headed in 2:14½. Donasham recovering from his break and worked into second place on the back stretch, but was not able to catch the flying Expedio. Although Durfee gave him a hard drive until a hundred yards from the finish, on finding he could not catch Expedio, but had all the others beaten eased Donasham up a little, jogging under the wire. Strathboule was again third and Bon Guy fourth. Under the rule, only the heat winners came out to start for the fourth heat, Bon Guy having third money won. The two three-year-olds were sent away to a perfect start with Expedio at the pole. They trotted like a team to the quarter pole where Expedio made a break and as it was a bad one, Donasham had a lead of nearly a hundred yards by the time the filly regained her feet and he won pulled up in 2:17½. The track was slow and dusty. Had the race been over a track like Woodland's the first heat would have been in 2:12 or better to a certainty.

After the race there were those who thought that Expedio but for the break in the fourth heat would have won it and the race as she seemed the fresher horse, but it was probably her effort to keep up with Donasham who was trotting very fast along side her, that made her break. Donasham was bred by Mr. Geo. L. Warlow of Fresno, who sold the colt when a two-year-old to Mr. C. A. Canfield of Los Angeles. Schuyler Walton has given Donasham nearly all his training. He is a big colt, standing over 16 hands and is as good gaited a trotter as one would wish to see. He is a full brother to Athasham 2:09½, the two-year-old Matawan 2:19½ and a half brother to Nogi 2:10½, all being out of the great brood mare Cora Wickersham by Junio 2:22, son of Electioneer. The summary of the race follows:

Occident Stake; three-year-old trotters:
Donasham, b. c. by Athadon-Cora Wickersham (W. G. Durfee) 1 2 1
Expedio, br. f. by Lijero (Ivey) 7 6 1 2
Bon Guy, b. c. by Bon Voyage (Twhig) 2 4 4
Pal, b. c. by Palite (Chadbourne) 4 2 5
Strathboule, blk. c. by Stamboulet (Walton) 3 3 3
Sweet Bow, b. f. by Bon Voyage (Quinn) 5 7 6
Babe Verne, blk. c. by Jules Verne (Hoy) 6 5 7
Time—2:13½, 2:14, 1:14½, 2:17½.

General H. now 2:07½, a New York winner, is one of the fastest trotting stallions of the year. He is owned at Calgary, Can.

FROM VISALIA.

Visalia, Cal., Sept. 4, 1910.

Breeder and Sportsman:—Last spring I reported the organization of an agricultural fair and racing association at Visalia. I did it at the time under pressure, feeling that it was premature, though it had assumed such proportions as to seem assured. A tract of land was secured, incorporation papers filed, a board of directors elected and stock actually subscribed, justifying the beginning of operations, when a split in the board of directors over the purchase of the improvements of the old Tulare track put a crimp in affairs from which we have no hope of recovering. This is to be regretted as no locality is better situated to prosper an organization of this kind. It is a decided disappointment to small breeders of harness horse since there are quite a few here now.

Mr. George McLees of Liudsay had the misfortune to have his three-year-old stallion by Nutwood Wilkes—McKinney, that he bought from the Martin Carter estate, burn up in a fire that destroyed his barns. He once had him out but while rescuing others the colt ran back into the flames. McLees made no effort to save his automobile, being engaged in saving the life of the poor dumb animals. He had made arrangements to send the colt to Mr. Zibbell at Fresno to work.

Mr. Lees informed me that My Way 2:15¼ is safe in foal by the colt.

Mr. Johnny Maben (brother of Walter) invited me to inspect his crop of young colts, three in number, all out of Zombro dams, and good bred ones, too. One being a full sister to Zomalta 2:08¾ that showed in 2:16 for Walter with little work. Her foal is by Carlok in 2:08¾. Another foal is by Mr. Canfield's good horse Walter Barker and the third one by Best Policy, a local horse of much promise by Allerton 2:09¼. I never saw three nicer colts bunched together, all showing size and finish suggestive of their royal breeding. The mothers are in foal to Best Policy now.

I could enumerate many more in this locality that are bred in the purple. There are no less than six Zombro mares here in foal to Best Policy together with daughters of Nutwood Wilkes, Diablo and others of the state's leading sires.

I am building on going to the races next year, fixing my hope on Irma Direct 2:24¼ and My Zolock filly Zonelita. Irma Direct will be six years old next spring; is sound of her curb now and a grand big mare that can trot a storm. Zonelita is coming five in the spring. She has never had much work, is a pure gaited pacer without straps or boots with the McKinney instinct to stick to her gait and keep busy. She can trot a mile in 2:30 in her pacing shoes. The 15th of last May, one day after her four-year-old birthday, with about 30 days' work on this dry sandy half mile running track that had not seen a water wagon or track tool all spring and in constant use by the runners, I stepped her a full mile in 2:15, last eighth in 16 seconds timed by Messrs R. O. Newman, B. W. Jennings and Sheriff Collins. This won't seem much of a mile to those not knowing the conditions, but since she had only beaten 2:31¼ four times and paced part of the distance in sand hoof deep out in the middle of the track, it would put most any pacer in trouble. After this she paced it faster. But allowing others the privilege I reserve unto myself of winking at fast trials by enthusiastic owners when alone. I am willing to rest her on her merit of positive proof. It may be she will not show to much advantage on a good track as a less powerful animal would. She stands 15¾ hands and weighs 1050 in track condition. She never misses a meal and will have all she wants to eat if it necessitates eating up her bedding, and with that done she'll put in her time sleeping and even with all this she is a free, willing pacer, not even requiring a whip.

JACOB BROLIAR.

Springfield Farm, Guelph, Ont., has lost the noted brood mare Brownie, who recently died, the result of inflammation. The loss of Brownie is keenly felt by Mr. Baker, the owner, as she was without doubt the leading speed producer among Canadian bred brood mares. Brownie was a daughter of Hamlet 2:25, by Highland Boy, and out of Brown Lady, by Sharpcatcher (thoroughbred), and her daughter, Darkey Hal 2:02¼, and her unsexed son Charlie B. 2:07¾, form the fastest harness horses by records ever produced by a Canadian bred mare. Besides these named, Brownie is the dam of Alpha Hal 2:21¼, and Hal Boy (trial 2:16 on a half-mile track), and one or two others at Springfield Stock Farm that have never been trained.

W. L. "Farmer" Spears, of Lexington, Ky., who journeyed all the way to New York to witness the Matron stake, decided at the Empire City meeting, was one of the happiest men present, outside of George H. Estabrook, owner of Colorado E. It was Mr. Spears who bred the dam of the colt to The Bondsman, and nominated her in the Matron stake, selling the youngster later to Mr. Estabrook. As a result of his trip and the race, Mr. Spears took home with him to the Hickory Grove Farm a handsome silver cup, donated by Senator J. W. Bailey, to the nominator of the dam of the winner.

Dudie Archdale 2:06¼ had to be content with second money again last week. To the average observer it looks as though the little black mare would be better for a few weeks' let-up.

HAL B. JR. 2:10¼.

The most sensational pacer that has appeared on the half-mile tracks this year is the handsome brown stallion, Hal B. Jr. 2:10¼, owned in Canada.

During the winter ice meet, this young pacer showed so much speed and consistency, that he was regarded as a good prospect for the slow classes and accordingly entered in quite a large number, eight of which, afterward failed to fill satisfactorily. Hal B. Jr. started the racing season on May 24 at Mitchell, Ont., where he defeated Mattie Chimes 2:07¼ in a special event. After that he next appeared at Pontiac, Mich., having been entered in the \$1000 early closing races for 2:20 pacers through the Short Ship Circuit. He captured the race at this point in straight heats, taking a record of 2:11¼ and impressing every one present with his many attractive qualities. At Flint, the next week, he again won the rich classic, continuing to head the summaries at Port Huron, Bay City and Alpena, Mich., after which he was shipped to Titusville, Pa. At this point, he took part in a 2:12 class event and met such tried campaigners as Exall, Ideal, Nettie Marie, Miss Peeler and others, but the same results attended him here as elsewhere. The next week at Corry, Pa., he defeated practically the same field reinforced by several other fast ones and at Kittanning, Pa., he placed another victory to his credit.

His race at Akron, O., proved his tenth in succession and though he was obliged to go seven heats to land it, he also raced against the best field that he was ever called upon to tackle, in fact, occasions are rare indeed, when a young pacer is called on his first year out, to meet a combination of 2:10 performers that had Grand Circuit experience.

Had Hal B. Jr. not been so unfortunate as to break his overcheck at the very start of the third heat, there is not much doubt, but what he would have concluded affairs with that round. By the accident, the young stallion lost considerable ground and in place of going an easy mile and just saving his distance, which appeared the most advisable, Jimmy Easson soon had Hal B. Jr. going at a great clip and at the last turn had reached the leaders, when another break put an end to his chances.

When darkness set in Hal B. Jr., Major Brino 2:05¼ and Dan Culver 2:09¼ each had won two heats, but the next morning when the event was called for completion, the first named landed in good style, thus keeping his reputation free from defeat. His present record 2:10¼ which was made over the Akron track, reduced the best previous time of the course three and a half seconds and when one takes into consideration the conditions of the surface and the ease with which he covered the distance, this young pacer must be considered one of extraordinary ability. That he is today on a good mile track, capable of stepping a mile in 2:05 there is not the slightest shadow of a doubt and barring accidents he will in another season acquire a record as fast or possibly faster than his sire.

Hal B. Jr. 2:10¼ is a son of Hal B. 2:05½ a full brother to Fanny Dillard 2:03¾ and a pacer of exceptional ability now owned by Paul Wessinger of Portland, Ore. The dam of Hal B. Jr. 2:10¼ is Annie Wilkes by Crook Wilkes, son of Baron Wilkes 2:18.

He is a dark brown stallion, standing a trifle over 15 hands high and weighing at the present time about 900 pounds. He is a very handsome individual, nicely mannered, smooth going pacer and possessed of a flight of speed that is remarkable. Outside of a pair of hoppers, he wears no other rigging other than the lightest design of a quarter boot.

Hal B. Jr. 2:10¼ is owned by P. L. Kastner of Sevringville, Ont., and is being raced by Jimmy Easson of Stratford, Ont. It is at present the intention to send him home, as his mark is as low as it is desired to give him this year.—American Sportsman.

WHAT THE HARVESTER DID.

Here are some of the records The Harvester made when he trotted the third mile of his race at Ft. Erie in 2:02.

1. Fastest five-year-old stallion and gelding, formerly himself, in 2:03¼ (1910); Bob Douglas 2:06¼ (1909), and Uhlman 2:02¼ (1909).

2. Fastest trotting stallion, formerly Cresceus, 2:02¼ (1901), against time; himself in a race, in 2:03¼ (1910), and Cresceus 2:03¼ (1901).

3. Fastest heat ever trotted by any five-year-old in a race, formerly Uhlman 2:03½ (1909).

4. Fastest third heat in a race, formerly Hamburg Belle and Jack Leyburn, both in 2:04¼, made in 1908.

5. World's fastest three-heat race by a stallion, former record made by Cresceus 2:07¼, 2:06, 2:06, in 1900, which for total fractional seconds is two seconds slower than that of The Harvester or 19½ seconds against 17½.

6. With the exception of Hamburg Belle, the fastest race trotter records, and as the former is dead, The Harvester is the world's fastest living trotter in a race.

The Harvester, for his age, has also beaten even the champion pacers of the world. The fastest pacing heat to the credit of a five-year-old is that of Coney, in 2:02¼, while the world's fastest pacing stallions of that age are Audubon Boy (1902) and Searchlight (1899) in 2:03¼, the fastest five-year-old mare being Lady of the Manor 2:04¼, record made in 1899.—Western Horseman.

Who will stop The Abbe 2:04? He now has seven rich pacing classics to his credit.

HARNESS RACING'S OPPORTUNITY.

There never has been a time in the history of the sport that presented so many opportunities to firmly establish light harness racing as the present. Circumstances have curtailed racing the thoroughbred in the East to such an extent that it is no longer the chief pastime of the masses, and in the middle West, Kentucky alone furnishes a field for the operations of men engaged in racing the runner. As a consequence of this condition of affairs in the East, thousands of people who are fond of a contest between horses, could be attracted to light harness racing if the proper steps were taken to make this sport an interesting one to others than breeders, trainers and enthusiasts. To the layman who does not know one horse from another and is interested solely in the exhibitions of speed and racing ability, the details of a meeting play an important part, for while the keen enthusiast concentrates his thoughts on the various happenings on the track itself, and pays little attention to the surroundings, the casual observer has time to take in the details. Harness racing has not been destroyed by the adverse legislation that has been directed against every form of betting, nor has it been injured materially as has the sport of racing the thoroughbred, and it is possible that successful meetings could be given at which betting was not permitted and thousands of spectators attracted by trotting and pacing races. In order that this could be accomplished, it is absolutely essential that the undesirable features be eliminated, that protracted scoring be done away with, that the starting should be prompt and skillfully done, and that the judges should be experts. Only well balanced fields of well mannered, fast horses of considerable racing ability can be of interest to the average spectator and even though an event may furnish the sensational performance as regards time, unless the finish is a close one, none but the so-called racing sharps are enthused. The meeting at Empire City was given under the auspices of a number of sportsmen who generously guaranteed a racing fund. As far as their efforts were concerned, nothing was wanting, and horsemen throughout the country owe them a debt of gratitude for their sportsmanly conduct and their unselfish devotion to the sport. There must, however, have been a screw loose somewhere, for in a majority of the races, the fields were small, and instead of sharp battles for supremacy, the spectators were given the tamest of tame sport. While it was probably not altogether the fault of the management that these conditions existed, enough has been learned to prove that another meeting like that recently given at Empire City would fall flat. The American Association of Trotting Horse Breeders furnished the attraction on the opening day, and the rich Matron Futurity Stake offered by this association was responsible for over fifty per cent of the number of spectators present. The value of the stake and the reputation of the young trotters engaged attracted something like seven thousand people to the Yonkers course, yet after that there was nothing of particular interest offered as an inducement.

There is no denying the fact that there is much that is commonplace about racing the light harness horse, and while it furnishes pleasure and delight to the student of breeding, and to one who watches closely the performance of the various horses in training, it lacks the thrill of excitement that is found in many other pastimes. This, however, is not the fault of the horse himself, for he is capable of better things than he is permitted to accomplish under the tremendous handicaps put upon him. The American trotter when seen at his best is little short of perfection. He possesses beauty of form, his gait is the poetry of motion, and when at speed, he furnishes a picture that can hardly be equalled. When pitted against a foeman worthy of his steel, he presents a thrilling spectacle, and his gameness, courage and intelligence arouse the enthusiasm of the entire world. How rarely one finds this spectacle presented to the racing public and how frequently there is furnished a most commonplace affair.

There are today more men in this country keenly alive to the possibilities in the American trotter, than ever before, a greater number who are willing to pay high prices, to extensively engage young trotters, and to hear the expense incident to their training, than in the entire history of light harness racing. It has been reported quite recently that the owner of The Harvester refused an offer of seventy-five thousand dollars for his great stallion, and that Colorado E has been sought by a prominent breeder at an enormous price. Fast youngsters extensively engaged are readily sold for prices representing a large profit on the cost of production, stallion fees are higher than for many years, breeding operations are being extended in every direction, in fact, the American trotter has never been as popular as now, nor has racing created the same interest that it holds at present. In spite of all these things and regardless of the fact that this seems to be the psychological moment in which to popularize racing the light harness horse, managers of racing associations appear to be blind to what is needed. At almost every meeting there is seen incompetency on the part of the starter and the judges, fields have been small and class races so arranged that there is little opportunity for the best horses in training to meet each other. The appointments at most trotting courses are hopelessly inadequate, and there is almost an absolute lack of charm in the surroundings. Whenever a meeting is given on a scale that is in keeping with the interest that is taken in the American trotter, the racing public has generously

responded. At Cleveland, the beautiful course with its perfect appointments, attracted thousands each day and the racing that was presented to the spectators was of such a nature that it created great enthusiasm. At Goshen, a meeting was given over the half-mile track at which a greater number of the fashionable element was attracted than at any similar meeting ever held in this country. The reason of this was that the setting was appropriate and that there was furnished something besides tedious racing, dust, and the many inconveniences that are too often seen at a trotting track.—Kentucky Stock Farm.

REAL HORSE RACES.

Minor Heir's complete return to form, as evidenced by his mile in 2:00 at Galesburg is perhaps one of the most pleasing features of the year, writes Palmer Clark. That the brown stallion is now close to record-breaking form he showed in that mile in which he defeated the chestnut stallion Hedgewood Boy 2:01. The performance of Minor Heir indicates that he will soon be in shape to beat the world's record for pacers without a wind shield in front now held jointly by himself, Star Pointer and Audubon Boy.

Some doubt had been expressed earlier in the year as to his ability to accomplish this feat, owing to his several disappointing showings previous to his Galesburg victory. Up to last week Hedgewood Boy seemed to hold him safe and the critics thought that perhaps Minor was not as good as he had been in 1908 and 1909. Now those doubts have been dispelled and all are ready to acclaim the stallion the king of living pacers. His mile in 2:00 is the world's race record.

Hedgewood Boy is also a much improved horse and there seems to be little doubt but that he will take a mark better than 2:00 before the year is over.

The M. W. Savage combination of pacers is meeting with unequalled success in their exhibition tour. Early in the year, when it was announced that the Minnesota owner would promote a series of match races among the pacers Minor Heir, Hedgewood Boy, Lady Maud C. 2:02½, and George Gano 2:03¼, it was feared that the events would degenerate into nothing but a number of hippodrome performances whose results were previously determined, and that they would not be real horse races. But the contrary is the case and the two exhibitions which were given by the all-star caste last week at Galesburg have never been surpassed.

On Tuesday Hedgewood Boy beat Minor Heir and George Gano in 2:01 in a desperate contest, and on Thursday Minor Heir beat the Boy in 2:00, the last half of which was paced in :59¼. Such exhibitions please the public immensely.

The early closing events at Boise, Idaho, brought out a splendid list of entries. The 2:12 pace, \$2500, has twenty-one entries; the 2:20 trot, purse \$2500, twenty entries, and the other \$2500 purse, the 2:10 trot, has sixteen entries. Four late closing purse races will be given, \$500 up in each case, for 2:40 trotters, 2:35 pacers and one each for the free-for-all trotters and free-for-all pacers. The rich program should bring out fine races and a good attendance.

The last matron to come to the court of the famous stallion Walnut Hall 2:08¼, was Dudie Egmont 2:13¼, dam of the fleet-footed Dudie Archdale. Dudie Egmont arrived at the farm by express from Hooper, Neb., Aug. 7, with a filly just nine days old, by Shade On, 2:08¼, at foot, and she was mated that day with Walnut Hall.

An own full brother to The Harvester 2:02, arrived at Walnut Hall Farm on May 8 and he resembles his illustrious brother very much in conformation, color and markings. He is a bay and has the same white feet, but not the small star. This is Nolelet's fifth foal, she having missed in 1909 and slipped in 1908. The Harvester was foaled in 1905, by Walnut Hall, and her first foal (in 1904) was by The Director General.

At Lexington, Ky., Henry Williams has some sensational yearlings, the star of the lot being a brown colt by McKinney 2:11¼, out of Lady Brussels, the dam of three foals which have beaten 2:20 at two years of age. This colt recently went a mile in 2:32½, which is the best reported for the season except that of the colt Benear, who was given a record of 2:27¾ during the Cleveland meeting.

Joe Rea has a number of the produce of the famous matron Brown Silk 2:19¼ in training at Lexington that will likely add more fame as a producer to Baron Wilkes' best daughter. These are Silk McKinney (2), by McKinney; Purple Silk (3), by Directum Spier; brown colt (1) by Directum Spier, and Bel Silk (2) 2:22½, an aged mare. Rea intends to give the two and three-year-old records and to reduce that of Bel Silk. The mare and produce are the property of Henry Schulbach of Wheeling, W. Va.

The Harvester is, without doubt, today the most valuable trotting horse in the world—and it is not improbable that if offered for sale he would bring as much or more money as any of the English thoroughbred horses which command such fabulous prices. But it is a known fact that his owner would not entertain the thought of selling him for a moment, regardless of the sum which might be offered.

INFLUENCE OF REMOTE ANCESTORS.

The effect of atavism, regression or throwing back for qualities to animals several generations removed, often causes great surprise to practical breeders. Cases of this kind are most likely to occur within three or four generations, but sometimes extend much farther.

The strength with which a particular quality or group of qualities is stamped upon an individual and the limit of his or her ability to transmit it, or them, to his or her offspring, does not appear to be influenced by the number of generations that the particular quality, whether physical or mental, has lain dormant. When an animal is noted for any special quality that has distinguished some ancestor it is reasonable to believe that the quality was inherited from the particular ancestor which was distinguished for this special quality, provided it is an inherited quality.

Uhlán 1:58¾ exhibited greater endurance in his record breaking mile than was displayed by any of the world's champions that preceded him, for he trotted the last quarter in 29 seconds. The question is from what source did Uhlán 1:58¾ inherit his wonderful endurance. There were several animals among his group of ancestors that were greatly distinguished for this quality.

Aherdeen 27 that got Sir Walter 2:24½, the sire of Sir Walter Jr. 2:18¼, was from the famous trotter Widow Machree, that was greatly distinguished both for gameness and endurance. The dam of Sir Walter Jr. was by American Clay 34, and the dam of American Clay was a thoroughbred daughter of imported Tranby, a horse that became greatly distinguished for endurance in England in connection with the remarkable match against time, made in 1831 by a Mr. Osbalderston, that he could ride two hundred miles within ten hours over the Newmarket Round Course, as related in "Vol. 1 of The Horse of America, by Frank Forester." The feat was performed in 7 hr. 19 m. 4 sec.—or, adding 1 hr. 22 m. 56 sec. for stoppage—in 8 h. 42 min.

In this match Mr. Osbalderston weighed 11 stone, or 154 lbs. (It is not clearly stated whether this is net weight or includes his saddle), and rode twenty-eight horses—all of them, of course, thoroughbreds, though not one of any previous celebrity or standing on the turf as racers of reputation, dividing the distance into four-mile heats, for his own convenience and the facility of changing.

Nineteen of the twenty-eight he rode more than once. Sixteen performed two heats each, and overaged their four miles in 8 m. 30 sec. with an infinitesimal fraction, two of them falling lame, and the weather being extremely bad throughout, and against speed. One, Skirmisher, he rode three heats, making had time enough, averaging 9 m. 3 sec. The hero of the day, however, was Tranby, by Blacklock, who performed four heats in the following gallant style: First, 8 m. 10 sec.; second, 8 m.; third, 8 m. 19 sec.; fourth, 8 m. 50 sec. Total of sixteen miles under 154 pounds, 33 m. 19 sec., which was, and justly was, considered prodigious proof of bottom and courage.

It is not improbable that the combined influence of the imported Tranby and Widow Machree 2:29 crosses imparted through Sir Walter Jr. 2:18, to the successful trotter Alciddalia 2:10¼, the gameness and endurance that she displayed, and through his dam, Blonde, improved the endurance of Uhlán. Through the second dam of Sir Walter Jr. 2:18, Blonde inherited not less than four crosses of the blood of the famous Sir Archy, the most wonderful horse of his day in America, and through such noted turf celebrities as Wagner, a four-mile record breaker in his day; Bertrand ("Unequaled on the turf, and in the stud he had no rival"—Wallace), also Sumpter, whose third dam was the famous Siammerkin.

Through the dam of his grandsire, Sir Walter Jr. 2:18¼ inherited a cross of the game race mare Widow Machree 2:29, by Seeley's American Star 14, a strain that is found blended with that of Hambletonian 10 in many of the champions. The combination of blood lines that produced Seeley's American Star 14 is very similar to the combination that produced the Rodes Mare, dam of the successful brood mare sire Mambrino Patchen 58.

No one has the least desire to detract from the credit of Bingen 2:06¼, for he has proved himself the most successful progenitor of uniform and extreme light harness speed that has ever lived. Uhlán 1:58¾, however, has proved himself so far superior in courage and endurance to any of the other sons and daughters of Bingen 2:06¼ that Blonde, the dam of Uhlán must be entitled to some of the credit of that superiority.

No one absolutely knows from what particular ancestor Uhlán inherited this ability. Those who have analyzed the pedigree of his dam know the blood lines of which it is composed. The characteristics of the most noted animals among her ancestors are also known. It is certain that Uhlán 1:58¾ derived his superior qualities from such of his ancestors as possessed them in an unusual degree.—American Horse Breeder.

Lady of The Manor 2:04¼, the one-time pacing queen, has entered the producing ranks, her two-year-old daughter, Royal Manor, by Royal Line 2:14¼, having made a record of 2:24¼ a few days ago. The famous daughter of Mambrino King is likely to take a high place among speed-producing mares eventually. Her oldest foal, Lord Direct, by Direct Hal 2:04¼, paced a mile in 2:10¼ as a three-year-old and is the sire of some very promising youngsters.

NOTES AND NEWS

Todd 2:14½ is credited with nine new performances to date.

Happy Dentist won at Portland Monday and took a record of 2:08.

Helen Stiles worked the Portland track one day last week in 2:08½.

More than \$16,000 passes through the pari-mutuel machines in France annually.

Outside the colt stakes the racing at Sacramento this week has been decidedly cheap.

The Newman Fair will be held next week, beginning Thursday, the 15th of September.

When George Estabrook purchased Colorado E. (3) 2:07¼ he paid Will Evans \$4500 for the colt.

Henry Helman has located at San Jose with his string of horses, headed by his stallion Alconda Jay.

Donasham was originally entered in the Pacific Breeders' Futurity, but payment was forfeited on him through an oversight.

Entries to the races at the Fresno County Fair will close next Thursday, September 15th. See the advertisement for particulars.

Fresno will hold a county fair this year in October. Entries to the races close next Thursday.

Eight two-year-olds, all by Ed Custer (3) 2:12¼, were given time records at the Galesburg meeting.

Five dollars will be due and payable October 1st on your weanling entered in the \$7250 Pacific Breeders' Futurity for foals of 1910. Be sure and make the payment in time.

M. C. Keefer's Zorankin is a new standard performer for Zombro. He won the two-year-old futurity at Portland last Monday, taking a record of 2:29¼.

Readville and Hartford Grand Circuit meetings were both partly spoiled by rain.

The Stanford Stake today at Sacramento will be a great race if the track is in any sort of shape for fast time.

October 10th is the date set for the fair at Hartford where there is one of the best mile tracks in the State.

The Angelus 2:13¼ by Zombro, dam Hazel Kinney 2:09¼ by McKinney, was a winner at the Kalamazoo meeting this week.

In all the harness races at the Sacramento State Fair horses not winning a heat in three are ruled out and must go to their stables.

Allendale Stock Farm, Melbourne, Australia, will send its stallion Marvin Wilkes 2:12½ to Christchurch, New Zealand, for the stallion season of 1911. The breeding season in the antipodes generally begins about the first of August.

The Woodland mare Nada, that worked a third heat in 2:09 before going north, was fourth in the 2:30 trot at Portland last Monday. The fastest heat of the race was 2:13.

Donasham has started in but two races. At Los Angeles last year he won his only start as a two-year-old when he won the Confidence Stake and took a record of 2:29. This year his only start was in the Occident Stake last Monday which he won.

Three three-year-old stakes have been trotted in California this year with a different winner in each. The winners are closely matched in records—Strathboule 2:13½, Bon Guy 2:13½ and Donasham 2:13¼.

When the official record was received from Galesburg it was found that 2:06¼ was Denervo's record instead of 2:03¼ as sent out in all the telegraphic reports.

Entries close Thursday next, Sept. 15th, for the harness races at Phoenix, Arizona. The program is an extensive one with no purse less than \$1000. California owners should not overlook this meeting. The Phoenix track is one of the best in the country.

Last Saturday morning Zapel worked his four-year-old gray pacing filly Silverlight (3) 2:18½ three heats in 2:11¼, 2:11½ and 2:11¼ at the West Chicago Driving Club's half-mile track. Although she stepped the last half of her third heat in 1:03, and the final quarter in :30¼, she was well in hand at all times and could probably have stepped three times in 2:10. She is by Searchlight, p. 2:03¼, out of Queenie, by Dexter Bradford, and was bred in California.—Horse Review.

There were twenty-two new 2:10 trotters up to the close of last week's racing. The total list of new 2:10 trotters for 1909 was 38.

The stallion Crescello, by Cresceus 2:02¼, out of Derby Princess 2:08½, has taken a half-mile track record of 2:26½.

Five four-year-old trotters have entered the 2:10 list this season to day—Billy Burk 2:06¼, Joan 2:07¼, Dr. Treg 2:09½, Captain George 2:09¼ and Vito 2:09½.

Mr. P. W. Bellingall of Oakland is breaking a very handsome yearling by a son of Nutwood Wilkes and out of a Secretary mare. It stands 15 hands over the withers and 15¼ over the hips.

Rain and mud prevented any harness racing being held at Portland on Tuesday of this week. A couple of running events made up the racing program.

Gus Macey believes he can drive Colorado E. a mile in 2:04 this year and if he should the colt will hold all others for a while.

Walter Hal 2:04 changed ownership the other day at \$5000. Walter Hal made his record this year and is considered a very high class racing stallion.

The Grand Circuit races have developed a number of high class new trotters this year, but the new pacers that have a chance to become free-for-all candidates are very few.

When Willy trotted the deciding heat of the final race for the Speedway stake at New York last Thursday in 2:10½, he touched near the world's race record for trotting stallions to wagon, which is the 2:10 of John A. McKerron.

Thirty thousand persons paid to see the fair and races at the Greenville, Ohio, county fair one day last week. The track is a half mile one and not extra good at that. During four days the attendance was over 100,000.

Lijero 2:20¼ and his daughter Expedito 2:14¼ both made their records at Sacramento last Monday. Lijero won his race in straight heats, and Expedito got one heat and second money in the Occident Stake. Lijero is but eight years old, and Expedito is three. Both are trotters.

The Harvester 2:02, the most valuable trotting stallion in the world, has been starting in \$1000 purses this year on the Grand Circuit, but there are trotters here in California that cannot go two heats in 2:20 the same day whose owners are insulted if they are asked to start them in \$500 purses.

Mr. I. L. Borden has recently purchased from O. A. Martin a three-year-old pacer by Stillwell, brother to Diablo, out of Ada Derby by Chas. Derby, second dam by Antevolo, third dam by Steinway, fourth dam by Almont 33. This is a very promising pacer and intensely inbred to Steinway.

The horsemen and livestock men of California were not active enough to get either of the State conventions held this week to declare in favor of district fairs. Had anything like an effort been made both conventions would have pledged their legislative candidates to favor laws reviving these fairs.

The many friends of Frank H. Burke, one of the directors of the State Agricultural Society, were pleased to see him occupying a seat in the judges' stand during the harness races this week. Mr. Burke is almost entirely recovered from his recent illness brought about by an automobile accident some months ago.

Telegraphic dispatches from Lexington, Ky., under date Tuesday, August 30, state that on that day W. A. Owings drove the four-year-old pacing colt The Philistine 2:08¼, by Direct Hal, p. 2:04¼, out of Pearl Onward, p. 2:06½, a mile in 2:03¼ and repeated him in 2:03¼, both heats being faster than the world's record for the age and gait, the 2:04 of Online.

Of the seven three-year-olds that started in the Occident Stake last Monday, all now have race records, as follows: Donasham 2:13¼, Bon Guy 2:13½, Strathboule 2:13½ and Expedito 2:14¼ as three-year-olds. Sweet Bow took a two-year-old record last year of 2:17½, Pal one of 2:17¼ and Babe Verne one of 2:25¼. Seven better looking three-year-olds would be hard to get together anywhere and there is not one but is much faster than its record.

Few events for two-year-olds are given on the German trotting turf and the most important is the Jugend Prize, of 12,000 marks, with 8000 (\$2,000) to the winner. It was trotted at the Berlin-Ruhleben track on August 17, and won by Eiche, a filly by Idolita 2:09¼, out of Elly Turnbull, who covered the mile dash in 2:32¼, driven by the young American trainer Charles Mills, who, it will be remembered, won this year's German Trotting Derby earlier in the season. Alla H., by Dr. Sphinx, was second, and Nelke I., by Idolita, third. There were eleven starters and the totalisator paid 43 crowns for 10 on the winner.—Horse Review.

"Marque," writing of Pat Logan, the little son of Bert Logan, says: "The two-year-old pacing record of 2:07¼ made by Directly in 1894 is likely to be smashed within the next few weeks if W. H. Stubblefield, owner of Pat Logan, elects to send that wonderful colt after it. Last Friday when Will Rash tackled the record Pat paced in 2:09¼, but the attempt was scarcely a serious one as the colt had been worked only four miles in better than 2:20 this season. Rash is confident that Pat can turn the trick if keyed up for it. The colt is beautifully gaited, needs no knee boots and can fairly fly."

Ed Geers, who alone has driven The Harvester since the horse was placed in his hands, gave him a thorough breaking in before attempting to do anything in the speed-making line. "I knew that his sire was one of the highest strung horses we ever saw racing," he said in 1908, "and I wanted to break the colt thoroughly before asking him for speed, lest he get speed crazy. I trained him on the mile-upon-mile system, that is to say, I brought him along slowly, dropping down a little each week and brushing him the first and last ends of his miles. He learned very fast, but I never drove him anywhere near his clip. I thought him the best individual I ever saw, and I can remember no trotter with which I have taken greater pains."

The official program sold to the visitors at the California State Fair this week failed to give value received for the money asked for it. The "program" was a book of fifty pages of advertising, through which were scattered a few small spaces devoted to the attractions of the week. A careful perusal of the pages failed to reveal any information as to where and when these attractions were to be held, and the harness race program was conspicuous for the information it did not give. With no breeding given of the horses that started, and the names of the horses and the drivers wrongly spelled and wrongly given in some instances, the official program was a joke on the public, yet it was sold to the credulous touts at 15 cents a copy, an increase of 5 cents over the price asked for a better program in former years.

The 2:20 trot for a purse of \$1000, held on Monday last at the State Fair, had but four starters. The handsome big stallion Lijero had an easy time winning the race and his owner Frank E. Wright, of Sacramento, who drove him, could have distanced the other three horses had he so desired. The contest for second money between Sam Hoy, driving Harold K., and Hamilton behind Bobby H. made the only real interesting feature of the race. In the first heat Hoy made one of the best drives ever seen on a race track and landed Harold K. at the wire a short nose in front of Bobby H. In the second heat Bobby got the place, but in the third and final heat Hoy brought his diminutive trotter to the wire once more in front of Hamilton's horse and thereby won second money. Little Branch was a consistent fourth each time.

DENERVO'S RECORD RACE.

The race at Galesburg, Illinois, reported in our last issue, in which he was credited with a heat in 2:03¼, when it should have been 2:06¼, was wrongly reported in nearly every eastern and coast daily as well as in several of the turf journals. The mistake was made in sending out the report of the race by telegraph. The correct summary of the race is as follows:

Aug. 24.—2:18 class, pacing, "The Illinois"; purse \$1500.
Denervo, b. g. by Demonio (De Ryder). 1 2 4 1
Nathan B., br. h. by Truce (McMahan). 2 2 1 2
Waltun Boy, br. h. by Cuckoo (Dean). 3 3 5 2 3
Asa Danforth, b. h. by Sphinx (Avery). 4 4 3 3 4
Brother Will, b. g. by Yewwood (Wilson). 7 6 4 5 5
May Queen, b. m. by Peter Slick (McLain). 5 5 6 ds
Lacon International, b. h. by Don Corbett (McKeel). 2:06½
Time—2:06½, 2:08¼, 2:10¼, 2:12½, 2:10¼.

In the account of this race the Review's correspondent said:

The feature offering was the Illinois stake for 2:18 pacers, valued at \$1500. Denervo, Charley De Ryder's California gelding, was picked to win at odds of \$10 to the field's \$6. Denervo made good, but it took him five hard heats to get the decision. In the opener Lacon International and Denervo hooked up for a test of speed, and racing head-and-head reached the three-quarters in 1:33½. Lacon broke in the stretch and Nathan B., who had trailed the pair, chased Denervo out in 2:06½, Waltun Boy being a close third, Denervo won the second heat with a lot to spare in 2:05¼, but in the third, after following May Queen into the stretch, met with defeat at the hands of Nathan B. May Queen was leading at the distance stand, when Denervo and Nathan started to sprint past her. Nathan swerved into Denervo, knocking that gelding to his knees. Nathan went on and won, and the judges for some unaccountable reason penalized May Queen, who had finished second and apparently had not in any manner interfered, setting her back to last place. Dick McMahan had no difficulty in winning the fourth heat with Nathan, De Ryder having laid up his pacer. In the final, however, Denervo came back strong and won in 2:10¼. Nathan paced an exceedingly game race, as also did the half-mile tracker, Asa Danforth, who won fourth money.

THE READVILLE MEETING.

Readville, Mass., Aug. 30.—Two American harness handicap derbies, two minor heat events and an unsuccessful attempt by C. K. G. Billings to drive his big black gelding, Uhlau, better than 2:01 to a wagon, marked the opening of the Grand Circuit today at the Readville track. Bob Douglass, a local horse, won the \$10,000 trotting derby from scratch. Aileen Wilson, another Boston entry with the same handicap, captured the derby for pacers, while Uhlau was beaten by 1½ seconds by old Father Time.

Both the derbies were made in poor time, and the officials apologized for sending Uhlau over a slow track and against a heavy breeze.

In the pacing division of the derby eleven horses pranced about the various marks which ranged from 660 to 870 feet behind the wire. The gray gelding, Wee Lad, made the pace to the half, but a break gave Northern Spy a chance to come up. Then Cox sent Aileen Wilson into the lead and won by six lengths.

The trotting divisions had fourteen horses with Sonoma Girl and Bob Douglass at the scratch. Jim Ferry led the field at the wire. At the half Bob Douglass nailed the leaders and had three lengths' lead at the finish, with Oxford Boy Jr. beating out Alice Roosevelt for second place, while Sonoma Girl was a close fourth.

Uhlau trotted the first quarter in 29¾ and the half in one minute flat. When the three-quarters was reached in 1:30½ there seemed a chance, but the pace was too swift and the last quarter was made in 32 seconds.

The 2:10 pace was taken by Lady Isle in straight heats.

Gamar captured the 2:08 trot without effort. Summaries:

2:10 pacing; purse \$1000:

Lady Isle, b. m. by Island Wilkes Jr. (Cox).....	1	1
Nellie Temple, b. m. (Proctor).....	2	2
Mike Wilcox, br. g. (Opdyke).....	3	2
Dr. Fox, b. g. (Gahagan).....	4	4
Mary Boo, b. m. (Merrifield).....	5	5

Time—2:09¼, 2:10¼, 2:09½.

2:08 class trotting; purse \$1200:

Gamar, b. h. by Tekmar (Harrison).....	1	1
Demarest, b. g. (Geers).....	2	3
Soprano, ch. m. (Andrews).....	4	2
Lady Stately, b. m. (McDonald).....	2	ds
Baron May, b. h. (Sayles).....	ds	

Time—2:07¼, 2:08¼, 2:08.

Exhibition mile to beat 2:01 trotting to wagon: Uhlau, bl. g. by Bingen, driven by owner, C. K. G. Billings, lost. Time—2:29¼, 1:00, 1:30½, 2:02¼.

The American Derby, pacing division; purse, \$5000: John W. Coakley's bl. m. Aileen Wilson, by Arrow Wood, 6150 feet (Cox)..... 1
J. L. Didge's b. h. King Cole, 6115 feet (Harrison) 2
Gilbert & Tardiff's g. g. Northern Spy, 6015 feet (Wodbury)..... 3
W. J. McDonald's b. g. Chief Wilkie, 6015 feet (McDonald)..... 4
Time—2:27¼.

Dillon Queen, Lulu Hunt, Wee Lad, Thoughtful, Belle, Vara Boy, King's Heir and Fanny Stanton also started.

The American Derby trotting division; purse \$10,000:

D. N. C. Hyams' g. h. Bob Douglass, by Todd, 6130 feet (A. McDonald).....	1
F. X. Nolette's b. h. Oxford Boy Jr., 5990 feet (Cox) 2	
W. J. Hoffit's cs. m. Alice Roosevelt, 6065 feet (Murphy).....	3
Miss Lotta Crabtree's br. m. Sonoma Girl, 6240 feet (McMahon).....	4

Time—2:29.

E. D. M., Major Wellington, Jennie Constantine, Kaldar, Baron Dell, Lazarus, Teasel, Olga W., Dora, Husky Harry and Jim Ferry also started.

Aug. 31.—Colorado E., owned by George H. Estabrook of Denver, smashed the world's record for three-year-old trotters today at the Grand Circuit meeting by lowering the time of 2:06¼ made by General Watts at Lexington, Ky., in 1907 to 2:06¼.

By winning the second heat of the American Horse Breeders' Futurity in 2:07¼ he also made a new world's record for two consecutive heats. It was a most remarkable achievement, as the wind was blowing a gale in the face of the horses on the home stretch.

Colorado E. reached the quarter in :32, the half in 1:03¼, and the three-quarter in 1:33¼. Undaunted by the strong wind on the last quarter, the grand colt swept to the wire ten lengths ahead in 2:06¼. With the pole, Colorado E. led all the way in the second heat, making the time of 2:07¼.

William G. Bradley of New York today raised a previous offer of \$50,000 for the three-year-old to \$75,000, but Mr. Estabrook would not sell if Colorado E. was to be driven by any other man in a race except Macey and Mr. Bradley refused to accept those conditions.

In the pacing division of the Futurity Directum Regent, owned by A. Jameson, Somerville, Mass., was the winner.

Bervado, the New York trotter, had easy work taking the 2:12 trot. Asa Wilkes won the 2:08 pace, finishing on the bit. Summaries:

American Horse Breeders' Futurity, for foals of 1907, trotting division; purse \$7000; two in three: Colorado E., b. h. by The Bondsman (Macey)..... 1
Lady Green Goods, b. f. (Grandy)..... 2
Eva Bellini, b. f. (Dickerson)..... 3
Emily Ellen, b. f. (McDonald)..... 5
Eva Tanguay, br. f. (Andrews)..... 4
Bon Vivant, b. h. (Walker)..... ds
Time—2:06¼, 2:07¼.

Colorado E. wins \$5000; Lady Green Goods \$1000; Eva Bellini and Emily Ellen divide \$500. R. E. Estill, breeder of Colorado E., receives \$500.

American Horse Breeders' Futurity for foals of 1907, pacing divisions; two in three:

Directum Regent, blk. h., by Directum Kelly (Milam).....	2	1
Nell Gentry, b. f. (McDonald).....	1	2
Leftwich, b. f. (Healy).....	3	dis
Toddestill, blk. h. (McMannerman).....	dis	

Time—2:09¼, 2:15¼, 2:13¼.

2:12 trot; purse \$1000; two in three:

Bervado, b. g. by The Tramp (Murphy).....	1	1
Captain Cute, blk. g. (Shahen).....	2	2
Teatoline, ch. m. (Barnes).....	4	3
Velzora, br. m. (Cox).....	3	6
Myrtle Granett, br. m. (Andrews).....	8	4
Olive F., ch. g. (Gahagan).....	5	5
Orlean, b. h. (Benyon).....	6	9
Bronson, br. g. (Titer).....	7	7
Border Knight, b. h. (Miller).....	9	8

Time—2:10¼, 2:09¼.

2:08 pace; purse \$1000; two in three:

Asa Wilkes, ch. h. by Roan Wilkes (Cox).....	1	1
Beauty Wilkes, b. m. (Gahagan).....	2	2
Dillon Queen, b. m. (Kelly).....	4	3
Caffeno, br. g. (Merrifield).....	3	4

Time—2:07¼, 2:08¼.

There was no racing on either Thursday or Friday, owing to rain.

Sept. 3.—Hail Axworthy won the \$10,000 Massachusetts stake for 2:14 trotters today after a fierce duel in all three heats with Diddle Archdale. The first heat was won by Geers' trotter in 2:06¼, which ties the record for the stake made by Sadie Mac in 1906. Hail Axworthy took the second and third heats in 2:07¼ and 2:09. It was the fifteenth renewal of the stake and the feature of the big card of races at the grand circuit meeting.

Ess H. Kay was winner of the 2:05 Bunker Hill stake, taking the \$3000 purse in straight heats in 2:05¼ and 2:03¼.

In the \$1000 2:16 trot the winner turned up in Creighton, who took the race in straight heats, in 2:11¼, 2:11¼ and 2:11¼.

The Norfolk stake of \$2500 resulted in a victory for The Abbe after stiff drives in each heat to beat Evelyn W. The time in the first heat was 2:05¼ and in the second 2:06¼.

In a driving race The Harvester went in 2:03¼ in an effort to beat 2:02, the world's stallion record.

LABOR DAY RACES AT STOCKTON.

Stockton, Cal., September 6.—The feature event of the day at the San Joaquin Valley Driving Club's matinee races Sunday was the fifth race, a 2:30 class trot. Jere Aker's black gelding, Lloyd A., and Dan Klench's black mare, Pickaninny, were the contestants. W. H. Parker's Guy Vernon stepped the mile in 2:13½ in the second heat of the free-for-all pace. Summary:

First race, half-mile dash, running:
Butterfly, p. m. (D. Greening)..... 1
Winebell, s. m. (A. Renecamp)..... 2
Samar, s. m. (G. Nevin)..... 3
Time—51 seconds.

Second race, 2:40 class; mixed:
Black Beauty, pacer, b. m. (M. Friedberger)..... 1
Laura D., trotter, s. m. (M. Carroll)..... 2
McRey, trotter, s. m. (F. A. Murray)..... 3
Time—2:46, 2:41¼.

Third race, 2:15 class; mixed:
Trix McAdrian, pacer, br. m. (P. J. Chalmers)..... 1
McDougall, trotter, b. g. (E. Kemp)..... 2
Time—2:32, 2:26¼.

Fourth, free-for-all pace:
Guy Vernon, b. s. (W. H. Parker)..... 1
Blanche A., b. m. (Jere Aker)..... 2
Time—2:23, 2:13¼.

Fifth race, 2:30 class trot:
Pickaninny, blk. m. (D. Klench)..... 0 1 1
Lloyd A., blk. g. (J. Aker)..... 0 2 2
Time—2:38, 2:33¼, 2:33.

DEATH OF GAMBETTA WILKES.

Gambetta Wilkes is dead. One of the greatest sires of harness speed that ever lived died at Cecil-Hurst Farm, owned by G. & C. P. Cecil, Danville, Boyle county, Tuesday. His death was the result of general debility and old age, for he was twenty-nine years old and had lived far past the allotted time for horses.

As a sire of speed no horse ever approached Gambetta Wilkes. Two hundred and twelve standard performers attest this fact. Standard horses are horses that have trotted to a record of 2:30 or paced to a record of 2:25. He sired two hundred and twenty-one in the 2:30 list, but nine of them were pacers that went faster than 2:30 but that could not reach the coveted mark of 2:20.

This wonderful horse was by George Wilkes. His dam was Jewel, she by Vermont 104. Gambetta Wilkes was brought to Danville as a three-year-old by the Cecil brothers. He took a record of 2:19¼ and then was put at the head of what he, himself, was destined to make one of the most celebrated breeding establishments in the world.

The chief mourner because of the death of Gambetta Wilkes is Paul Helm, a negro hostler, who for a quarter of a century has been his groom and daily attendant. Old Paul is desolate, for he loved this horse and was his companion in his youth, in his prime and his equine dotage.—Stock Farm.

GREAT WESTERN CIRCUIT AT JOLIET.

Joliet, Ill., Aug. 30.—Fast time marked the events of the opening today of the Joliet session of the Great Western circuit harness races. Nathan B. won the 2:20 pace in straight heats, making the first mile in 2:06¼. The California horse Denervo was second. In the 2:06 pace Adam G. finished last.

The 2:21 trot required four heats, Alice L. Woodford winning easily after finishing third in the first heat. Summaries:

2:20 pace; purse \$1000; three in five:
Nathan B., b. g. by Truse (Putnam)..... 1 1
De Nervo, b. g. (De Ryder)..... 2 2
Evelyn Patchen, b. m. (Palmer)..... 4 3
Walton Boy, br. h. (Dean)..... 3 4
Willy Penny, br. g. (Keating)..... 5 4
Time—2:06¼, 2:08¼, 2:10¼.

2:06 pace; purse \$300; three in five:
Bland S., b. h. by Egyptian Boy (Barnes)..... 1 1
Tony Swift, bl. h. (Dean)..... 2 2
Manager H., b. h. (Hawkes)..... 2 5
S. S. All, br. h. (Anderson)..... 3 4
Maconda, b. m. (Albin)..... 5 4
Adam G., b. g. (De Ryder)..... 4 6
Time—2:06¼, 2:04¼, 2:06¼.

2:21 pace; purse \$500; three in five:
Alice L. Woodford, br. m. by Woodford Wilkes (Harrison)..... 3 1 1
Castle Dome, b. h. (Chandler)..... 1 2 2
Jim Boyle, b. g. (Dean)..... 5 3 3
Alice Brown started.

Time—2:14¼, 2:11¼, 2:13¼, 2:14¼.
It required six heats to decide the 2:17 pace. Five heats had been run when the owners of Bird Grattan and Bonnie Redheart entered pleas as to the necessity of deciding the event by another heat. A decision of President Knight of the American Trotting Association, given a month ago in a similar case at Aurora, Ill., was finally declared correct and an extra heat was ordered, Bird Grattan winning. Summaries:

2:24 trot; purse \$1000:
Dictor Treg, b. g. by Tregantle (Rash)..... 1 1
The Angelus, br. h. by Zombro (Colby)..... 2 2
Star Light, br. h. (Cox)..... 3 4
Henry H., br. g. (Dean)..... 4 4
Ashland Clay, b. h. (Hogan)..... 5 dr
Time—2:10¼, 2:13¼, 2:11¼.

2:10 trot; purse \$500:
Vito, b. h. (Benyon)..... 1 1
Don Labor, br. g. (Kilmine)..... 2 3
Fair Margaret, b. m. (Renick)..... 6 2
Bertha C., b. m. (Chandler)..... 7 6
Roscoe, King's Entertainer and Safe Guard started.

Time—2:10¼, 2:09¼, 2:11¼.
2:17 pace; purse \$500:
Bird Grattan, br. m. (Kilmine)..... 1 1 2 4 2 1
Bonnie Redheart, b. h. (Burcky)..... 4 2 4 1 1 2
Jennie Gentry, b. m. (Dean)..... 3 5 1 3 4
Blanch May, b. m. (Carpenter)..... 2 3 3 2 3
Red Light, b. g. (De Ryder)..... 5 4 5 dr
Time—2:12¼, 2:11¼, 2:12¼, 2:15¼, 2:18¼, 2:18¼.

Joliet, Ill., Sept. 1.—Steadily increasing attendance mark the Great Western Circuit harness meeting today. Despite a heavy gale of wind, which blew against the pacers in the back stretch, good time was made. Summaries:

2:12 class pacing; purse \$1000; three in five:
Dickie C., b. g. by Dictator Prince (Crooker)..... 1 1
Americo, b. g. (Cooper)..... 2 2
Peter Pan, b. g. (Chambers)..... 4 4
John Brydon, Prince Albert, Wilkesbrino and Carter G. started.

Time—2:10¼, 2:08¼, 2:08¼.
2:25 class pacing; purse \$500; three in five:
Gracie Pointer, gr. f. by Star Pointer (De Ryder)..... 4 1 1
Morton G., blk. h. (Dean)..... 2 3 2
French Girl, b. m. (Harris)..... 1 2 4
Little Patch, b. m. (Hill)..... 3 5 3
Frank Eagle, ro. h. (Morgan)..... 5 4 5 4
Time—2:16¼, 2:11¼, 2:11¼, 2:16¼.

Three-year-old trot, sweepstakes; two in three:
Lulu Arion, ch. f. (Benyon)..... 1 1
Celestine, br. f. (Renick)..... 2 2
Jane Jones, g. f. (Ryan)..... 3 3
Loopewood, b. c. (Peacock)..... 4 6
Eva Thompson, Peter Clay and High Bond started.
Time—2:15¼, 2:15¼.

Sept. 2, Last day.—Summaries:
2:14 trot; purse \$1000:
Margate, ro. g. by Mangrave (Snow)..... 4 1 1
Bobbie McGregor, gr. g. (Rash)..... 1 3 2
Vestale, b. m. (Taylor)..... 2 3 4
Keating Brown, ch. h. (Keating)..... 3 4 3

Time—2:06¼, 2:05¼, 2:07¼, 2:08¼.

Drink Jackson's Napa Soda.

ROD, GUN AND KENNEL

CONDUCTED BY J. X. DeWITT.

DRY FLY TROUT ANGLING.

[By Black Jack]

What is the dry fly? A Briton of the latest up to date class of anglers would smile in derision and astonishment at such a question, for he has been using it, to the positive and stubborn exclusion of all others, for the past 15 years or more. His astonishment that a real angler will stoop to take trout in any other manner will be mingled with incredulity when you assure him that comparatively few dry flies are tried in America, and that not many articles longer than a couple of paragraphs have ever appeared in any American periodical on the art of dry fly angling.

The dry fly is an exact imitation of some natural insect actually found on the water, made as truly like the original as the most experienced and delectable handed tiers can fashion it except for the hook, which is a wee sma' thing, hardly ever larger than our No. 12 and often much smaller. Its body is made of cork or straw to render it buoyant, and attached to a leader of almost invisible delicacy it is allowed to fall upon the water in or a few feet above the ring made by a rising trout and float down over the spot with the current.

The idea, of course, is not a novel one. Many of us have tried this trick—not with the floating fly perhaps, but with a real insect; but the development of the art is exclusively English, a fact which has its cause in the nature and habits of the *Salmo fario*, the common brown trout of Europe, which compares with our aristocratic rainbow or Fontinalis, the bejeweled brook trout, as a drayhorse does with a Futurity winner.

It is a matter of dispute at what date the expression of dry fly came into use as a generic term descriptive of a special method of angling; but the mention of a dry fly, or one that is tossed on to the water in a completely dry state so that it will float, in distinction to one drawn over and through the water, can be found in many books on fishing dating as far back as the middle of the last century. Thus Pulman, in the third edition (1851) of his "Fly Fishing for Trout," says:

"When trout lie near the surface, waiting for flies, a wet one sinks beneath their line of vision; so let a dry fly be substituted for the wet one, the line switched a few times through the air to throw off its superabundant moisture, a judicious cast made just above the rising fish, and the fly allowed to float toward and over them, and the chances are 10 to 1 that it will be seized as readily as a living insect. This dry fly, we must remark, should be an imitation of the natural fly on which the fish are feeding."

A better general description of the method that has now become the actual fetish of the purist school of anglers could hardly be found. At that early period, of course, the use of the dry fly was only occasional; but experiments with it were carried on steadily, especially in the south of England, on the chalk streams, the waters of which are limped and without much current.

It is probable that it was not until the '80s that a real school of anglers appeared who had become so devoted to the new method that they used it exclusively. The third edition of Francis' "Book on Angling" (1872) hardly refers at all to the dry fly, and even the Badminton volume on "Fishing," which was published in 1888, treat of the art only in an inadequate separate chapter, almost as a thing to be apologized for.

The following year appeared the first important book on the subject, "Dry Fly Fishing," by F. Halford, certainly a very great authority and one to whom fishermen owe much instruction and pleasure, but who, as the foregoing lines will indicate, hardly merits the name often given him, "father of dry fishing." Those who care to delve into the intricacies of the delicate art should consult Mr. Halford's books, as well as those of G. Dewar ("Book of the Dry Fly"), Sir Edward Grev ("Fly Fishing") and Sydney Buxton ("Fishing and Shooting").

As the art developed and crystallized two schools were formed; the dry fly fisherman, who is not totally blind to the merit of the wet fly and who will vary his methods on occasion, and the out-and-outer, the purist, who would as soon think of breaking all the Ten Commandments as of taking the least liberty with the sacred laws of dry fishing. For the sake of instruction in the art let us take a stroll along the banks of the Tee and the Itchen behind this latter angler, and let us mind our manners well, for the golfer is but the personification of meekness compared with the dry fly purist whose wrath is quickly aroused by a breach of angling etiquette.

But hold. Let us first inquire how this exquisite among anglers is accoutred and what manner of weapons he wields for the deluding of *Salmo fario*.

To the average angler of the Truckee or Sacramento he would appear a sad tenderfoot. A Norfolk suit of tweeds, knickerbockers and stout shoes, with the usual summer "biled rag" is the general thing. Waders are seldom needed. First as to the rod.

The English expert, W. Baden-Powell, speaks in the Field of the "standard pattern dry fly split cane rod of 11 feet 3 inches," and had fashioned one he considers perfection, 11 feet 6 inches long, and 8 1/4 ounces in weight. This rod we on this side of the water would characterize as a walking beam, but over there they aver that one of that size and consequent power is necessary to keep the hooked trout out of the weeds.

It may be remarked parenthetically that good old conservative Albion gives up the heavy rod of the fathers with reluctance, but progress will not be blocked for long, and now the British makers, being forced to abandon their standpoint, declare that they can turn out just as good a featherweight rod as their American rivals "if they want to," but the angling editor of England's greatest sporting periodical told me that his favorite was a split bamboo of American manufacture. Q. E. D.

Having recovered from our surprise that the dry fly angler should use what to our fingers is a brutally heavy rod, we proceed to examine his reel, and here admiration claims us, for a comparison with American reels—the old-fashioned Briton calls them winches—results in a victory for the old country. In the first place there is no such abomination in England for fly fishing as an automatic or even a multiplying reel, nor does the line tangling balance handle exist.

The regular thing is a reel with a large drum, single action, and devoid of the polished nickel that frightens trout as well as the sharp edge that cuts the line when, as often happens, it is pulled off sideways. And yet there are many fly fishermen in this country who will pay \$25 for a double multiplier all bedizened with high lights and jewels.

The dry fly man's line is a floating silk fabric, dressed under the air pump and double tapered. It is about 40 yards long and cost in the neighborhood of \$7. For ordinary purposes the best American lines are preferable.

In the matter of leaders (Anglice casting lines) the British beat us again, for theirs are much finer and more carefully made. If we wonder at the heavy rod and the fine leader of the Briton we must, on the other hand, regret that the average American uses for trout a leader thick and strong enough to hold a 20-pound salmon, though scoffing at the Briton's heavy rod. It may be said that the very fine, drawn gut leaders used in England would in many cases be found too flimsy in our turbulent waters, as they can be used only where there is plenty of room to play the fish with no strong current to aid it.

The brown trout, too, is a dull lackadaisical fellow compared with our rainbow. Nevertheless, we may learn a lesson of light leaders from our British cousins. The past spring I had as much luck with a gossamer leader and one fly as I ever had with stronger gut and and two or three flies on the cast.

The round or three cornered British landing net is of silk and attached to a handle, which doubles on itself at the net and costs \$16 or \$18.

And now we come to the lure, to the dry fly itself, and it may as well be said at once that in delicacy of workmanship, beauty of finish and the exact imitation of the natural insect and British fly tiers accomplish results undreamed of by their Yankee colleagues. Dry flies are simply marvels of beauty and scientific accuracy.

The angler keeps them in little tin boxes divided into small compartments, each of which holds one fly. Other fly boxes are lined with cork, into which the flies are lightly hooked.

The flies are imitations, male and female (!), of the duns, spinners, gnats, sedges, quills, and other ephemera that hatch out in the water and are fed upon by the fish. As remarked above, they all float and are furnished with minute books, which are invariably eyed and attached to the leader by a fisherman's or other knot. The dry fly angler would scorn a hook with a gut attached.

A tiny oil bottle, a drop from which serves to anoint and dry the fly, and a moistened leader hox are carried in the pocket, while a pad of soft leather for the knee is generally added to the impedimenta, the use of which will later appear.

It is thus accoutred that the dry fly purist, the out and outer, who has come down from London the night before, leaves his early breakfast at the inn on a bright June morning and saunters down to the limpid chalk stream. He needn't really have hurried, for the rise will in all probability not begin before 11 o'clock; in fact, had he been more academic and less enthusiastic he would very likely have left his rod at home and taken in its place a small binocular, as I once saw an angler do one morning on the Itchen.

Now there is one thing in common between dry and wet fly fishermen, and that is to find the fish. Our friend therefore hies himself to the downstream limit of the stretch of river over which he is privileged to fish, and steps lightly upon the bridge which spans the water, which is crystal clear, revealing every object on the bottom.

Peering cautiously over the stone arch the angler beholds a goodly trout lying motionless within 10

inches of the surface. He is not surprised, for he has found them there before. Does he cast? Not a bit of it. The wet fly fisherman—ah, yes, that's a different story; he would not waste a moment in casting the tempting lure before his troutship; but the dry fly purist—for him the fish is but an ichthyological specimen, and in a sporting sense merely a future possibility.

And why? Simply because, dear reader, the trout, although goodly in size, is not on the feed, is not rising! Of any non-feeding fish the simon purist is in honor bound to take no notice whatever, unless it be to mark his position for future observation.

By contrast the expert wet fly angler prides himself upon being able to tell where the fish lie and to lure them to the creel, even when they are not really on the feed, in fact, he more exults in finally coaxing some old fastidious sockdolager to take the fly than in landing half a dozen fish that make the water boil with frenzied glee. Not so our dry fisherman.

For him there is no fish in the stream as yet, for as far as his eye can reach there is no rise, though he seems to descry a few trout grubbing near the banks. He must possess his soul in patience, but it is not a difficult thing on a bright June morning in England.

The landscape is charming and the birds—ah, the song birds of England! You must wait till spring to know why lyric poetry had to exist there. And if your friend be lazy, he pulls out a pipe and sits down on the coping perchance with a pocket volume of a favorite author in his hand; or he strolls leisurely up the bank scanning the river for the first rise.

When it does come, does he get to work at once? Not if he is above the downstream limit. He returns thither and approaches the bank as an American still hunter would stalk a buck. In fact, stalking trout is the proper expression for this preliminary work.

Suddenly he sees a slight commotion in the water near the bank and quickly drops upon one knee. Now we see the use of the knee pad and, likewise, the reason for the folding landing net, which must not drag upon the ground. It must often do so, however, for if the cover on the bank be low, the fisherman falls upon all fours and crawls toward the stream until he deems that his cast will reach the rising fish.

But meantime he has not been so idle as the mere watching for a rise would indicate, for he has carefully studied the character of the insects abroad and particularly of the water ephemera, and he now strains his eyes to discover what manner of fly it is that the big trout has taken or essayed to take, for here again he differs from his wet fly brother, who, in four cases out of five, throws his gray hackle or his professor without regard to the natural insects upon which the fish may be feeding. Our angler cannot make out the particular fly and so selects from his box a tiny red quill gnat and holds it with a pair of pincers while he attaches it to his gossamer leader.

Then, pulling from the reel a reserve of line, he waits for the fish to rise again. In a moment this happens at a distance of some 50 feet. Our angler, still upon one knee, gently switches his line back and forth a few times until certain that his real cast will reach, and then shoots it out toward the middle of the river.

But, alack! at the very last moment he perceives that the red quill will fall a yard behind the trout, and he essays to withdraw it by a quick, spasmodic jerk. Too late, for the fish has been the coiling line and dropped out of sight, leaving the awkward angler to bite his lips with annoyance.

The thing must be done all over again after waiting for another to rise. This time the slight breeze is not ignored, and the fly falls, feather light, upon the glassy current a few feet above the last rise.

Lazily it floats down stream, two or three feet and then—a swirl, a flick of the tail, a gentle check by the fisherman and the trout, feeling the hook, dashes across and up the river, and then down again, striving to gain the entangling shelter of the reeds, from which the stout rod keeps him clear. He is a heavy fish, but he has little current to assist him, and his pluck is not quite equal to that of our rainbow, so that in less than ten minutes the net is slipped under him and his quietus is administered in the form of a knock on the head.

A pound and a half, very fair. The fisherman exults as much as the Anglican temperance will permit, and moves upstream to stalk another *Fario*. No British angler fishes downstream unless on an uproarious American torrent which compels him to do so.

It would take us too far afield to discuss the relative merits of the two schools, which, after all, are both quite justified in the regions where they chiefly obtain. We must not take it amiss, however, if the dry fly angler, with his tapered line, delicate leader and exquisite fly cast far and fine, considers himself the elite of his craft, though the north woods fisherman may be prone to regard him much as the writer of *vers de soci  t  * is looked upon in poetry.

But the lack of appreciation, amounting to absolute disdain, with which the dry fly purist views all other fly fishermen is in no wise warranted, for the two arts differ widely in certain cardinal points.

J. Harrington Keene, in his interesting and authoritative remarks on the origin of trout flies in the angling portion of the book on "Guns, Ammunition and Tackle" (American Sportsman's Library), speaks of the feud of the formalists, who assert that the fish regard almost exclusively the shape of the lure, and the colorists, who declare that the color

of the fly is the most important element. The dry fly fisherman is neither one nor the other, but insists that artificial should be as nearly an exact imitation as possible of the real insect upon which the fish is feeding.

Mr. Keene lays down certain axioms which he assumes are admitted by all anglers, but his very first, it seems to me, is true only part of the time, indeed less than half of it when trout are being angled for. He says:

"The trout certainly take the artificial for the natural fly."

Very often, no doubt, but not generally. They take it simply for something that can be eaten.

The trout is not an entomologist, but he is a most voracious feeder. He stops not to distinguish insect from grub or minnow; his instinct tells him it is clean, for the trout touches nothing carrion, and, most essentially, he sees that it moves and is consequently alive.

We know, as the late peerless H. P. Wells told us, that the giant trout of Maine, for instance, will generally take only a submerged fly, usually of large size, pulled with measured jerks through the water, and this is often the case in many other districts.

They certainly do not take it for a fly, but probably a minnow, or, not possessing the power of analysis, merely for food, as said above. Mr. Keene himself expresses wonder that our trout rise to flies that have little resemblance to anything that has wings, but the apparent anomaly is explained if we abandon his axiom and say that trout by no means necessarily take the artificial fly for the natural one.

The difference between the chalk stream anglers of England and our streams is that the quarry also differs, for Ponnais, particularly, in his wild state in most cases disdains dead food, while Farlo loves to suck in a sedge or a spinner that floats over him without a struggle.

HOW TO GET BRITISH COLUMBIA HUNTING.

As people are gradually becoming aware of the splendid sport to be had in this country with rifle, gun and fishing rod, and the facilities for getting here are becoming greater year by year, it may be of interest to many of your readers to hear something of the various kinds of game we have and what a trip in the mountains would cost.

With the single exception of antelope, I think I may say we have every variety of big game that is to be found on the continent, and not only that, but some varieties are very abundant. Of course, this is a big country and you cannot expect to find every kind of game without traveling long distances, though in the Cassiar district you will come as near to doing so in a limited area as any place I know of. In East Kootenay a few years ago you might possibly have done so with the exception of black-tailed deer.

Cassiar is by no means an easy district to get into, as you have to go up the Stikine river to Telegraph creek, a distance of about 160 miles, and from there to get into the heart of the best game country it will take another six days' journey by pack horse. However, when once there the man who can do even a fair amount of walking and can use a rifle at all cannot fail to get a good number of trophies. The game comprises moose, caribou, mountain sheep, mountain goat, both black and grizzly bear, wolves, lynx, fox, and in addition any number of ptarmigan for the gun and in the streams countless trout and grayling for the rod. To get in there at any reasonable expense you must take a boat which will land you in Wrangel in time to catch the Hudson Bay Company's river steamer which will make a special trip for sportsmen between the 20th and 25th of August; otherwise you will have to charter a canoe and Indians to take you up at a cost of from \$150 to \$200, whereas the fare on the river boat is only about \$12, with an extra 50 cents for each meal and \$1 for berth. The journey from Vancouver to Wrangel takes about two days and a half. It is all through a mass of islands, and as the scenery is unsurpassed anywhere and the accommodation on the boat is splendid this trip alone will be a pleasure worth coming for. If the water on the Stikine is at all favorable a day will take you to Telegraph creek. At this place you will obtain guides and everything you want in the way of an outfit, so it is not necessary to take anything much with you except your clothes and rifles. Most of the guides are Indians, and as the number of them is limited, it is well to engage them beforehand; this also applies to pack horses. This is one of the most expensive parts of the province to hunt in, though the cost of a trip there will to a great extent depend on the amount of comfort a man wishes to have. There are one or two white guides who will contract to take a party there and will supply at a fixed figure every delicacy and comfort that can be taken on pack horses and they will make you almost as comfortable as if you were in a house. For a party of four who wished an ordinary camping outfit I should put the cost of a six weeks' trip from Wrangel at about \$100 a man. A man going by himself would find the cost more in proportion. This would include a guide for each member of the party and a camp cook.

As there is such a variety of game to be had, my advice to anybody going there is to stick to one kind of game until you have got your complement of heads of that kind of animal and then go after another kind. Hunt sheep and goats first of all, as the heads are in better condition than caribou and moose at the beginning of the season. Do not spend any time hunting bear until you have done with everything else; their skins are no good until October; moreover

you will have to go down the Stikine in a canoe and you will pass through a good bear country on your way where you can stop off and hunt bear.

I am often asked what sort of a bag could be expected on a two months' hunt in that country. It is hard to answer such a question, as so much depends on the man and also the kind of shot he is, and also whether he wants extremely fine heads or will be content with moderate ones. I think I may say that a fairly energetic man who could shoot a little should have no difficulty in obtaining a couple of sheep, as many goats as he wants, two or three caribou, a couple of black bear and probably a moose and a grizzly. A man with experience could easily obtain a much larger bag.

East Kootenay is in the extreme southeast part of the province. It is the hardest district to hunt in, as the timber is thicker and the mountains very rough compared with other districts. Game of all kinds is still to be found there, though owing to the advance of civilization much of its glory has departed from it. A few years ago the tops of the mountains were alive with mountain sheep and goats, lower down mule deer were numerous, while in the valleys moose, elk, white-tailed deer and feathered game were to be found everywhere. It was also the best place to make sure of getting grizzly bear. There are still a fair number of sheep and I think as many goats as ever; deer are fairly plentiful, there are even a few white-tailed deer in some of the bottoms, and though nothing like as numerous as formerly, grizzly bear can generally be found. Panther and lynx are very numerous in places and are increasing in numbers. Caribou do not frequent the southern part of this district, but can be found in small bands up in the northwestern part. The number of moose and elk is very limited, but as the former are not allowed to be shot and the latter likely to be also protected before the next shooting season, it is useless for anybody to go there on purpose for them.

The cost of a trip in this district will not come so high as in Cassiar; the best guides will charge about \$5 a day with everything found for them; some of them will contract for a trip and will generally furnish everything except rifles and ammunition at a cost of from \$10 to \$15 a day according to the number of the party.

Bridge river and Chilcoten are the favorite tourist hunting grounds. There the climate is not to be beaten and the mountains more suitable for getting horses about, so much so that in parts of the district a man can ride up to the sheep grounds. You will not get moose or elk there or caribou unless you go into the northern part of Chilcoten. It is yet a good sheep country and there are any amount of mule deer and goats. In some parts both black and grizzly bear can be found with some degree of certainty. There is good trout fishing in all the streams and grouse can be got almost everywhere. This is the best part of the province for any party accompanied by ladies, and some of the guides make special preparations for any such party.

The coast, including Vancouver Island, swarms with black-tailed deer, and goats and black bear can be easily obtained in many places. Wild fowl fishing in the late fall is very good and the salmon fishing is unsurpassed anywhere else. The cost of a trip on the coast can be made at half the cost of one in the interior.

SAN FRANCISCO FLY-CASTING CLUB.

Sunday Contest No. 9. Stow Lake, September 4, 1910. Wind, southwest. Weather, cloudy.
Judges, E. A. Mocker, T. C. Kierulff, James Watt.

Fractions in Event 2, fifteenths; in Event 3, sixtieths; in lure casting, tenths.

Tree Squirrels.—The open season for killing tree squirrels under the present game laws commenced Thursday, September 1st, and continues until the 1st of January. Judging from the feeling which has arisen against the tree squirrels in different parts of the State because of the destruction they are causing, it is believed a bill will be introduced at the next Legislature asking that the protection be removed from them. The tree squirrels in Mendocino County are not only ruining many pine cones, but are also doing damage to the young walnut trees, according to a letter received by State Forester Homans from S. E. Hunsaker of Redwine.

Lowell McNabb, a twelve-year-old son of Arthur McNabb dropped his first big buck, a three pointer, recently, with a .22 caliber rifle. The "coup" was made on the McNabb ranch near Largo, Mendocino county.

Despite the fact that this tract is patrolled by two wardens, three doe heads were recently discovered near a camp of city hunters. Patrolman Tindall recently arrested a Los Angeles hunter and two companions for hunting without a license.

RAISIN CITY GUN CLUB.

[By Frank D. Fleming]

In Fresno county there are many things which no other county in the State of California can boast of and one of these many things is the Raisin City Gun Club, whose preserve is located at the little station of Oxalis, about 50 miles from Fresno on the Southern Pacific Railroad. The Raisin City Gun Club has leased from the Miller-Lux ranch 22,000 acres comprising a tract of land about eight miles long and five miles wide.

On this vast tract of land, which has a frontage of eight miles on the banks of the San Joaquin river, there are many small bodies of water, in which there is an abundance of fish, and where thousands of geese, ducks, snipe, plover, bronze ibis, the latter in ancient history being the sacred bird of the Egyptians, congregate every season. During the past seasons homebred ducks have been very scarce because the high water washed the nests away, but this year there was not any high water to speak of, so the ducks will be very plentiful.

A pretty four-room club house has been built on the preserve. The interior of the house is arranged in true sportsman's style. One large room serves as a kitchen, another, which is called the club room, is where the high jinks are held, the locker room in which each member has a separate locker for his guns and clothes, and last but not least, the bunk room which will accommodate fifty members with no "doubling up."

The club owns its outfit of horses, wagons, and tally-ho. This year several important improvements have been made at the club grounds. One of these which will be of great interest to the members who have been out of the city for the summer and have not been in touch with the "doings" at the preserve, is the installation of a long distance telephone directly from the club room to the central office in Fresno, which will put them in communication with their families or any one else. The boats on the lakes have all been looked over and those needing repairs have been given such. It has always been a policy of the club that no member shall sink in a leaky boat. Many duck blinds have been made. These blinds are in the shape of a box big enough for one man and are made of galvanized iron. They can be placed in the water or on the banks as may be deemed best for the occasion.

Heretofore the club house has been lighted with hanging lamps but now a lighting plant has been installed which will generate gas. E. M. Bettridge will be the keeper of the preserve for the coming season. Last year the members had a Chinese cook at the club house who stayed there during the season, but this year the Oriental will be replaced by Harry Webber, a professional chef. At the gun club grounds there are also many other helpers who take care of the horses and perform other duties.

When a club member or a party intends to go to the preserve they phone to the club-house and are met at the station by the tally-ho or buggy according to the number of the party. Many members have made the sad mistake of dropping off at Oxalis without first notifying the headkeeper and as a result have had to "hoof it" to the club house. But let it here be mentioned that in the history of the club no member has made the mistake twice.

The club is one of the most exclusive in this vicinity but every one of the members is a true blue sportsman. At the last club meeting a resolution was passed that the membership be limited to 75 persons, but at that time there were 84 members on the roll. No new members will be taken in until the membership is reduced to 74, then one member will be added when a particularly worthy sportsman applies. There are at present about 15 men who are waiting for vacancies.

A person does not have to be a millionaire to enjoy the luxuries of this club. The admission fee to the club is \$20, with yearly dues of \$30. The club has been organized now for about five years.

The opening of the fall shooting season on October 1 will be observed at the club house in due and proper form. A large crowd of members will be present.

The following is a list of the officers and members: L. O. Stephens, president; H. L. Nudd, vice-president; Guy Borland, secretary; D. A. Williams, treasurer; A. B. Long, Fred Hance, and F. K. Keisker, trustees; C. K. Abbott, G. A. Adams, J. Q. Anderson, J. T. Anderson, A. H. Blasingame, J. A. Brattin, D. L. Bachant, Ed. Betteridge, Bobbie Burns, W. R. W. T. Burks, O. A. Brachler, W. G. Barnum, J. S. Bradley, P. A. Pebb, J. E. Barrey, W. W. Coates, Geo. Cosgrave, G. C. Cobb, E. R. Crawford, Dr. W. W. Craycroft, G. P. Cummings, Dr. W. Cross, H. D. Carver, C. L. Chandler, W. F. Chandler, Eli Deitz, W. J. Eilera, J. C. Ferger, Dr. G. H. Free, Chas. Frahler, J. B. Goodman, H. Good, R. E. Good, J. G. Glougie, E. Hurlburt, R. L. Heffin, M. D. Huffman, C. S. Hardwick, F. Stephens, Dr. T. N. Sample, F. M. Shuck, Fred Stone, H. W. Swift, Herb Smith, G. E. Tufts, G. W. Warlow, H. Willnes, Dr. J. L. Walker, J. D. Winkle and W. H. Worswick.

Drink Jackson's Napa Soda.

AT THE TRAPS.

The medal winners for the California Wing Club's thirty-eighth annual live bird trap shooting season are: Fred Willet, Clarence Nauman and Tony Prior. The three gold medals are valuable and handsome, emblematic of the sport, and were won by the three high guns for the season of 1910.

Seven monthly shoots at twelve pigeons were contested. Willet, up to the last shoot, was high man, having lost but four birds out of seventy-two. He missed two pigeons in Sunday's final race. Nauman and Captain Du Bray were six birds behind. Nauman, the old reliable, was six birds behind, but scored twelve straight, and tied the high man. Captain Du Bray lost two birds, and fell back to fourth place, keeping company with Asblin, who killed straight in a back score but lost one bird in his final match.

Tony Prior, with seven birds, lost, scored eleven in the last shoot, and went up to third place. Out of a total of eighty-four pigeons shot at during the club season, the five high scores were: Willet 78, Nauman 78, Prior 76, Du Bray and Asblin 75 each.

Weather conditions for the sport were favorable, and most of the birds were lively flyers. In the forenoon medal race, Webb and Nauman, each with straight, divided first and second money, and the men in the eleven hole split up the balance of the purse.

In the afternoon purse shoot, three straight scores were shot by Prior, Terrill and Munday, who divided the club purse.

The concluding event was a six-bird pool, the winners were: Haight, Terrill and Nauman, each grapsed straight.

Club medal race, 12 pigeons, \$50 added, three moneys, high guns, distance handicap:

The feature of the Bay View Gun Club shoot at Alameda last Sunday, was the remarkably clever rifle, shotgun and revolver shooting of Mr. and Mrs. Ad. Topperwein of San Antonio, Tex.

Mrs. Topperwein is in a class by herself and is without doubt the world's champion lady shot. Her handling of repeating rifles and shotguns is marvelous, and must be seen to be appreciated. Numerous objects were thrown in the air, singles, doubles and handfuls, and shattered with unerring accuracy. Her aerial omelettes—the shooting of eggs thrown into the air from different directions—is a unique exhibition. In shooting blue rocks she tied the high gun in a 100-target race, and afterwards shot two squads of the club's crack shooters.

Ad Topperwein also gave an interesting exhibition in disintegrating all manner of flying and tossed objects with rifle bullets—oranges, apples, marbles, and cans of tomatoes that disappeared in a film of yellow spray. This exhibition was an object lesson in demonstrating the killing powers of the heavy repeating and automatic rifles used.

E. Hoelle won the silver cup in the 100-target race. H. Swales won the Selby trophy, 204 out of 250 targets. The winners in the club match for the season were announced as follows:

Champion class—H. Swales, gold medal, 124 out of 150. E. Hoelle, second, 119.

First class—Geo. Morss, gold medal, 105 out of 150. P. Fox, second, 102.

Second class—A. Speetzen, first, 93. L. Vosburgh, second, 92.

Third class—J. Hardin, first, 76. G. Killam, second, 66.

Doubles—H. Rickleson and E. Holle tie, 49 out of 60. P. Fox, M. Ulrich and A. Speetzen tied for second prize, 37 breaks each.

Miss and Out—Two longest runs, 11 breaks, tie between H. Rickleson and H. P. Jacobsen.

Longest run in any 25 target race—H. Swales 24, G. Morss 21.

Longest run in 100 target race, 26 by H. Rickleson.

Three Jacobsen trobbies were awarded under sealed conditions—Most misses in three club matches, P. Fox, first prize. Most misses in the doubles event, M. Ulrich, second prize. Most breaks, both double and single events, three last shoots, F. Parker, third prize.

R. Moon was awarded the Feudner trophy. Sealed conditions allowed a bandicap of 60 targets, which added to his score, the lowest, shot in the 100 bird race won him a fine fly-rod.

In two squad matches at 25 targets Mrs. Topp broke 22 and 22. Mrs. Topperwein was presented with a handsome bouquet, a pennant and a souvenir spoon on behalf of the club. The pennant at the lady's request was inscribed with a list of the club officers and members.

The successful season of the club is greatly due to the untiring efforts and enthusiasm of Harry Rickleson who managed each monthly shoot in a pleasing and business like style that won him the plaudits of his fellow members.

Special target shoot, sixteen, sixteen yards rise: First class—E. Hoelle 84, Mrs. Ad Topperwein 84, H. Swales 82, H. Rickleson 81, Will Price 81, F. Adams 78, George Morss 8, J. Connelly 78, P. Fox 75.

Second class—A. Foster 74, M. Ulrichs 72, S. Parker 71, J. Vosburgh 68, L. Vosburgh 68, R. Moon 65.

Third class—H. P. Jackson 65, A. Speetzen 64, J. H. Jones 63, H. Wobber 63, L. Parker 61, P. Hardin 52, L. Anderson 52, J. Welch 50.

Fourth class—G. Christman 48, H. Gillam 41.

There was a good attendance at the Riverside blue rock grounds, Petaluma, Sunday afternoon, August 30, when the regular trap shoot was held and some good work was done. The shooters are showing an improvement in their work, due to the practice.

The following scores were made: Stratton, 8 out of 14; Gouldner, 8 out of 10; Van Frank, 6 out of 10; Lauritzen, 6 out of 10; Drees, 6 out of 10; Rodd, 6 out of 10; Mego, 6 out of 10; Ramos, 6 out of 10.

DOINGS IN DOGDOM.

The query comes up in American Stock-Keeper as to the identity of Mr. Tyler, who is to judge must of the breeds in Spokane.

We knew a Mr. Tyler in Los Angeles, he judged there in 1902. He was a poultry fancier but had a side liking for cocker spaniels. He was discovered by the Fried Liver Artist, who was yardmaster of that show.

The F. L. A. also discovered "Richard H. Thomas, Esq., of Butte, Mont." (?) who judged at Santa Cruz recently and who was openly accused by an angry exhibitor of "judging by dictation." What a jolly row they had down there, too!

It is hinted that the adipose generalissimo put over a "bloomer" in a style particularly his own.

Before the Santa Cruz fiasco was perpetrated the question each fancier put to his neighbor was: Who is Richard H. Thomas, Esq., of Butte, Mont.?

The Spokane fanciers and the northwest fancy at large are asking: "Who is E. J. Tyler, of Chicago, Ill.?"

Rawther odd, doncherknow!

The San Rafael Independent is authority for the following:

"Fred Swanton, owner of the Casino and great admirer of dogs and patron of the dog show recently held at Santa Cruz, has joined the Marin County Kennel Association. He stated that he would not permit the Pacific Coast Directors of the American Kennel Club to again hold a show in his place."

The "Pacific Coast Directors" is a bit inaccurate, but the statement is decidedly positive and its intent plain. Mr. Swanton is a power in Santa Cruz when it comes to a question of promotion, public utility and amusements in that seaside burg.

The Cuckoo Kennel Club tactics last May were considered as being decidedly odoriferous. The San Francisco Kennel Club franchise was hung up in the air at two weeks' notice. The efforts to pilfer the Oakland Kennel Club franchise were abortive, the catspaw used was too weak and vascillating.

Following in line comes the press notices in the daily papers boosting the San Mateo one day show. Deliberate lying and exaggerated statements were used by the press representative responsible for the stuff published.

A dog that was shown here last May and won the special for best in the show has been repeatedly touted as a \$10,000 specimen, bought especially for the San Mateo function and transported from Boston, across the continent in a special car. The names of other dogs in the same kennels have also been used for the same style of grandiloquent and misleading advertising.

Such tactics may mislead novices and the general public for the time being, but are boomerangs, they come back with punishing accuracy. The fancy is not fooled one whit.

The same rotten old tactics have cropped up recently in San Jose. Not only is there a brazen attempt to gobble up the franchise of an old established club, but the looting stunt is braced up with

misleading inuendo and plain, ordinary lying in a published statement in the San Jose Herald.

Note the pettyfogging misuse of the term National, the gauziest cheating bluff imaginable.

We quote the article in its entirety, headlines and all, and also the reply in The Times, which are both submitted here for the purpose of an intelligent comparison:

"To Hold Dog Show in San Jose Next Spring. Santa Clara County Kennel Club Arranging for Event for Canine Fanciers.

E. W. Jack Made Vice-President and Harry Doble Becomes Secretary.

An enthusiastic meeting of the Santa Clara Kennel Club was held Wednesday evening. E. W. Jack was elected vice-president in place of Harry Doble, who resigned to accept the more arduous position of Secretary, vice C. R. Harker, retired.

It was decided to hold a Dog Show here in the early spring under American Kennel Club rules, and a committee was appointed to arrange the preliminary matters connected with the show.

The attention of the meeting having been called to the fact that a club calling itself the San Jose Kennel Club, but with its offices in San Francisco, intended holding a Dog Show in San Jose in October the following resolution was adopted:

"Whereas, The attention of this club has been called to the fact that an association calling itself the San Jose Kennel Club intends holding a Dog Show in San Jose in October under rules other than those of our National Kennel Club, the American Kennel Club, and

"Whereas, The dog fanciers of Santa Clara County who have so generously supported our shows in the past with entries and prizes may be led to believe that such show is given with the authority of the Santa Clara Kennel Club. Therefore be it

"Resolved, That the Secretary be directed to notify the exhibitors of dogs at our past shows that the Dog Show to be held in San Jose in October by the San Jose Kennel Club is antagonistic of our National Kennel Club and has not the approval or support of our association.

"THE SANTA CLARA COUNTY KENNEL CLUB,

"By W. H. Carmichael, President; Dr. H. C. Brown, Vice-President; E. W. Jack, Vice-President; M. Perry, Treasurer; H. Doble, Secretary; O. J. Albee, S. E. Portal, E. Fournier, N. J. Stewart, Board of Directors."

"San Jose Kennel Club to Hold Show Next Month. Will Be Given in Conjunction With Poultry Show of the S. C. C. P. A. Organization.

There was a large attendance at an executive meeting of the San Jose Kennel Club held yesterday afternoon, in which the prospects for the coming official dog show is reported to be the largest and best ever seen in the city. It will be given in conjunction with the great poultry show of the Santa Clara Valley Poultry Association. The combined exhibition as usual, will consist of poultry, dogs and pet stock. Each department forms a complete show in itself, and each is recognized everywhere as a leader in its special line. The combined show will be held at the Auditorium pavilion, October 5 to 8. Prize list and entry forms will be ready for exhibitors September 10, entries closing September 29. Valuable prize cups and trophies are coming into the secretary's office thick and fast, with assurances of entries of the best dogs from breeders and fanciers all over the Pacific Coast. The San Jose entry, also the Santa Clara county entry, will be especially strong. Exhibitors and fanciers know from experience that they get the best of treatment and their dogs a square deal in the judging ring. The judges this year will be for cocker spaniels, the president of the California Cocker Club, Mr. J. Hervey Jones of San Francisco. The cocker club is composed of practically every leading breeder of cocker spaniels in California. Thomas J. Blight of San Francisco will judge some of the classes, and his name alone to dog fanciers is a guarantee of fair treatment. The bulk of the show will be judged by Mr. Theed Pearse of Victoria, B. C., recently from England, and a gentleman well qualified. This being his first entry into the California judging ring, much interest in his decisions will be exhibited. The secretary, Mr. Charles R. Harker, who has filled this position at every dog show ever held in San Jose, with but one exception, will again act as secretary this year. The superintendent will be J. C. Berret, as in former years. Mr. Berret is especially qualified and has acted as superintendent at nearly every dog show ever held in San Jose. The show committee will consist of over 100 members, which will demonstrate to the public that we have the most cordial support of fanciers in general. The active management will be in the hands of the secretary and his associates, Henry Berrar, Val. J. Ruh and J. C. Berret.

The matter of a communication which appeared in the San Jose papers regarding the formation of a so-called Santa Clara Kennel Club was discussed and brought out the following facts, any and all of which may be verified from kennel records:

First, the San Jose Kennel Club is at the present time the same organization which gave the very successful dog shows at the Auditorium last year and the year previous. It is the only kennel club which has had any existence in San Jose for five years past. It is the only club which has ever given a dog show in San Jose, with but one exception, and that was a small exhibit held in Turn Verein ball six years ago by the Santa Clara County Kennel Club of that day, but which for years has been extinct, played out, defunct, a dead and gone organization.

ation without standing or any sort of recognition by either the American Kennel Club or the kennel world in general.

Second—The legitimate and only successor to the moribund association formerly known as the Santa Clara County Kennel Club is the present San Jose Kennel Club. This can with no trouble be conclusively proved by reference to the records of the American Kennel Club.

Third—While this newly resurrected and freshly stuffed club, which has not half a dozen members all told, assumes the role of local champion of the New York association known as the American Kennel Club, the only show it ever held in its brief life was one given by it six years ago, and that was held in open defiance of and in direct conflict with the American Kennel Club.

Fourth—As a matter of fact, easily verified, the so-called Santa Clara County Kennel Club has today no right, title, nor claim to be designated as a regular kennel organization. The San Jose Kennel Club now holds and has held for years the sole franchise and right to hold a dog show in San Jose under American Kennel Club rules, and no other club has at present the right to hold any show here.

Fifth—The coming show of the San Jose Kennel Club will be held under the rules of the National Dog Breeders' Association, a progressive national body of fanciers, formed only for the purpose of increasing the interest in thoroughbred dogs on the Pacific Coast, and entirely independent of the "Dog trust" in New York. The new body includes in its membership some of the leading kennel clubs of the State, including the San Francisco Kennel Club, the Oakland Kennel Club, the California Cocker Club, the Ladies' Kennel Association of California and others of equal standing.

Sixth—In affiliating with the National Dog Breeders' Association the San Jose Kennel Club has but exercised the American right to have a direct voice in the government of its affairs, and in doing so it has the cordial support and approval of California dog fanciers, both State and local.

Seventh—The San Jose Kennel Club is purely a San Jose and Santa Clara concern. Its officers and offices are here in San Jose, not in New York city. As stated, with but one exception, it has given all the dog shows that have been held in San Jose, and which have been so favorably received by the dog fanciers of the city and State.

Eight—From the 5th to the 8th of October next the San Jose Kennel Club, with an unbroken record of success behind it, proposes to hold the largest and best dog show ever seen in the Garden City. It repudiates the unwarranted action of a few individuals styling themselves a kennel club and appropriating a name to which they at present have no just right nor title, claiming to be that which they are not, the club which has given such successful dog shows in San Jose during the past ten years.

Executive committee—H. F. Mann (president); Henry Berrar, Joseph L. Brooks, Charles R. Harker, (secretary), Val J. Ruh, Frank E. Baldwin, E. R. Everett, A. B. McKean, W. S. Sullivan."

MULES IN THE SOUTH.

Southern horsemen visiting New York and other Northern cities frequently express surprise at seeing so few mules on the streets and in the markets, as compared with the great number of horses. And to those who are familiar with the strong points and good qualities of this much misunderstood animal it seems strange that in a city where more than one hundred thousand horses are used there is not a single dealer, so far as known, who makes a business of trading in mules. Jersey City has one mule dealer, and in Newark there is another who keeps a few in addition to his big stock of horses, but when a resident of New York wishes to buy a mule he must go out of town or go without.

In the Southern States the mule ranks with the horse as a beast of burden, and in some sections of the cotton belt outnumbers the horse as a work animal. Of the 3,000,000 mules in America more than 2,000,000 are owned in the eleven Southern States. Texas tops the list with 391,000, but the proportion of mules is larger in South Carolina, Georgia and Alabama. In each of these States there are more mules than horses, South Carolina having 107,000 mules and 74,000 horses, Georgia 201,000 mules and 123,000 horses and Alabama 162,000 mules and 147,000 horses.

In the New England States there are so few mules that they are not enumerated in the statistics compiled by the Department of Agriculture. New York State has only 380 mules, as compared with 650,000 horses.

That mules excel horses in several ways is recognized by men who work them side by side. In the first place, the mule is healthier than the horse. He is subject to comparatively few of the horse's diseases, and is not likely to have any of the blemishes which destroy the market value of so many horses. Besides, a blemish seldom affects the selling price of a mule. If he goes sound no questions are likely to be asked. In buying a mule no one ever thinks of demanding a veterinary examination.

In point of intelligence and also in the muscular strength and endurance the mule excels the horse. He is not so nervous or high strung. He has a saner instinct of self preservation. His vitality is greater. He can stand more hardships, is surer footed, and when properly trained is steadier and more reliable in work harness.

To Charles Darwin the mule always appeared "a

surprising creature." "That a hybrid," he said, "should possess more intelligence, memory, obstinacy, social affection and power of muscular endurance than either of its parents seems to indicate that art has outmastered nature." It is well known that the brain of the mule is heavier than that of the horse.

Breeders find the mule more profitable than the ordinary work horse, because he can be put on the market a year or so younger. He is not so expensive to raise or to keep, and he is in condition for light work before the horse is old enough to be broken to harness. Mules are often sent to the field when two years old and kept there until old age overtakes them.

It is not generally known that George Washington was the first breeder of high grade mules in America and that he made the mule popular in the South. On Washington's first retirement, in 1783, he devoted himself to farming at Mount Vernon and soon became dissatisfied with the work horses at his command. Casting about for something better adapted to Southern agriculture he decided to try mules.

As soon as his intention became known the King of Spain sent him a present of a fine jack and two jennies selected from the royal stud at Madrid. The jack was called Royal Gift and what is an extraordinary height even was said to be sixteen hands high. Lafayette also presented to Washington a jack and several jennies from the Island of Malta, which has long been noted for the superiority of the breed. This jack, which Washington called The Knight of Malta, is said to have been a splendid animal, "with the form of a stag and the ferocity of a tiger," as a writer of that period put it.

By the judicious use of these jacks and the native mares, Washington produced a fine lot of superior mules, eight of which sold for \$200 each after his death in 1799. Before he began his breeding operations the only mules in this country were a few of diminutive size and inferior quality imported from the West Indies.

When it comes to marketing mules the two years saved in feeding and handling them means a big profit to the breeder. Then, too, mules are always salable. The supply has never caught up with the demand. The average value of mules in the United States is nearly twenty-five per cent greater than that of horses, according to statistics of the Department of Agriculture.

Missouri, Tennessee and Kentucky are the leading mule breeding States of the Union, and East St. Louis is the largest mule market in the world. Unlike horses, mules are not sold on their individuality, but their market price depends very largely on their height. While there may be a difference of \$100,000 between the value of two horses of the same size, a mule is a mule, and one brings about as much as another of equal height and weight. Good mules are worth as much as good draught horses.

Dealers in mules always keep them in pens and never in stalls. Stabled like horses they seldom thrive unless worked daily. Take a mule out of a pen and tie him in a stall and he will almost certainly grow thin and pine away. On the other hand, take a thin horse out of a stall and turn him in among a pen full of mules and he will take on flesh so fast that one can fairly see him grow. Race horse men often resort to this expedient with a thoroughbred or trotter of nervous temperament that refuses to eat or frets himself thin.

Ask a dealer in horses why he does not sell mules, or inquire among truckmen, contractors and others why more mules are not used in New York, and in all probability no satisfactory answer will be forthcoming. Perhaps the most plausible explanation is that mules are slow, and everybody in New York is in a hurry. With all his good points in the matter of health, strength, endurance and ability to stand hardships on light rations, the mule, like his sire, is undeniably a sluggard. Mules are at a disadvantage also on the smooth asphalt pavements of the city streets, their small feet and comparatively light weight making it difficult for them to get a hold when asked to move a heavy load.—N. Y. Herald.

JUDGING SHOW HORSES.

With the opening of the autumn horse show season the usual criticisms are heard concerning the work of the judges. More or less unfavorable comments are always expected from the owners of beaten horses, but the number of disinterested experts who find fault with the judges at all shows nowadays is on the increase, and is already so large as to cause some misgivings and many regrets among those interested in the future welfare of the sport.

However unjust the charge may be, it is nevertheless very commonly urged that judges are incompetent or unduly influenced by feelings of friendship or prejudice, and it is unfortunately true that under the present system of judging horses can be disproved or substantiated. So long as the judges make their awards without giving any reasons for them they are open to attack on any and all grounds, and are, in a measure, themselves defenseless, while the disappointed exhibitor has no means of really knowing why his horse was beaten.

So much dissatisfaction with the judging at all shows may well excite inquiry as to whether the system of judging is not at fault. In judging almost all kinds of animals excepting horses it is customary for the experts who award the prizes to use score cards, or a scale of points, in reaching their conclu-

sions as to the relative merits of the entries before them. Pigs, chickens and cattle of improved breeds are so judged, and the American Shetland Pony Club has adopted a similar scale of points for ponies, while the system is being used extensively at the agricultural colleges, where stock judging is a regular course of study and instruction.

In judging horses at the shows, the scale system has been frequently adopted in a rudimentary form for certain classes, notably those for hunters, saddle horses and completely appointed equipages.

At Madison Square Garden, for example, the judging of hunters is by a rudimentary scale of points, which is as follows:

	Per Cent.
Conformation and quality	50
Performance over fences	50

Saddle horses are judged at several shows by a scale slightly more elaborate, but still very crude and confusing. In this scale the points are as follows:

	Per Cent.
Manners	50
Conformation	25
Quality	25

Here it will be observed that performance is entirely omitted from the scale, manners, conformation and quality counting the full 100 per cent.

In the appointment classes at the Garden the scale method of judging is again brought into play in a rudimentary form. The scale for brougham equipages is as follows:

	Per Cent.
Horse	50
Carriage	25
Harness	15
Liveries	10

In the classes for carriage horses the conditions at the Garden show specify that entries "should have conformation, quality, style, good manners, all around action and be able to go a good pace," but the values of the different points specified have not been reduced to a scale, as in the hunter and saddle classes.

Inquiry among dealers and other exhibitors directly interested indicates a widespread belief that if horse show conditions were reduced to a scale in all classes, thus enabling judges to use a score card system, not too elaborate, much less criticisms would exist. The disappointed exhibitor would then have something to shoot at, and the judges something with which to defend themselves, if in making their awards they had set down in black and white their reasons for their decisions.

To go into minute details or to score every horse in a large class would consume too much time, as a matter of course, but many experienced horsemen are of the opinion that an expert could administer the score card system expeditiously and satisfactorily if he first sent out the dead wood in a class and then used a scale of points embracing only such essentials as conformation, quality, style, action, speed, manners and perhaps, one or two others. The number of points or the percentage, representing perfection for each of these qualifications would, of course, vary according to the particular type of horse under consideration, speed, for example, being of more importance in a runabout horse than in a lady's phaeton horse, and manners more important in a horse of the latter type than in a gig horse for a man to drive.

As illustrating the score card system the following scale is presented tentatively as representing something like the points and values in judging a gig horse:

Conformation	25
Quality	15
Style	15
Action	20
Speed	10
Manners	15

Total100

By using such a score card for each of the real competitors in a class the judge would make a record of his opinion of every essential point of every horse considered, and if he made a glaring mistake it would stare him in the face when the show was over and the owner of the horse received his score card. If supplemented with brief notes, such as "ewe neck" opposite conformation, or "wings badly" opposite action, the score cards would record the reasons for the decisions quite satisfactorily and would expose manifest errors of judgment almost at a glance, so the advocates of the system maintain.

Saddle horses were judged by a scale of points much more elaborate than the one above outlined at the Bryn Mawr Horse Show last year and the system has sometimes been tried in judging trotters and other horses at the fairs, but for some reason it has never come into general use at the shows.—N. Y. Herald.

During the past week Trainer Tanner has shipped to C. K. G. Billings at New York the five trotters, Berta Mac, 2:08; Turley 2:07½; Peter Balta 2:10½; Zozell, trial 2:12, by Bow Bells and Pauline. All of the above will be used under saddle by their owner during the balance of the summer and fall.

Admiral Dewey 2:04¾, the dead son of Bingen 2:06¾, and Nancy Hanks 2:04, has seven new standard performers, all trotters, and is second to Todd in the list of new sires.

THE FARM

MANAGEMENT OF THE DAIRY.

Milk is more cheaply made by good grass than in any other way, and next to grass comes silage, because it furnishes the cheapest and most desirable substitute for grass, says a writer in Rural Life. It is true that it costs considerable to make silage, but careful tests show quite conclusively that silage from corn is a more desirable feed for cows than the corn crop preserved and fed in any other way, and this after allowing the cost of harvesting and storing the crop. There is nothing like silage to keep the dairy cow's appetite on edge throughout the long winter period. It also keeps her system in good condition which is a very important matter and gives her a relish for her feed. In fact silage well made can be fed in the summer to great advantage. The dairyman who proposes to maintain the milk flow of his herd will find either a necessity during dry summer for even on the best managed farms the grass if utilized to best advantage will become dry and short from one to three months, depending on the season.

I make silage my main cow feed. I feed from thirty-five to forty pounds of silage per day in proportion to the cow. It is my intention for the cows to have all they want and in the best of condition.

The silage ration is balanced with bran, oil meal and clover and alfalfa hay. The bran and oil meal is fed in proportion to the period of lactation of the cow, and as much as she will consume at a profit. I feed silage and grain the first thing in the morning, then do the milking and separating. I then feed as much clover and alfalfa as the cows will clean up before noon. The same method is followed in the evening, feeding hay the last thing at night. I do not depend on grass alone more than ninety days in the year. Then if I have any silage left over from winter I feed about twenty-five pounds per day.

If I have no silage I plant a small plot of early corn in the spring and sow oats and peas, I begin feeding as soon as it will do, cutting from the field and hauling to the pasture each day. This is a more expensive way of feeding than the silage, but it is far better than to let the cow go hungry, for a hungry cow will not give milk.

No man is in a better position to build up his soil than a dairy man if he uses wisely the forces at his command. You cannot afford to raise timothy which impoverishes your soil, and buy high-priced fertilizers for your land. Raise legumes to replace your concentrates and add nitrogen to your soil and save both fertilizer and a feed bill. I advise our farmers to grow more protein feed upon the farm and not buy so much. I am sure that the plan is a good one and one that will pay under most any conditions. What is the use of spending good hard earned money for rich concentrated feeding stuffs when we can just as well grow it for almost nothing compared with what market feed costs.

It certainly looks as if something was wrong with the farmer who persists in carrying on his farm and crop operation in the same old way, when he could just as well be profiting by new and better methods. The simple raising of more leguminous plants upon the farm will do away with the necessity of buying great bills of commercial feeds in order to balance up the farm ration. When a ton of alfalfa hay contains nearly as much protein as a ton of wheat bran, which usually cost from \$20 to \$25 per ton in the open market and when one acre of land will produce several tons of the hay annually, it does not seem as if there would be much question as to which food product is the cheapest for the farmer to use. The balance is greatly in favor of the alfalfa hay, clover, cow peas and soy beans. Although not quite so rich in protein as alfalfa, they furnish a much cheaper source of this bone and muscle making food than wheat bran. The matter of growing any of these crops need not greatly trouble the farmer for al-

though they may be new to him and his soil a little careful preparation before sowing and the proper attention afterward will result in surprising success. There is no reason why farmers should dislike to try new crops.—J. P. Fletcher, Fulton county, N. Y.

A ROUND OR SQUARE BARN?

In comparing a sixty foot round barn with a rectangular barn of the same area, the two barns should afford the cows the same amount of space on the platform. Allowing each cow in the sixty-foot round barn three feet six inches in width at the rear of the platform, it will accommodate forty cows and leave space for two passage ways. But in a rectangular barn, only three feet four inches of platform space need be allowed for each cow and a 78½ foot barn, with two three-foot passage ways across it for convenience in feeding will accommodate forty-two cows. While the rectangular barn has stall room for two more cows, the round barn contains space in the center for a silo eighteen feet in diameter. The floor space and cubical content of the round barn sixty feet in diameter and the rectangular barn 36x78½ feet are practically the same. This being true the percentages figured from the complete bills of material for these barns show the exact saving in lumber on the sixty-foot round barn over the plank and mortise frame rectangular barns 36x78½ feet. The lumber bills of the rectangular barns show an increase in cost of twenty-eight per cent for a plank frame and fifty-four per cent for a mortise frame. The round barn, sixty feet in diameter, contains 188½, and the rectangular barn 225 lineal feet of wall. The rectangular barn has therefore twenty-two per cent more lineal feet of outside barn wall, requiring a proportional increase in both paint and foundation. The 176¾-foot rectangular barn would hold 100 cows, allowing each cow three feet four inches in width and providing for three passage ways of three feet each across the barn. A ninety-foot round barn would hold 100 cows in two rows headed together, sixty-five of which would be in the outer circle, and have three feet six inches each in width at the gutter. This leaves sufficient room for feed alleys and walks and two passageways, one three feet and the other seven feet wide for the manure and feed carriers. All of this is outside of a central space for a silo twenty feet in diameter and seventy-one feet high, with a capacity of 620 tons of silage, and in the mow there would still be an excess of 33,000 cubic feet, which would hold sixty-six tons of hay or as much as the entire mow of a barn 32x36 feet with twenty-foot posts. The square feet of floor space in a round barn ninety feet in diameter and a rectangular barn 36x176¾ feet are the same but the cubical content of the former is more than that of the latter. The increase in the lumber bill is twenty-three per cent in the plank frame and fifty-three per cent in the

The Most Perfect Colt Bit Made

EVERY COLT

Should wear the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE** from the very beginning of its training, as it is the easiest, most comfortable and most humane bit on the market. With its use the colt will not fret, worry, pull, toss its head and get into the bad habits so often caused by the use of other bits and checking devices that inflict punishment or keep it under too much restraint, and at the same time you will have absolute control over it at all times.

Patented Aug. 11, 1896. Patent No. 565,681

BEWARE of worthless imitations and Checking Devices claimed to be as good as the **ELLIS IMPROVED HUTTON PATENT CHECKING DEVICE**. Illustrations of some of these check bits and devices are made to look as near like the genuine as possible, but the article itself is very different, and will not give the same results.

ALL GENUINE are stamped G. S. ELLIS & SON on the supporting strap and back part of Check Rein. Any that are not so stamped are not genuine.

FREE—Our new Catalogue No. 45, with wholesale discount sheet, the largest, finest and most complete Horse Goods Catalogue ever published, is ready for distribution. It contains illustrations, descriptions, and guaranteed to be lowest prices on Harness, Horse Boots, Horse Clothing and Tack Goods of every description. Every horseman should have a copy. You can save many a dollar during the season by buying direct from us, as we are now selling direct to horsemen, allowing them from 30 to 50 per cent discount from retail prices. Write us today for a copy and we will take pleasure in sending it to you all charges paid.

As they Sometimes Are.

As "Save-the-Horse" Can Make Them.

CONCENTRATED IRRESISTIBLE POWER—herein lies the success of "Save-the-Horse," the only remedy sold with a contract. Every testimonial we publish is bona fide and from actual users, not from friends or agents. But the contract alone takes all the chances out of the matter so far as the user is concerned.

Mr. J. S. Day of Midland, Texas, attended a series of Texas tournaments from Aug. 8th to 18th, and **BROKE ALL AMATEUR RECORDS.** His scores follow:

August 8-9, Midland, Texas, 484 ex 500

August 10-11, Big Springs, Texas, 442 ex 450

August 12-13, Cisco, Texas, 395 ex 400

August 15-16, Gorman, Texas, 398 ex 400

August 17-18, Walnut Springs, Texas, 397 ex 400

From this it will be seen that Mr. Day averaged **98.4** per cent on **2150** targets and **99.16** per cent on his last **1200** targets.

He used **PETERS** regular factory loads, **NOT SPECIAL**, but bought from Texas dealers—the same quality goods anyone can buy anywhere.

mortise frame barn. The round barn ninety feet in diameter contains 283 and the rectangular barn 426 lineal feet of wall. The rectangular barn has therefore fifty per cent more lineal feet of outside barn wall, requiring a proportional increase in both paint and foundation. The smaller surface on the outside wall of the round barn requires less paint and makes a proportional saving in keeping the round barn painted in after years. Thoughtlessly, men go on building rectangular barns but what would this reckless disregard of a possible saving of thirty-four to fifty-eight per cent mean on a year's business on the farm? Some illustrations may help us to understand what this money saved in building a round barn really amounts to, and its

convenience is also a great saving. If the dairyman discarded the idea of a rectangular barn and built a round one instead, he could take the money thus saved and buy one of the best purebred sires for his herd and also three to ten purebred heifers or fine grade cows. Either of these purchasers might double the profit of the herd. Or this saving properly applied would purchase many labor-saving devices which would make life less of a drudgery on many dairy farms. Is not such a saving worth while? When the comparative cost and merit of two constructions are known, it is a poor financier who will pay extra for the one which is inferior. If a man received bids from contractors for a building he would be foolish to accept one which

Follows Colorado meeting, precedes El Paso and Phoenix.

The A. T. S. F. Ry. Co. will return horses free to points of shipment on their road in California, New Mexico, Arizona, Colorado and Kansas; also El Paso, Texas.

For entry blanks, etc., address JOHN B. McMANUS, Secretary, Albuquerque, New Mexico.

is from thirty-four to fifty-eight per cent higher than the lowest bidder, especially when he knew the lowest bidder would put up the most convenient and substantial building. The disadvantages of the round barn are that it cannot be enlarged by building on as readily as can the rectangular form, but as the round barn may be built higher to the eaves than a rectangular barn thirty-six feet wide, provision can be made for the growth of the herd by building so as to put cows in the second story and still leave sufficient mow room for hay. Light and sunshine are also more evenly distributed in a round barn.—Field and Farm.

In comparing purebreds with grades or scrubs one must take into consideration the profits from each. This is really the basis upon which they should be judged. To work from the bottom up we will first consider the scrubs vs. the grades (the grades being those which have a purebred sire). Scrubs are generally owned by that class of farmers who keep eight to ten cows for their milk. They do not stop to consider whether or not they are producing milk economically, figuring their profits more from the finished product and not from its cost of production. They do not stop to

FOR SALE—Diablos 2:11 by Diablo 2:09½; bas stepped half in 1:01, quarters in 29½. When ready will step in 2:07 or 2:08. Ask any Fresno trainer about her. Price \$400. Have leased ranch and sold stock. For particulars write A. S. Kellogg, 3040 Wash. Ave., Fresno, Cal.

FOR SALE—Black French poodle puppies, pedigrees contain blood of notedoodles in England. Miss Alice Harrison, Menlo Park, Cal.

TO THOROUGHBRED HORSE-OWNERS.

FOR SALE AT A SACRIFICE.

First six volumes of Bruce's American Stud Book, practically unused. Cost \$10 per volume. Hard to get.

Two volumes of American Horse Breeders' Guide and Hand Book, with 100 tabulated pedigrees of leading stallions (work now out of print).

The American Thoroughbred, by Capt. Thos. B. Merry.

Two volumes Goodwin's Turf Guide for 1907. Cost \$12.

About 50 thoroughbred catalogues, including Rancho del Paso, Palo Alto, Rancocas, McGrathiana, Nursery Stud, Marcus Daly and all the great stock-farms of the country. These are handier than a studbook, because they are tabulated.

Price, \$60 for all these works.

ON WEANLINGS

\$7250--Pacific Breeders Futurity Stakes No. 10.

For Foals of Mares Bred in 1909. Foals Born 1910.

To Trot or Pace at Two and Three Years Old.

ENTRIES CLOSED DECEMBER 1, 1909.

\$4250 for Trotting Foals. \$1750 for Pacing Foals. \$800 to Nominators of Dams of Winners and \$450 to Owners of Stallions.

MONEY DIVIDED AS FOLLOWS:

\$3000 for Three-Year-Old Trotters.
200 for Nominator on whose entry is named the Dam of Winner of Three-Year-Old Trot.
1250 for Two-Year-Old Trotters.
200 for Nominator on whose entry is named the Dam of Winner of Two-Year-Old Trot.
100 to Owner of Stallion, Sire of Winner of Three-Year-Old Trot when mare was bred.

\$1000 for Three-Year-Old Pacers.
200 for Nominator on whose entry is named the Dam of Winner of Three-Year-Old Pace.
750 for Two-Year-Old Pacers.
200 for Nominator on whose entry is named the Dam of Winner of Two-Year-Old Pace.
100 to Owner of Stallion, Sire of Winner of Three-Year-Old Pace when mare was bred.

ENTRANCE AND PAYMENTS—\$2 to nominate mare on December 1, 1909, when name, color, description of mare and stallion bred to must be given; \$5 May 2, 1910; \$5 October 1, 1910; \$10 on Yearlings, April 1, 1911; \$10 on Two-Year-Olds, April 1, 1912; \$10 on Three-Year-Olds, April 1, 1913.

STARTING PAYMENTS—\$25 to start in the Two-Year-Old Pace; \$35 to start in the Two-Year-Old Trot; \$35 to start in the Three-Year-Old Pace; \$50 to start in the Three-Year-Old Trot. All Starting Payments to be made ten days before the first day of the meeting at which the race is to take place.

Colts that start at two years old are not barred from starting again in the three-year-old divisions.

Be Sure and Make Payments in Time.

A CHANCE FOR THOSE WHO FAILED TO ENTER.

SUBSTITUTIONS—A few of the original nominators of Pacific Breeders Futurity Stakes for foals of 1910 have advised us that, because of barrenness of the mare or death of the foal, they wish to dispose of their entries. If you own one or more whose dams you failed to name when entries closed, by making the payments due any time on or before April 1, 1911, which covers payments to April 1, 1912, the few substitutions to be disposed of will be awarded in the order in which remittances are received. Prompt attention will secure for you this rich engagement. Address all communications to the Secretary.

F. W. KELLEY, Secretary, 366 Pacific Bldg., San Francisco, Cal.

E. P. HEALD, President.

MILKING SHORTHORNS.

Shorthorn cows possessing marked dairy capacity, have been known from the earliest period of improved cattle breeding history. In fact 100 years ago the celebrated English breeders of the time, the Colling brothers, Thomas Bates, Charles Knightley, John Whitaker and others paid particular attention to the milking qualities of their cattle and we have no doubt but that the Shorthorns of that day were very good dairy cattle.

The milking shorthorns of today in England trace almost without exception to cattle bred by the men before mentioned, and in America to the early importation into this country from their herds. The imported cows Arabella, Dulcibella, Pansy Young Mary, Rose of Sharon, and a few others founded good dairy families and the several branches of the Clay, Princess, Bates and Knightley families are coming the best in this country.

The Scotch and other beef families are popular in the West and very largely in the majority in this country were developed almost wholly along beef lines and are not good milkers. None of the best herds of milking Shorthorns carry strains of these beef animals.

Dairy Shorthorns are cows of large size, strong constitution and fine dairy capacity. They possess enough of shorthorn character to enable them to fatten easily and make a very acceptable beef carcass from the market standpoint. There are hundreds of herds of these cattle in England, in fact, they are the leading dairy breed of the Kingdom, making fine averages in milk production.

Here though not so numerous they have won many friends and are rapidly increasing in popular favor. In records they are making some excellent showings. The champion Rose of Glendale in a semi-official test of 735 pounds of butter, exceeding in milk yield the champion Jersey and champion Ayrshire, which is certainly a significant showing.

Pounds

Milk.
Rose of Glendale . . . 18,075
Panama Lady . . . 13,784
Mamie Clay 2d . . . 13,232
Lula . . . 12,341
Red Bird . . . 11,280

Sixteen cows have made records averaging 11,420 pounds of milk each in one year. One herd of 51 cows have records that average 9,380 pounds of milk each. There are more to follow!

The milking Shorthorn has made a place and is worthy of appreciation and consideration as a dairy cow.—Rural Life.

I have been in the habit of clipping the under side of the body and the udders of my Holstein cows for several years during the winter months, writes H. A. Moyer in Farm and Home. The object is to prevent dirt gathering on the under side of the body. After the cow has been nicely clipped the milk veins show up much larger and much plainer than they do without clipping. This particular feature is attractive to buyers and visitors. They like to see the nice network of milk veins plainly.

A Maine paper says that in many sections of the state where poultry raising has been carried on successfully for years, the poultrymen are abandoning the incubators and going back to the good old hen. This seems to be another triumph of nature over human ingenuity.

KEEP YOUR RAZOR SHARP

Don't blame the razor if it dulls quickly. Maybe it's your fault. Rub a few drops of 3-in-One oil on your razor strip. When leather is pliable strip as usual. Any razor will cut easier, better and stay sharp longer. After using, draw blade between thumb and finger moistened with 3-in-One. This prevents rust, keeps edge smooth and keen, always sharp and ready for immediate use. Don't scrape your face. Use 3-in-One on your razor and shave right. Write for liberal free sample and special FREE scientific circular. Try it yourself. 3-IN-ONE OIL COMPANY, 102 New St., New York.

SMITH GUNS

HUNTER ONE-TRIGGER

WEATHER conditions aren't always at their best in the "blind" or in the skiff. That's when you don't want your gun to balk or double.

YOU CAN easily wear gloves if you shoot with a Hunter One-Trigger. And without "fiddling." It won't balk—because there is no friction to make it balk. And it won't double—because there is no second trigger to get tangled up in your glove.

The very newest Hammerless Smith Gun is the 20-Gauge Hunter One-Trigger. Weighs only 5½ to 7 lbs. Just the finest gun that can be made at the low price.

WINCHESTER

.351 Caliber, High-Power Self-Loading Rifle

THERE is nothing to take your mind off the game if you shoot a Winchester Self-Loading Rifle. The recoil does the reloading for you, which places the complete control of the gun under the trigger finger. You can shoot six shots as fast as you can pull the trigger and without taking your eye off the sights. As this rifle is made with a detachable magazine, you can replace an exhausted one with a loaded one in a jiffy and continue shooting. No recoil-operated rifle but the Winchester offers this advantage. The .351 Caliber, High-Power Cartridge has great killing power, making it heavy enough for the largest game. **ASK TO SEE THE WINCHESTER TRIGGER-CONTROLLED REPEATER.**

AT THE TRAPS

293 x 300

was Mr. Jack Forbes' score at Medford, Ore., August 18-19, 1910, winning for him the Professional High Average.

\$3000 for Three-Year-Old Trotters.	\$1000 for Three-Year-Old Pacers.
200 for Nominator on whose entry is named the Dam of Winner of Three-Year-Old Trot.	200 for Nominator on whose entry is named the Dam of Winner of Three-Year-Old Pace.
1250 for Two-Year-Old Trotters.	750 for Two-Year-Old Pacers.
200 for Nominator on whose entry is named the Dam of Winner of Two-Year-Old Trot.	200 for Nominator on whose entry is named the Dam of Winner of Two-Year-Old Pace.
100 to Owner of Stallion, Sire of Winner of Three-Year-Old Trot when mare was bred.	100 to Owner of Stallion, Sire of Winner of Three-Year-Old Pace when mare was bred.

ENTRANCE AND PAYMENTS--\$2 to nominate mare on December 1, 1909, when name, color, description of mare and stallion bred to must be given; \$5 May 2, 1910; \$5 October 1, 1910; \$10 on Yearlings, April 1, 1911; \$10 on Two-Year-Olds, April 1, 1912; \$10 on Three-Year-Olds, April 1, 1913.

STARTING PAYMENTS--\$25 to start in the Two-Year-Old Pace; \$35 to start in the Two-Year-Old Trot; \$35 to start in the Three-Year-Old Pace; \$50 to start in the Three-Year-Old Trot. All Starting Payments to be made ten days before the first day of the meeting at which the race is to take place.

Colts that start at two years old are not barred from starting again in the three-year-old divisions.

Be Sure and Make Payments in Time.

A CHANCE FOR THOSE WHO FAILED TO ENTER.

SUBSTITUTIONS--A few of the original nominators of Pacific Breeders' Futurity Stakes for foals of 1910 have advised us that, because of barrenness of the mare or death of the foal, they wish to dispose of their entries. If you own one or more whose dams you failed to name when entries closed, by making the payments due any time on or before April 1, 1911, which covers payments to April 1, 1912, the few substitutions to be disposed of will be awarded in the order in which remittances are received. Prompt attention will secure for you this rich engagement. Address all communications to the Secretary.

F. W. KELLEY, Secretary, 366 Pacific Bldg., San Francisco, Cal.

FRED H. CHASE & CO.

Will Sell 50 Good Ones

Monday, Sept. 26, 1910

They are by Milbrae 2:16½, Geo. W. Archer 2:49½, Portola 3:41½, Altamont 2:26¾, Monterey 2:09½, Nearest 2:22½, Hambletonian Wilkes 1679, and out of good trotting bred mares.

Anyone wanting a good roadster or a good young colt prospect should attend this sale. Several high-class, light business horses are in the consignment.

FRED H. CHASE & CO.,

478 Valencia St., San Francisco.

Sound as a Dollar

That's the way to keep your horses. It's easy to do it with Kendall's Spavin Cure. Thousands of other horsemen have done it in past 40 years.

Cured Spavin

"Two years ago, I bought a pair of fine black mares. In about six months one had a spavin. I simply used your Spavin Cure, and cured her entirely, which mystified all the horsemen. Yours truly,
M. S. Culver, Union City, Conn."

Letters like the above are received by us daily from grateful horsemen.

Kendall's Spavin Cure

is the only safe, sure cure for Spavin, Curb, Splint, Ringbone, Bony Growths and all Lameness. Save your horses with the old reliable cure. Leaves no white hairs or scars. It is the world's best liniment for man and beast. At druggists, \$1 a Bottle; 6 for \$5. Ask your druggist for book, "Treatise on the Horse," or write to
Dr. B. J. Kendall Co., Enosburg Falls, Vt.

BON GUY BEST THREE-YEAR-OLD.

By the racing test Bon Guy, the three-year-old colt bred by C. L. Crellin, of Ruby Hill Vineyard, near Pleasanton, and sold by him to the colt's present owner, W. E. Detels of Pleasanton, is the best three-year-old trotting colt in California this year. Bon Guy has started four times this year. In the Pacific Breeders' Futurity at San Jose he was unsteady but won the first heat in 2:16 and earned second money. At the Woodland meeting he was steady as a clock and defeated about the same field he met at San Jose, in straight heats in 2:13½, 2:13¾ and 2:13½, a rattling good race and the fastest three heats up to that time ever trotted on the coast by a three-year-old. His next start was in the Occident Stake at the State Fair on Monday of last week. He was not right in this race as he was unsteady and would not stick to his gait. The race went to Donasham at the end of four heats, Bon Guy being second in the fastest heat of the race, which was in 2:13¾, and won third money. On the following Saturday the same field started in the Stanford Stake with the exception of Sweet Bow who was scratched. Bon Guy was on his good behavior and not only lowered the record of the stake but trotted the fastest heat ever trotted in a race by a three-year-old on the coast and also trotted the three fastest heats by a three-year-old on the coast. The heats were in 2:12½, 2:11¾ and 2:12½, and when it is considered that the track was slow the race is a remarkable one.

Bon Guy is not a large colt but he is big enough and is one of the best formed young stallions of his age ever seen on a track. His gait is clean and open and he trots the last end of his miles with the same determination that he trots the first end of them. He is one of the best bred colts living. His sire Bon Voyage (3) 2:12¾ is a son of Expedition, be by Electioneer. Bon Voyage was a stake winner himself and is siring stake winners—his oldest colts being three-year-olds.

The dam of Bon Guy is La Moscovita by Guy Wilkes 2:15¾ and she is the dam of Yolanda 2:14¾. The next dam, Moscova (3) 2:28¾ is the dam of Mamie R. (3) 2:15½, and was sired by Belmont 64, the third dam is Mosa, dam of four in the list, by Woodford Mambrino 2:21½, the fourth dam is Hermosa 2:33½, dam of Hermes 2:27½ by Edwin Forrest 49, fifth dam Black Rose, dam of Darkness 2:27¾ by Tom Teemer, sixth dam by Cannon's Whip.

As Bon Guy is sound as a dollar and all right in every way, it is reasonable to suppose that he will train on and trot below 2:10 in another year. He has won more money this year than any other colt on the coast, the total being a little over \$2500. He has been taken back to Pleasanton by his owner who proposes making a season with him next year. Bon Guy was trained and driven in all his races this year by Jos. Twohig, to whom much of the credit is due for the colt's splendid showing.

ANSWERS TO CORRESPONDENTS.

W. S., Eureka—Vasco 10996 was by Harold 413 (sire of Maud S, 2:08¾) he by Hambletonian 10. Vassar, the dam of Vasco, was by Belmont 64, and her dam by American Star 14.

Dr. E. Jamieson, Grass Valley—It is hard to decide the question asked from the information given. If there was no distance flag, the winners of the two heats should have contested in a third heat.

Drink Jackson's Napa Soda.

TWO DAYS' SPORT AT STADIUM.

Among the sports provided for the entertainment of the many thousands of Native Sons who visited San Francisco last week on the occasion of the 60th anniversary of California's admission into the Union, was harness racing and under the auspices of the San Francisco Driving Club a program was arranged that took two days to complete. The races were held on the afternoons of Saturday and Sunday at the stadium ¾-mile track in Golden Gate Park and there were thousands of spectators both days. The racing was excellent and greatly enjoyed by all. Results:

Saturday's Events.

First race, 2:15 pace, one mile:
P. Kohn's Alfred D. (Schwartz).....1 1 1
J. Ryan's Mike C. (Ryan).....2 2 2
R. Bennett's Sydney B. (Burton).....3 3 3
D. Roberts' Charles J. (Roberts).....4 4 4
Time—2:14, 2:15½, 2:14.

Second race, 2:25 pace, one mile:
T. H. Corcoran's Caliente Girl (Benson).....1 2 1 1
G. Gianuini's George Gin (Machado).....7 1 4 6
W. F. Bennett's Lulu B. (McGrath).....6 3 2 3
H. D. Chase's Don C. (Chase).....4 5 7 2
J. Ryan's Pat O. (Ryan).....8 3 5
W. Higginbottom's Prince Almo (Higginbottom).....5 7 5 4
Captain W. Olsen's Zulu (Olsen).....2 4 6
J. Kramer's Cloudlight (Burton).....8 6

Time—2:21½, 2:20, 2:19½, 2:21.
Third race, 2:30 trot, one mile:
H. Hagensen's Search Me (Hagensen).....4 1 2 1 1
B. J. Rybicki's Bahe Benton (Murphy).....1 2 1 2 2
F. Clotere's Monk (Clotere).....2 3 3 3 3
E. T. Ayres' Daita A. (Ayres).....3 4 4 4 4
W. P. Hamner's Clara W. (Hamner).....6 6 6 6 5
B. Patton's Ben Allen (Patton).....5 5 5 5

Time—2:24, 2:25, 2:22, 2:22, 2:25.
Fourth race, free for all pace, one mile:
D. E. Hoffman's Dictatum (Hoffman).....5 1 1 3
D. Campbell's Ginger (Schwartz).....3 4 2 1
G. Gianuini's George Perry (Burton).....1 2 5 5
Joe Ryan's Satmour (Ryan).....2 3 3 2
H. Freelon's Jack (Freelon).....4 5 4 4
Time—2:13½, 2:12½, 2:13, 2:16½.

The final heat of the last race was postponed until Sunday and was won by Ginger. On the first turn George Perry, who had a first and second to his credit, fell on the first turn and Satmour fell over him. Ginger and Dictatum had the race to themselves, the former winning all the way with four or five lengths to spare at the wire. As Ginger had a first and second on Saturday he won the race. The time was very poor compared with that made in all the heats on Saturday. Ginger stepped the mile in 2:18¾. Perry was cut up some in the mix-up, but the drivers were uninjured.

Sunday's Events.

First race, 2:20 trot, one mile:
C. Buckley's Walter G. (Buckley).....1 1 1
H. C. Ahler's Sunset Belle (Ahlers).....2 2 2
Captain Matson's Bird Eye (H. Frelson).....6 3 3
M. W. Herzog's Lady Nell (Herzog).....3 8 6
F. Von Issendorff's Ceta Dillon (Von Issendorff).....4 4 4
F. W. Thompson's Lady Washington (Thompson).....7 5 5
J. W. McTigue's Darby Mc (McTigue).....8 7 7
E. Deomenchini's Reno D. (A. Schwartz).....5 6

Time—2:23½, 2:21, 2:20½.
Second race, 2:30 pace, one mile:
T. D. Sexton's Alfred E. (Sexton).....1 1 1
G. Geitner's Mission Kid (F. Burton).....3 2 2
S. Burns' Dick (Buckley).....2 3 3
A. Benson's J. Arthur (Benson).....5 4 4
W. Malough's Mulcahy (Malough).....4 5 5
Time—2:23½, 2:23½, 2:26½.

Third race, 2:20 pace, one mile:
W. J. Kenney's W. J. K. (Kenney).....3 1 1 1
H. Schotter's Lulu S. (Schwartz).....1 3 2 2
E. C. Chase's George Z. (R. Frelson).....4 2 3
E. C. Chase's Dollie (H. Frelson).....5 4
C. James' Ray McGregor (James).....2
Time—2:19, 2:19, 2:17½, 2:18.

Fourth race, free-for-all trot, one mile:
F. Burton's Walter Wilkes (Burton).....4 1 1 1
G. E. Erlin's Major Cook (McGraw).....1 2 2 2
A. Ottinger's Mike Kelly (Ottinger).....2 3 3 3
V. Verilhac's Dr. Hammond (Verilhac).....3 4 4 4
Time—2:23¾, 2:20, 2:17, 2:21.

WILL RACE AT STADIUM TODAY.

Races of the Park Amateur Driving Club will be held at the stadium track this afternoon commencing at 2 p. m.
First race, class A pace—D. E. Hoffman's Dictatum and Balboa, A. Ottinger's sorrel pacer, H. M. Ladd's Ringrose.

Second race, class A trot—H. C. Ahler's Sunset Belle, F. W. Thompson's Lady Washington, M. W. Herzog's Lady Nell, F. L. Matthes' Walter G. and Raymond M.

Third race, free-for-all trot—G. E. Erlin's Major Cook, A. Ottinger's Mike Kelly and bay trotter.

Fourth race, class B trot—R. Consani's Dividend, Capt. Matson's Bird Eye, F. Von Issendorff's Ceta Dillon, E. Cerlat's California Belle, J. W. Smedley's Red Velvet.

Starter, S. Christenson; Judges, J. Perry, R. Nolan, A. J. Molera; Timers, T. F. Bannan, L. Marisch; Marshal, H. M. Ladd; Secretary, F. W. Thompson.

THE HOLIDAYS AT KENTFIELD.

Labor Day and Admission Day were both celebrated by the horsemen at the pretty half-mile track at Kentfield, Marin county, and those who went there to see the sport were well repaid as the racing was excellent. Little Medium, the pacer by Dictatus Medium, won a heat on Monday in 1:11 4-5, which is the fastest time any horse has ever made on the track and he now has the title of King of the Kentfield Speedway. The races on Labor Day were as follows:

In the first race Dr. A. J. Rydberg's Patrose won the first heat in 1:12 2-5, C. W. Rice's Billy B. taking the next two in 1:15 1-5 and 1:15. Frank Peratia's Eden Vale was third.

The second race was between Dr. Rydberg's Bird-catcher, Geo. McDermott's Lou Dillon and Frank Peratia's Little Medium, the last named winning in straight heats in 1:13 2-5 and 1:11 4-5.

C. W. Rice's Skidoo, Hugh McCurdy's Chicken and Henry Marten's Maud M. were the starters in the third event. Maud M. took the first heat in 1:30 2-5 and Chicken the next two in 1:27 and 1:25.

The fourth and last race of the day was between a couple of green youngsters—Jack Mecchi's Searchlight and Frank Peratia's Little Sid. The latter won in 1:38 and 1:35.

The first event on the speedway on the 9th of September was the race between Frank Peratia's Edenvale and C. W. Rice's Billy B. In the first half mile Billy B. showed the way in 1:16, in the second Edenvale acted as pilot in 1:15, and in the third Billy B. got squared away and came under the wire slightly in advance of the Sausalito stepper in 1:12, making one of the most exciting contests on the new speedway.

I. Emerald entered in the last race his green colt, C. M. Jones named Daisy, and Rice, Skidoo, the latter taking the first and last heats in 1:36 and 1:30, Daisy winning the other heat in 1:33.

The Judges were V. J. B. Cheda, S. P. Brownlee and C. M. Jones; Cheda acting as starter and general master of ceremonies. The timers were W. H. Mahoney, I. Emerald and J. E. Lewis.

RIVERSIDE DRIVING CLUB.

The matinee of the Riverside Driving Club on Friday, September 9th, was a most successful affair. There was a big holiday crowd present and the racing was all that could be desired so far as good contests were concerned.

Following is a summary of the events:
Race No. 1—3-Minute Mixed.

Kid Downey, owned and driven by Chas. June, won; June Wilkes, owned by G. M. Carrigan and driven by Axel Nelson, second; May Fly, owned and driven by I. J. H. Mummy, third. Time—2:59½, 2:49½, 2:51.

Race No. 2—2:35 Trot.

Miss Lott, owned and driven by F. S. Pond, won in straight heats; Lena Lowe, owned by Hemet Stock Farm and driven by F. H. Holloway, second; Dark Streak, owned and driven by H. E. Wehster, third. Time—2:33, 2:30½.

Race No. 3—Free-for-all Mixed.

Monk, owned and driven by H. Eigenbrod, won; Harry H., owned and driven by Chas. June, second. Time—2:26, 2:28.

Race No. 4—2:40 Trot.

Alsirat, owned and driven by Walter Eames, won in straight heats; Billy C., owned and driven by I. N. McKaughen, second; Copper the Ore, owned and driven by G. W. Bonnell, third. Time—2:35, 2:37.

Race No. 5—2:25 Trot.

Sea Girl, owned and driven by I. N. McKaughen, won; Nearest, owned and driven by Dr. W. L. Spoor, second; On Conn, owned and driven by J. H. Kelly, third. Time—2:32½, 2:29, 2:27.

The judges were Thomas Holmes, F. P. Ogden and C. H. Thomas. H. G. Stanley acted as starter, and the timers were W. L. Scott, W. A. Hayt and Al McRae. H. P. Zimmerman was clerk of the course.

DIRECTS MAKE GOOD SHOWING.

William G. Layng, who has been looking up the performances of the Direct family this year, sends us the following:

"Of the newcomers to the list and those that reduced their records the Direct family shows up remarkably well so far this season. Direct 2:05½ has had two new performers and three of his former record holders have lowered their marks. One of his sons, Direct Hal 2:04½, has had four new ones accredited to him, one of them, The Philistine, getting a record of 2:08¾ and he is a four-year-old. His son, Ess H. Kay 2:05¾, lowered his record to 2:02¾, and is the fastest of the tribe. Direct Hal Jr. 2:14½ has reduced his mark to 2:06½ and two others by Direct Hal have lowered their records. Directum Kelly 2:08½ by Direct has one in the 2:10 list now; it is Direct Tone 2:09¾. Direct Heir, another son of the 'Little Black Rascal,' as the late Monroe Salishury affectionately called him, is the sire of Conqueror 2:10½ that won first money in the \$5000 stake at Portland, Oregon, September 7th; Rey Direct 2:10 by Direct 2:05½ has a new one in Rosa Belle 2:13¾, while another of Direct's greatest sons, Directly 2:03¾, has two additions to his list, viz.: Correctly 2:11 and Improve Directly 2:18¾."

When Colorado E. took the world's three-year-old trotting record of 2:06½, Lady Green Goods was second, separately timed in 2:07¾. It takes a great three-year-old filly to trot that fast.

PORTLAND'S GREAT MEETING.

California Horses Win the Principal Purses and Make the Fastest Time.

With the largest crowd present that ever gathered at the Country Club, the racing program of the Portland Fair & Livestock Association opened Monday afternoon. Ideal weather prevailed, the crowd was full of the holiday spirit and the events were characterized with exciting features.

The principal race was the 2:30 trot in which a purse of \$1000 was contested for by seven entries. Remarkably good time was made in each of the five heats. After the first appearance of the horses it was evident that the chief contenders were Florodora Z., Dan McKinney and Kingbrook. The former won the first two heats but showed weakness in the third and finished third in the fourth and fifth heats. Kingbrook displayed lasting qualities and it was the third heat before he began to give an account of himself. He took the third, fourth and fifth with comparative ease, although he was pressed in the last two heats by Dan McKinney, a Colorado owned, but California bred horse.

Kingbrook's best time was 2:13, in the third heat. He was driven by L. B. Daniels and his owner, W. I. Higgins of Deer Lodge, Mont. Florodora Z., which took second money, is an Oregon horse and is owned by Maurice Winter of Albany. Dan McKinney is owned and trained by Joe McGuire of Denver, Colo. A peculiar feature of the event was that three horses which took first, second and third place are all descendants of McKinney, the famous racing stallion of the Pacific Coast.

There were but two starters in the first event, the trotting futurity, Zorankin and Star Patch. Only two heats were driven, Zorankin winning each, in 2:36½ and 2:29¾. Spencer, who drove Zorankin, could have distanced Star Patch, as Zorankin was capable of trotting a mile better than 2:20.

The second event was featured by the splendid performance of Happy Dentist, which took the first three heats without apparent effort. Alleredaw secured second place over Judge Dillard. Happy Dentist of owned by Dr. Nash, a D.D.S. of San Jose, Cal., who was present to see the race. C. A. Durfee drove the Nutwood Wilkes gelding.

A heavy rain fell Monday night and the track was so muddy on Tuesday that all the harness races were postponed until the following day and a couple of running races made up the afternoon's program.

A strong wind was blowing all the afternoon of Wednesday and the track was probably two seconds slow, owing to its not having thoroughly dried out from the wetting it received Monday night.

The harness events included five races, two postponements from Tuesday and the regularly scheduled three for Wednesday and these five races required 17 heats to decide the winners.

Naturally the center of interest during the afternoon was in the 2:14 pacing event for a purse of \$5000, of which \$4000 was divided among the winners as the association provided for the use of \$1000 of this purse as a consolation prize to be contested for by the horses unplaced on Wednesday. This race was the longest of the day and required five heats to decide the winner, and even at that no horse won more than two heats and none of them successively. It was a great struggle between some of the finest pacers ever seen on a Northwestern track and Fred Ward, driver of the brown gelding Conqueror, proved his entry to have been appropriately named. Ward practically cinched the race in the fourth heat, when he finished first, for all that was then necessary for him to do was to take second in the final and first money was his. He undoubtedly realized this, for he saved his horse in the stretch and was beaten in the final heat by Miss Jerusha, with Conqueror second and a winner. Miss Jerusha's final victory gave her second honors, while another California horse, George Woodard, owned by W. R. Merrill, of Colusa, and driven by "Bob" Duncan, captured third money. Donald Dinie's Francona nosed into fourth honors after having threatened better results in the first two heats by taking second honors both times. The continuous switching of winners as each successive heat was paced kept the interest of the big crowd centered on the race to the finish, and at least 5000 of the 8000 persons present remained to the very last, despite the fact that it was 6:20 o'clock when the final heat ended.

It was by all odds a great race and a fitting finish to an afternoon of as high class racing as has been seen on the Portland tracks in years.

Conqueror, the winner of the big pace, is one of the Direct strain, and is owned by the Valencia Stock Farm of San Bernardino, California, and Fred Ward, the successful driver, has raced over this circuit before.

The last race on the program, though not the last heat, was the 2:24 trotting event regularly scheduled for Wednesday, and in this race there was only one horse to be considered at any time, and he was plainly the class. This animal is Judge Dillon by Sidney Dillon, which won in three straight heats well driven by Walter Mahen, though the surprise of the day was the showing made by Thomas W. Murphy's game little mare, Sis Meridan, which took second honors from a field of nine starters. Murphy's entry really made a great showing considering the fact that this was practically her first essay against other than amateur matinee company, and her performance is rated as high class. She is a full sister to the mare Perfection, which Mr. Geo. Estabrook of Denver paid \$10,000 for and only owned a few weeks until she died.

The first race of the day was the postponed two-year-old pace originally scheduled for Tuesday, and was won in two straight heats by Lizzie Dillon, owned by Charles Bowman of Walla Walla, and driven by Will Hogboom, one of the veterans of the Northwestern circuit.

Four heats were required to settle the 2:20 trotting event which was originally scheduled for Tuesday, and the contest for the \$1000 purse was keen. After finishing fourth in the first heat, C. A. Durfee, driving his entry, Almaden, brought the black stallion home victor in the succeeding three heats. Almaden got off to a poor start in the first heat, but after that his pilot took him through the field with apparent ease, and at no time was he seriously threatened. With his cleverly gaited and nice behaving mare, Mary Mason, F. C. Hamley, of Sprague, Wash., took second honors in this race, finishing well in each event. The best time in the race was in the second heat, when Almaden made 2:19¾.

With perfect weather and ideal racing conditions prevailing, the first \$10,000 event ever held in the Northwest was successfully trotted Thursday at the track of the Portland Fair and Livestock Association. Seventeen thousand people took advantage of the splendid weather to see the greatest horse race ever held in Portland.

It was truly a great race, for it required five heats to decide the winner. C. A. Durfee of San Jose, Cal., carried off the honors by piloting his bay mare, Helen Stiles, under the wire first in the last three heats. His victory in the third heat is disputed by some who question the action of the judges in awarding the Durfee entry the decision in one of the closest finishes ever made in a harness race.

The old saw about a horse's winning by sticking out his tongue could certainly apply to this race, so close were Helen Stiles and Prince Lot, the latter also a California horse, at the wire. In fact, many who were just opposite the judges' stand declared that C. A. Spencer, driver of Prince Lot, had picked him up and shoved him over the margin just a wee bit ahead of the speedy mare.

Prince Lot had a comparatively easy time winning the first two heats, with several lengths to spare in each. But in the third Helen Stiles, came up fast in the stretch and overtook Spencer's entry within 100 yards of the finish, and the struggle between the two horses from then to the wire was a magnificent sight to watch. Turf history has recorded many a close finish in both harness and running races, but it is doubtful if ever a field of 10 starters has approached the wire bunched closer than happened Thursday in this heat.

When the herald called for the horses entered in this big event, 13 of the original entries responded. Lady Malcolm and Zomell were scratched, and in the drawing for positions Cuicello drew the pole with Lady Inez. According to the rules only the four horses standing to win money are eligible for the final heats.

Of the four horses to get into the money at the finish, three got away in the first tier, for Durfee drew a position in the second tier, but despite this handicap he finished fifth in the first heat. In the second place Helen Stiles broke in the stretch but took second honors away from Joe McGuire and his Lee Crawford, and in the third Helen Stiles' sensational victory made it necessary to trot the next two heats.

When the four eligibles for the final struggle faced the starter for the fourth heat of the race, McCarthy sent them away to a perfect alignment. A better start was never seen here before, and it is doubtful if any starter in this section of the country has done better work than the man who handled the races at the Portland track. By virtue of her victory in the third heat, Helen Stiles had the pole, and while hard pressed by both Prince Lot and Lee Crawford, she gamely held to the front and finished a good length ahead of Spencer's entry, where the latter took second honors with ease from McGuire.

In the last heat it was easy sailing for Helen Stiles, as she pulled away from the field after passing the three-quarters and was in no danger at any time on entering the stretch.

The judges watched the finish of that third heat carefully and rendered an unbiased decision, for despite the large number of admirers of Prince Lot, who thought that horse should have won, there are as many who side with the judges. At any rate it was a great race. Helen Stiles is a bay mare by Sidney Dillon, and one of the most promising California horses. The best time in the big event was 2:09¾, made in the third heat.

While interest in the big stake event naturally overshadowed that in any other, there were two other meritorious races which served as appetizers to the big throng. The first race on the program was the futurity or "baby" race, for two-year-olds. This race required but two heats to reach a decision as Dick Wilson piloted Mrs. A. R. Shreve's Ruby Light, a filly by the famous Searchlight, out of the world's greatest broodmare Bertha, to victory in two straight heats. Laura Rogers, one of Alex Brown's California horses, was the only contender in both heats, and took second honors, for Frank E. Alley's Roseburg Boy and Della McKay, driven by Sebastian, broke so frequently in the first heat that both got the flag.

Fred Brooker's Bonnie Antrim proved the most consistent performer of the day by winning the 2:18 pace in three straight heats, each time with a fine margin to spare over the other four starters. Driven by John Sawyer, Bonnie Antrim took the lead each time and had no difficulty maintaining first position throughout each heat. For pacers in that class the

entries made excellent time, for Bonnie Antrim's slowest time was in the third heat, which was paced in 2:14½. The first heat was made in 2:12 and the second in 2:13. Bonnie Antrim has greatly improved in Fred Brooker's care. Captain Apperson took second honors, while third money went to Abe Bender, owned and driven by Charles Whitehead. James McGuire and his Cranky Thorne captured fourth money from Dick Wilson, driving George W. Howett's Zoe W.

Despite the fact that no big event was advertised as an attraction, over 6000 people attended the Harvest Festival at the track of the Portland Fair Association Friday, and heartily enjoyed a high class racing program. It was really an excellent card and the consolation pacing event for starters in Wednesday's \$5000 event which did not get into the money, lent interest to the occasion, and it required four heats to settle Junior Dan Patch's claim to superiority.

However, this was not the only exciting race on the program, for the last harness event of the day required five heats to settle the differences of the horsemen, and every heat was hotly contested from the moment the steppers left the barrier until they returned after circling the track.

College Maid, the guideless pacer, was once more on her good behavior and bettered her time of the previous day by pacing the mile in 2:12, much to the delight of the women and children present.

While the consolation pace was a fine struggle for supremacy between pacers, the 2:25 pacing event was really the feature of the day, for, in the first heat of this latter event, the supposedly slow pacers went the distance in 2:11¼, which is a considerably better mark than the class would indicate.

The last race was won by Joe McGuire's Ella Erickson, an entry hardly figured as a contender after her performances in the first two heats, when she just barely gained fifth position each time. It was not until the third heat that McGuire let his entry out, and she responded most gamely, for she won the third heat and then the fourth and fifth successively, though in the latter heats the time was much slower than the first two trials.

In this race a different winner was returned in each of the first three heats, for Haltmont, owned by Mrs. Florence E. Vaughn of Canby, Ore., captured the first heat in the fastest time of the race, while W. T. Golden's King Bird was successful in the second heat. McGuire pulled the surprise in the third by putting Ella Erickson over in front, and then came right back at the field in the fourth and fifth heats.

The McGuire entry was the gamer of the field, for the brown mare responded nobly to the urging of the Denverite who is one of the cleverest drivers on the circuit. The second heat was marked by almost as exciting a finish as occurred in the third heat of the feature race on Thursday, for King Bird won from Haltmont by a scant nose, and the excitement was intense until the judges announced the decision. Both Haltmont and King Bird seemingly paced themselves out in the struggle, for neither gave Ella Erickson much of a tussle for the next three heats.

In the consolation pace W. S. Mahen's Chiquita won the first heat in the fastest time of the afternoon, when the Los Angeles mare paced the mile in 2:08½, winning with ease from Junior Dan Patch and Lou Miller, the nearest contenders. After scoring once for the second heat, McDonald, driving Chiquita, was given a nasty fall when the mare turned a complete somersault. Officials and attending horsemen, as well as policemen, rushed to the assistance of the overturned driver. He was extricated and it was found that no bones were broken. The animal was not injured. After a few moments' delay until a piece of harness broken by the fall could be secured, McDonald gamely mounted the sulky and took Chiquita into the race once more.

Still frightened at the fall, the Los Angeles mare broke badly at the first turn, and before McDonald could bring her down to her stride she had lost considerable ground, and got no better than fourth place in that heat, which was won by Junior Dan Patch, which horse also captured the next two heats, deciding the race in four heats. Lou Miller, a chestnut mare belonging to G. O. Miller of Portland, and driven by "Old Man" Cox, proved a strong contender to the son of Dan Patch in all three final heats.

Like on the occasion of the \$5000 pace on Wednesday, A. R. Gibson's Amy S. was a bad actor at the post, and broke so badly at the barrier that she was completely out of the race from the start. Driver Sebastian tried hard to bring her to her stride, but his efforts were useless and the Seattle entry got the flag at the finish of the first heat.

The first race on the program was the 2:16 trotting event, and this also required four heats for a decision. After winning the first two heats in fine style, Lady W., owned by S. C. Schell of Walla Walla and driven by McDonald, lost the third heat to Densmore, a bay horse owned by D. A. Dinie of Minot, N. D. Lady W. returned winner in the deciding race by a fine finish in the fourth heat.

Getaway day at the track of the Portland Fair and Live Stock Association was signalized by the running off of every scheduled event, despite showers which fell intermittently. So sloppy was the going that the horses at the finish were covered with mud.

The first harness event was the Consolation trotting for \$2000 of the original \$10,000 stakes which was competed for Thursday. Henry Grey, the veteran roan gelding owned by Arnold Zbinden of Seattle, driven by Hartnagle, captured the event in three straight heats, and in each heat the gray came from behind at the three-quarters pole and finished easy

winner in two heats and just did nose out Alfred B. and Goldennut in the final.

In the 2:06 pacing event Joe McGuire, with his veteran pacer Sherlock Holmes, won in three straight heats. Results:

Monday, Sept. 5.

Futurity, Two-Year-Old Trotters; \$600:

Zorankin, b. c. by Zombro-Bessie Rankin 2:16¼
(Spencer)1 1
Star Patch1 1

Time—2:36¼, 2:29¾.

No summaries of the 2:30 trot and 2:10 class pace decided on Monday, have been received, but the results were as follows:

2:30 Trot, \$1000—Kingbrook, blk. g. by King Red won third, fourth and fifth heats and race in 2:13, 2:14, 2:14; Florodora Z. took first and second heats in 2:16, 2:13. Dan McKinney, Nada and All Style also started.

2:10 Pace, \$1000—Happy Dentist by Nutwood Wilkes won three straight heats in 2:08¾, 2:08 and 2:09¾. Allerdaw, Judge Dillard, Gen. Huertus and Amado also started.

Tuesday, Sept. 6.

No harness racing was held on Tuesday owing to the muddy condition of the track after heavy rains Monday night.

Wednesday, Sept. 7.

Pacing, three-year-olds, \$500:

A VETERAN VIEWS THE \$10,000 TROT.

Capt. Tom Merry Saw Helen Stiles Win and Describes the Race by Heats.

Portland, Sept. 11, 1910.

It is just fifty-one years since I had seen a trotting race for a sum in excess of ten thousand dollars; and that was the first race between Princess and Glencoe Chief at the old Pioneer course, San Francisco, when the future dam of Happy Medium covered ten miles to wagon in 29:10¼, admirably driven by James L. Eoff, now twenty-five years dead. And on Thursday last at the Fair grounds I saw the first purse of ten thousand dollars, in public money, trotted for at any track west of the Mississippi river. And such a day as it was. The rain of the previous day had just dampened the ground enough to make perfect footing for the horses, in addition to laying the vast pall of grey smoke that had overhung the city for nearly five weeks. The kindly autumn sun, in its genial glow, lighted up long avenues of sombre fir, bedecked with vine maples whose leaves turned into flowers of gold, purple and scarlet, denoting the Frost King's slow but steady approach.

The sky above was clear and blue as a baby's eye. Up in the azimuth there were long, streaming triangles of clanging wild fowl winging their way southward with loud cries of "Honk, Honk," in response to a thousand automobiles on earth below, as on mighty weary pinions they fanned the thin autumn air. It seemed but a day since I had beheld these lovely scenes in the glow of early spring-tide; and yet here was the year in its sheaf, waiting to be garnered into the vast storeroom of the centuries.

And it was the biggest crowd I had ever seen at a harness race in all my sixty odd years of experience as a race-goer. The grand stand, holding over 4000 people, was filled to a degree of suffocation; the bleachers to the east of the grand stand, good for at least 8000 more, were nearly full an hour before the big race was called out; and on the hill-sides overlooking the track, which, like Ingleside, is built on two sides of a swale with heavy embankments forming each of the turns but not as heavy as the first turn at Ingleside, which cost over \$54,000. I kept the accounts of that work myself. The stretches are wide enough for any ordinary racing, though not as wide as those on the two winter tracks near Los Angeles; and although the finish appears to be up-hill, such is not the case for there is a fall of about 32 inches between the head of the stretch and the wire.

And wasn't that grand stand a bower of beauty. This murky climate, recalling England as I saw it in 1901, has the effect of giving men and women alike the most dazzling and brilliant of complexions. Near me sat a girl of eighteen, with tresses of gold falling in profusion over her exquisitely moulded temples. She was of Scottish ancestry, with the blue of Loch Lomond in her eyes and the bloom of the heather in her cheeks. On the other side of me was a bride of seven weeks' as dark as the other one was fair, with raven tresses that a Cleopatra

might have envied and eyes that glowed like the stars on a midnight sky. Beautiful women, did you say? Well, here's where they grow them, rank and indigenous as the snow-white clover that lifts its blossoms from out the charred trunks of the fallen pines. If you want rare physical beauty, come right up here and no one will accuse you of going to the wrong shop.

There was a pacing race for two-year-olds, one mile and repeat, for which there were but two starters; and it was won by Ruby Light, a daughter of the great Searchlight in 2:19½, 2:22½. My watch is one of those used in timing the gallopers and beats fifth instead of quarters. I made these heats 2:18 4-5, 2:21 2-5. Ruby Light is a very pleasant filly to look at and, considering it was her first start for the money, acted like a very biddable and well-behaved miss. She is a rich bay in color and goes like an eight-day clock. She was superbly driven by Dick Wilson, while Laura Rogers, her only other opponent, was handled by Spencer. Ruby Light was in hand all the way and there was never a semblance of a real contest.

I have seen several turf pageants in my time—two Melbourne Cups; one Suburban Handicap at Coney Island; one St. Leger at Doncaster, and several Derbys at San Francisco and Los Angeles. This big \$10,000 purse did not partake of any of the features pertaining to those events, but as a race pure and simple, it was equal to anything I had ever beheld. There had been twenty-two nominations in all, at \$500 each, of which thirteen came to the post. Owing to the large field, the starting judge, Mr. J. L. McCarthy, was obliged to range them up into two ranks, Lady Malcolm and Zomell being scratched at 11 a. m. Prince Lot, Lee Crawford and Lady Inez were in the first rank and Durfee drew the eleventh position for Helen Stiles, the ultimate winner of the race. The starting judge notified them to come up on a slow jog so that a photograph could be taken; and with that once done (a copy of which goes to you by the same mail with this) they lined up splendidly for the

First Heat.

Lady Inez, driven by Joseph Cuicello, had drawn the inside position, while Prince Lot was fourth. When they had scored twice, Mr. McCarty reprimanded Joe Maguire, who drove Lee Crawford, for coming up ahead of his horses and warned him of a fine if he did not score by Lady Inez. At the third attempt they got off to a perfect alignment and Lady Inez and Prince Lot went out to make the pace, reaching the quarter in :33½ and the half in 1:06¼. They were easily in front of all the others and going steadily to the three-quarters in 1:39, where Helen Stiles moved up with a great rush into fifth position which she held to the wire. (I took a look at her after the heat and she wouldn't have blown out a wax taper). There was a deafening roar of applause as Lady Inez, Lee Crawford and Prince Lot came tearing down to the wire, the latter gaining at every stride and winning the heat by a scant length from the mare in 2:12, with Lee Crawford third, Alfreda B. fourth, Helen Stiles fifth, Mayo sixth, Goldennut seventh, Henry Grey eighth, Katalina ninth, Zombronut tenth, Tell Tale eleventh, Kingbrook twelfth and Freddie C. Jr. absolutely last, beaten over sixty yards, but several of them pulled up when well within the distance flag.

Second Heat.

Durfee, having finished fifth in the first heat, now became entitled to start in the front rank. They got the word at the second attempt and there was no attempt on the part of Durfee to take the lead while going around the first bend but, on reaching the back stretch Helen Stiles moved up from fifth place to third and held it to the half mile in 1:05½, and then took a breathing spell around the upper turn. Entering the stretch she came with an electric burst into second place. At the drawgate she had gotten up to Prince Lot's shoulder and was gaining inch by inch when she broke but recovered immediately and went in pursuit of the Prince Ansel gelding, but the gap was too big for her to close and Prince Lot won the heat cleverly in 2:10¾. Many private watches made it 2:10 and I was only one-fifth slower than that. Of course there was no pools sold on the race but Helen Stiles had been booked to win the race at 2 to 1 and the Prince at 3 to 1, while 5 to 1 could easily be had against Lady Inez and Lee Crawford. If Prince Lot could get another heat, that would give him the race and first money. Still Durfee showed no great signs of anxiety. Three had been distanced—Freddie C., Goldennut and Henry Grey, which left the race a trifle more open. Up they came for the

Third Heat.

As they went around the turn it was evident to me that Durfee did not want to trot the first quarter any faster than he could help, for the mare is a long strider and goes best on straight ground. But on reaching the quarter Durfee opened her out and away they went up the back stretch with the Prince leading her a good neck. Around the lower turn the pace was slower for Lot was beginning to tire and his driver was saving him all he could for he knew what a royal battle there would be as soon as they got on the home stretch. Hence Spencer made about as fine a drive as I remember to have seen anywhere but on entering the stretch the mare was already as his girths and both of them driving as though the fate of an empire depended upon it.

[Concluded on page 11.]

NOTES AND NEWS

Happy Dentist 2:08 pacing.

Helen Stiles 2:09¾ trotting.

Two new 2:10 performers that appeared at the Portland meeting.

Colorado E. (3) 2:06½ has a double Morgan cross.

Racing on the North Pacific circuit next week will be at Walla Walla.

Lon Dillon 1:58½ is to be bred to The Harvester 2:02 next season.

The owner of The Harvester says the horse is not for sale at any price.

Columbia Fire (3) 2:10¼ over a half-mile track, must be a pretty hot pacer.

Willy, the European trotter of American blood is the best broke horse on the Grand Circuit.

Dictatus 2:17 is now the sire of three 2:10 pacers—Dictatress 2:08¾, Funston 2:08¾ and Little Dick 2:09¾.

S. H. Knox of Buffalo has bought Sweet McKinney, a sister to Sweet Marie, and will breed her to The Abbe 2:04.

Helen Stiles 2:09¾ is the ninth 2:10 performer to the credit of Sidney Dillon and of the nine seven are mares.

The year 1910 will be remembered as the year when all the three-year-old coast trotting records were broken.

The Grand Circuit horses move to Columbus next week for a two weeks' meeting. The Lexington meeting opens October 5th.

Prof. Heald, the chestnut stallion by Nutwood Wilkes, trotted a good race at Salem this week and won second money.

Uhlan 1:58¾, The Harvester 2:02 and Colorado E. (3) 2:06½, all wear very few boots. The day of the pure gaited trotted is here.

Bonnie Antrim 2:12 is by Bonnie McK. son of McKinney and Bonsilene 2:14¾, and his dam is by Antrim. He is four years old.

Helen Stiles won the \$5000 trot at Salem in straight heats—2:09¾, 2:09¾, 2:09¾. Prince Lot was 2—2—4 in the summary.

Up to the close of the Readville meeting the Geers stable had won \$44,000; Cox, \$27,000; Murphy, \$25,000, and McDonald, \$21,000.

Vic Schiller 2:11¼ has been sent to Chase's sale to be held September 26th. He is a kind and gentle road horse and in good shape.

Four pacers in one race all making the mile in 2:00 or less is the sight that was furnished the people at the Indiana State Fair last Monday.

Auto races were held on the Pleasanton track last week, and the forty or fifty horses in training there looked on and seemed to enjoy the fun.

Colorado E. (3) 2:06½ trots with his head checked pretty high and wears a Crahh hit. He wears less than four ounces in front and only 3¾ behind.

And now an offer of \$5000 has been made for a prospective foal of Bingen 2:06¾ out of The Harvester Queen, a full sister to The Harvester 2:02.

The Oregon papers speak very highly of the work being done as a starter of the harness races by J. L. McCarthy. He officiated at both Portland and Salem.

The Angelus 2:12 by Zombro 2:11 out of Hazel Kinney 2:09¾ has worked a mile below 2:10 this year and may get into that list before the season is over.

California horsemen have done well at Portland and Salem. They entered very liberally at both meetings and by so doing assured the success of the racing.

Just as sure as Ruby Light (2) 2:19½ lives and meets with no accident she will pace in 2:10 as a three-year-old, thus giving old Bertha her sixth 2:10 performer.

Shade trees are the great need of the fair grounds at Sacramento. Several hundred quick growing trees should be planted there this winter where they are most needed.

George Dietrich, the Cleveland secretary, is following the Grand Circuit gathering entries for the stallion Produce and Matron stakes of the American Breeders' Association.

Shuler worked Sterling McKinney in 2:08¾, 2:07¾ and 2:06¾ one day last week. If the son of McKinney would only trot that way in a race his value would go up considerable.

Bon Guy 2:11¾ is the fastest three-year-old trotter ever raced on the Pacific Coast, and he holds the record for the three fastest heats ever trotted by a three-year-old on the Coast.

We are pleased to know that the Woodland Driving Club will have three or four hundred dollars in its treasury after paying all the expenses of its meeting this year. This is encouraging.

All the racing held at the California State Fair this year did not cost the association more than \$2400. The aviator cost \$12,000, the Cheyenne Wild West Show \$22,000 and the fireworks \$8000.

C. A. Durfee has put two of his string in the 2:10 list already—Helen Stiles 2:09¾ trotting and Happy Dentist 2:08 pacing, and he may step Dr. Lecco 2:11½ into the exclusive set before he returns home.

McO. D. by Zolock started in pretty hot company at the Urhuna, Illinois, half-mile track recently, as the heats were paced around 2:12. He got fourth money in a geld of seven 2:12 class pacers.

Bertha by Alcantara has the distinction of having two of her foals take standard records this year—C. The Limit 2:06¾ and Ruby Light (2) 2:19¼ both pacers and both records made in winning races.

K. O'Grady of San Mateo sends a few to the Chase sale September 26th. One is a very useful driver, gentle, broke single and double, four years old and by Monterey 2:09¾. She is worth looking at.

A black gelding, 15.3 that has been used as a family horse, never trained, but has plenty of natural speed, will be sold at Chase's Combination Sale Monday, September 26th. He is five years old and well broken.

De Ryder won third money with Adam G. at St. Paul on Thursday of last week, Bland S. taking the race in straight heats in 2:06 and 2:08½. The same day De Ryder won an easy race with Denervo in straight heats, best time 2:13½.

Ruby Light won the two-year-old pacing division of the Oregon futurity at Salem last Thursday, Geo. Woodard won the 2:20 pace and Helen Stiles won the \$5000 trot, with Prince Lot second. It was a great day for California bred horses.

Director Charles Paine of the California State Agricultural Society worked late and early for the success of the fair this year and but for his active attention to details at the fair grounds things would have gotten badly mixed many times during the week.

The Sacramento track was a little better on the last day when the Stanford Stakes was trotted than it was on Monday when the same colts raced for the Occident Stake, but it was far from being an ideal track.

Mr. Vance of Marysville, who owns Sir John S. 2:04½, is thinking of taking the fastest entire son of Diahlo to Phoenix in November, with the idea of lowering his record. Sir John S. is in rare fettle just now and over the Arizona hilliard table track should pace a mile right at two minutes.

Fernloc is coming into great favor with Pacific Coast horsemen as the best body wash for a tired horse. Chas. Spencer of the Woodland Stock Farm uses it and speaks very highly of it, as do many other California trainers.

Fresno will hold a big county fair from October 3d to 8th. The premium list shows that liberal prizes will be offered in all departments. A program of harness and running races has been provided with purses nearly all \$250 each. The advertisement will be found in this journal.

Bon Guy 2:11¾, winner of the California Breeders' and Stanford stakes, and of second money in the Pacific Breeders' Futurity and third money in the Occident stake, is the highest winner in California this year. This three-year-old has about \$2500 to his credit and has never been behind the money. He is a real hear cat.

The three-year-old chestnut colt William S. by the Marysville stallion Sir John S. 2:04½ is winning frequently over the half-mile tracks of Kansas and Nebraska this year, he having been sold to Kansas parties a year ago. His last win was at Eureka, Kansas, where on August 26th he won the three-year-old pace very handily in 2:19¼ and 2:20. At the same meeting Walter Dillon by Sidney Dillon won a heat in 2:15¼ and earned second money.

It is announced that there are 95 sucklings at Walnut Hall Farm, one of which is a full brother of The Harvester 2:02, and he is probably the most highly prized one in the lot.

Rubylight (2) 2:19¼ pacing is the eleventh of the produce of the famous mare Bertha by Alcantara to take a standard record. She is also the first of the get of Aerolite (3) 2:11¾ to start in a race. She is owned by Mrs. A. R. Shreve of Cathlamet, Washington, who purchased the handsome filly from her breeder, Mr. C. L. Crellin of Pleasanton, when the filly was a weanling.

A Hanford subscriber asks: "Is it not a fact that the California State Fair was managed by the Directors and Secretary this year and not by any matinee club?" Certainly; the Sacramento citizens organized a Fiesta of the Dawn of Gold committee and aided the Directors financially and otherwise, but the Directors managed the fair.

Strathboule 2:13½, winner of the Pacific Breeders' Futurity, Donasham 2:13¾, winner of the Occident Stake and Bon Guy 2:11¾ winner of the California Breeders' and Stanford stakes, are three mighty high class three-year-old trotters, and there are three or four more that were just behind them in these stakes that also are colts of much class even though they failed to get first money this year.

The Ice Man 2:10 is a great little pacer for his size and legs—the latter being very poor owing to harsh treatment for several years on rough roads when The Ice Man pulled a huggy and was a "huck-eroo" horse between times. They say he knows all the cow pony stunts and can hold a lasso taut as long as the next one.

How fast can Geo. Estabrook's colt Colorado E. trot? The turf scribes all say he was pulled up in the stretch when he took his record of 2:06½ and when he trotted the next heat in 2:07¾ he was so far ahead of all the others that he was taken back and almost walked under the wire. He certainly is some trotter.

Russell Gray has two pacers and the trotter Lightning Bug (brother to Toggles 2:08½) in training at Hanford. These horses are the property of Judge Erlanger of Lemoore. Walter Gallup is working his two-year-old stallion Stone Direct by Robert Direct, dam Stonelita 2:15¾, also Clara Mac by Expressive Mac. Several other horsemen are getting their horses ready for the county fair.

W. J. Kenney, of 531 Valencia street, San Francisco, made a fine exhibit of sulkies, speed carts and speed wagons at the California State Fair last week. During the fair he sold one of those beautiful McMurray carts to Mr. Charles W. Paine, of Sacramento, and sulkies to various other persons. Mr. Kenney acted as starter of the races during two days and got his field away well. A. C. Stevens was the official starter the remainder of the time.

An item in last week's Breeder and Sportsman stated that Palo King was the only stallion on the coast to put two two-year-olds in the standard list up to that time. The item was true at the time it was written, but a few days thereafter Prince Ansel gained the honors by having three two-year-olds in the list, two of them in the 2:20 list. They are Laura Rodgers 2:18¾ pacing, Dorothy Ansel 2:20 trotting, and Adansel 2:29¾ trotting.

There must have been something burling Bon Guy the day of the Occident Stake. The best he could do was to get third money out of that stake, and when he was cooling out in the paddock he seemed irritable and was ready to kick in all directions. The following Saturday he was in an entirely different mood and won every heat of the Stanford Stake in faster time than the fastest in the Occident Stake on Monday.

R. J. McKenzie, of Winnipeg, for whom Gil Curry purchased Joe McGregor and a McKinney mare last winter, neither of them turning out very well, has just paid a long price for Joe Patchen the Second, a horse said to be very much like his noted sire. Joe Patchen the Second showed Havers James a mile in 2:10 over a half mile track before he bought him for Mr. McKenzie and he thinks him the best green pacer he ever saw. The price was over \$6000.

Next year California should have a home-bred and home-raced 2:10 three-year-old trotter. We are getting close to the mark with such colts as started in the stakes this year and have set the coast race record at 2:11¾, but we should knock a couple of seconds off this record next year. It is up to the breeders of California to produce the colts and the track managers should see that the tracks are put in the shape to make 2:10 possible.

Mr. Geo. L. Warlow, owner of the futurity winning two-year-old trotter Matawan 2:19½, has shipped him home and will let him play for several months, then have Schuyler Walton take him up again and give him a careful preparation for the express purpose of having him win just as many of the three-year-old stakes of 1911 on this coast as he possibly can. Matawan is engaged in nearly all of them.

Happy Dentist was third in the \$5000 pace at Salem. Allertaw won the race and Solano Boy got second money. Solano Boy paced a mighty good race, but the eastern horse had the most speed at the finish. Allertaw is by Allertonian, dam by Jackdaw, second dam by Ansel.

Send to Fred H. Chase & Co. for a catalogue of their combination sale to be held September 26th. Mr. P. H. McEvoy has consigned several head of well bred trotting stock to this sale, mostly by his stallion Milbrae 2:16½. They are fully described in the catalogue.

Vera Hall 2:09½, the only horse to get into the 2:10 list at the California State Fair is owned by James Liggett of Hanford, California. She was bred in Merced and is the first of the get of Expressive Mac to be raced on the circuit. She won her first start at Sacramento, getting a mark of 2:14½ and in her second race won the two fastest heats of the race and was only beaten by a narrow margin in the third heat.

Lijero won two races at Sacramento last week and his three-year-old daughter Expedio 2:14½ started twice at the same meeting, getting second money in the Occident Stake and fourth in the Stanford. Expedio is the only three-year-old by Lijero ever trained and is one of his first crop, he having been bred to three or four mares in 1906. Lijero is bound to be a great sire of speed and of size and good looks as well. Mr. Wright, his owner, has already hooked a number of mares to him for 1911.

Will De Ryder, who now lives in Wisconsin, is winning races with his Knight gelding Ben M. this summer. At the Manitowoc, Wisconsin, half mile track August 27th Ben M. won first money in the 2:18 trot, his fastest heat in 2:16½, good time for a rather poor two lap track. At the same meeting the mare Wicke Wicke by Del Coronado won a heat and second money in a pacing race, and Elloretta by Zomhro won first money in the 2:25. Both these mares are from Los Angeles.

The twenty-five-year-old mare Wanda 2:14½ (dam of The Roman 2:09½, etc.) and her family Siesta by Iran Alto 2:12½, Roman Boy by Zolock 2:05½, and Weltha, by Birdman, won the blue ribbon in the standard trotting horse class at the State Fair. Mr. F. H. Burke, her owner, believes she knows when this fair takes place for she does her best to show that she has no ailments and acts as spry as a four-year-old. Truly, Wanda is a wonderfully well-preserved matron. Weltha, her latest foal, is considered by many to be the purest gaited and hest trotting "prospect" she has ever had.

The handsome and fast trotter San Juan that Chas. De Ryder took east to race for Mr. Leadbetter of Napa was taken very ill at Joliet, Illinois, and had to be declared out of all his future engagements. Mr. DeRyder attributes the stallion's illness to a week of very hot weather which affected many of the horses in training. San Juan was confidently expected to trot a mile in a race in 2:10 before coming home, but a low mark for him will now have to be postponed until next year.
